TABLE OF CONTENTS.

Page.	From.	Date.	Subject.
1	GOVERNMENT OF INDIA	July 31, 1876, No. 13.	THE AGRICULTURAL PROSPECTS OF BELLARY, CUDDAPAH, SOUTH ARCOT, AND NORTH ARCOT, IN MADRAS PRESIDENCY, CONSEQUENT ON FAILURE OF RAIN.
	ENCLOSURES.		
1	Under Secretary to Government of India.	Jan. 22, 1876 -	<i>Telegram</i> , calling for full information from Madras Government as to sudden change in prospects.
1	Secretary to Government of Madras.	Jan. 24, 1876 -	In reply to telegram, forwards enclosures from,—
1	Collector of Bellary -	Oct. 26, 1875 -	Relief works to be undertaken should distress continue (with enclosures).
2	Ditto - - -	Nov. 10, 1875 -	Distress alleviated for present (with enclosure).
3	Ditto - - -	Dec. 14, 1875 -	Personal inspection of distressed districts.
3	Ditto Cuddapah -	Dec. 11, 1875 -	Season has been a bad one, but does not apprehend distress; pasture sufficient; prices rising; advocates more liberal treatment of wet wells.
4	Ditto South Arcot	Jan. 6, 1876 -	Prospects of harvest bad.
4	Ditto North Arcot	Jan. 10, 1876 -	Season disastrous. Fears remissions of revenue will be necessary.
5	Secretary to Government of India.	Feb. 5, 1876 -	Calls for statement of views of Government of Madras as to prospects of affected districts.
5	Secretary to Government of Madras.	July 4, 1876 -	In reply to preceding Letter:— <i>Bellary</i> . Prices not excessively high. Condition of labouring classes does not call for interference of State.— <i>Cuddapah</i> . Prices steady. Condition of labouring classes good. Remissions, Rs. 177,100.— <i>North Arcot</i> . Prospects on the whole not yet unfavourable. Estimated remissions, Rs. 150,000.— <i>South Arcot</i> . Drinking water scarce, and want of pasturage for cattle. Markets well supplied. Estimated remissions, Rs. 280,000. Nothing certain can yet be predicted. Every precaution being taken.
6	SECRETARY OF STATE	Oct. 5, 1876, No. 28.	REPLYING TO GOVERNMENT OF INDIA DESPATCH OF JULY 31, DESIRES TO BE INFORMED OF PROGRESS OF EVENTS.
7	GOVERNMENT OF INDIA	Oct. 19, 1876, No. 21.	REPORT SCARCITY IN CERTAIN PARTS OF THE BOMBAY PRESIDENCY. HAVE SANCTIONED LOCAL RELIEF WORKS BEING STARTED, BUT AVERSE TO BEING COMMITTED TO LARGE SCHEMES OF EXPENDITURE WHICH MAY INVOLVE OUTLAY FAR IN EXCESS OF REQUIREMENTS OF SCARCITY.
	ENCLOSURES.		
7	Acting Chief Secretary to Government of Bombay.	Sept. 13, 1876 -	Forwards papers relative to insufficient rain in Poona district. Feels confident Government of India will sanction necessary expenditure for relief operations if required.
8	Acting Second Assistant Collector, Poona.	Aug. 28, 1876 -	Condition of Bhimthadi and Indapur talukas, and consideration of measures to meet probable scarcity.
9	Acting Collector, Poona.	Sept. 4, 1876 -	<i>Memorandum</i> , enumerating works to be first commenced in Bhimthadi and Indapur.
10	Revenue Commissioner, Southern Division.	Sept. 6, 1876 -	<i>Memorandum</i> , reviewing the two preceding papers.
10	Officiating Secretary to Government of India.	Sept. 29, 1876 -	Government of India not prepared at present to bear necessary expenditure. Should scarcity be circumscribed, relief should properly be met by provincial funds. Should situation become graver, Government of India should be informed in time to form decision as to incidence of relief expenditure.
10	Governor, Bombay -	Oct. 3, 1876 -	<i>Telegram</i> , requesting instant answer respecting Dhond and Munmar Railway. Distress severe. Local funds exhausted.

Page.	From.	Date.	Subject.
11	Secretary to Government of India.	Oct. 4, 1876 -	<i>Telegram.</i> Grounds submitted not sufficient to justify immediate commencement of Dhond and Munmar Railway. Local relief works may be started. Incidence of expenditure to be considered hereafter.
11	Governor, Bombay -	Oct. 12, 1876 -	<i>Telegram.</i> Reports exceedingly bad. Council unanimously of opinion that Dhond and Munmar Railway must be commenced.
11	Secretary to Government of India.	Oct. 16, 1876 -	<i>Telegram.</i> Government of India do not think it right to embark on large project involving continuance of expenditure after emergency has ceased. Local works should be organised, Government of Bombay providing necessary funds.
11	Governor, Bombay -	Oct. 17, 1876 -	<i>Telegram.</i> Will endeavour to give effect to instructions.
11	GOVERNMENT OF INDIA	Oct. 26, 1876, No. 22.	AREA OF DISTRESS IN BOMBAY PRESIDENCY MORE EXTENDED THAN AT FIRST SUPPOSED. NINE DISTRICTS (53,000 SQUARE MILES, POPULATION ABOUT 8 MILLIONS, LAND REVENUE, Rs. 1,39,40,000) MORE OR LESS AFFECTED. EVIDENT THAT PROVINCIAL RESOURCES MUST BE SUPPLEMENTED BY IMPERIAL EXPENDITURE. THOSE RELIEF WORKS TO BE PREFERRED WHICH CAN BE COMPLETED WITHIN OUTLAY NECESSARY FOR RELIEF. DESIRE OF BOMBAY GOVERNMENT TO INVITE TENDERS FOR SUPPLY OF GRAIN, AND TO ABSTAIN FROM MAKING PURCHASES IN THE GENERAL MARKET ON ITS OWN BEHALF APPROVED: ALSO INCREASE OF ADMINISTRATIVE STAFF. SATISFIED WITH CONDUCT OF BOMBAY GOVERNMENT. THE SCARCITY IN THE MADRAS PRESIDENCY.
ENCLOSURES.			
12	President in Council -	Oct. 25, 1876 -	<i>Telegram</i> to Secretary of State, summarising preceding Despatch.
12	Secretary, Government of Bombay.	Oct. 9, 1876 -	Whole of eastern parts of Deccan and southern Mahratta country threatened with famine. Revenue Commissioner, Southern Division, directed to proceed to affected districts. To avert extreme distress, relief on a larger scale must be commenced. Bombay Government may be trusted to avoid extravagance and ultimate waste.
13	Acting Collector, Sholapur.	Oct. 4, 1876 -	Almost total failure of crops throughout collectorate. Necessity for fresh relief works on larger scale.
14	Revenue Commissioner, Southern Division.	Oct. 5, 1876 -	Recommending sanction to certain works.
15	Under Secretary to Government of Bombay.	Oct. 13, 1876 -	Publishing resolutions by Government of Bombay.
15	Government of Bombay.	Oct. 4, 1876 -	Resolutions by the Government of Bombay.
15	Ditto - -	Oct. 5, 1876 -	
16	Ditto - -	Aug. 29, 1876 -	
16	Ditto - -	Sept. 22, 1876 -	
17	Ditto - -	Oct. 3, 1876 -	
18	Ditto - -	Oct. 3, 1876 -	
19	Ditto - -	Oct. 3, 1876 -	
19	Ditto - -	Oct. 3, 1876 -	
20	Ditto - -	Oct. 3, 1876 -	
20	Ditto - -	Oct. 6, 1876 -	
21	Ditto - -	Oct. 9, 1876 -	
22	Ditto - -	Oct. 11, 1876 -	
23	Ditto - -	Oct. 12, 1876 -	
24	Chief Secretary to Government of Bombay.	Oct. 16, 1876 -	Requesting views of Government of India on proposals for relief of Poona, Ahmednagar, and Sholapur districts.
24	Collector of Poona -	Oct. 10, 1876 -	<i>Demi-official</i> , reporting bad condition of Dhond, and need of prompt assistance.
24	Revenue Commissioner, Southern Division, and Superintending Engineer, Central Division.	Oct. 10, 1876 -	Report of visit to Poona and Ahmednagar collectorates. Estimated cost of earthwork on Dhond and Munmar Railway (133 miles), 15 lakhs. Recommend immediate commencement of surveyed portion, 47 miles. Suggestions as to grain supply.

Page.	From.	Date.	Subject.
26	Acting Collector of Poona.	Oct. 10, 1876 -	Population likely to be affected. Best organisation for a large work. In favour of small works. Opposed to collection of large numbers of people. Minor works. Grain stores.
27	Secretary to Government of Bombay.	Oct. 9, 1876 -	Forwards papers, and states whole of eastern parts of Deccan and Southern Mahratta country are threatened with serious famine.
28	Government of Bombay.	Oct. 16, 1876 -	Resolution, estimating population affected, cost of relief, duration of famine, and measures to be adopted.
30	Chief Secretary to Government of Bombay.	Oct. 19, 1876 -	Forwards papers regarding Satara and Dharwar collectorates.
30	Subordinate Judge, Tasgaon.	Oct. 3, 1876 -	Bad condition of Tasgaon taluka. Cultivators have no grain in store, their surplus going to the Soncars, and no money. Willing to work, but no employment.
31	Ditto - -	Oct. 8, 1876 -	Fears that riots may occur.
31	Acting Collector, Satara.	Oct. 10, 1876 -	To prevent riots, is of opinion that those who have granaries should be compelled to open them, if persuasion fails.
32	Ditto - -	Oct. 10, 1876 -	Asks approval of measures to prevent riots. Suggests Rs. 5,000 grain should be sent from Bombay. Traders disposed to sell at fair rates.
33	Revenue Commissioner, Southern Division.	Oct. 13, 1876 -	<i>Memorandum</i> , disapproving of measures reported in preceding letter. Grain asked for appears insufficient.
34	Government of Bombay.	Oct. 17, 1876 -	<i>Resolution</i> , granting Rs. 25,000 for grain to Satara. No reason to suppose scarcity of grain. Most averse to interfere with free action of traders.
34	Collector, Dharwar -	Oct. 7, 1876 -	Relief works. Insufficient establishment.
34	Ditto - -	Oct. 6, 1876 -	Dambal road making rapid progress. New works must be provided.
35	Executive Engineer, Dharwar.	Oct. 6, 1876 -	Report for whole district, in reply to preceding.
35	Revenue Commissioner, Southern Division.	Oct. 13, 1876 -	<i>Memorandum</i> , forwarding the preceding for orders of Government.
35	Government of Bombay.	Oct. 17, 1876 -	<i>Resolution</i> . Dambal tank to be commenced at once. Buying grain in general market to be avoided.
36	Ditto - -	Oct. 12, 1876 -	<i>Resolution</i> . Revenue Commissioner, Southern Division, competent to sanction local works submitted by him.
37	Ditto - -	Oct. 16, 1876 -	<i>Resolution</i> . If necessary to undertake relief works on large scale, it may be advisable to invite tenders for supply of grain.
37	Memorandum - -	Oct. 21, 1876 -	On the condition and resources of the districts in the Bombay Presidency which are threatened with scarcity.
41	Secretary to Government of India.	Oct. 22, 1876 -	<i>Telegram</i> , requesting preparation of statements as to Bombay affected districts.
41	Secretary to Government of India, Public Works Department.	Oct. 23, 1876 -	<i>Telegram</i> , informing Bombay Government initiation of measures to rest with Department of Agriculture and Commerce. Public Works Department confined to professional details after sanction.
41	Ditto - -	Oct. 23, 1876 -	Letter to same effect.
41	Governor, Bombay -	Oct. 24, 1876 -	<i>Telegram</i> . Statements being prepared. Population to be relieved likely to be larger than calculated.
41	Secretary to Government of India.	Oct. 25, 1876 -	Communicating to Bombay Government views of Government of India on measures already taken, and on policy to be observed generally.
45	Ditto - -	Oct. 25, 1876 -	<i>Telegram</i> , giving summary of preceding letter.
45	Secretary to Government of Madras.	Oct. 24, 1876 -	<i>Telegram</i> . Grave condition of Kurnool, Kuddapah, and Bellary districts.
45	Secretary to Government of India.	Oct. 25, 1876 -	Measures of Madras Government approved. Statements to be prepared as to affected districts.
46	SECRETARY OF STATE	Dec. 7, 1876, No. 44.	REPLYING TO GOVERNMENT OF INDIA DESPATCH, OCT. 26. BOMBAY AND MADRAS TO SEND WEEKLY REPORTS.

Page.	Form.	Date.	Subject.
46	GOVERNMENT OF INDIA	Nov. 2, 1876, No. 24.	FORWARDS CORRESPONDENCE REGARDING SCARCITY IN BOMBAY AND MADRAS, THE NIZAM'S TERRITORIES, AND MYSORE. OCCUPANCY RIGHTS OF RYOTS REDUCED BY UNFAVOURABLE SEASON NOT TO BE SOLD IN DEFAULT OF PAYMENT OF LAND REVENUE, AND EXEMPTIONS GRANTED IN CASES OF INDISPENSABLE SALES OF MOVABLE PROPERTY. BOMBAY SCHEME OF RELIEF WORKS, AMOUNTING TO 62 LAKHS, UNDER CONSIDERATION: ALSO SUGGESTION OF RESIDENT, HYDERABAD, TO REDUCE RAILWAY FREIGHT ON GRAIN. FEAR THAT SCARCITY WILL ENTAIL CONSIDERABLE LOSS OF LAND REVENUE AND EXPENDITURE OF IMPERIAL FUNDS.
	ENCLOSURES.		
47	President in Council	Nov. 2, 1876 -	<i>Telegram</i> , summarising preceding Despatch.
47	Secretary to Government of Bombay.	Oct. 21, 1876 -	Forwarding to Government of India.
48	Collector, Násik -	Oct. 15, 1876 -	Condition and prospects of Násik collectorate. Scarcity, not famine. Not anxious about grain supplies.
51	Government of Bombay.	Oct. 21, 1876 -	<i>Resolution</i> as to remissions in Násik collectorate.
51	Government of Bombay.	Oct. 27, 1876 -	<i>Resolution</i> , sanctioning scheme of relief works amounting to Rs. 61,84,790 for nine districts. Difficulty arising from uncertainty as to ultimate demands for relief. Suggested transfer of population. Instructions to officers.
52	President in Council, Madras.	Oct. 27, 1876 -	<i>Telegram</i> , asking sanction to embankment work of Bel-lary Guddak Railway.
52	Secretary to Government of India.	Oct. 27, 1876 -	<i>Telegram</i> . Cannot sanction. Local works should be organised.
53	Madras Government.	Oct. 27, 1876 -	<i>Telegram</i> . Relief works already aggregate Rs. 3,77,770.
53	Secretary to Government of India.	Oct. 31, 1876 -	<i>Telegram</i> , in reply to preceding, calls for report already asked for.
53	Resident, Hyderabad	Oct. 30, 1876 -	<i>Telegram</i> . Merchants offer to import grain if railway transport be lowered.
53	Secretary to Government of India.	Nov. 1, 1876 -	<i>Telegram</i> . Question affects other provinces.
53	Chief Commissioner, Mysore.	Oct. 3, 1876 -	Condition of Mysore. Grant of 10 lakhs requested.
54	Ditto - -	Oct. 25, 1876 -	<i>Telegram</i> . Prospects worse.
54	Under Secretary to Government of India, Foreign Department.	Oct. 30, 1876 -	<i>Telegram</i> , calling for statements as to affected districts.
54	GOVERNMENT OF INDIA.	Nov. 9, 1876, No. 27.	NO CHANGE FOR BETTER. BOMBAY SCHEME OF RELIEF WORKS MODIFIED. REDUCTION OF FREIGHT OF GRAIN BY RAILWAY UNDECIDED.
	ENCLOSURES.		
55	Secretary to Government of India.	Nov. 3, 1876 -	Approving suggestions of Bombay Government* as to occupancy rights of ryots (p. 47).
55 to 59	} Ditto - - - -	Nov. 3, 1876 - {	Weekly reports of rainfall and state of crops in Bombay distressed districts.
59	Collector, Khandesh -	Oct. 12, 1876 -	Report of visit to central and eastern talukas of Khandesh collectorate.
61	Chief Commissioner, Mysore.	Nov. 1, 1876 -	Condition worse. Proposes to supplement local subscriptions by equivalent Government grant.
61	Under Secretary to Government of India, Foreign Department.	Nov. 2, 1876 -	Proposal contained in preceding telegram approved.
61 to 69	} - - - - -	- - - - - {	Statements of proposed expenditure in Bombay distressed districts.
69	Secretary to Government of India.	Nov. 9, 1876 -	Instructions of Government of India as to Bombay scheme of relief works.
69	Ditto - - - -	Nov. 4, 1876 -	Is statement regarding increased grain traffic on Great Indian Peninsula Railway correct?
69	Ditto - - - -	Nov. 7, 1876 -	Is reduction in railway freight of grain needed also in Madras and Bombay?
69	Secretary to Government of Bombay.	Nov. 7, 1876 -	Statement regarding increased grain traffic generally correct.
70	SECRETARY OF STATE	Dec. 21, 1876, No. 46.	REPLY TO DESPATCHES OF NOVEMBER 2 AND 9.

Page.	From.	Date.	Subject.
70	GOVERNMENT OF INDIA	Nov. 17, 1876, No. 28.	ASPECT OF AFFAIRS STILL EXTREMELY SERIOUS. BOMBAY GOVERNMENT REMONSTRATE AGAINST MODIFIED PROGRAMME OF RELIEF WORKS. MEASURES FOR PRESERVATION OF CATTLE. RECOMMENDATION OF RESIDENT AT HYDERABAD TO REDUCE GRAIN FREIGHT NOT ACCEDED TO. IN BOMBAY AND MADRAS PRIVATE TRADE ACTIVE. PURCHASE OF GRAIN BY MADRAS GOVERNMENT.
	ENCLOSURES.		
72	Secretary to Government of Bombay.	Nov. 9, 1876 -	<i>Telegram.</i> Reduction of railway rates not called for.
72	Ditto - - -	Nov. 10, 1876 -	<i>Telegram.</i> No deaths from starvation in Sholapur district.
72	Secretary to Government of Bombay.	Nov. 9, 1876 -	<i>Telegram.</i> Reduction railway freight of grain unnecessary.
72	Resident, Hyderabad	Nov. 11, 1876 -	<i>Telegram.</i> Again urges reduction railway charge.
72	Sir A. Arbuthnot -	Nov. 11, 1876 -	<i>Telegram.</i> Madras and Bombay object. Reduction not advisable.
72	Secretary to Government of Bombay.	Nov. 8, 1876 -	<i>Telegram.</i> Collectors of five Districts authorised each to spend Rs. 25,000, to keep alive infirm and poor.
72	Secretary to Government of India.	Nov. 9, 1876 -	<i>Telegram.</i> Asks for further information as to preceding telegram.
72	Secretary to Government of Bombay.	Nov. 10, 1876 -	Enormous grain traffic over Great Indian Peninsula Railway. Prices falling. Grain coming from Persian Gulf, Sind, and Guzarat.
73	Secretary to Government of Bombay.	Nov. 13, 1876 -	<i>Telegram</i> in explanation of gratuitous relief to incapable and destitute.
73	Secretary to Government of Madras.	Nov. 4, 1876 -	<i>Telegram,</i> reporting purchase of 15,000 tons of rice at cost of 32 lakhs, as reserve.
73	Sir A. Arbuthnot, Simla.	Nov. 11, 1876 -	<i>Telegram,</i> forbidding further purchases without previous reference to Government of India. Proceeding reported calculated to cause serious embarrassment.
73	Secretary to Government of Bombay.	Nov. 6, 1876 -	<i>Telegram.</i> Will attend to suggestions in letter of 25th ult., and keep Government of India informed of course of events.
73	Secretary to Government of India.	Nov. 10, 1876 -	<i>Telegram</i> for full information about Bombay irrigation relief works.
73	Ditto - - -	Nov. 9, 1876 -	Reviews Bombay programme of relief works; disallows certain works, and calls for explanations.
75	Secretary to Government of Bombay.	Nov. 11, 1876 -	<i>Telegram,</i> remonstrating against orders contained in the preceding letter.
75	Revenue Secretary, Calcutta.	Nov. 17, 1876 -	No objection to Bombay throwing open forest reserves as free grazing grounds.
75	Secretary to Government of Madras.	Nov. 7, 1876 -	Reviewing condition of distressed districts.
78	GOVERNMENT OF INDIA	Nov. 24, 1876, No. 30.	PROCEEDINGS OF MADRAS GOVERNMENT OPEN TO QUESTION.
79	Resident, Hyderabad	Nov. 11, 1876 -	Forwards letter from Nizam's Government, asking reduction of railway charges on grain freight. Supports the same.
80	Nizam's Government	Nov. 9, 1876 -	Request alluded to in preceding letter. Copy of instructions for organisation of relief in Hyderabad State.
81	Resident, Hyderabad	Nov. 11, 1876 -	Summarising letter of same date.
81	Secretary to Government of India.	Nov. 19, 1876 -	Decision of Government of India accepted by Nizam's minister.
81	Revenue Secretary, Calcutta.	Nov. 15, 1876 -	<i>Telegram</i> for names of works commenced which would be suspended under telegram of 9th.
82	Secretary to Government of Bombay.	Nov. 17, 1876 -	<i>Telegram</i> in reply to preceding.
82	Revenue Secretary, Calcutta.	Nov. 18, 1876 -	<i>Telegram.</i> Information in preceding not sufficient. Government of India await letter.
82	Secretary to Government of Bombay.	Nov. 11, 1876 -	Increase to staff. Concentration of correspondence in one department, that of Public Works.
82	Secretary to Government of India.	Nov. 24, 1876 -	In reply to preceding letter, selection of Public Works Department for concentration open to grave objections.
83	Secretary to Government of Madras.	Nov. 13, 1876 -	In explanation of purchase of grain.
84	Revenue Secretary, Calcutta.	Nov. 20, 1876 -	<i>Telegram.</i> Preceding letter does not explain necessity for action without reference to Government of India.
84	Secretary to Madras Government.	Nov. 23, 1876 -	<i>Telegram</i> in reply to preceding.
85	Revenue Secretary, Calcutta.	Nov. 24, 1876 -	<i>Telegram,</i> requesting full explanation by post. Further contemplated purchase must be postponed.
85	Agent to Governor-General, Central India.	Oct. 14, 1876 -	<i>Diary.</i> Loss of cattle. Corndealers declined proffered aid of Maharaja. Proceedings of Maharaja.

Page.	From.	Date.	Subject.
85	SECRETARY OF STATE	Jan. 5, 1877, No. 3.	IN REPLY TO GOVERNMENT OF INDIA LETTER OF NOVEMBER 24.
86	GOVERNMENT OF INDIA	Dec. 1, 1876, No. 31.	PROCEEDINGS OF MADRAS GOVERNMENT. RELIEF MEASURES IN MYSORE. PROTECTION OF RYOTS IN CASES OF DEFAULT ATTRIBUTABLE TO DROUGHT. STATISTICAL STATEMENTS FROM BOMBAY, AND INSTRUCTIONS ISSUED UPON RECEIPT OF THEM. SITUATION SUCH AS TO CAUSE VERY SERIOUS ANXIETY FROM FINANCIAL POINT OF VIEW.
ENCLOSURES.			
87	Secretary to Government of India.	Nov. 25, 1876 -	Instructions to Madras as to relief expenditure and necessity for full information.
88	Secretary to Government of Madras.	Nov. 19, 1876 -	Sir A. Arbuthnot's telegram "en clair" has rendered futile efforts to keep grain transactions secret.
88	Secretary to Government of India.	Nov. 29, 1876 -	In reply to preceding.
88	Chief Commissioner, Mysore.	Nov. 8, 1876 -	Condition of Mysore and Coorg, and measures of relief.
89	Commissioner, Nundydroog Division.	Oct. 26, 1876 -	Condition of respective districts, and measures of relief.
90	Deputy Commissioner, Bungalow District.	Oct. 24, 1876 -	
91	Deputy Commissioner, Kolar District.	Oct. 24, 1876 -	
92	Chief Commissioner, Mysore.	Oct. 27, 1876 -	Orders issued on recommendations contained in the foregoing.
94	Commissioner, Nundydroog.	Oct. 27, 1876 -	Bad condition of Tumkur district.
94	Chief Commissioner, Mysore.	Oct. 31, 1876 -	Order thereon.
95	Ditto - - -	Nov. 2, 1876 -	Order granting in respect of remissions or suspensions of land revenue.
95	Secretary to Government of India.	Nov. 27, 1876 -	In reply to letter of November 8, calling for fortnightly narrative.
95	Revenue Secretary, Calcutta.	Nov. 27, 1876 -	Asking Commissioner of Mysore if statement is correct as to his purchasing grain at Madras.
95	Chief Commissioner, Mysore.	Nov. 28, 1876 -	Statement devoid of foundation.
95	Secretary to Government of Bombay.	Nov. 18, 1876 -	Forwarding resolution regulating remissions.
96	Secretary to Government of India.	Nov. 30, 1876 -	The foregoing instructions do not seem to provide for sale of land for default, and exemption of necessary movable in case of indispensable sale.
96	Revenue Secretary, Calcutta.	Nov. 25, 1876 -	Telegram for truth of statement as to block of grain on railway.
96	Secretary to Government of Bombay.	Nov. 25, 1876 -	Statement exaggerated, but block on Great Indian Peninsula Railway owing to deficient waggon stock, &c.
97 to 101	- - - - -	- - - - -	Statements regarding the famine districts in the Deccan and Southern Mahratta country called for by Government of India.
102	Secretary to Government of India.	Nov. 30, 1876 -	Reviewing statements furnished by Bombay, and calling for further information on certain points.
103	Public Works Secretary, Bombay.	Nov. 30, 1876 -	Outlay up to 31st March probably 54 lakhs; from 1st April to 31st October 86 lakhs.
103	SECRETARY OF STATE	Jan. 5, 1877, No. 4.	IN REPLY TO DESPATCH OF DEC. 1, 1876.
104	GOVERNMENT OF INDIA	Dec. 8, 1876, No. 32.	ESTIMATES OF LOSS OF REVENUE AND EXPENDITURE: MADRAS, 2 CRORES 32 LAKHS; BOMBAY, 2 CRORES 6 LAKHS; TOTAL, 4,380,000 <i>l</i> . ON MADRAS RAILWAY FOOD GRAINS TO HAVE PREFERENCE OVER OTHER GOODS. INFLUX OF PEOPLE FROM NIZAM'S TERRITORIES.
105	Secretary to Government of Madras.	Nov. 24, 1876 -	Estimate of loss of revenue from famine.
105	Board of Revenue, Madras.	Dec. 1, 1876 -	Revised estimate, showing loss and expenditure.
105	Accountant General, Bombay.	Nov. 28, 1876 -	Revised estimate, showing loss of revenue for Bombay.
107	Secretary to Government of Bombay.	Nov. 30, 1876 -	Estimate of expenditure for Bombay.
108	Governor, Madras -	Dec. 1, 1876 -	Telegram. Railway being unequal to grain traffic, grain to have preference over other goods.
108	President in Council, Calcutta.	Dec. 2, 1876 -	Telegram, approving foregoing.

Page.	From.	Date.	Subject.
108	Secretary to Government of Madras.	Dec. 5, 1876 -	<i>Telegram.</i> Influx of people from Nizam's territories.
108	Secretary to Government of India.	Dec. 8, 1876 -	Referring to estimate of loss to State (p. 105) ; calls for further explanations.
109	GOVERNMENT OF INDIA	Dec. 15, 1876, No. 33.	VIEWS OF GOVERNMENT OF INDIA ON EXCEPTION TAKEN BY BOMBAY GOVERNMENT TO INTERFERENCE WITH SCHEME OF RELIEF WORKS. REASONS OF MADRAS GOVERNMENT FOR PURCHASE OF GRAIN APPEAR UNSATISFACTORY.
110	Secretary to Government of Bombay.	Nov. 27, 1876 -	Defends original programme of relief works, and states that if Government of India withdraw their confidence in Bombay Government, the latter will do their best not to exceed any specified outlay which the Government of India may name.
115	Secretary to Government of Bombay.	Dec. 8, 1876 -	Explanation.
116	Secretary to Government of India.	Dec. 15, 1876 -	Replying to letters of Bombay Government (pp. 110, 115) on subject of scheme of relief works.
119	Secretary to Government of Madras.	Nov. 30, 1876 -	Stating reasons for purchase of grain.
120	Governor, Madras -	Dec. 12, 1876 -	<i>Telegram,</i> urgently requesting permission to make further purchase of grain.
120	Sir A. Arbuthnot -	Dec. 13, 1876 -	Cannot sanction foregoing request. Better run risk of high payment in local markets than occur immediate heavy penalty.
120	Secretary to Government of India.	Dec. 15, 1876 -	Requesting fuller information from Madras as to distressed districts.
121	SECRETARY OF STATE	Jan. 12, 1877, No. 6.	REVIEWING CONDITIONS AND PROSPECTS OF DISTRESSED DISTRICTS, AND MEASURES TAKEN TO AFFORD RELIEF. WIDEST DISCRETION IN ALL ADMINISTRATIVE DETAILS LEFT TO GOVERNMENT OF INDIA. MISSION OF SIR R. TEMPLE TO MADRAS APPROVED. RESERVES OPINION ON DIFFERENCE OF OPINION BETWEEN GOVERNMENTS OF INDIA AND BOMBAY AS TO EXPENDITURE ON RELIEF WORKS. THE PURCHASE OF GRAIN BY MADRAS GOVERNMENT.

THE FAMINE DISTRICTS

CORRESPONDENCE.

No. 13 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Simla, 31st July.

1. We have the honour to forward, for your Lordship's information, copies of the correspondence with the Government of Madras noted on the margin, on the subject of the agricultural prospects in the Bellary, Cuddapah, South Arcot and North Arcot Districts, consequent on the failure of rain in those districts.

Telegram to the Government of Madras, dated the 22nd January 1876.
From the Government of Madras, No. 95, dated the 24th January 1876, and enclosures.
To ditto, ditto, No. 89, dated the 5th February 1876.
From ditto, ditto, No. 900, dated the 4th July 1876.

We have the honour to be, &c.

(Signed) LYTTON, &c.

Telegram No. 52, Calcutta, 22nd January 1876.

From the UNDER SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF MADRAS.

Your weekly telegram of state of season for week ending 20th January implies a very sudden change in prospects. Please report facts fully by letter, stating probable amount of remissions, localities affected, and any other important points.

No. 95. From the SECRETARY TO THE GOVERNMENT OF MADRAS to the SECRETARY TO THE GOVERNMENT OF INDIA.

24th January 1876.

With reference to your telegram of 22nd instant, I am directed to forward the Proceedings of Government embodying the reports which have reached them from the Collectors of the Bellary, Cuddapah, South Arcot, and North Arcot districts on the agricultural prospects in those districts consequent on the failure of rain.

I have, &c.

No. 117. Proceedings of the Board of Revenue, dated 29th October 1875, No. 3,010.

From the COLLECTOR OF BELLARY to the ACTING SECRETARY TO THE BOARD OF REVENUE, dated 26th October 1875, No. 432.

With reference to the Proceedings of the Board, No. 2,828, dated 9th instant, and to the Order of Government, No. 1,496, dated the 13th instant, I have the honour to state that the scheme of works to be undertaken in the event the distress continues are—

Opening out a road from Humpasagar to Hollal *via* Huvinhadgally.

Do. do. Oojinny *via* Kottur and Ittigy to Soovainhully on the Toongabhadra.

2. I was of opinion that it would be better to mass the labour upon one or two main lines of communication than to commence petty relief works in many localities.

3. The District Engineer agreed with me, but the Deputy Collector thinks otherwise, and there is no doubt that his remarks are deserving of consideration.

4. I request, therefore, that I may be allowed discretion, if the necessity arises, of commencing work in villages in the repair of roads, tanks, &c., independently of the Department of Public Works. I will keep the Board informed of all that is being done.

5. At present the District Engineer estimates that Rs. 12,000, in addition to the Rs. 3,000 already given by the Circle Board, will be required, and I request that that sum may be immediately granted. I request that intimation of the grant may be given by telegraph.

6. I enclose copies of correspondence which has passed on the subject. I am glad to be able to report a fall of rain in the west on the 22nd instant. I hope we may have more.

Enclosure No. 1.

2. The Collector of Bellary has selected two roads on which expenditure should be incurred in order to afford relief to the distressed population in the west of the district, and requests that Rs. 12,000 may at once be placed at his disposal. The lines of road apparently include those for which Rs. 3,000 have already been allotted by the Local Fund Board.

3. The Board believe that heavy rain has fallen in the tract in question, and trust that no special measures will be necessary, but they have not yet received report from the Collector, and they recommend that he be authorised by telegraph to spend the sum asked for if necessary.

4. The Board do not agree with the Collector in his opinion that it is better to concentrate labour. For relief works to be efficient for this purpose, it is necessary that they should be selected near the homes of the distressed population, so that men, women, and children may receive employment and be enabled to earn subsistence. Much, however, must be left to the discretion of the local officers.

No. 118. Order thereon, 9th November 1875, No. 1,607.

RECORDED. It is observed that a telegram from collector, Bellary, dated 29th ultimo, states that rain has fallen generally, and that the ryots in the western taluqs have commenced to cultivate.

No. 251. Proceedings of the Board of Revenue, dated 16th November 1875, No. 3,125.

LETTER from the COLLECTOR OF BELLARY to the ACTING SECRETARY TO THE BOARD OF REVENUE, dated 10th November 1875, No. 464.

I have the honour, with reference to the Proceedings of the Board, No. 2,967, dated the 26th ultimo, to state that I have called upon the District Engineer to state what works are actually in hand.

2. I am myself about to visit the western part of the district, so I shall be able to report more fully after personal inspection.

3. In the meantime it is evident from the letter from the Deputy Collector of the division (copy of which is herewith enclosed) that distress is alleviated for the present, but, as no wet cultivation is in progress or expected to be undertaken in those taluqs, I am afraid that, eventually, work will have to be found for the poorer classes till the next cultivation season comes round.

Enclosure No. 1.

From the DEPUTY COLLECTOR to the COLLECTOR OF BELLARY, dated Hospett, 6th November 1875, No. 272.

With reference to my letter of the 20th August last, No. 204, reporting on the insufficiency of rain and cultivation in the taluqs of my division, I have the honour to report the present state of the taluqs, as some rain has fallen since my first report.

2. I beg to annex a memorandum showing the cultivation of the land in the taluqs to the end of October 1875:—

Taluqs.	Area cultivated up to the end of October 1874.	Area cultivated up to the end of October 1875.	Decrease.	Rainfall in July, August, September, and October 1874.	Rainfall in July, August, September, and October 1875.
	Acres.	Acres.	Acres.	in oz.	in oz.
Hurpanhally	129,845	121,216	8,629	22 2 $\frac{1}{2}$	9 2 $\frac{1}{2}$
Hudgally	172,995	165,150	7,845	26 3	11 1 $\frac{1}{2}$
Kudlighi	121,148	83,076	38,072	24 8 $\frac{1}{2}$	15 1 $\frac{1}{2}$

	Sep.	Oct.
Hurpanhally	2 9 $\frac{3}{4}$	1 4
Hudgally	4 1	2 6 $\frac{3}{4}$
Kudlighi	7 6	1 9 $\frac{3}{4}$

3. The marginal memorandum shows the rain that has fallen in the Cusbah stations of the taluqs during the last two months.

4. I beg to annex a memorandum showing the rate at which Jonna (Cholum) was sold at the end of October last year and this year:—

	1874. Seers.	1875. Seers.
Hurpanhally	48 10	18 10
Hudgally	35 0	19 20
Kudlighi	33 3	19 0

5. As rain has fallen at the end of October, when the Jonna crop was ready to die for want of rain, several fields of Jonna produced the grain, which has been the cause for grain being brought to the fairs, while it was difficult to get grain in the middle of the month. The fact of the rain of this year being one half of that of last year shows that Jonna crop cannot be abundant for this year.

6. As tanks have received no water I think that there will be no wet crop in this year.

7. It is my humble opinion that poor coolies and poor ryots will have cultivation work, such as cutting Jonna produce, &c., for one month more, and that they will have no work afterwards, as there is no paddy harvest this year, and that measures will have then to be taken to provide work for the poor men.

Submitted for the information of Government.

2. The collector should make arrangements for opening the works of relief as soon as ever the want of employment is clearly shown to exist.

No. 252. Order thereon, 22nd November 1875, No. 1,672.

RECORDED.

2. The Collector will be directed to keep the Board and Government regularly and fully informed of the state of the district.

No. 227. Proceedings of the Board of Revenue, dated 20th December 1875, No. 3,385:—

Letter from the COLLECTOR OF BELLARY, to the ACTING SECRETARY TO THE BOARD OF REVENUE, dated Daroji, 14 December 1875, No. 503.

In continuation of my letter, No. 464, dated the 10th ultimo, embodied in the Proceedings of the Board, No. 3,125, dated the 16th idem, and in G.O., Revenue Department, No. 1,672, dated the 22nd idem, I have the honour to report that during the month of November I traversed a great portion of the taluq of Hadgally and part of Harpanhally, those in which distress had been reported by the Deputy Collector as most severe.

2. In the first-named taluq the villages mentioned in the margin were said to be the worst off, but I found that almost all the lands, even in them, had been cultivated and sown for the cold weather crop. The crops will be poor, no doubt, but still there will be some produce. The first or wet-weather crop, consisting chiefly of yellow cholum, was, generally speaking, a failure. The coming crop consists of white cholum, cotton, &c. The tanks were very generally dry, or else very low ;

there will, therefore, be hardly any wet cultivation. Many of the above-mentioned villages, however, produce only dry crop.

3. In Harpanhally the villages as named in the margin are reported to be the worst off, but here again the lands are nearly all sown for the second or cold-weather crop, which may be expected to produce something.

4. In the Kudlighi Taluq alone is there any great decrease in the area cultivated as compared with last year (*vide* extract annexed), but I have no reason to believe that the condition of this

taluk is worse than that of the other two.

5. The truth is that, when the rain held off so long, a panic arose in the market, and for a week or two grain was sold at really famine prices ; a rupee bought only twelve seers of cholum.

6. The fall of rain in October, slight though it was, sufficed to allay this panic, and now cholum, the food of the masses, is to be had everywhere, though at a heavy price compared to those usually obtaining.

7. I annex a memorandum showing the price as compared with that of last year.

8. No rain is expected now, and if it did fall it would hardly benefit the standing crops.

9. As regards relief works, two have been put in hand ; viz., the road from Oojinny *via* Kottoor and Ittigay to Soovainhally on the Dharwar Road, near the Toongabhadra, and that from Hampasagar to Hollal *via* Hadgally.

10. The range officer, however, reports that he cannot get as many coolies as he wants for the work at present. The greatest number at any one time employed in one taluk was 652 ; this was in Harpanhally. The range officer is anxious to get the roads marked out. He would then be able, upon emergency, to employ any number of men upon earthwork or digging gravel in particular places.

11. The small allotment made by the Local Fund Board of the Bellary Circle, Rs. 3,000, will soon be expended, and moreover it is not available for Harpanhally, where the greatest number of labourers presented themselves.

12. I request, therefore, that the sum asked for by me in my letter, No. 432, dated the 26th October last, and which the Board, in their Proceedings, No. 3,010, of the 29th idem, requested the Government to sanction, may be placed at my disposal, as there is no doubt that in the course of a month or so, when the crops have been cut ("the prices continuing high"), the means of obtaining subsistence will be difficult. Labour should then be provided to enable the people to earn wages.

Enclosure No. 1.—Memorandum of Cultivated Area.

Submitted for the information of Government.

2. With reference to the papers recorded in G.O., dated 9th November 1875, No. 1,607, the Board request that the sum asked for by the collector ; viz., Rs. 12,000, may be placed at his disposal by telegraph.

No. 228. ORDER thereon, 21st December 1875, No. 1,833.

Sanctioned Rs. 12,000, by telegram.

No. 66. Proceedings of the Board of Revenue, dated 21st December 1875, No. 3,391.

LETTER from the COLLECTOR OF CUDDAPAH to the ACTING SECRETARY TO THE BOARD OF REVENUE, dated Cuddapah, 11th December 1875, No. 263.

I have the honour to report, for the information of the Board, on the agricultural prospects in this district.

2. The north-east monsoon, upon which this district is mainly dependent for water, promised at first to give the usual supply, but eventually the rain ceased and tanks throughout the district received little or no water. Wet cultivation is almost everywhere at a standstill, except where wells can supplement the supply. Wet crops are to be seen growing, but at present their prospects are very poor. Wet ayacuts under river channels are not as badly off, except in the Sidhout Taluq, as the lands under tanks. In the Pullampett Taluq alone, where wet cultivation under tanks and channels is very extensive, the Tahsildar has estimated that remissions amounting to Rs. 30,000 will be necessary this year. In the sub-division the sub-collector fears the remission will amount to a lakh of rupees, that is in four taluqs comprising the division.

3. Dry crops are not as they should be by any means, but they are not so badly off as the wet crops. The early dry crops, such as sudza and oil-seeds had rain to assist them, but not as

much as they required. Jonna and horse-gram sown later in the season will entirely be lost unless some rain falls hereafter. This does not apply to the black cotton taluqs, where cotton and jonna seem to be in very fair condition.

4. I do not in the least apprehend any distress. The season has been so far a bad one, and there will be a loss of revenue if rain does not fall. As I write I am glad to say that there are some indications of rain.

5. Pasture is sufficient. Prices are everywhere steadily rising. Health is good, except as regards fever, which is rather severe. Cholera has almost disappeared.

6. Floods apparently have less effect on this district than a drought. If Government would treat wet wells more liberally the effects of a dry season would not be so severely felt by the ryot. I have written before on this subject, but I regret to say that my views did not meet with the approval of the Board.

7. To relieve the ryots I have directed that kists of wet lands are to be collected according to the extent of cultivation, and not according to the demand of the past year. Dry kists will, of course, be collected as usual. I trust that the Board will approve of this arrangement.

The Board approve the Collector's proposal in the last paragraph of his letter.

2. They request that a weekly report may be furnished showing the condition of prices of food grains in the principal markets as compared with the corresponding period of the previous year.

No. 67. ORDER thereon, 10th January 1876, No. 32.

RECORDED. The Government desire to have the views of the Collector, the Director of Revenue Settlements, and the Board of Revenue, placed before them in greater detail regarding the question raised by the Collector (paragraph 6).

2. The previous correspondence was not specially communicated to Government, but is found in Board's Proceedings, No. 2,355, dated 22nd August 1874.

No. 111. Proceedings of the Board of Revenue, dated 11th January 1876, No. 68.

LETTER from the COLLECTOR OF SOUTH ARCOT, to the ACTING SECRETARY TO THE BOARD OF REVENUE, dated Cuddalore, 6th January 1876, No. 1.

I regret to report that, owing to the want of rain, the prospects of the harvest are bad.

2. For the most part, so far as dry crops are concerned, I do not think there will be any need for remissions; but in the northern and eastern parts of Tindivanam Taluq there seems to be a probability that, unless timely rain falls, such remissions may be needed. Mr. Gibson writes to me demi-officially from Tindivanam:—

"January 5th.—The season here is turning out worse than my hopes. The change for the worse since the day I left for Christmas is most marked. 'Wet' crops, except where kept alive by pecotahs, are withering. No dew worth mentioning, and dry crops suffering, having been late sown. I fear very large remissions will be necessary on almost the whole irrigated ayacut of the northern and eastern parts of *this* taluq at least; and, I fear, we may have to apply for remissions on punjah also. It seems, in this *corner* at any rate, to be a worse season than that of 1873-74, when such remissions were freely granted."

3. I have asked him to report officially, and to estimate to what extent he thinks punjah remissions may be required.

4. As to wet crops, I fear that over a great part of the district, except where there is anicut-channel or river-channel irrigation, punjah remissions may have to be given. Applications are pouring in in great numbers daily.

5. I will report further at the end of a week or ten days.

Submitted for the information of Government. The Board await Mr. Garstin's further report.

No. 112. ORDER thereon, 13th January 1876, No. 55.

The Government infer from the Collector's silence on the point that there is no reason to anticipate actual distress, but they desire that the earliest intimation of probable distress be submitted.

No. 171. Proceedings of the Board of Revenue, dated 18th January 1876.

LETTER from the COLLECTOR OF NORTH ARCOT, to ACTING SECRETARY TO THE BOARD OF REVENUE, dated 10th January 1876, No. 10.

I regret to have to report, for the information of the Board of Revenue, the disastrous state of the season of the current revenue-year. The north-east monsoon has proved a complete failure, while the south-west monsoon was by no means encouraging.

2. The average rain-fall throughout the district from April to December last is returned to be 23 inches, whereas that during the corresponding period of the preceding year was no less than 50 inches, or more than double the former quantity.

3. The Palar and other rivers received no freshes whatever during the past season, and almost all the tanks in the district are now completely dry. There is not a drop of water in the Cauveripauk tank, which is directly fed from the Palar Anicut, a fact unknown for the last 30 years. The spring channels everywhere are fast losing their supply.

4. In consequence a large extent of land, both dry and wet, has been left waste, and where any cultivation has been made the standing crops are perishing for want of water. The Cultivation

Return up to end of November last shows that there has been under the heads wet and dry a decrease of acres 23,055, assessed at Rs. 85,760, as shown below :—

Description of Land.	1874-75.		1875-76.		Decrease.	
	Extent.	Assessment.	Extent.	Assessment.	Extent.	Assessment.
	Acres.	Rs.	Acres.	Rs.	Acres.	Rs.
Dry	345,693	520,985	335,112	504,532	10,581	16,453
Wet	168,872	993,712	156,398	924,405	12,474	69,307
Total	514,565	1,514,697	491,510	1,428,937	23,055	85,760

5. The out-turn of the early dry crops has been tolerable, and horse-gram is expected to yield a good harvest. The result of the harvest of the early wet crops has been much below the average.

6. I expect that a large amount of remissions, especially on account of wet *Shavi*, will have to be granted at the approaching annual settlement. A very large number of applications for remission has been received, and the fields are now being inspected and reported on by the taluq officers. I fear that in consequence, the beriz of the current fasli (1285) will show a decrease of about three lakhs of rupees under land revenue as compared with that of the past fasli.

7. I purposely delayed the submission of this unpleasant report, in the hope that there might, even at the eleventh hour, be a fall of rain, and being unwilling needlessly to raise the alarm. Having, however, been disappointed in my hopes, I now regret to have to apprise the Board of the disastrous state of the present season, and the consequent evil effect it will eventually have on the Government revenue, as well as on the prices of food-grains of every description. The stocks of such grain are, I have reason to believe, considerable; so that I do not anticipate at present more than inconvenience to the poorer classes, owing to the prevalence of high prices of grain. I shall narrowly watch the progress of events, and will keep the Board fully informed; and, if need be, suggest the commencement of relief works. The misfortune that we can most certainly predict is a water famine, whereby cattle throughout the district will perish in large numbers. Already I have heard that the inhabitants of villages close to the Cauveripauk tank (which ought now to have a year's supply of water in it) are sending several miles to fetch water for drinking purposes.

Submitted for the information of Government.

2. The Collector should at once, in communication with the District Engineer, prepare a scheme of works to be undertaken in the event of its being necessary to provide employment for the poorer classes. He should report how far the ordinary imperial local fund works will meet this object, and whether there is any balance of local funds in hand available for more extended works.

No. 172. ORDER thereon, 22nd January 1876, No. 86.

Communicated to the Accountant-General. The Board's instruction, are approved. Should relief works prove necessary, the Collector should consider whether improvements to wells cannot beneficially be undertaken as was done in Bellary in 1868.

2. The Collector will be careful to warn Government of the earliest indication of distress.

No. 89, 5th February 1876.

From the SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF MADRAS.

I am directed to acknowledge the receipt of your letter, No. 95, dated the 24th ultimo, forwarding the Proceedings of the Government of Madras, embodying the reports from the Collectors of Bellary, Cuddapah, South Arcot, and North Arcot on the agricultural prospects in those districts consequent on the failure of rain, and to request that the Government of India may be favoured with a condensed statement of the views of the Government of Madras as to the prospects of the districts in question as soon as they are in a position to form definite conclusions on the subject.

No. 900, 4th July 1876.

From the SECRETARY TO THE GOVERNMENT OF FORT ST. GEORGE to the SECRETARY TO THE GOVERNMENT OF INDIA.

With reference to your letter, dated 5th February 1876, No. 89, calling for a condensed statement of the views of this Government as to the prospects of the districts named in the margin, as soon as definite conclusions might be formed on the subject, I am directed to report as follows :—

2. *Bellary*.—The distress arising from the failure of rain was confined to the southern and a part of the western portion of the district and parts of the Gooty and Raidrug Taluks. The decrease in the cultivated area was 127,008 acres, and the out-turn of crops raised in the affected taluks ranged from one-fourth to three-fourths of the usual quantity. The "dry" cultivation suffered most severely; seed sown in a considerable tract not having

germinated; and where it did germinate, the crops withered away soon after. A large extent of "dry" land was also left waste, and it was found necessary to grant remissions of assessment to the extent of Rs. 103,799. The absence of fodder is particularly felt in the Southern Division; scarcity of water is confined to a few villages.

The prices ruling are not excessively high in the affected localities, and the condition of the labouring classes is not such as to call for the interference of the State. Some public works are, however, taken in hand, and being proceeded with in the Southern and Western Divisions.

3. *Cuddapah*.—The area under "dry" cultivation has not fallen below the usual standard; but that under "wet" shows a diminution of 76,888 acres as compared with the extent cultivated in an ordinary year. The yield of the crops has not fallen below the average of former years, and remissions of assessment were found necessary only in the case of lands left waste for want of water. These amounted to Rs. 177,100*. Pasture is getting scarce, but want of drinking water is not yet felt, and the condition of the labouring classes is described as good. The prices are steady, except in the subdivision where they show an upward tendency owing to large exports of grain into Mysore.

4. *North Arcot*.—The decrease in the area of cultivation was 49,634 acres, and the estimated out-turn of the crops is from between 30 to 60 per cent. of the ordinary yield. The amount of the remissions is expected to aggregate Rs. 150,000; a general want of pasturage and scarcity of drinking water appear to have been felt for some time; but the Collector now reports a good fall of rain in various parts of the district, and the prospects seem, on the whole, to be not yet unfavourable.

5. *South Arcot*.—The worst feature of the past adverse season in this district is stated to be scarcity of drinking water, which was much felt, and the want of pasturage for the cattle. The recent fall of rain would, however, appear to have to some extent mitigated these evils, and the Local Fund Boards have been laying out funds in sinking wells where they are chiefly wanted.

There has been a decrease of 63,665 acres in the area cultivated; and about 87 per cent. of this area is estimated to have yielded a harvest. The average yield of the "wet" crops range from 50 to 75 per cent. of an ordinary harvest, and that of "dry" was about one half. The total remissions are estimated to amount to Rs. 280,000, of which a lakh and twelve thousand appertain to the single taluk of Tindivanam, which is the worst in the district, both as regards poverty of soil and absence of permanent sources of irrigation. The markets are well supplied, and exports of grain from Porto Novo and Cuddalore are reported to have exceeded those of last year by 3,000 cwts. In regard to the future prospects of the district, it is alleged that a great deal depends on the expected rains proving favourable for the kambu, which forms the staple dry crop, and on which a large portion of the population of the district subsists.

6. In conclusion, I am to state that further slight falls of rain have been reported from all these districts; but that as yet nothing certain can be predicted of the future of the coming season. Every precaution is being taken for guarding against the serious effects which a famine may produce if the current official year prove indifferent likewise, and relief works have been proposed and sanctioned for execution in the event of the necessity for providing labour to the poorer classes becoming imminent.

DESPATCH from the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA.

No. 28, 5th October 1876.

1. The Despatch of your Excellency in Council, dated 31st July, No. 13 of 1876, forwarding copies of a correspondence with the Government of Madras on the subject of the agricultural prospects in the Bellary, Cuddapah, South Arcot, and North Arcot Districts, consequent on the failure of rain in those divisions, has been considered by me in Council.

2. There has been in all the four districts a large diminution in the area of cultivation, and a necessity has consequently arisen for the grant of considerable remissions. In the Districts of Bellary, Cuddapah, and North Arcot the condition of the people forms the subject of favourable report, while in South Arcot the markets are stated to be well supplied, and the prospects of the district to be in a great measure dependent on the effect of the expected rains on the "Kambu," the staple dry crop on which a large portion of the population subsists.

3. The Government of Madras would appear to be regarding the condition of the districts with vigilant attention, and to be prepared to establish relief works should necessity arise for the provision of labour for the poorer classes.

4. I desire that I may be kept carefully informed of the progress of events in these districts.

(Signed) to SALISBURY.

No. 21 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Simla, 19th October.

1. In continuation of our telegram of this date on the subject of the scarcity which has arisen in certain parts of the Bombay Presidency, we beg to forward, for your Lordship's information, copies (as per margin) of the communications which have passed between the Governments of India and Bombay.

Letter from Government of Bombay, No. 5,243, dated the 13th September 1876, with accompaniments.

Letter to ditto, No. 350, dated the 29th September 1876.

Telegram from Governor of Bombay, dated the 3rd October 1876.

Ditto to ditto, dated the 4th October 1876.

Ditto from ditto, dated the 12th October 1876.

Ditto to ditto, dated the 16th October 1876.

Ditto from ditto, dated the 17th October 1876.

2. The communication from Bombay, dated the 13th ultimo, was the first official intimation which we received that the want of rain, which the weekly reports has indicated as being considerable in some parts of that Presidency, was likely to lead to serious distress. As only two talukas were named as requiring relief, we did not consider it necessary, in view of your Lordship's instructions regarding the localization of famine charges, to do more than refer the Bombay Government to the provision made in the provincial assignments for such emergencies, adding, however, that should the situation assume a graver aspect, we looked for timely representation of the facts, with a view to a decision as to the incidence of any further relief expenditure which might be required.

3. The telegram from Bombay of October 3rd, which pressed for a decision on a request, which had been intermediately received in the Department of Public Works, for sanction to the immediate commencement of the chord line to connect the south-east branch of the Great Indian Peninsula Railway at Dhond with the north-east branch at Munmar, was considered by us in Council. We were of opinion that we should adhere in this case to the principle which was acted on in regard to the scarcity in Behar at the end of last year, that it is not advisable that the Government should hastily commit itself to large schemes of expenditure under the pressure of an apprehended scarcity, which schemes may involve an outlay far in excess of the requirements of the scarcity, and for an object which, in a financial point of view, may not be the most useful object to which State funds might be applied. While intimating this decision to the Bombay Government, we at the same time suggested that local relief works and relief operations might be started, and indicated that the incidence of whatever expenditure might be necessary would be subsequently considered.

4. On the 13th instant we received a further telegram from the Government of Bombay, in which sanction for the commencement of the railway was again urgently solicited, and from which it further appeared that our previous communications had not been understood as conveying the permission which we intended for expenditure in excess of the resources of provincial funds, in the event of such being found to be indispensable. Our reply of the 16th instant has made the matter plain, as we are glad to learn from the further telegram from Bombay of the following day.

We have the honour to be, &c.

(Signed) H. W. NORMAN, &c.

No. 5,243, 13th September 1876.

From the ACTING CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY to the SECRETARY to the GOVERNMENT OF INDIA.

I am directed to forward the accompanying copies of the papers noted in the margin, relative to the insufficiency of rain in the Poona District, and to express the confidence of his Excellency the Governor in Council that the Government of India will be prepared to sanction a sufficient expenditure, if it be required, for carrying out relief operations.

2. This Government do not forget that the Secretary of State desires to localize the cost of such relief; but, bearing in mind both the absence of any scheme for giving effect to that view, as well as the enormous outlay lately incurred in Bengal, they feel confident that the comparatively trifling demand which will be made by this Presidency will be readily granted by the Government of India.

No. 74, 28th August 1876.

From the ACTING SECOND ASSISTANT COLLECTOR, POONA, to the ACTING COLLECTOR OF POONA.

I have the honour to report that, in consequence of the very slight fall of rain in the eastern talukas of the district, I made a tour through Bhimthadi and a portion of Indápur.

2. The rainfall up to date is five inches at Pátas, six at Baramatti, and four at Indápur; it has come in two falls, but the interval between was so great that the crops sown at the first fall were withered before the second.

3. The result is that throughout both talukas all the oodeed, mut, moog, and cootly are irretrievably lost, about half the bajree sown is also lost, and the remainder, consisting of that which was sown at the second fall of rain in July, will be gone too unless there is rain within the next week or 10 days.

4. This, of course, does not apply to garden lands, but even these are affected, as the small rainfall both this year and last has very much diminished the quantity of water in the wells, and consequently the notes of many wells can be worked only for half their usual time.

5. The cattle are, of course, suffering much from the want of fodder and are looking very thin.

6. Between Poona and Loni Kalbhur the crops are good, thence on to Oorulee they are fair, they are tolerable up to Yewut, where the Bhimthadi taluka commences, and from Yewut onwards through Bhimthadi and Indápur, and from Pátas through Soopa and Baramatti up to Dixal, they may almost be said to be non-existent, there being nothing but a few patches of the latter sown bajree, which at the outside may hold out another 10 days without rain.

7. Unless, therefore, we have rain in Bhimthadi and Indápur within the next 10 days the entire kharif crop, excepting in garden lands, will be lost, and about three fourths of it are lost already.

8. Matters are, however, not quite so serious as this fact might lead one to suppose. In Bhimthadi and Indápur they never do have both a good kharif and rabi crop, so that if the rabi is good the people will be no worse off than usual.

9. Of course if rain does not fall by the middle of September, the prospects of the rabi crop will be very doubtful, and matters will then become very serious indeed.

10. On Saturday the 26th there was a slight drizzle at Pátas and a smart shower at Soopa, and on Saturday a little rain (a few drops) fell at Baramatti and Indápur, the weather looked rainy, and I think there is ground for hoping that heavy rain will fall in the two talukas during this week.

11. I have told the Bhimthadi Mamlatdar to commence his local fund works on September 1st if rain has not fallen, and I have advised the Indápur Mamlatdar, Indápur not being in my charge, to do the same.

12. The amount which can be expended by the Bhimthadi Mamlatdar out of local funds during September is about Rs. 3,000. The executive engineer has also about Rs. 3,000 of local fund money to spend on works, and there is also the repairing of the Sholapur road.

13. I would propose, therefore, that the executive engineer be requested to commence his local fund works early in September if rain does not fall by the 1st.

14. These works will give employment to the ordinary labouring population, and carry them through September; but if rain does not fall by the 15th or 20th it will be absolutely necessary for Government to do something.

15. I have ascertained that there is, at the least, a months supply of grain in Bhimthadi, and three months in Indápur, probably much more in both talukas, but in any case it will never be necessary for Government to send grain there, provided the people have money to buy it. The railroad passes through both talukas, and there are good roads from the stations to most of the market towns.

16. At present grain is at 16 seers the rupee as compared with 24 seers last June. If, unhappily, there should be no rain in September, nearly the whole population of the talukas will be dependent for employment on Government, and there is not the slightest difficulty about finding the work, provided funds are available.

17. The population of Bhimthadi is 100,000, and that of Indápur 68,000, and in case of a regular famine I estimate that it will be necessary for Government to find employment for 15,000 men and 10,000 women in Bhimthadi, and 10,000 men and 7,000 women in Indápur. The wages would have to be about two annas a day per man and one anna a woman. This is, of course, an extreme case, as it is exceedingly improbable that the rabi crops in the whole of both talukas will fail.

18. As regards suitable works in case of a famine, there are 90 villages in Bhimthadi and 60 in Indápur which will be very much benefited by being cleared of prickly pear, and the average cost of clearing will be about Rs. 500 a village. Then, in Bhimthadi, a road is much wanted from Baramatti to Sangwi, the cost of which would be about Rs. 4,000. A road from Baramatti to Nimboot and one from Baramatti to Soopa would also prove very useful, and would cost about Rs. 10,000 each if done well. Most of the roads too in the taluka are susceptible of improvements, especially the road from Pátas to Soopa, and that from Pátas to Baramatti, near Rotee and Wassoondi. Then, again, there are tanks at Wudanee and Bori Bial which might be cleared out with advantage, and at Pátas there is a nulla, across which if a dam be thrown, at a cost of about Rs. 3,000, an abundant supply of good water will be obtained close to the town.

19. In Indápur, a road from the town of Indápur through Bhewreh to the Neera, costing about Rs. 10,000, would be of very great value, and has been thought of for a long time by the Local Funds Committee; a road too is required from the town of Indápur to Soogaon, and would cost about Rs. 2,000.

20. In all cases I have estimated for good roads at about Rs. 500 a mile, as half-finished roads would become in the future a very heavy burden on the local funds.

21. Very little help is to be expected from the Inamdars, the greater number of whom are involved in debt; but there are three departments which could render assistance,—the railway, the forest, and the canal.

22. It is probable that the railway authorities could find a good deal of occupation for labourers along the line in the shape of lopping trees, cutting down prickly pear, repairing walls, &c., &c., and the Forest Department might do a good deal in the way of felling trees, fencing plantations, and clearing them of prickly pear.

23. But the Irrigation Department is the one which can give us most help. The line of the canal is, I believe, finally settled as far as Yewut, and the department might be requested to push on the work as rapidly as possible; this will employ a large number of heads, and the department will gain from the fact of wages being much cheaper than they are likely to be again. At present they are two-thirds the usual rates, and will, of course, fall still further if there is no rain. Probably the line of the canal from Yewut to Wurund could be finally determined by December.

24. To summarise this long report I consider that in Bhimthadi and Indápur two thirds of the kharif crop are gone, and the remainder stands a fair chance of being lost. Should this prove to be the case, the local fund and provincial works, together with any aid the Railway, Forest, and Irrigation Departments may be able to give us, will keep the labouring class from starving through September, and if heavy rain falls during that month the rabi crop will probably be secure, and no special steps need be taken. If, however, there is little or no rain in September, it will be necessary to obtain funds from Government, and also to urge the three departments named above to help us to the best of their ability.

25. If there is no rain by the first week in September, it will, I think, be prudent to obtain provisional sanction for the expenditure of a lakh of rupees.

26. Should matters not improve, I propose going out into the districts for good at the end of September.

No. 2,016, 4th September 1876.

MEMORANDUM by the ACTING COLLECTOR OF POONA.

Forwarded to the Revenue Commissioner, Southern Division. Up to the end of last month the total rainfall registered was 5·44 at Pátas, 6·21 at Baramatti, and 4·32 at Indápur.

2. It is therefore evident that the rain which fell at Poona last week did not extend beyond the Haveli taluka, and that in Bhimthadi and Indápur the prospects are not more favourable than they were at the date of Mr. Macpherson's report.

3. From information I have received from the Mamlatdar of Indápur and the Chief Constable of Bhimthadi, I have no doubt that the poorer classes have difficulty in procuring food, and that in some cases they have been compelled to part with their cooking-pots and other articles in order to procure the necessities of life. There is, however, plenty of grain in the country, and if there should be an absolute failure of crops in the eastern districts, I do not think it would be necessary for Government to import grain.

4. As I write there is every appearance of rain, and if we should be blessed with a good fall before the 20th of this month we may still anticipate a fair rabi harvest, so that as yet I do not consider matters are by any means hopeless.

5. The local fund works in Bhimthadi and Indápur have already been started, and will give some relief. The sums available are, however, small, and the relief thus afforded will be temporary.

6. I agree with Mr. Macpherson that unless there is a sufficient fall of rain before the end of this month, it will be absolutely necessary to commence works on a much larger scale than the Local Fund Department can undertake.

7. Of the works enumerated by Mr. Macpherson, I would recommend that the following be first commenced:—

Bhimthadi Taluka.

Road from Soopa to Baramatti, probable cost Rs. 10,000. This road passes through the very centre of taluka, and would be within easy reach of most of the distressed villages.

The roads from Pátas to Supa and Pátas to Barámatti both require improvement, and Rs. 5,000 might be expended on these two works.

Many of the villages are surrounded by prickly pear, and Rs. 5,000 expended in the villages where the distress is greatest would do much good.

Indápur Taluka.

Road from Indápur to the Neera passing through Bhoweeh Rs. 10,000. This would be a most useful road, and passes through the worst part of the taluka.

Road from the ferry at Chandgáon to the Sholapur Road at Loni, distance about five miles, Rs. 3,000.

Road from Indápur to Sujáon as recommended by Mr. Macpherson Rs. 2,000.

Rs. 3,000 or Rs. 4,000 might also be expended on prickly pear clearances.

The tanks mentioned by Mr. Macpherson might be cleared out if there is not too much water, but these are works which should be left for the hot weather, if, unfortunately, it should be found necessary to continue the famine works for so long a period.

8. I agree with Mr. Macpherson that the Irrigation Department should be urged to press on the works in connexion with the canal, so as to give employment to as many hands as possible. I doubt if either the Railway or the Forest Department can afford much assistance.

9. Finally, I am of opinion that provisional sanction for the expenditure of at least Rs. 40,000 should be obtained, to be available in case rain does not fall within the next ten days.

No. 2,971, the 6th September 1876.

MEMORANDUM by W. H. HAVELOCK, Esq., REVENUE COMMISSIONER, Southern Division.

With reference to Government memorandum, No. 4,980, dated 31st ultimo, the Revenue Commissioner begs to submit letter, No. 2,016, dated 4th instant, from the Acting Collector of Poona.

2. Mr. Macpherson's report is dated 28th ultimo, and there is no improvement in the position since then; on the contrary, as so many days have elapsed without rain, the probability of any appreciable proportion of the kharif crop in the Bhimthadi and Indápur talukas being saved has become even more remote. It is almost unnecessary to state that the most recent intelligence from Pátas of yesterday's date, which has been furnished by the Collector to the undersigned, announces no rain, and marked restriction of the grain market from anticipation of failure of crops and scarcity of money. This is in accordance with the extreme poverty in some cases mentioned in the Collector's 3rd paragraph.

3. The works recommended by the Collector appear to be judiciously selected to supplement the local fund expenditure already commenced, but which will not go very far. The aggregate amount of Imperial expenditure, for which the Collector requests conditional sanction, is about Rs. 40,000, to be divided in equal proportions between the two talukas of Bhimthadi and Indápur. The Revenue Commissioner begs to support the Collector's recommendation.

4. It will be seen that Mr. Macpherson calculates that, in the event of there being famine of a serious character, the support of the poorest part of the working population in Bhimthadi will require for—

	Per mensem. Rs.
15,000 males	60,000
10,000 females	20,000
	80,000
in the Indápur taluka—	
10,000 males	40,000
7,000 females	14,000
	54,000

or an aggregate of Rs. 134,000 per mensem.

5. It is premature to do more as yet than to take a rough estimate of what expenditure might devolve on Government in case of complete failure of the rabi or second crop; but should the prospect of this very serious contingency supervene, evidently work on a large scale must be provided. The extension of the canal from the Khara Kwásla dam is suggested by the Collector, and the Revenue Commissioner has no doubt that this suggestion will be favourably considered by Government in the Irrigation Department.

6. It is understood that the line of the projected railway from Dhond to meet the North-eastern Branch Extension of the Great Indian Peninsula Railway has been surveyed. The line starts in the Bhimthadi taluka, and skirts for some distance the Sirur taluka of Poona, traversing the Shrigonda, Nagar, and Kopargaon talukas of Ahmednagar. Such a calamity as failure of the rabi, if it does take place, is not likely to be confined to the Poona Collectorate, and expenditure on the projected line in the way of cutting and embankments would, if permissible, be of great service to the inhabitants of Ahmednagar, Poona, and Sholapur.

No. 350, dated Simla, the 29th September 1876.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF BOMBAY.

I am directed to acknowledge the receipt of your letter No. 5,243, dated the 13th instant, forwarding copies of certain papers relating to the scanty fall of rain in the Poona District, and expressing a hope that the Government of India will be prepared to sanction a sufficient expenditure, if it be required, for carrying out relief operations.

2. In reply, I am to state that the Government of India are not prepared at present to pledge themselves to bear the expenditure which may be necessary. Should the pressure which is apprehended be, as it is hoped it will be, only of a local character and circumscribed in extent, any measures of relief which may be required will properly be a charge on provincial funds, in the assignments for which provision has been made for this class of expenditure under the head "Miscellaneous and unforeseen charges." Should the situation unfortunately assume a graver aspect, and actual famine threaten any considerable tract, his Excellency the Governor in Council will doubtless represent matters in time for a decision as to the incidence of relief expenditure to be arrived at by the Government of India.

Telegram, dated the 3rd October 1876.

From GOVERNOR, Bombay, to WORKS, Simla.

I must beg for an instant answer respecting the Dhond and Munmar Railway. The distress is very severe in those districts, and the people are becoming disorderly. Local funds are, it may be said, already exhausted. Government must help, and there is no better work on which employment can be given.

Telegram No. 352, dated the 4th October 1876.

From COMMERCE, Simla, to GOVERNOR, Bombay.

Your telegram of 3rd to Works. Governor-General in Council considers that grounds submitted do not appear sufficient to justify immediate commencement of Dhond and Munmar Railway as a relief work. Local relief works and other relief operations may be started, selecting such works as can be found near the homes of the people, in preference to committing Government to commencement of large projects. Incidence of expenditure will be considered hereafter on principles laid down in this department letter No. 350 of 29th ultimo.

Telegram, dated 12th October 1876.

From GOVERNOR, Bombay, to COMMERCE, Simla.

There has been a long discussion to-day in Council on the measures to be adopted for the relief of the distressed population. The reports are exceedingly bad. All will be forwarded immediately. The small works spoken of in your letter of the 29th have been sanctioned and are nearly done. We are unanimously of opinion that the works on the Dhond and Munmar Railway must be commenced at once. If there is not heavy rain in the course of a few days, the state of affairs will be most serious, and we must be free to deal with them at once. Local resources are virtually exhausted, and we have been compelled to-day, as a temporary expedient, to authorise each of the Collectors of Poona, Ahmednagar, and Sholapur to expend Rs. 25,000 for preserving the lives of those who may be too infirm to work and too poor to buy, as well as for payment of any employed on trifling local works.

Telegram, dated 16th October 1876.

From COMMERCE, Simla, to GOVERNOR, Bombay.

The Government of India regret to learn that the distress in three of your districts is so great, but do not think it right to authorise the commencement of so expensive a work as the railway in question, the expediency of constructing which in preference to other important lines has not yet been determined, merely to meet a temporary, though serious, emergency. Local works of a character to give employment for some months should be organised, the Government providing the necessary funds and leaving the final incidence of the charges to be settled hereafter. The district officers ought to have no great difficulty in organising such works. Your Government are authorised to incur such expenditure in providing work and relief in the distressed localities as you may consider necessary to meet the emergency, but it is not deemed advisable to embark on any large project which will involve the continuance of heavy expenditure after the emergency has ceased. The railway question must be decided on its merits from a financial and political point of view, and is not yet ripe for decision.

Telegram, dated 17th October 1876.

From GOVERNOR, Bombay, to COMMERCE, Simla.

Your telegram of yesterday received. We will do our best to give effect to instructions contained.

No. 22 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Simla, 26th October.

1. In continuation of our Despatch No. 21, dated the 19th instant, and of our telegram of the 25th, of which copy is annexed, we beg to forward, for your Lordship's information, copies (as per margin) of the communications which have since passed between the Governments of India and Bombay on the subject of the scarcity which has arisen in the latter Presidency.
 - Letter from the Government of Bombay, No. 142, C.W. 718, dated the 9th October 1876, with accompaniments.
 - Bombay Government memorandum, dated the 13th October 1876, with accompaniments.
 - Letter from the Bombay Government, No. 5,891, dated the 16th October 1876, with accompaniments.
 - Letter from ditto, No. 5,953, dated the 19th October 1876, with accompaniments.
 - Memorandum by the Hon. T. C. Hope, dated the 21st October 1876.
 - Telegram to the Bombay Government, dated the 22nd October 1876.
 - Telegram to ditto, dated the 23rd October 1876.
 - Letter to ditto, No. 923, dated the 23rd October 1876.
 - Telegram from ditto, dated the 24th October 1876.
 - Letter to ditto, No. 365, dated the 25th October 1876.
 - Telegram to ditto, dated the 25th October 1876.
2. Since we last addressed your Lordship we have received more detailed accounts from Bombay, which disclose, we regret to say, a much more extended area of distress than had at first been supposed. The whole of the nine districts of the Bombay Deccan, containing an area of 54,203 square miles, and a population of about eight millions, and yielding to Government in 1874-75 a realisable land revenue of Rs. 1,39,40,000, and an abkari revenue of about 10 lakhs, may be considered as more or less affected, the eastern talukas and districts, however, being more distressed than the western.

3. The Government of Bombay have, in accordance with the instructions received, been fully utilising all local and provincial resources, but it is now evident that these must be supplemented by considerable Imperial expenditure for both providing work and supplying food to those who cannot work.

4. In selecting works to be started for purposes of relief, we have impressed upon the Local Government the importance of preferring those which can be to a considerable degree completed within the outlay necessary for relief alone, and which will not draw large bodies of men to a distance from their homes.

5. We have approved of the desire of the Bombay Government to invite tenders for the supply of grain for relief purposes, and to abstain from making purchases in the general market on its own behalf, except in the last resort.

6. The importance in a time of famine of strengthening from the first the administrative establishments was markedly recorded in paragraph 11 of the final orders of the Government of India on the Bengal famine, dated 18th February 1875. We have consequently intimated to the Bombay Government our readiness to admit certain increases to the ordinary staff of the affected districts, and to sanction, as a temporary measure, the appointment of an additional Revenue and Police Commissioner on Rs. 3,000 per mensem. The latter measure will relieve the present Commissioner of the Southern Division, whose charge comprises 43,923 square miles, with a population of above seven millions and a half, and a revenue, including excise, of Rs. 155,95,000, by the temporary creation of a new division in the Southern Mahratta country, where the presence of a separate controlling officer appears to be indispensable.

7. We may here express our sense of the promptitude and care with which the Government of Bombay and its officers are dealing with the emergency, and the excellent spirit evinced by the more wealthy or influential members of the Native community. We have every confidence that the Bombay Government will exercise the discretion vested in them so as to prevent loss of life of Her Majesty's subjects, and without wasteful expenditure of public money.

8. In conclusion, we would invite your Lordship's attention to the accompanying telegram* from the Madras Government, informing us of the distress in Kurnool, Cuddapah, and Bellary, and other districts,

* Dated the 24th October 1876.

† Dated the 25th October 1876.

and our reply† thereto. We may add that we have reason to believe that the scarcity extends to Mysore.

We have the honour to be, &c.

(Signed) H. W. NORMAN, &c.

Telegram, dated 25th October 1876.

From PRESIDENT IN COUNCIL, Simla, to the SECRETARY OF STATE, London.

Detailed accounts from Bombays how severe distress over large portion of Khandeish and eight districts of the Deccan. Local and provincial resources being insufficient to provide work and supply food, we have again authorised such further expenditure from Imperial funds as the local Government deem indispensable for relief. We have approved of non-interference with grain trade. In order to afford due supervision for the Southern Mahratta country, we have sanctioned, as a temporary measure, the appointment of a third Revenue Commissioner. The Bombay Government is acting with promptitude and care, and the disposition of wealthy and intelligent classes in support of Government is excellent. Accounts from Madras of the condition of the Kurnool, Cuddapah, and Bellary districts most unfavourable. Local relief works have been started. It is understood that the scarcity extends to Mysore and to some other Madras districts.

No. 142 C.W. 718, dated 9th October 1876.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the GOVERNMENT OF INDIA, Public Works Department.

With reference to the telegrams noted in the margin,* regarding the distress now prevailing

*Telegram—Works, Bombay, to Works, Simla, dated 29th September.

Ditto, Governor, Bombay, to Works, Simla, dated 3rd October.

Ditto, Works, Simla, to Works, Bombay, dated 3rd October.

Ditto, Commerce, Simla, to Works, Bombay, dated 4th October.

in some of the eastern districts of the Presidency in consequence of the failure of the monsoon, I am directed to forward, for the information and consideration of the Government of India, a copy of a letter received from the Collector of Sholapur, which describes the very serious state of matters with which this Government have now to deal in the Sholapur district.

2. Returns, similar in tenor, have been and are being received from the districts of Násik, Khandeish, Ahmednagar, Poona, Kaládgi, and Dharwar, and it may be said that the whole of the eastern parts of the Deccan and the Southern Mahratta

country are threatened with a serious famine. In the parts affected nearly the whole of the monsoon crops have perished; and there have been no later rains to admit of sowing of the rabi.

3. His Excellency in Council has directed the Revenue Commissioner, Southern Division, and the Superintending Engineer, Central Division, at once to proceed to the affected districts to obtain the most reliable and the most recent information as to the condition of the country, and to be in a position to suggest to Government the best measures available for meeting the emergency which has arisen. On the receipt of the report of these officers, a copy of it will be immediately placed before the Government of India; in the meantime, in all the districts affected, this Government have authorised the immediate commencement of the works which are best calculated to afford relief, and for which projects superintendence and funds are available.

4. These works have hitherto afforded some measures of relief, and may do so for a short time longer; but it is apparent that efforts on a larger and more extended scale must very shortly be made if extreme distress and even disaster is to be averted.

5. His Excellency in Council, I am desired to say, is awaiting the receipt of a letter from the Department of Agriculture and Commerce, dated 29th September, of the despatch of which he has been advised in the telegram last quoted above, in which he understands he is to receive instructions as regards the provision of funds for famine relief works, and in respect to the incidence of the charge for such works. Some considerable outlay of Imperial money will, no doubt, be necessary; but his Excellency in Council, I am desired to say, believes that if confidence be placed in this Government all that is needed may be done without extravagant or lavish expenditure of public money, and without any great ultimate loss or waste.

No. 2,321, the 4th October 1876.

From the ACTING COLLECTOR OF SHOLAPUR to the REVENUE COMMISSIONER, Southern Division, Poona.

In my letter of 25th August last, to the address of the Chief Secretary to Government, in which I pointed out the necessity of starting famine relief works for the benefit of the people of the Kurmala Taluka of this Collectorate, I anticipated that the distress which was then beginning to be felt severely in only one taluka would soon extend to others. It has, as I have already informed you, now done so, and to such an extent that there is now no part of the district in which the condition of the mass of the people is not most deplorable; and as there is no prospect of any crop whatever throughout by far the greater portion of the Collectorate, there can be no doubt that a scarcity amounting to famine must be the result.

2. On bringing the state of affairs to the notice of Government about six weeks ago, I was, as far as aware, permitted to commence relief works in the talukas in which they were urgently required, and directed to appropriate for that purpose the local funds balance, which otherwise would have been budgetted against the expenditure in 1877-78. I was thus enabled to provide employments for some thousands of persons, who otherwise would have been reduced to the greatest extremity. The local funds balance, including the re-appropriations from local fund works, amounted to Rs. 25,000. This amount has now been expended, and I have received the permission of Government, through the Secretary to Government in the Public Works Department, to carry out, at the expense of Government, other local works that may be absolutely necessary for the relief of the people. This is now being done, and I submit herewith a list of those works for the information and sanction of Government.

3. So far all that had to be or could be done has been done, and if the rain which was pretty confidently looked for until quite recently had come to our assistance, the scarcity and distress would have been merely temporary, and we should by the present time have got over it; but unfortunately the rain held off, and if it should come now, which is not at all probable, it will be of little or no use, except in portions of one or two talukas, where the soil is exceptionally good. The result is that there has been an almost total failure of the crops throughout the Collectorate, and the cultivating classes and others, such as the Mahors, Mhangs, and Ramosees, will be without food or provision for themselves, their families, and cattle for the next 12 months, and unable to procure the barest necessities of life without the assistance of Government.

4. I believe it is in contemplation to start the Dhond and Munmar Railroad for the relief of the surrounding districts as soon as Government are fully convinced of the necessity for doing so. I would respectfully submit that the time has now come for the adoption of whatever measure Government intend to adopt for the alleviation of the distress which is now prevalent throughout the Deccan. The Dhond and Munmar Railway would, no doubt, provide employment for several thousands of people, but as it will pass through three other Collectorates in which the people will shortly be almost as badly off as the people are here, I would suggest that some other relief works should be started in this Collectorate.

5. The works now in progress, and upon which about 20,000 persons are employed, will all be completed in the course of a week or 10 days, and it is absolutely necessary that other works on a very much larger scale should take their place. The Executive Engineer is of opinion that the most suitable works would be the Barsi and Yedshi Road and the Pandharpur and Janoni Road. Both these roads would be very useful hereafter, for when they are completed there would be a first-class road from the border of the Nizam's territory on the north to the border of this Collectorate on the south, leading to the Jutt and Jamkhandi States, and thence to Satara. The plans and estimate of the Barsi Yedshi Road have been prepared and sanctioned, and there is no reason why the work should not be commenced at once if sanctioned. The greater portion of the other road has also been lined out, and the work can be commenced by the Public Works Department immediately on receipt of orders.

6. I have no hesitation in declaring that the state of this district is in every way most unsatisfactory at the present time, and it stands to reason that it must rapidly become worse. A feeling of insecurity is becoming very prevalent, and the lower classes, who naturally are the first to suffer from the effects of the general scarcity, are becoming restless and reckless. If Government would purchase grain in a cheap market and supply it at a moderate price to labourers and others, it would have a highly beneficial effect, for prices have risen considerably of late, although there is as yet no scarcity of former years grain in the district.

No. 3,340, dated Poona, the 5th* October 1876.

MEMORANDUM by the REVENUE COMMISSIONER, Southern Division.

Submitted to Government for consideration and orders.

2. It is recommended that sanction be accorded as solicited to the works included in the accompanying list from the Collector, for the carrying out of which permission has been accorded by Government through the Secretary in the Public Works Department. It is presumed that the requisite plans and estimates have been or will be furnished.

3. No specific arrangement regarding the Pandharpur Janoni Road has as yet been made by the Collector.

4. The Revenue Commissioner has consulted the Superintending Engineer with reference to the Barsi and Yedshi Ghât Road recommended by the Collector and the Executive Engineer, and Colonel Finch approves of the proposal. An estimate for this work—Rs. 1,27,655, Government Resolution No. 620 C.W. 1,544, of 26th August 1875—was submitted for sanction for bridging and metalling; but of this sum Colonel Finch considers that Rs. 30,000 could be spent on road works at the present time. It is strongly urged that this grant should be made at once; it is suited to give employment to people in the northern part of the Sholapur Collectorate.

5. The Revenue Commissioner considers that, whenever any large work is to be constructed within easy reach of a station on the Great Indian Peninsula Railway, good grain should be imported from the Central Provinces or Guzerat, where it is cheap. By this means Government will be able to apply the famine test of paying a portion of wages in grain bought at a moderate rate, and the labourers will be to a great extent saved from the danger of eating grain damaged by age, which is always produced by the storers for sale in a season of scarcity. It is, of course, of great importance to protect men assembled in large numbers from the risk of those diseases which unwholesome food is likely to engender, and which the assemblage of crowds has a tendency to propagate and render epidemic.

MEMORANDUM by the UNDER SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, 13th October 1876.

Government having received reports from several districts of the Presidency that the partial failure of the monsoon and the very general absence of the latter rains has very seriously affected the harvest, and consequently has given rise to distress amongst the agricultural population of those parts, orders have been issued for the prosecution of relief works, and copies of these orders are now made public.

The distress still continues, and is likely to be greatly aggravated, especially if sufficient rain does not soon fall in the eastern districts. Government are now engaged in organising such further measures of relief as may be suitable and practicable, and information in respect to such measures will, from time to time, be placed before the public.

RESOLUTION by the GOVERNMENT OF BOMBAY, in the Public Works Department, dated 4th October 1876.

RESOLUTION.—In consequence of the unfavourable reports of the season in the eastern districts of this Presidency, particularly in the Sholapur, Ahmednagar, and Poona Collectories, it appears to be inevitable that famine relief works on a considerable scale must be immediately undertaken.

2. The local funds of these districts, under orders already issued, have been appropriated, and, should distress continue, nothing now remains but to provide for the relief of the people by the expenditure of Imperial funds.

3. Government have been kept informed of the state of the districts above referred to by the reports of the local officers, but having in view the increasing gravity of the situation, Government consider they should now have the benefit of the advice of their higher officers of the Revenue and Public Works Departments after these officers have personally visited the locality. Government are pleased, therefore, to direct that the Revenue Commissioner, Southern Division, and the Superintending Engineer, Central Division, should proceed at once into the affected districts, and should, after personal inquiry and consultation with the local officers, advise the Government whether it is absolutely necessary to commence any, and what, relief works on a large scale.

4. This report is required with the least practicable delay.

RESOLUTION by the GOVERNMENT OF BOMBAY, in the Public Works Department, dated 5th October 1876.

READ again—

Government Resolution No. 138 C.W.—709, dated 3rd October 1876, paragraphs 1 to 4, laying down the principles to be adopted in respect to relief works as follows:—

The principle to be adopted in respect to relief works is as follows:—

1st.—All possible re-appropriations to be made from the current year's Local Funds Budget items, irrespective of the talukwar restriction; this on the principle that the district is bound to help its own suffering people to the full extent of its ability, before indenting on the resources of other districts or parts of India.

2nd.—All balances of local funds not yet appropriated, *i.e.*, not yet budgetted against, to be made available.

3rd.—When the current year's Budget credits and the balances not yet budgetted against have been exhausted, Government will provide such other funds as may be clearly required to afford the necessary relief.

2. The necessary re-appropriation returns as regards transfers of budget credits, and appropriation returns as regards unbudgetted balances, for works undertaken under these orders, should be submitted as soon as possible, and if it is absolutely necessary to undertake any works for which there are no sanctioned estimates, estimates should be submitted to competent authority for sanction as soon as it can be done.

3. In starting relief works it should be borne in mind that the most useful works, as well as those best suited for relief, are road works and tank clearances.

4. In order, as regards road works, that the greatest ultimate benefit may be secured from the measures now to be undertaken, it should also be borne in mind that what are required are railway feeders, branch lines to existing through communication, and roads connecting market towns and centres of producing districts with other market towns, and with distant markets. The local officers should keep in view the necessity of laying out works, as far as may be, so that they may form portions of an efficient system or net-work of roads, that will enable the cultivators to convey their produce with facility to railway lines or trunk roads, and to obtain access to near or distant markets.

RESOLUTION.—As regards orders issued in reference to relief works in different districts, the following points require early attention:—

1st.—Re-appropriation statements as regards transfers of sanctioned budget credits, *i.e.*, of funds from one item to another of the sanctioned Local Funds Budget, should be prepared and submitted.

2nd.—Appropriation statements of outlay against local funds balances, *i.e.*, of the balances of local funds on the 1st of April 1876.

3rd.—Statements of relief works it is proposed to undertake from the current year's local funds revenue, in anticipation of the Local Funds Budget for the ensuing year, showing the amount required for each work.

4th.—Estimates for all works to be undertaken as relief works, for which there are no sanctions, to be sanctioned by competent authority. The estimates for such relief works, which will necessarily be of a simple character, may be rough and approximate, but it is essential that they should be sanctioned with as little delay as possible.

2. Payment to labourers on relief works may be made at such short intervals as the local officers may determine to be expedient. If advisable, it may be arranged that such payments may be made by the Civil officers on muster rolls and pay sheets kept and prepared by the Public Works officers; money to be obtained as usual on credits granted to the Public Works officers, so that the transactions may be recorded in the accounts of the Public Works Department.

3. If deemed necessary or desirable by the local officers, payments may be made partly in money and partly in grain.

RESOLUTION by the GOVERNMENT OF BOMBAY, in the Public Works Department, dated Bombay Castle, 29th August 1876.

Memorandum from the Revenue Department, No. 4,788, dated 22nd August 1876.—Transfers, for immediate consideration, a memorandum from the Collector of Dharwar, forwarding copy of a letter addressed by him to the Executive Engineer, Dharwar, requesting that officer to take early steps to commence the construction of the road between Dambal and Hesrur, for which Rs. 30,000 have been sanctioned, so as to afford immediate relief to the people in Mundargi Peta, who are suffering, not being able to gain a livelihood, want of rain having deprived them of their field labour; also a memorandum from the Revenue Commissioner, Southern Division, stating that the proceedings of the Collector seem judicious.

RESOLUTION.—A sum of Rs. 30,000 is allotted under item 48 of the Provincial Budget for the road from Gadag *via* Dambal to Hesrur, and the Superintending Engineer, Southern Division, should take steps for the immediate prosecution of the work.

RESOLUTION by the GOVERNMENT OF BOMBAY, in the Public Works Department, dated Bombay Castle, 22nd September 1876.

Memorandum from the Revenue Department, No. 5,242, dated 13th September 1876.—Transfers a letter from the Acting 2nd Assistant Collector of Poona, reporting the very slight fall of rain in the eastern talukas of the district; also a memorandum from the Revenue Commissioner, Southern Division, submitting, with his opinion, a report from the Acting Collector of Poona, recommending that the following works be first commenced, to give relief to the people of Bhimthadi and Indapur Talukas :—

Bhimthadi Taluka.

	Rs.
Road from Supa to Baramathe - - - -	10,000
Improvements on the roads from Patus to Supa, and Patus to Baramathe - - - -	5,000
Clearing prickly pear around certain villages - - - -	5,000

Indapur Taluka.

Road from Indapur to the Neera passing through Bhoweeh -	10,000
Road from the ferry at Chandgaon to the Sholapur Road at Loni - - - -	3,000
Road from Indapur to Soogaon - - - -	2,000
Prickly pear clearances - - - -	3,000
or Rs.	4,000

And adding that he agrees with Mr. Macpherson that the Irrigation Department should be urged to press on the works in connexion with the extension of the canal from the Kharakwasla dam, so as to give employment to as many hands as possible. The Revenue Commissioner remarks that, in the event of a failure of the rubber crops, expenditure on cuttings and embankments on the projected line of railway from Dhond to meet the North-east Branch Extension of the Great Indian Peninsula Railway would be of great service to the inhabitants of Ahmednagar, Poona, and Sholapur.

RESOLUTION.—These proposals are approved, and the road works enumerated may be put in hand as soon as the local officers consider that the necessity for affording relief has arisen.

2. As regards prickly pear clearance, Government consider that it would be better to expend the funds it is proposed to devote to this purpose to additional road works. The local officers should, therefore, take this point into consideration, and should propose additional road works to the extent of the outlay contemplated. Estimates for the proposed works, if not already prepared and sanctioned, should be drawn up, and should be sanctioned by competent authority with as little delay as possible.

3. All the works being local, the funds for their execution should, as far as possible, be provided by the Local Funds Committee. Formal proposals for re-appropriations necessary to cover their cost should, therefore, be submitted at once, and, if the current year's budget will not admit of the necessary re-appropriations, proposals for the appropriation of any local funds balance that may exist should be submitted.

4. Should the current year's budget, aided by the unappropriated local funds balance, not be sufficient to furnish the necessary funds to cover the contemplated outlay, Government will provide the difference from other sources, but the works should not be delayed as soon as it is determined that they are needed.

5. The papers should be transferred to the Irrigation Department as regards the proposal to proceed with the Kharakwasla Canal.

RESOLUTION by the GOVERNMENT OF BOMBAY, in the Public Works Department, dated Bombay Castle, 3rd October 1876.

Memorandum from the Revenue Commissioner, Southern Division, No. 3,040, dated 12th September 1876. Submits a letter from the Collector and President, Local Funds Committee, Sholapur, requesting sanction to the re-appropriations, amounting in the aggregate to Rs. 25,462-10 as under, for famine relief works now being carried out in the Sholapur District. The Revenue Commissioner remarks that it is desirable that the particular works which the Collector and President proposes to undertake as famine relief works should be specified, and that estimates for such as are beyond his power of sanction should be submitted by him for the sanction of competent authority as early as practicable.

Memorandum from the Revenue Commissioner, Southern Division, No. 3,140, dated 18th September 1876. Submits, with reference to paragraph 2 of Government Memorandum, No. 50r., dated 15th September, copy of a letter from the Collector and President, Local Funds Committee, Sholapur, forwarding a list specifying the works for which re-appropriations and appropriations from the local funds balance are required; and stating that the estimates have been called for, and will be forwarded in due course.

RESOLUTION.—The proposed re-appropriations of credits in the current year's Local Funds Budget are sanctioned, the additions to the current year's budget and appropriations against such additions are also sanctioned.

2. The sum of Rs. 5,000 entered for "prickly pear clearance at Jinti," if still available, had better be expended on road works; roads are more needed than prickly pear clearance, and the fruit of the prickly pear is understood, in some cases, to be used as food by the people.

3. The attention of both the Collector and President, and of the Executive Engineer, is called to the necessity for submitting plans and estimates for all works that may be commenced under these orders with as little delay as possible.

4. The Revenue Commissioner should ensure that a record is kept of transfers of Taluka funds owing to these re-appropriations, so that an adjustment may be made in the next or subsequent years.

RESOLUTION by the GOVERNMENT OF BOMBAY in the Public Works Department, dated Bombay Castle, 3rd October 1876.

Memorandum from the Revenue Commissioner, Southern Division, No. 3,209, dated 23rd September 1876.—Submits a letter from the Collector of Ahmednagar [and further correspondence], reporting that he has found it necessary to start local fund relief works for the support of the very poor in certain talukas of the Ahmednagar Collectorate, where the fall of rain has been very scanty, in the shape of road repairs, to the extent of Rs. 4,500 [for which the Collector promises to submit re-appropriation statements in due form]; stating that, if the present state of distress continues and increases it will be absolutely necessary to start works on a larger scale, and suggesting as the best [1] the railway embankment from Dhond towards Nagar and Munmar, for which a grant of Rs. 25,000 would be required from Imperial or provincial funds, and [2] the Khardi and Kashti Road, towards which a re-appropriation of Rs. 4,000 is proposed from the unexpended balances of local funds on the 31st March 1876.

The Revenue Commissioner adds that, besides the Rs. 4,000 proposed for re-appropriation from unexpended balances on 31st March 1876 towards the above road, the Acting Collector anticipates being able to obtain a sum of Rs. 10,000 for more immediately pressing wants by re-appropriation from budget items pertaining to the current year; but as the total sum thus obtained will not suffice for any lengthened period, he is desirous of obtaining a grant from provincial or Imperial funds for expenditure on famine relief works in the district; that the Collector has not yet suggested any particular work or works, nor has he yet specified any particular sum, but that in his first letter he asked for Rs. 25,000 for the railway from Dhond, and Rs. 10,000 for the Kharda and Kashti Road; and, in conclusion, points out that there are sums, as noted below, for road repairs provided in the Provincial Budget of the current year, and Superintending Engineer and Executive Engineer of Ahmednagar may be able to expedite proceedings on these works, so as to furnish early relief to some portions of the district where relief is most urgently required:—

	Rs.
Road from Ahmednagar to Ghor River - - - - -	12,000
Ditto to Dhond - - - - -	18,000
Ditto to Pimpalgaon (Malegaon Road) - - - - -	11,000
Road from Nandur-Singota to Ahmbegargaon (Násik and Poona Road) - - - - -	6,000
Road from Ahmednagar to Toka - - - - -	9,000
Road from foot of Imampur Ghât to Paithun - - - - -	10,000
Aggregating - - - - -	66,000

RESOLUTION.—The proposed appropriation against the balances of local funds on the 31st of March last is sanctioned.

2. Re-appropriation statements in regard to relief works it is proposed to undertake against sanctioned budget credits for the current year should be submitted; in the meantime the works determined on as necessary should proceed.

3. The Executive Engineer should be directed to proceed with road repairs in the Nagar District to the extent available in the current year's Provincial Budget. This balance is understood to amount to about Rs. 10,000. Should rain still hold off, and further assistance in addition to that referred to above, be needed, Government will be prepared to grant it; in the meantime, the Collector, in communication with the Executive Engineer, should determine what works it would be best to undertake, so as to be ready to commence them the moment an undoubted necessity arises.

4. As regards the Dhond and Munmar Railway, it may be advisable to commence the earth-work of this line; should relief on a larger scale be required, and the state of the surveys is such as to admit of this being done without difficulty; but this work can only be commenced as a last resource, and the Government of India should be addressed on the subject by telegram, and their permission to put the earth-work in hand should be solicited, in the event of Government being driven to this measure by the necessity of affording relief to the suffering people of the district.

RESOLUTION by the GOVERNMENT OF BOMBAY in the Public Works Department, dated Bombay Castle, the 3rd October 1876.

Memorandum from the Revenue Commissioner, Northern Division, No. A. 6, dated 27th September, 1876.—Forwards for the orders of Government, a letter from the Collector of Khandesh, submitting an estimate by the Executive Engineer, Khandesh, of Rs. 31,005 for a tramway from Sowda town to railway station, a distance of a little over 2 miles. The work is provided under item 154, Part II. of the Local Funds Budget, with a provision of Rs. 4,400. States that the work has been put in hand in anticipation of sanction, and that as it is in the very centre of the famine stricken districts, it supplies labour for 1,000 persons. The Revenue Commissioner, Northern Division, disapproves of the work for reasons stated, and recommends instead of it that an Irish bridge be constructed over the Tapti at Bhosawal or Satara, or some place between the two; or a road from Jalgaum to Amalnair *via* Dharangaum.

RESOLUTION.—The Collector has been informed by telegram that the proposed tramway from Sowda to the railway station is not approved, but that a metalled road between these points will be sanctioned, if required, as a relief work.

2. Government concur generally with the Revenue Commissioner's remarks on this work, but the point is not now so much what particular class of work it is most expedient that the Local Funds Committee should undertake, as what work or works can best be put in hand, with a view of affording local relief.

3. The Sowda Road has already been undertaken, and has been partly completed, and if in addition other relief works are needed, the local officers should determine whether it is best to undertake, as suggested by the Revenue Commissioner, a causeway across the Tapti, in the vicinity of Bhosawal, with its necessary approaches, or a road from Jalgaum to Amalnair, or whether there is any other suitable work that it would be advisable to carry out in addition to, or in substitution for, either or both the above.

RESOLUTION by the GOVERNMENT OF BOMBAY in the Public Works Department, dated Bombay Castle, the 3rd October 1876.

Memorandum from the Revenue Commissioner, Northern Division, No. A. 7, dated 28th September 1876.—Forwards, for the orders of Government, a letter from the Collector of Násik,

reporting the condition of several points of the Collectorate where crops have failed, and recommends the starting of the following relief works, viz. :—

1. On the Bhawadbari and Suttana Road.
2. The 3rd section of the Bhawadbari and Vinchur Road.
3. Continuation of the road to Lasalgaon or the road between Chandor and Munmar.

States that there are no plans and estimates for the last works (3). Points out that the Executive Engineer, Násik, requires additional establishment to go on with these works, and that there are no local funds balances to appropriate.

The Revenue Commissioner states that he has already supported the Collector's demand for a loan of Rs. 40,000 to enable the works proposed being carried out.

RESOLUTION.—The Acting Collector of Násik should be referred to the instructions already issued with regard to the provision of funds and the prosecution of works. These instructions state clearly that, after the current year's budget credits, and any balances that may not have been budgeted against, are exhausted, Government will grant such other sums as may be clearly necessary to give relief. These grants will be made as advances to local funds, and under these circumstances the advance of Rs. 40,000 asked for, or any other specific sum, is not required.

2. The Superintending Engineer, Northern Division, should ascertain what assistance is required by Lieutenant Hart, and should provide it by transfers from other districts where there is no pressure for relief works, or by entertaining such temporary establishments as may be available.

RESOLUTION by the GOVERNMENT OF BOMBAY in the Public Works Department, dated Bombay Castle, the 3rd October 1876.

Memorandum from the Revenue Commissioner, Southern Division, No. 3,224, dated 25th September 1876.—Submits a letter, with accompaniments, from the Collector of Dharwar, reporting on the distress prevailing in this district, and expresses his entire concurrence in that officer's view of the necessity to employ the people on useful works of intercommunication as early as possible; and states that it will be seen that the Local Funds Committee will devote all available local funds for expenditure of the kind "in accordance with the budget rules;" but the Collector requests that immediate orders may be given to the Executive Engineer to prepare plans for lining out the provincial road from Hubli to Kaládgi, between Hubli and Kunnur, as the line passes so directly through the length of the very distressed districts of Navalgund and Nargund, as to afford the best relief to the people; and also suggests, in the event of the distress increasing, that the question of the immediate construction of the earth-works of the railway between Bellary and the Kanara frontier be taken into consideration.

RESOLUTION.—The principle to be adopted in respect to relief works is as follows :—

1st.—All possible re-appropriations to be made from the current year's Local Funds Budget items, irrespective of the talukwar restriction; this, on the principle that the district is bound to help its own suffering people to the full extent of its ability, before indenting on the resources of other districts, or parts of India.

2nd. All balances of local funds not yet appropriated, *i.e.*, not yet budgetted against, to be made available.

3rd.—When the current year's budget credits, and the balances not yet budgetted against, have been exhausted, Government will provide such other funds as may be clearly required to afford the necessary relief.

2. The necessary re-appropriation returns, as regards transfers of budget credits, and appropriation returns, as regards unbudgetted balances, for works undertaken under these orders, should be submitted as soon as possible, and, if it is absolutely necessary to undertake any works for which there are no sanctioned estimates, estimates should be submitted to competent authority for sanction as soon as it can be done.

3. In starting relief works it should be borne in mind that the most useful works, as well as those best suited for relief, are road works and tank clearances.

4. In order, as regards road works, that the greatest ultimate benefit may be secured from the measures now to be undertaken, it should also be borne in mind that what are required are railway feeders, branch lines to existing through communication, and roads connecting market towns and centres of producing districts with other market towns, and with distant markets. The local officers should keep in view the necessity of laying out works, as far as may be, so that they may form portions of an efficient system or net-work of roads, that will enable the cultivators to convey their produce with facility to railway lines or trunk roads, and to obtain access to near or distant markets.

5. These orders should be sent to the Revenue Commissioners, Southern Division and Northern Division, and should be held to be generally applicable.

6. As regards the particular case of the Dharwar District, orders should at once be sent to the Executive Engineer to line out and be prepared to commence that portion of the Hubli and Kaládgi Road which lies in the Dharwar District, and the Government of India should be addressed by telegram as regards the commencement of the earth-works of the Bellary and Karwar Railway, should that measure, a last resource, be forced on this Government by the necessity for relieving distress.

RESOLUTION by the GOVERNMENT OF BOMBAY in the Public Works Department, dated Bombay Castle, the 6th October 1876.

Letter from the Revenue Commissioner, Southern Division, No. 3,262, dated 27th September 1876.—Forwards correspondence with the Collector of Kaládgi relative to the employment of unexpended balances of the local funds of the Kaládgi District in useful works to be undertaken

in order to furnish employment for the poorer classes during the pressure of the present drought. Observes that each work has either a plan and estimate, or will have one, to be sanctioned by competent authority; and solicits sanction to the several works in the statement as under being undertaken in the current year as a debit to the unexpended local funds balances of the district amounting to Rs. 55,097. States that, although sanction is thus desired, a discretion will be exercised in actually carrying out the works, in due regard to their intrinsic utility and the degree of necessity for the employment of local labour.

Memorandum from the Accountant General No. L. F. 9849, dated 29th September 1876—Reports that the actual balance on 1st April 1876, and the estimated receipts for 1876–77, are correctly given by the Collector and President, Local Funds Committee, Kaládgi; that he has, however, no means of verifying the estimated unexpended allotments at the close of 1876–77, and the estimated charges for 1876–77 are given by the Collector and President at Rs. 23,512 in excess of the amount originally sanctioned in the budget estimate for the current year, which cannot be accounted for.

RESOLUTION.—The propositions are approved, and sanctioned only in the event of its being absolutely necessary to undertake works of relief; and the total amount, Rs. 36,796, should be taken as an addition to the current year's Local Funds Budget.

2. The arrangement proposed is in accordance with the orders contained in Government Resolution, No. 138 C. W. 709, dated 3rd October 1876, regarding the principle to be adopted in providing funds for relief works.

3. Estimates should be submitted as early as possible for the sanction of competent authority in cases of works for which there are at present no sanctioned plans and estimates.

RESOLUTION by the GOVERNMENT OF BOMBAY, Public Works Department, dated Bombay Castle 9th October 1876.

Memorandum from the Revenue Commissioner, Southern Division, No. 3,340, dated 5th October 1876—Submits, for consideration and orders, a letter from the Collector of Sholapur regarding famine relief works in that district. Recommends sanction, as solicited, to the works as under, to carry out which permission has been accorded by Government, through the Secretary in the Public Works Department. States that it is presumed that the requisite plans and estimates have been, or will be, furnished; that no specific arrangement regarding the Pandarpur and Janoni Road has as yet been made by the Collector; that he has consulted the Superintending Engineer with reference to the Barsi and Yedsi Ghât Road recommended by the Collector and the Executive Engineer, and Colonel Finch approves of the proposal; that an estimate for this work, Rs. 1,27,655, as per Government Resolution, No. 620, C. W. 1544, dated 26th August 1875, was submitted for sanction for bridging and metalling, but of this sum Colonel Finch considers that Rs. 30,000 could be spent on road works at the present time. Urges strongly that this grant should be made at once, as it is suited to give employment to the people in the northern part of the Sholapur Collectorate. Adds that he considers, that, whenever any large work is to be constructed within easy reach of a station on the Great Indian Peninsula Railway, good grain should be imported from the central provinces or Gujrat, where it is cheap, as by this means Government will be able to apply the famine test of paying a portion of wages in grain bought at a moderate rate, and the labourers will be to a great extent saved from the danger of eating grain damaged by age, which is always produced by the storers for sale in a season of scarcity.

Dadpur Tank clearance - - - - -	2,000	
Nandni Tank (additional) - - - - -	2,500	
		9,500

Grand total - - - 34,800

RESOLUTION.—The famine relief works enumerated in the list submitted by the Revenue Commissioner should be put in hand whenever they are required.

2. The outlay upon them should be carried to a separate head of "Famine Relief Expenditure."

3. The papers should be transferred to the Financial Department, in order that the Accountant General may be directed to afford the Collector the necessary credit to admit of his obtaining funds.

4. Estimates should be submitted for each work as soon as possible, in order that regular and formal sanction may be accorded.

5. The provision under item 37 of the Provincial Budget for the Sholapur and Takli Road, amounting to Rs. 30,000, or so much of it as is still unexpended, should be transferred to the Barsi and Yedsi Road, for which there are sanctioned plans and estimates, the latter work being considered to be of greater service as a famine relief work than the former.

6. The Superintending Engineer should direct the Executive Engineer, in carrying out relief works, to apply the funds at his disposal, as far as possible, to earth-works on which bodies of labourers can be employed, and not upon works of construction, such as drains or bridges, which will only give occupation to a limited number of skilled workpeople.

7. The road from Pandharpur to Janoni may be added to the list of works, the commencement of which is now authorised for famine relief; but this work should not be commenced unless it is clearly needed; estimates should be submitted without delay for sanction.

8. As regards the importation of foreign grain, the proposal is one which should be considered in the General Department. In this department it is observed that transport and railway haulage over long distances will greatly enhance the cost of imported grain, and that the measure is one which does not seem necessary or desirable so long as there is grain locally available. Should it be necessary to start large concentrated famine relief works, on which large numbers of people would be employed, it might be advisable to make arrangements with the Baniyas and grain-dealers to regulate price and quality of grain, but the difficulty of supplying grain to the people over numerous scattered works by Government agency would be very great, and would render necessary a special machinery.

RESOLUTION by the GOVERNMENT OF BOMBAY, Public Works Department, dated Bombay Castle, the 11th October 1876.

Memorandum from the Revenue Department No. 5,729, dated 7th October 1876—Transfers a memorandum from the Revenue Commissioner, Northern Division, No. 5,082, dated 4th October 1876, forwarding, in continuation of his No. A.-7 of the 28th September 1876, a letter from the Collector of Nasik, stating with reference to the amounts available for re-appropriation from items of the current year's budget for the relief works which he has set going on the Niphar and Yeola Road, and on the Kappralla Ghât in Sinnar, that, in concert with Lieutenant Hart, he went very carefully through the budget provisions, and the result is that something within Rs. 3,000 can be diverted from the provisions of the budget of 1876-77 on account of works to be done by Public Works agency, and Rs. 3,388 from works to be done by Civil agency; so that in round numbers he can reappropriate Rs. 6,388 for relief works on the Niphar and Yeola Road, and at

the Kappralla Ghât; but he and Mr. Hart, and his assistants, are agreed that to do so will be detrimental to the scheme of works arranged for 1867-77; that this sum of Rs. 6,388 is not likely to suffice for the two relief works mentioned, and he still thinks it would be best to let the local funds have the loan of Rs. 40,000 he has asked for, and that he has shown how it would be repaid in 1877-78 in proportions fixed for each taluka, and he believes that the concession would do much for the road system of Násik Collectorate.

RESOLUTION.—The Revenue Commissioner, Northern Division, should be referred to Government Resolution No. 137 C. W.-708, dated 3rd October 1876, which gives the Acting Collector all the authority he is in need of; if he does not, he should state clearly in what difficulty he finds himself.

2. The intention of that resolution was to permit him to anticipate the local funds assets of 1877-78 to the extent absolutely needed for relief works in anticipation of the next year's budget. He should also be referred to clause 3, paragraph 1, of Government Resolution No. 140 C. W.-715 of the 5th October 1876.

RESOLUTION by the GOVERNMENT OF BOMBAY, Public Works Department, dated Bombay Castle, the 12th October 1876.

Memorandum from the Revenue Commissioner, Southern Division, No. 3,230, dated 26th September 1876. With reference to Government Resolution No. 123 C. W.-672, dated 22nd September 1876, submits a letter from the Collector of Poona, reporting that no rain has as yet fallen in the eastern talukas, and applications for assistance are numerous and urgent; stating that he proposes to commence the works which have been sanctioned on the 1st October 1876; the plans and estimates for the works noted—[road from Supa to Baramati, Rs. 10,000; road from Indapur to Nira, passing through Bowra, Rs. 10,000; road from Chandgaon Ferry to Loni, Rs. 3,000; road from Indapur to Sugaon, Rs. 2,000]—having already been prepared, and those for improvements on the roads from Patus to Supa and Patus to Baramati are under preparation; that the two large works, viz., the roads from Supa to Baramati and Indapur to the Nira, will be undertaken by the Executive Engineer, who will be requested to employ every one who is willing to work, and to pay all labourers at least once a week, and the other works will be undertaken by the Mamlatdars, with the assistance of the usual Local Funds Establishment, and that Mr. Macpherson will also proceed into the district early next month to exercise a general supervision in the distressed taluks; that as Government consider that additional road-works should be undertaken in preference to prickly pear clearances, he proposes the two following roads, which he thinks will be found useful:

<i>Bhimthadi Taluka.</i>		Rs.
Road from Baramati to Sangni on the Nira	-	4,800
<i>Indapur Taluka.</i>		
Road from Kalas to Sholapur high road at Kumbhargaoon	-	3,000

Stating, with reference to the 4th paragraph of the above resolution, that the Local Funds Committee are unable to provide any portion of the funds required for the execution of the proposed works, as the unappropriated local funds balance on the 31st March 1877 is estimated to amount to Rs. 714 only; that the unexpended balance at the close of the year will, no doubt, amount to a much larger sum, but, on the other hand, if large remissions of land revenue have to be given there will be a corresponding falling off in local funds receipts; appending extracts from the Local Funds Budget of Indapur and Bhimthadi, from which it will be seen that there is no possibility of making re-appropriations, that road repairs having already been undertaken as famine works, as reported in his previous letter, and the remaining works consisting chiefly of repairs to wells and dharamsalas, &c., which it would be very false economy to postpone; that the other talukas of the district are in much the same position as Bhimthadi and Indapur, and cannot spare any portion of their local funds for expenditure elsewhere; trusting, therefore, that there will be no difficulty in providing the necessary funds from Imperial or provincial sources.

The Revenue Commissioner concurs, except that he thinks it possible a better line from Baramati might be to Moreshwar on the Nira Bridge line, which is more direct for Jejuri and Poona than Supa.

Memorandum from the Superintending Engineer, Central Division, No. 3,364, dated 5th October 1876. Forwards the above, and states that the most advantageous line for the road proposed to be constructed between Baramati and Supa appears to be that indicated in Mr. Havelock's memorandum, viâ Moreshwar, as the road will then follow for a considerable distance the beaten track communicating from Jejuri to Baramati and beyond to Pandharpur, and that he estimates relating to the following roads referred to have been prepared by the Executive Engineer, and submitted through his office to the Revenue Commissioner, Southern Division, for approval and sanction:—

1. Supa to Baramati.
2. Indapur to Nira, passing through Bowra.
3. Indapur to Sugaon.

Memorandum from the Revenue Commissioner, Southern Division, No. 3,353, dated 6th October 1876. With reference to Government Resolution No. 323 C. W.-672, dated 22nd September 1876, and in continuation of his memorandum No. 3,230 of the 26th September 1876, submits, for sanction, a letter from the Superintending Engineer, Central Division, forwarding survey plans with estimates, as follows, prepared by the Executive Engineer, Poona Districts, for constructing certain local roads in that district:

	Rs.
Estimate No. 152, for Baramati and Supa Road	9,503
" " 156, for Baramati and Moregaum Road	9,655
" " 154, for Indapur and Nira River Road through Bowra	7,190
" " 153, for Sugaon and Indapur Road	2,319

Memorandum from the Revenue Commissioner, Southern Division, No. 3,357, dated 6th October 1876. Submits a letter from the Collector of Poona, forwarding, with reference to paragraph 6

of his letter No. L. F.-699, dated 25th September 1876, for sanction, an estimate amounting to Rs. 3,000 for making special repairs to the road from Kumbhargaoon to Kalas, Taluka Indapur, and requesting early instructions regarding the source from which the cost is to be met.

RESOLUTION.—As these are all local works they are within the competency of the Revenue Commissioner to sanction, and he should sanction them accordingly. He should also issue such orders as he may think fit in regard to the alignment of the road between Baramati and Supa. It seems to be of very little consequence what particular direction the road takes; the chief object in putting the work now in hand is to afford relief, and this object should not be lost sight of while discussions are carried on regarding what is practically a very minor point.

2. As regards the provision of funds, when the local funds resources are exhausted, the requisite means will be found by Government, and the papers should accordingly be transferred to the Financial Department, in order that the Accountant General may be directed to afford the Collector the necessary credit. The expenditure should for the present be carried to a separate head of "Famine Relief Expenditure," to be hereafter adjusted.

No. 5,891, the 16th October 1876.

From the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY, Revenue Department, to the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce.

I am directed by his Excellency the Governor in Council to forward the accompanying copies

Letter from the Collector of Sholapur, No. 2,321, dated 4th October 1876, to the Revenue Commissioner, Southern Division.

Demi-official letter from the Collector of Poona, to the Private Secretary to his Excellency the Governor, dated 10th October 1876.

Letter from the Revenue Commissioner, Southern Division, and the Superintending Engineer, Central Division, No. P—1, dated 10th October 1876.

Letter from the Collector of Poona, to the Revenue Commissioner, Southern Division, No. 731, dated 10th October 1876.

of the papers noted in the margin, together with copy of this Government Resolution thereon, No. 5,890, dated 16th instant, regarding the measures to be adopted for the relief of the famine-stricken population in the districts of Poona, Ahmednagar, and Sholapur, and to request that this Government may be favoured with the earliest communication of the views of the Government of India on the proposals contained in the Resolution quoted above.

2. A copy of this Government letter in the Public Works Department to the address of the Government of India, No. 142, dated 9th instant, is herewith forwarded for ready reference.

No. 2,321, dated the 4th October 1876.

From the ACTING COLLECTOR OF SHOLAPUR to the REVENUE COMMISSIONER, Southern Division, (Poona. See pp. 13, 14.)

Poona, 10 October 1876.

Demi-official from the COLLECTOR OF POONA to the PRIVATE SECRETARY TO THE GOVERNOR OF BOMBAY.

The Governor was good enough, yesterday, to ask me to put on paper the result of my observations when at Dhond last Sunday. For the first few miles beyond Poona the crops are still in the ground, but they are rapidly drying up, and, unless rain falls, cannot expect to yield any grain. They are now being cut for forage.

Beyond that distance the country is an absolute desert. Not a blade of grass nor a particle of grain is to be seen anywhere. The rivers and wells are drying up, and the cattle are dying of absolute starvation. The people are looking very thin and ill, and though there have been no deaths from starvation it is very evident that something must speedily be done to alleviate the distress. I have already received sanction to commence works, which will cost about Rs. 40,000, and these will be pushed on as fast as we can get tools and collect labourers. I fear these works alone will not be sufficient even for present requirements. In the course of a month or two other large works must be started, but they will require time and a thorough organization to get under weigh. What is wanted now is immediate assistance, and the only way this can be done is by making a grant of money to local officers to expend as they think best. This may be irregular, but I see no other alternative. I am to day writing officially on the subject, and I hope that my views will meet with the approval of Government. In a crisis like the present it is absolutely necessary to act promptly, and much must be left to local officers. If the famine unfortunately continues through the hot weather, it will be possible to establish a proper organization, but this cannot be done at once, and in the meantime people may die of starvation. If his Excellency desires any further particulars, I shall be ready to wait upon him at any time.

I have just heard of a grain riot at Sirur, owing to the grain dealers suddenly raising their prices. Of course it was promptly suppressed, without damage to person or property. The grain dealers at Sirur are more arbitrary than at other places, because they know they can rely on the Poona Horse for protection. I hope that the municipality there may equalise prices by buying grain wholesale and retailing it at cost price. I shall go to Sirur myself on Sunday for a couple of days to do what I can.

Ahmednagar, 10th October 1876.

From W. H. HAVELOCK, Esq., Revenue Commissioner, Southern Division, and Colonel A. W. H. FINCH, R.E., Superintending Engineer, Central Division, to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

In accordance with the instructions conveyed in extract of Government Resolution No. A., dated 4th October 1876, we have the honour to report that we have visited the Bhimthari Taluka of the Poona Collectorate, and have passed through a portion of the Ahmednagar Collectorate, from the head-quarters of which we are now writing.

2. The Collectors of Poona and Ahmednagar, Messrs. Norman and Jacomb, met us in conference at Dhond Station on the Great Indian Peninsular Railway.

3. We are about to proceed to the Sholapur Collectorate, but we are already so impressed with the excessive character of the drought in those parts seen by us, and we are so fully convinced from various circumstances, and especially from the communications of the Collector of Sholapur, Mr. Grant, that our visit there will bring before us a still worse and more universally spread calamity, that we should consider ourselves to blame in delaying to lay the very serious nature of the case before Government, and to apply at once for relief works on a large scale.

4. Several works have been already sanctioned by Government for Poona and Sholapur, which the Collectors are, no doubt, utilising until labour on a larger scale can be found.

5. We append a statement framed in consultation with the Acting Collector, Mr. Jacomb, and his Executive Engineer, Major Manson, of works in Ahmednagar partly selected for appropriation of the provincial repair allotment, Central Division, of the year 1876-77, partly as re-appropriations from the local funds, and the remainder as sums for which we trust Government will be able to find provision from Imperial funds.

6. We have also availed ourselves of an interview with Mr. Hallum, Executive Engineer, Railway Survey, to ascertain from him the probable cost of the earth-work in cutting embankments, &c. on the projected State railway between Dhond and Munmar, and we append a separate memorandum of particulars. The estimated cost of that portion of which the survey has been completed, viz., 47 miles from Dhond to Ahmednagar, is six lakhs. We recommend this work being immediately commenced, as the only present available means of meeting the influx of labourers, who, according to the best information we can obtain, are in the east of Poona, in the greater part of Ahmednagar, and the whole of Sholapur, in enforced idleness on account of the absence of harvest, and clamorous for employment.

7. We regret to add that the very general entire failure of the kharif or early crops in the area mentioned, and the almost hopeless prospect of the rabi or later crops, are throwing on the hands of the authorities many thousands of cultivators who do not ordinarily work for labour. The rise in prices has also caused deprivation and discontent among the common people of the towns.

8. The Collectors of the three districts above named have been requested to furnish an estimate of the number of the population who may in all likelihood be thrown on the hands of Government to find labour for their support. The preparation of the estimate will probably take a little time, but for the two talukas of Bhimthari and Indápur alone, which are the worst in the Poona District, the numbers are roughly estimated at not much less than 40,000, and they may be in excess of that estimate. Unless there should be within a few days a good fall of rain to give hope of the late or rabi crops, which cannot be expected, the numbers of destitute will certainly increase, and we are prepared to find the Sholapur District alone requiring provision for a much larger crowd of human beings, who will shortly have no means of subsistence, except that provided by Government.

9. With this prospect before us we have turned attention to the inquiry when the survey of the section of the projected State railway beyond Ahmednagar will be sufficiently prepared to commence operations. We have been neutrally informed that this can be done in two months, with certain additional assistance; this section is 86 miles in length, making a total of 133 miles, and it is understood the cost of the works on which the population can be employed with advantage may be taken, inclusive of Mr. Hallum's estimate given above, at about 15 lakhs. As places better suited in regard to water supply than others for the location of large gangs of workmen we have ascertained that Dhond, Balaundi, and Ahmednagar should be selected. The Collector of Ahmednagar has, we understand from him, turned his attention to the appropriation of land for the line for which the present moment ought to be particularly favourable. Smaller gangs can be detached along the line.

10. Colonel Finch is making inquiry as regards a supply of suitable tools.

11. We hear on all sides of the great and sudden rise in prices of the staple grains. This is only what might be expected, and is in the prospect of increased scarcity to a certain extent beneficial as tending to diminish consumption. But one of the results is to throw a large supply of damaged grain into the market, which is reserved for consumption in seasons of scarcity.

This is also a beneficial provision, because it is better that a man, woman, or child, should get bad grain than none at all. But sanitation ought to be considered in a large assemblage of work-people. Disease is likely to follow the eating of bad grain, and it appears to us that Government should either allow contracts with responsible dealers to supply approved grain at specified points, at the weekly advertised rates of the head-quarter station, to all who are willing to buy, giving a "bonus" in consideration of the risk of the undertaking, or that Government should purchase large stores of good grain where it may be cheap, and import for distribution in payment or part payment. We prefer the former course, because interfering less with the markets, and saving most of the cost of establishment, which might be limited to a few inspecting officers.

12. There is a project of which the plans and estimates have been prepared and favourably regarded by the late Superintending Engineer, Central Division, Colonel Bell, but for which funds would probably not in ordinary course be provided for some time. This is the Malse Ghât, which is already tested by a trace of six feet in width throughout its length. It would open out Ahmednagar and the talukas north and east, and a portion of Poona in the direction of Bombay *viâ* Kallian. This is a work well suited for the employment of large gangs of labourers, and the only extensive work in the Poona Collectorate which we could at present bring forward with confidence. The approaches to it have already been in a measure opened out by the Local Fund Committees of Ahmednagar and Poona, and we understand that provision for a road to meet the foot of the Ghât in the Konkan is undertaken jointly by the Forest Department and the Tanna Local Fund Committee.

13. We desire this project to be considered as one of local importance, for which, with necessary improvements of the approaches on the Deccan side, we would recommend grant of one lakh of rupees. Bearing in mind the indispensable requirement of water supply for large numbers of labourers, we have made our recommendation on the assumption that the streams on the Konkan side of the Ghâts are in their ordinary state of refreshment from the rainfall of the past monsoon.

I.

STATEMENT of proposed EXPENDITURE on Famine Relief Works in the Ahmednagar District.

MEMORANDUM of APPROXIMATE COST of earth-work and ballast in proposed line of Railway from Dhond to Ahmednagar and Munmar.

Section from Dhond to Ahmednagar, 47 miles. Survey completed and quantities of embankment and cutting taken out in statement furnished by Mr. Hallum, Executive Engineer in charge of Railway Survey - - - - -	6,00,000
Section from Ahmednagar to Munmar, 86 miles. Survey incomplete - - - - -	9,00,000
Total - - - - -	15,00,000

A. W. H. FINCH, Colonel, R.E.,
Acting Superintendent Engineer, Central Division.

No. 731, 10th October 1876.

From the ACTING COLLECTOR of POONA to the REVENUE COMMISSIONER, SOUTHERN DIVISION.

I have the honour to acknowledge the receipt of your letter No. 3364C., dated 7th instant, with accompaniment, to which I hasten to reply. The remarks of my assistants, to whom your letter will be at once sent, I propose to forward hereafter.

2. I will reply to your queries in the order in which they have been put in your letter.

A.—What number of people may eventually be dependent on Government for support should the drought continue?

At present the talukas chiefly affected are Bhimthari, Indápur, the eastern parts of Sirur, Khed and Junnar. To a slight extent Haveli and Purandar are also likely to suffer. At present I have not reason to suppose that Mawal will suffer to any great extent, though, if no rain falls, the crops will be below the average.

The population in the affected area is as follows:—

Taluka.	Population.	Affected.	Population.
Bhimthari - - - - -	115,297	the whole	115,297
Indápur - - - - -	62,392	the whole	62,392
Sirur - - - - -	76,984	one-half	38,492
Khed - - - - -	139,152	one-fourth	34,788
Purandar - - - - -	75,732	one-sixth	12,622
Haveli - - - - -	155,082	one-eighth	19,385
Junnar - - - - -	106,876	one-third	35,625
Total - - - - -	- - - - -	- - - - -	318,601

I calculate that the whole population of the affected area will never be dependent on Government for supplies of food. Many have already emigrated and more will follow. Deduction must also be made for traders, those who are well off, very young children, and the like. I therefore take one-fifth of the total population as the possible number of persons who may eventually have to be provided for. This gives a total of 63,720 souls. A labourer cannot be supported on less than four rupees a month, which would give a monthly expenditure of Rs. 2,54,880. Suppose the famine to last for six months, an expenditure will therefore be required amounting to Rs. 15,29,280.

Grain is now selling at nine seers the rupee; if that price be maintained, and the labourer be paid in grain instead of money, at the rate of one seer per man a day, the expenditure will amount in round numbers to Rs. 12,74,400.

I believe the above estimate is the very outside of the amount that may possibly be required. It must take time to organize an establishment sufficiently large to expend so large a sum, and even if my worst anticipations are realized, I do not expect that 63,720 will immediately become dependent on Government for food.

B.—What is the best organization for a work on a large scale?

I am of opinion that a large work such as a long line of road should be cut up into sections, each section under a European officer. The labourers should be arranged in gangs according to villages, so that the whereabouts of every man might be ascertained at once. Under these circumstances men and women might be allowed to work together. Sub-contracts might eventually be instituted, but not at first. Able-bodied men should have the hard work to do. Grain stores might be established, and the labourer given the option of being paid either in food or money.

C.—Should a portion of those seeking work be employed on minor operations in various parts of the country in preference to being collected on large works?

I am strongly of opinion that as many small works should be undertaken as possible. I much fear that the collection of large numbers of people in localities where they must live in great discomfort, and without shelter, may lead to the outbreak of disease, which it would be difficult to combat.

3. I have already recommended the immediate commencement of work in Indápúr and Bhimthari, at an estimated cost of about Rs. 40,000; these are now being taken in hand. Of larger works I would beg to recommend the following:—

1st. The construction of the earth-works of the proposed railway from Dhond to Manmar.

This will relieve the northern part of Bhimthari and the eastern part of Sirur and Khed.

2nd. The immediate extension of the Karakwasla Canal towards Patas, which will give employment in the worst parts of Haveli and Bhimthari.

3rd.—The improvement of the road from Ana to the head of the Malsef Ghât, and the eventual construction of the Ghât Road.

This will relieve the people of Junnar and part of the Nagar Zillar.

4. I do not anticipate very great distress in the western part of Khed, but Rs. 20,000 or Rs. 30,000 laid out in opening out the road to Bhimashankar would afford great relief to the villages on the Ghâts, and would tend to keep the hillmen quiet, who are apt to be very turbulent in times of scarcity.

5. With regard to minor works, I hope to be in a position to make further recommendations in the course of a short time. There are a few tanks which it might be advisable to clear out, and some short lines of roads which should be constructed. The work of all others which I consider best adapted for the purposes of relief is the clearance of prickly pear. This work could be carried on independently at each village. The workpeople would live in comparative comfort. They could utilize their own tools, and from a sanitary point of view the benefit to many villages would be incalculable. It is true there would not be much to show for the money spent, but the land thus reclaimed would be available for cultivation, and in many cases would realize a considerable sum. I believe this work would be more easily supervised than most others, and it would certainly be more popular, because it would not take people away from their villages. Should Government be willing to modify their opinion with regard to this class of work, I shall be prepared in a short time to submit definite proposals as to the amount which could advantageously be expended in each village.

6. Should it eventually prove necessary to establish stores of grain, I propose to utilize the dharmshalas at Khetgaon, Patas, Dhond, and Diksal as depôts. Each is large enough to contain a considerable store of grain, and all are connected by good roads with the most famine-stricken parts of the district.

The 9th October 1876.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF INDIA, Public Works Department.

With reference to the telegrams noted in the margin, regarding the distress now prevailing in

Telegram, Works, Bombay, to Works, Simla, dated 29th September.

Telegram, Governor, Bombay, to Works, Simla, dated 3rd October.

Telegram, Works, Simla, to Works, Bombay, dated 3rd October.

Telegram, Commerce, Simla, to Works, Bombay, dated 4th October.

some of the eastern districts of this Presidency in consequence of the failure of the monsoon, I am directed to forward, for the information and consideration of the Government of India, a copy of a letter received from the Collector of Sholapur, which describes the very serious state of matters with which this Government have now to deal in the Sholapur districts.

2. Returns similar in tenor have been and are being received from the districts of Násik, Khandesh, Ahmednagar, Poona, Kaládgi, and Dharwar, and

it may be said that the whole of the eastern parts of the Deccan and the southern Mahratta country are threatened with a serious famine. In the parts affected nearly the whole of the monsoon crops have perished, and there have been no later rains to admit sowing of the rabi.

3. His Excellency in Council has directed the Revenue Commissioner, Southern Division, and the Superintending Engineer, Central Division, at once to proceed to the affected districts to obtain the most reliable and the most recent information as to the condition of the country, and to be in a position to suggest to Government the best measures available for meeting the emergency which has arisen. On the receipt of the report of these officers, a copy of it will be immediately placed before the Government of India; in the meantime in all the districts affected this Government have authorised the immediate commencement of the works which are best calculated to afford relief, and for which projects superintendence and funds are available.

4. These works have hitherto afforded some measure of relief, and may do so for a short time longer; but it is apparent that efforts on a larger and more extended scale must very shortly be made if extreme distress and even disaster is to be averted.

5. His Excellency in Council, I am desired to say, is awaiting the receipt of a letter from the Department of Agriculture and Commerce, dated 29th September, of the despatch of which he has been advised in the telegram last quoted above, in which he understands he is to receive instructions as regards the provision of funds for famine relief works, and in respect to the incidence of the charge for such works. Some considerable outlay of Imperial money will, no doubt, be necessary, but his Excellency in Council, I am desired to say, believes that, if confidence be placed in this Government, all that is needed may be done without extravagant or lavish expenditure of public money, and without and great ultimate loss or waste.

Accompaniments to this letter,—

(1.) Letter from the Collector of Sholapur, No. 2321, dated 4th October 1876.

(2.) Memorandum from the Revenue Commissioner, Southern Division, No. 3340, dated 5th October 1876.

No. 5,890.

EXTRACT from the PROCEEDINGS of the GOVERNMENT OF BOMBAY in the REVENUE DEPARTMENT, dated 16th October 1876.

RESOLUTION.—On the reports received from different districts, Government have from time to time, during the last six weeks, issued orders for minor works calculated to relieve the distressed in those districts of the Presidency where the failure of the monsoon rains has caused the destruction of the crops, and deprived the agricultural population of their ordinary means of earning a subsistence. But from the information now being received, it is evident that the distress is of a wider and more serious character than was at first anticipated; and Government are therefore called upon to determine and make known the plan of operations which they will propose to the Government of India for meeting the great calamity which is impending over a very large portion of this Presidency.

2. The districts with which the Government are best enabled to deal immediately are Poona, Ahmednagar, and Sholapur. They form but a part only of the tract to which relief on a large scale must be afforded; but the principles applied to them will generally govern all the rest.

3. The Collector of Sholapur, in his letter of the 4th October, reports “there is now no part of the district in which the condition of the mass of the people is not most deplorable; and as there is no prospect of any crop whatever throughout by far the greater portion of the Collectorate, there can be no doubt that a scarcity amounting to famine must be the result.” The Collector of Poona, writing on the 10th instant, says: “For the first few miles beyond Poona the crops are still in the ground, but they are rapidly drying up, and unless rain falls cannot expect to yield any grain. They are now being cut for forage. Beyond that distance, the country is an absolute desert, not a blade of grass nor a particle of grain is to be seen anywhere. The rivers and wells are drying up, and the cattle are dying of absolute starvation. The people are looking very thin and ill, and though there have been no deaths from starvation, it is very evident that something must speedily be done to alleviate the distress.” The Revenue Commissioner and the Superintending Engineer, who had been specially ordered out by Government to report on the distressed districts, writing from Ahmednagar on the 10th instant, after passing through the Bhimthari Taluka of the Poona District, report: “We are about to proceed to the Sholapur Collectorate; but we are already so impressed with the excessive character of the drought in those parts seen by us, and we are so fully convinced from various circumstances, and especially from the communications of the Collector of Sholapur, Mr. Grant, that our visit there will bring before us a still worse and more universally spread calamity, that we should consider ourselves to blame in delaying to lay the very serious nature of the case before Government, and to apply at once for relief works on a large scale.”

4. The Collector of Poona, in a letter to the Revenue Commissioner of the 10th instant, estimates the population of those talukas which are more or less affected at 318,601. The last census gives that of Ahmednagar as 773,938, and that of Sholapur as 662,986. The total population of the districts for which Government is now endeavouring to make immediate provision, amounts to about one million and three-quarters. The Collector of Poona estimates the number of those that must be kept alive by Government at one-fifth, or over sixty-three thousand. There is little reason to believe that the proportion of the destitute in Ahmednagar will be less than that of the worst talukas of Poona. While in the case of Sholapur the Collector calculates that the cultivating classes and others, such as the Mhars, Mhangs, and Ramosis, will be without food or provision for themselves, their families, and cattle for the next twelve

months, and unable to procure the barest necessities of life without the assistance of Government.

5. It is evident that all calculations on this head must be attended with great uncertainty; but bearing in mind that the Government of India in their Despatch to the Secretary of State of the 30th January 1874, in commenting on the Bengal famine, assumed that one-tenth of the population might require relief, it seems reasonable to frame our estimate on a medium between that rate and that of the Collector of Poona, viz., one-eighth, or say two lakhs and a quarter.

6. The Collector of Poona supposes the famine may last six months. The Collector of Sholapur contemplates twelve months. It will probably be better to reckon on eight months from the 1st November, that is, up to the end of June, by which time it may be hoped that the monsoon rains of 1877 will enable the agricultural population to resume their ordinary avocations.

7. Assuming, again, that each person will require, on an average, one pound of grain per diem, and that 18 lbs. or 9 seers can be purchased for one rupee, the following will be the general result:—

$$219,440 \times 240 \div 18 = \text{Rs. } 29,25,866$$

or say 30 lakhs of rupees.

8. Such being the magnitude of the undertaking with which the Government are called upon immediately to deal, and which they much fear will form but a moderate proportion of the whole burden, they think it desirable to make known the mode of action they will recommend to the Government of India.

9. His Excellency in Council is clearly of opinion that in all cases in which, with due regard to sanitation and other local circumstances, it may be found practicable, it will be far more convenient, and in the end far more economical, to select for relief works those of considerable magnitude, which have been well examined and approved, though unavoidably postponed, on which the labour of large bodies of men can be advantageously concentrated. There may be cases in which it may be necessary to have recourse to isolated works of a trifling nature; but these should, as far as possible, form the exceptions.

10. All payments for labour employed on relief works should be paid for either in money or in grain; the officers directing the works should take no part in the provision of food.

11. Government earnestly desire to abstain from making any purchases of grain in the general market. They will only have recourse to such a step in cases where there is no supply, or where they are satisfied that the prices demanded by the dealers are extortionate and cruel, and they trust they may not be disappointed in the hope that no such necessity will arise.

12. In every case, therefore, in which it may be found necessary to undertake large relief works, the Government will, by public advertisement, invite tenders for contracts for the supply of grain to the labourers employed, at certain rates, for a term certain, at such places as may be found convenient.

13. In those cases in which the Government may be obliged to supply food to people unable to work, or to those employed on small works to which no contractors may be attached, the grain will be purchased, as far as practicable, at the contract price from the nearest contractor.

14. Government do not lose sight of the fact that, under this system, the price to be paid for grain may be high; but they believe that this may be counterbalanced by their being relieved of the obligation to provide stores and establishments for the charge and distribution of the grain, and above all by escaping the risk of accumulating supplies which may prove in the end to exceed the actual requirements.

15. His Excellency in Council has sent the following message by telegraph to the Government of India in the Revenue Department: "There has been a long discussion in Council on the measures to be adopted for the relief of the distressed population. The reports are exceedingly bad. All will be forwarded immediately. The small works spoken of in your letter of the 29th have been sanctioned and are nearly done. We are unanimously of opinion that the work on the Dhond and Munmar Railway must be commenced at once. If there is not heavy rain in the course of a few days, the state of affairs will be most serious, and we must be free to deal with them at once. Local resources are virtually exhausted, and we have been compelled to day, as a temporary expedient, to authorise each of the Collectors of Poona, Ahmednagar, and Sholapur to expend Rs. 25,000 for preserving the lives of those who may be too infirm to work or too poor to buy, as well as for the payment of any employed on trifling local works."

16. This Government have issued instructions for resuming work on the Mutha Canal, which will afford useful employment to the people of the Poona Collectorate.

17. The works enumerated in the statement No. I. attached to the letter from the Revenue Commissioner and Superintending Engineer should be sanctioned in the Public Works Department, and should be proceeded with at once.

18. His Excellency in Council abstains on this occasion from any discussion on the incidence of the cost of the contemplated operations, to which allusion is made in the letter from the Government of India of the 29th September last. By a letter from this Government, of the 7th June last, the Government of India were made acquainted with their views on the subject. The measures adopted in Bengal have established the principle that the people must be kept alive, and it is manifestly impossible to postpone affording relief until the ultimate incidence of the cost has been arranged.

19. Copies of this resolution, and of the reports on which it is founded, should be immediately transmitted to the Government of India, with a request for the earliest communication of their views on the proposals submitted.

No. 5,953, 19th October 1876.

From the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY to the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenues, Agriculture, and Commerce.

In continuation of my letter No. 5,891, dated 16th instant, I am directed by his Excellency the Governor in Council to forward, for the information of the Government of India, the accompanying copies of the papers noted in the margin, regarding the distress prevailing in the Satara and Dharwar Collectorates of this Presidency, and the measures adopted in consequence.

Letter from the Collector of Satara to the Revenue Commissioner, Southern Division, No. 4,347, dated 10th October 1876, with accompaniments.

Endorsement by the Revenue Commissioner, Southern Division, on the above, No. 3,440, dated 13th October 1876.

Government Resolution, No. 5,907, dated 17th October 1876.

Letter from the Collector of Dharwar, No. 3,076A., dated 7th October 1876, with accompaniments.

Endorsement by the Revenue Commissioner, Southern Division, on the above, No. 3,441, dated 13th October 1876.

Government Resolution, No. 5,906, dated 17th October 1876.

2. I am desired at the same time to transmit the accompanying copies of the Resolutions of this Government in the Public Works Department, Nos. 142 C. W.-718 and 144 C. W.-725, dated respectively the 9th and 12th instant, as also a copy of the Resolution of Government in the Financial Department, No. 4,256, dated 16th idem, instructing the Accountant General to debit all charges on account of the famine to a separate head "Famine Relief Expenditure."

No. 903, 3rd October, 1876.

From KHAN SAHEB MEHERJIBHAI KUVARJI, Subordinate Judge, Tasgaon, to the COLLECTOR and MAGISTRATE, Satara.

Though it is no part of my duty, I consider myself bound, as a public servant, to bring to your notice the following few circumstances, which my own experience and personal inquiry have enabled me to ascertain, relating to the very great suffering of the cultivating and other poor population of this large town, and the other villages of this taluka within the jurisdiction of my court, on account of want of rain this year.

It is quite justifiable to say that the little rain that fell here and there throughout the whole season was really speaking equal to no rain to produce any crops. I have been in this place since the beginning of the rainy season, and am therefore able to lay before you circumstances attending the fall of rain from the commencement. In a very few places of the taluka it fell at the commencement of the season (about the 7th or 8th June), and in other places about a month and a half after (*i.e.*, about the 26th of July). But this downpour was only sufficient for the purpose of sowing seeds in the fields. At this time most of the fields (for there are a few fields which are not sown up to this time) were sown. The rain almost entirely stopped after this, except a few momentary showers here and there, which fell at great intervals, and to no advantage to the crops. The seeds grew up as long as there was moisture in the fields, and no sooner they were dry than the growth of the crops were stopped. The consequence is, that at this time, when the crops ought to be in their full height, and healthy, and prosperous state, with ears of corn over them, they are hardly more than a foot high from the ground, and in a ruinous and dry state, with not a particle of grain over them.

Such being the state of crops the people are exceedingly alarmed; every person dreams of a famine. The grain bazaar is getting dearer and dearer every day. There are two bazaar days in this town, Monday and Thursday. On Thursday before last the rate of grain was suddenly reduced by the merchants from 3 to 2 "pailis" for the rupee. And even at this dear rate many persons were unable to get any grain in the bazaar. I had to assemble all the grain merchants in one place and persuade them to have mercy on the poor sufferers, and not to mind much about their profits. The consequence is that the same rate is retained for the last three bazaars, and the practice of the merchants of this place of buying in lump the grain that come from out-stations and then selling it in retail on profits has been discontinued for a time, to enable the poor to buy it from the out-station merchants directly at a cheaper rate. But I humbly submit that if the state of rain remains the same the bazaar will not retain its present state for many days.

It is a well-known thing in this part of the country that cultivators have no grain in store for their own provision. They produce grain, but they go to their Soucars no sooner they are ready, and almost immediately after the harvest time they are obliged to borrow either money or grain for their own support. But at this time the lenders have stopped all transactions with their customers, either in cash or grain, because they have no hope of recovering anything at the next harvest time. The same is the case with the other labouring class who are not cultivators, as every man has stopped his private works. The labourers are ready to work for the whole day for a paltry wage of 1½ annas, or even less, but they are unable to find employers. The result is that the above two classes of people have become quite supportless. They are quite unable to support themselves and their families. It is horrible to describe how many cattle they have lost. Many are obliged to abandon their cattle for being unable to feed them. For the last one week I have been hearing of instances in which people are actually starving; some living on vegetable only. Many people have become desperate, and it has therefore become a dangerous thing for a man to go from one place to another without apprehending the danger of being plundered on the road. The other day a witness who appeared to give evidence before me complained of his being plundered by two men and deprived of the only two breads he had for himself. Many such instances have come to my knowledge, and I have taken the utmost care to see that the statements are not exaggerated.

Since the 25th of the last month there has almost every day been every sign of a heavy rain. In some places there were actually some downpours, but they were too slight to be of

any use to the crops. There were two successive downpours at this place on the 26th and 27th ultimo, but each did not last for more than 10 minutes, and was to no advantage to the standing crops at all. It is said that if sufficient rain falls within the next eight or ten days, the crops in the best soil which are not quite dry will yield one-fourth part of their usual produce. But if it does not fall within the above time, then it is beyond all hopes to get anything out of the crops that are standing now. If it falls within a fortnight or so, it will be useful only for the rabi crops, the advantage of which is not to be derived before the month of April or May of 1877.

I have been able to ascertain that very few people of this taluka have some grain in store, but they apprehend famine, and are therefore unwilling to take it out for sale. The other day a Marwari took a certain amount of grain out of his store, and no sooner the Mohars and Mangs heard of it than they came in multitude of about 50 to demand grain from him. At last he was obliged to give them some (of course gratis), lest they would commit mischief and other outrages. I myself have heard many a people cry for food. Some say they are starving for two days, some for three days. If the children are fed the parents must starve.

Such is the condition of the people of this taluka, particularly the cultivators and labouring class of people. The long and short of it is, that they have neither grain nor money to buy any with, and though they are willing to work for a trifling wage there is nobody to employ them. Unless, therefore, some prompt measure be immediately taken by Government to relieve the sufferers from starvation their condition will be too hard to endure.

I am sorry to say that I have not the advantage of going round in the taluka, otherwise I would have made this report earlier. Still, whatever I have stated above is not without inquiry and satisfying myself as to its truthfulness. I have just ascertained from some merchants of this place that what grain they and other merchants have in store in the taluka is hardly enough to last for a month if freely exposed to sale. They are willing to get grain from distant parts of the country, but they are discouraged to do so on account of the dangerous state of the roads in these days.

I need hardly suggest what measure should be adopted, but if public works be commenced to enable the labouring classes to earn their livelihood, and arrangements made for the safety of grain in transit, the evil will be remedied to a great degree.

Hoping to be excused for the lengthy report.

No. 920, 8th October 1876.

From KHAN SAHEB MEHERJIBHAI KUVARJI, Subordinate Judge, Tasgaon, to the COLLECTOR AND MAGISTRATE, Satara.

With reference to my letter, No. 903, of the 4th instant, I have the honour to state that on the 5th instant, at about 2 p.m., a multitude of about 60 persons (men and children) of the village of Nimblak came to me while I was engaged in court and complained that they have been all starving, that the merchants of their village who have some grain in store have positively declined to lend them any. They further said that some of the villagers have already become deserters and gone to different directions, and the remaining have made up their minds to go wherever they like and do whatever their present condition would dictate them to do, unless the Sirkar would make some immediate handobast.

Yesterday morning also some 25 men of the village of Erandole came and complained about the same things as above stated. They say that their calamity has reached to such a height that they cannot suffer any longer; that they cannot see their children starve before their faces, and that the last thing that remains for them to do would be to throw their children into wells, and then do whatever they would be compelled to do under the present hard circumstances.

Such are the circumstances which I consider it my duty to bring to your honour's notice.

I beg humbly to submit that this place being the sadr station of the taluka, the suffering class of the people can have every excuse for coming here in a large number for the purpose of asking for relief from the Sirkar, and it is not therefore unlikely that they may commit some outrages. The police force here is comparatively too small to confront any such attempt from the desperate people. Several minor thefts and house-breakings have already been committed for the last few days. Mangs and Mohars are occasionally seen wandering in the town at unusual hours, and when they are asked the reason of doing so, they plainly say that they are starving, and so wandering for bread.

While I was writing the above, about 60 men of the village of Visapur came and complained about the same thing. It has now become a difficult thing to console such people.

It has been reported to the Chief Constable that several persons have very severely assaulted a Wani merchant of Visapur yesterday in daytime for refusing to give them grain.

Since my last report there has not been a single drop of rain, and the crops are therefore in a worse condition than before.

I have hastened to make this second report to-day, though Sunday, as I consider that such things as the above should be brought to your honour's notice without delay.

No. 4,342, 10th October 1876.

From ACTING COLLECTOR AND MAGISTRATE, Satara, to the FIRST, SECOND, and EXTRA SECOND ASSISTANT and DEPUTY COLLECTORS.

Judging from reports arriving from the districts, it appears to me that there is every chance of grain riots if some special measures are not adopted to provide the poorer classes with grain; that there is no scarcity of that article I fully believe, but evidently it is not available to the public. I have addressed Government on the subject of importing grain from Bombay, but a fortnight or more may elapse before it arrives, and meanwhile our position will be considerably worse.

2. I have written to the several municipalities in the district to suspend the duty on grain, and I have also written to Mamlatdars and others to use their influence with those who have granaries

to sell their grain to the people; but reports received to-day, especially from Tasgaon, are so distressing, that active measures must be adopted.

3. After giving the subject much anxious and serious consideration, I have come to the conclusion that we must compel those who have granaries to open them for the use of the poor. This may appear at first sight a harsh measure, and certainly it interferes with the right in private property; but I believe that the end justifies the means, and that it would simply be culpable on our part if we sit with folded hands.

4. You are now in your districts, and you will be able to judge for yourself what the real state of the poorer classes is. If it is as bad as represented, I authorise you to assemble the people who are holding back their grain, and to point out to them that if they wish to prevent serious disturbances, resulting most probably in great injury and loss to themselves and their property, they should at once place their granaries at our disposal for distribution to the starving poor. If they refuse I authorise you to take possession of the granaries, and after, with the assistance of a panchayat, fixing a fair and just valuation, to distribute it as you think fit, either by sale to those who can afford to buy, or as wages in return for labour to those who cannot afford to buy.

5. As regards the particular works on which unskilled labour can most effectively be employed, I must leave much to your discretion. I will, by the next post, send you a copy of a letter addressed by me to the Revenue Commissioner on the 7th instant, and I would add, I think, pending the sanction which I have solicited to the commencement of important water schemes, you cannot inaugurate any more useful work than digging large and deep pits or trenches on the roadsides for tree-planting and filling them up half with prickly pear and half with soil. We shall thus eradicate prickly pear, secure good pits and trenches for our roadside trees, and give really useful and profitable employment to a starving and discontented population.

6. You should, where necessary, establish about four centres in each taluka, so as to prevent the people from all congregating in one particular part.

7. I fully depend upon your good sense and zeal in carrying out these instructions, and you may, in turn, rely upon my support in strengthening your hands to the best of my power.

8. I have asked the District Superintendent of Police to place aid at your disposal in carrying out these instructions.

No. 4,347, 10th October 1876.

From the ACTING COLLECTOR AND MAGISTRATE, Satara, to the REVENUE COMMISSIONER, Southern Division.

The translations of petitions which I sent you to-day for perusal will have given you some idea of the state of these districts. I have now the honour to forward copies of two communications received from the Subordinate Judge at Tasgaon, which show that it is high time to take active measures in order to prevent the suffering poor from taking the law into their own hands.

2. The present state of affairs is clearly the result of a panic. There is, I believe, a good deal of grain in the district; but the khariff crop has failed in the east, and the continuous drought causes apprehension for the safety of the crops which have hitherto thriven and for the sowing of the rabi, and therefore those who have grain in their possession are holding it back in the hope of making a harvest.

3. But be the cause what it may, it is a fact that grain is not procurable in many places, and, as in Tasgaon the poorer classes are in desperation assuming a threatening attitude.

4. The outcry is not confined to Khatan and Man, where the crops have, we may say, failed altogether, or to Tasgaon and Khandpur, where they have suffered much; but, even in Satara and in the most fertile taluka of this Collectorate, Wahva, the poor cannot procure grain.

5. In Satara some of the respectable and most liberal-minded traders, led by Shet Durgaram, have sent money into Poona in order to import grain to sell it at cost price, including the transit charges; and the arrival of some of this grain, coupled with the temporary suspension of the municipal duty on that article, has already afforded some relief in this city; and although I have recommended the suspension of the grain duty in other municipalities, I find on calculation that it will be impossible to import grain from Poona to the east and south-east of this district and to sell it except at a high rate. I also feel that if I wait until I can make arrangements for importing grain at any price to those parts of the district much delay must occur, and that meanwhile the starving people will probably be driven to violent and lawless measures; and I have therefore assumed the responsibility of issuing instructions to the officers in charge of districts to compel such people as have granaries to place them at our disposal as the only means of affording immediate relief.

6. I append a copy of the instructions which I have issued, and I trust that Government will hold me excused for acting illegally in consideration of the urgency of the case. You will observe that I have directed my assistants in the first place to adopt persuasion, and in case of failure only to assert their authority.

7. We have, it appears to me, the choice of two evils—either to stand idly by and to see the houses and property of the merchants robbed and destroyed, or to put the law on one side, and take possession of their grain at a fair valuation, and to distribute it to the poor. In the former case the greatest mischief and trouble to all concerned will result, and in the latter the owners of grain will receive a fair profit for their goods, and their houses and other property will be safe, while the wants of the poor will be supplied until we can import grain. Taking this view of the case (the only view in which I can possibly regard it), I trust that I may be held justified in adopting the measures which I have taken.

8. Such measures can, however, only afford temporary relief, and I have now to request that Government will be so good as to make arrangements for sending grain from Bombay to Chiplun, in order to meet the pressing wants of the distant parts of these districts. I will make arrangements with the Collector of Ratnagiri to have it sent up the Kumbharli Ghât to Karad, from which place I can send it where it is required.

9. I am sorry to trouble Government in this matter, and to ask them to make these arrangements for me, but I know not to whom to apply in Bombay, and, as delay in making references may prove fatal, I trust this requisition may be complied with at once, and that I may receive an intimation to that effect. I might, it is true, procure grain from Poona, but from inquiries personally instituted in the city I find that it will be cheaper to import grain via Chiplun to the south and south-east of the district.

10. A cart is supposed to carry 6 maunds of grain. Cart hire from Poona to Satara is Rs. 7; the distance to Tasgaon is double that from Poona to Satara, so we will put that down at Rs. 14, plus the price of grain, including extra charges, Rs. 43, *i.e.*, Rs. 7 per maund, and Re 1 for extras; Rs. 57 for 6 maunds from Poona to Tasgaon.

11. By Chiplun the following would be the calculation:

	R.	A.	P.
Water carriage for 6 maunds from Bombay to Chiplun	-	1	2 0
Cart hire from Chiplun to Tasgaon	-	8	0 0
Price of grain	-	42	0 0
Total	-	51	2 0

or Rs. 5.84 less per cart-load.

12. As a commencement, I think grain worth Rs. 5,000 will suffice, and I will regularly report progress.

13. There is no prospect of rain at present, although it is anxiously expected. If rain falls prices will fall, and there will be hope for a rabi crop; but the season for sowing rabi has already far advanced, and if rain is withheld great despondency will succeed the present anxiety.

14. You will be glad to hear that the temporary suspension of the municipal tax on grain has already had its effects. Private traders are bringing in grain and selling it at a fair price to the public. I was at the bazaar this morning when they were commencing to sell at 8 seers per rupee. I have had a good deal of conversation with the merchants of this city lately, and I must say the disposition is to help the poor; they wish to make a little profit and to sell grain to the people at cheap rates. As far as Satara is concerned, I think we have secured a fair supply of grain now, and I can also feed Khandala, Koregaon, Wai Janli, Khatan, and Man from Poona; but it is for the distant talukas that I wish to import grain, as they have not the same facilities as we have at Satara.

No. 3,440, 13th October 1876.

MEMORANDUM by the REVENUE COMMISSIONER, Southern Division.

Submitted to Government.

2. As the Collector explains in his 9th paragraph that he has a difficulty in applying to agents for grain in Bombay, the Revenue Commissioner respectfully supports the request in paragraph 12, that Rs. 5,000 worth of grain* should be supplied via Chiplun for distribution as wages or part wages to labourers, or to be otherwise applied at the Collector's discretion; the value to be accounted for.

* The Collector does not specify the kind. Jawari would be preferable, but if not obtainable at moderate price, then bajri would be taken. That grain is just now very cheap in Gujrat.

The amount, however, appears inadequate.

3. The Revenue Commissioner regrets that he cannot add his approval of the measure reported by the Collector of "issuing instructions to the officers in charge of districts to compel such people as have granaries to place them at our disposal as the only means of affording immediate relief." The best feature in the measure is the option given to the grain holders to voluntarily place their property at the disposal of the authorities, because though it is obvious that the panchayat valuation is not that which the grain storer wishes to realise, yet he may perhaps set against the loss of profit avoidance of the risk of holding on when the popular feeling is irritated, and the expropriation might take place in a still less unceremonious manner, with the addition of personal violence.

4. There is apparently a complete failure of the early or kharif crop in Khatan and Man talukas, and more than a partial one in Tasgaon and Khandpur, the Satara Mangs and Ramosis are also a turbulent race, but there is at least as bad a failure in Pandarpur and Sangola taluka of Sholapur, from which district the Revenue Commissioner is now writing, and a more than partial failure in Malsiras. The two first-named talukas formerly belonged to Satara, and Malsiras was transferred only last year; yet no such measure has been ever recommended for those districts.

5. It appears to the undersigned that though there may be much suffering already among the poor of the talukas in Satara under consideration from the failure of the renewal of supply to which they ordinarily look at the season of harvest, yet that the amount in store has been underrated. The simple and judicious measure of suspending the municipal octroi on grain at Satara has, Mr. Moore reports, made the grain pass from the shops. The similar instructions to other municipalities will probably have a similar effect, not perhaps to last very long, unless rain should fall.

6. If there are any serious grounds for the apprehension expressed, the Revenue Commissioner thinks the proposed amount of importation of grain by Chiplun quite insufficient, and would recommend its being quadrupled. No doubt, though not precisely so stated, the maund to which Mr. Moore's recommendations refer is the Satara maund of 12 local pails, or 48 local seers, which would probably represent about 130 lbs. each, instead of the maund of 82 lbs. used in Government statistics. Between 300 and 400 cart loads of grain which, at the prices mentioned, Rs. 20,000 would represent, would not have the effect of a glut on any one of the talukas in the condition described.

7. With regard to the taking possession of the grain dealer's property, except in case of a desire to seek protection, the undersigned would be prepared to peremptorily prohibit any further proceedings of the kind ; but the question is respectfully left for the consideration and orders of Government.

RESOLUTION by the GOVERNMENT OF BOMBAY, Revenue Department, No. 5,907, dated Bombay Castle, the 17th October 1876.

MEMORANDUM from the Revenue Commissioner, Southern Division, No. 3,440, dated 13th October 1876, submitting, with his remarks, a letter, No. 4,347, dated 10th idem, from the Collector of Satara, with its accompaniments, relative to the distress prevailing in that Collectorate and the measures proposed for its relief.

RESOLUTION.—A grant of Rs. 25,000 has already been made, under conditions which have been communicated to the Collector.

2. Steps have been taken to countermand the instructions issued by Mr. Moore in respect to interfering with the free action of the dealers.

3. There is no reason to suppose there is a scarcity of grain in the country ; and Government are most averse to import on their own account, or otherwise interfere with the natural course of trade.

No. 3,076A., 7th October 1876.

From the COLLECTOR OF DHARWAR to the REVENUE COMMISSIONER, Southern Division.

I have the honour to submit copy of my letter No. 3,053, dated 6th instant, to the Executive Engineer for Irrigation, as also copy of his reply.

2. I would request that Mr. Palliser may receive early orders for the immediate commencement of the three works mentioned in his 3rd paragraph.

3. As regards the Doni tank work, that project necessitates a great deal of skilled labour, and therefore, as a famine relief work, is not so desirable as the Dambal tank work, which will have more earth-work.

4. A very large body of distressed villagers are employed on the Dambal and Hasrur Road, and by the end of this week the number of persons employed will have (I am told by the Engineer Department) reached the large number of about 3,000 people.

5. Yesterday I met Colonel Greig, and we arranged for such re-appropriations in the Local Funds Budget as were feasible, and I am about to submit a letter on this subject.

6. As the relief works now absolutely required to keep people from starving are extending, and the number of people on the Hasrur Road is very large, I have issued orders, in concurrence with the views of Colonel Greig, to introduce the famine test of part grain payments. We have determined to pay part wages in grain, at the rate of $\frac{1}{2}$ Dharwar seer (equal to a seer of 80 tolas) of jawari to each single man per diem, and 1 Dharwar seer (equal to 2 seers of 80 tolas) to each man with a family. The grain we can, by buying it wholesale, purchase cheaper than the people can buy it retail, and we shall serve it out at our purchase rate. I have directed that the grain distribution or payments shall be made by the Mamlatdar every Sunday morning.

7. It may be necessary to ask Government to relieve the Mamlatdar of his magisterial duties, and to appoint an extra first Karkun. This course has, I hear, been adopted in all the talukas of the Bellary Collectorate, Madras Presidency, the Mamlatdars being employed specially in matters connected with the present distress.

8. The Dambal and Hasrur Road work cannot last very long, and we must have some other properly prepared work on which to proceed in the Gadag taluka as soon as the Hasrur Road work comes to an end.

9. I beg, therefore, with reference to paragraph 4 of the letter of Mr. Palliser, Executive Engineer for Irrigation, that he may at once be directed to resubmit the plans and estimates of the Dambal tank scheme, which, from there being much earth-work, is one admirably suited for a relief work.

10. In calling upon Mr. Palliser to hasten the Savanur tank project, as the work is required as a relief work in that State, he has stated in his No. 1,725, dated 6th instant : "The delay has been unavoidable owing to the insufficiency of my establishment." I beg that the establishment of the Executive Engineer for Irrigation may be temporarily strengthened, as at this juncture time is everything, and the want of a sufficient establishment must not be allowed to delay the preparation of projects on which funds can be expended for the relief of the people.

11. Now that works are being vigorously prosecuted, the want of establishment is most seriously felt. Colonel Greig yesterday complained severely of it, and I hope that Government will be pleased to place a sufficient extra strength of supervisors at the Superintending Engineer's disposal, to allow of his being able to meet our necessities.

No. 3,053, 6th October 1876.

From the COLLECTOR OF DHARWAR to the EXECUTIVE ENGINEER FOR IRRIGATION, B. and Dharwar.

I have the honour to request you will inform me what estimates you have prepared, as also for what works you have sanctioned plans and estimates.

2. The road work from Hasrur to Dambal is progressing rapidly, and funds will soon be expended. It is now therefore necessary to look to new works to aid the people.

No. 1,715, 6th October 1876.

From the EXECUTIVE ENGINEER FOR IRRIGATION, B. and Dharwar, to the COLLECTOR OF
DHARWAR.

In reply to your letter No. 3,053 of this date, I have the honour to report in detail on the subject, as it appears you wish the information for the whole district, and not for any one taluka.

2. The Doni tank estimates, amounting to Rs. 89,114, have been sanctioned by this Government, but in consequence of financial difficulties the Government of India excluded the work from this year's budget. In April last the Chief Engineer for Irrigation said that "possibly after" the rains provision might be made for the work by re-appropriation." If it were necessary to start the work as a relief to the people, funds would, I think, probably be available; but a reference from you would be desirable.

3. Below are named three sanctioned works, which I have authority to proceed with immediately after the rains:

Work.	Taluka.	Amount of estimate.
		Rs.
Repairs and improvements, Mavinkop tank	Dharwar	10,000
" Ditto ditto Yelvigi tank	Bankapur	9,200
Repairs, Tilavalli tank	Hangal	5,350
Total	—	24,550

4. The Dambal tank estimates, amounting to Rs. 40,000, have been returned to me for reconsideration. Some further survey is necessary; but if you should contemplate urging this work as a relief work, I shall be obliged by your letting me know, so that I may do my best to send in the estimates for immediate sanction.

5. The estimates for the Medhri tank, taluka Ranibennur, are in abeyance pending a reply to a reference to you on the subject: vide my No. 1,332 of the 1st August last. These estimates could, if necessary, be pushed on and sanction be obtained by December. The work would be effective as a relief work.

6. The Hirekerur tank work, taluka Kod, will in all probability be sanctioned in a week or two. The amount will be about Rs. 10,000.

7. There are other works the estimates of which are in hand, but I cannot give you such certain information with regard to them as on those enumerated above.

No. 3,441, 13th October 1876.

MEMORANDUM by the REVENUE COMMISSIONER, Southern Division.

Submitted for the early consideration and orders of Government.

2. The Collector's present proposal relates principally to the question of finding employment for the people on works of irrigation. The Dambal tank scheme is represented to be specially adapted, as supplying a large quantity of earth-work, to the present emergency. The undersigned accordingly strongly supports the recommendation in paragraph 9 of the Collector's letter.

3. Attention is also invited to the representations in paragraphs 10 and 11, regarding the insufficiency of the establishments under the Executive Engineer for Irrigation, as well as the Executive Engineer of the district.

4. Regarding the subjects mentioned in paragraphs 5 and 7, the Collector's reports, when received, will be laid before Government for consideration in the departments to which they relate.

5. The steps taken by the Collector, as reported in his 6th paragraph, appear very suitable under the circumstances, and are recommended for approval.

RESOLUTION by the GOVERNMENT OF BOMBAY, Revenue Department, No. 5,906, dated Bombay Castle, 17th October 1876.

MEMORANDUM from the Revenue Commissioner, Southern Division, No. 3,441, dated 13th October 1876, submitting, with his remarks, for the early consideration and orders of Government, a letter No. 3,076 A., dated 7th idem, with its accompaniments, from the Collector of Dharwar, containing his proposals for finding employment for the people on works of irrigation, and for the relief of the distress prevailing in that district.

RESOLUTION.—Government understand that the Dambal tank can be commenced at once as a relief work. Instructions should therefore be communicated by telegraph from the Public Works Department.

2. The steps the Collector of Dharwar is taking regarding the construction of the Dambal and Hasrur Road are approved.

3. The Collector should be informed that Government is most anxious to avoid buying grain in the general market, and desires to obtain contracts for the supply to labourers on large works. Further instructions will be sent to him on this head.

4. The Government of Madras have been asked by telegraph to inform this Government of the measures of relief that are being adopted in Bellary.

RESOLUTION by the GOVERNMENT OF BOMBAY, Public Works Department, No. 142 C. W.—718, dated Bombay Castle, 9th October 1876. (See p. 22.)

RESOLUTION by the GOVERNMENT OF BOMBAY, Public Works Department, No. 144 C.W.—725, dated Bombay Castle, the 12th October 1876.

MEMORANDUM from the REVENUE COMMISSIONER, Southern Division, No. 3,230, dated 26th September 1876.

With reference to Government Resolution, No. 123 C. W.—672, dated 22nd September 1876, submits a letter from the Collector of Poona, reporting that no rain has as yet fallen in the eastern talukas, and applications for assistance are numerous and urgent; stating that he proposes to

	Rs.
Road from Supa to Baramati - - -	10,000
Road from Indapur to Nira, passing through Bowra - - -	10,000
Road from Chandgaon Ferry to Loni - - -	3,000
Road from Indapur to Sugaon - - -	2,000

commence the works which have been sanctioned on the 1st October 1876; the plans and estimates for the works noted in the margin having already been prepared, and those for improvements on the roads from Patas to Supa, and Patas to Baramati, are under preparation; that the two large works, viz., the roads from Supa to Baramati

and Indapur to the Nira, will be undertaken by the Executive Engineer, who will be requested to employ every one who is willing to work; and to pay all labourers at least once a week, and the other works will be undertaken by the Mamlatdars, with the assistance of the usual Local Funds Establishment, and that Mr. Macpherson will also proceed into the districts early next month to exercise a general supervision in the distressed talukas; that, as Government consider that additional road works should be undertaken in preference to prickly pear clearances, he proposes the two following roads, which he thinks will be found useful:—

Bhimthadi Taluka.

	Rs.
Road from Baramati to Sangui on the Nira - - -	4,800

Indapur Taluka.

Road from Kalas to Sholapur high road at Kumbhargaoon - - -	3,000
---	-------

Stating, with reference to the 4th paragraph of the above resolution, that the Local Funds Committee are unable to provide any portion of the funds required for the execution of the proposed works, as the unappropriated local funds balance on the 31st March 1877 is estimated to amount to Rs. 714 only; that the unexpended balance at the close of the year will, no doubt, amount to a much larger sum, but, on the other hand, if large remissions of land revenue have to be given, there will be a corresponding falling off in local funds receipts; appending extracts from the Local Funds Budget of Indapur and Bhimthadi, from which it will be seen that there is no possibility of making re-appropriations, the road repairs having already been undertaken as famine works, as reported in his previous letter, and the remaining works consisting chiefly of repairs to wells and dharamshalas, &c., which it would be very false economy to postpone; that the other talukas of the district are in much the same position as Bhimthadi and Indapur, and cannot spare any portion of their local funds for expenditure elsewhere; trusting, therefore, that there will be no difficulty in providing the necessary funds from Imperial or provincial sources.

The Revenue Commissioner concurs, except that he thinks it possible a better line from Baramati might be to Moreshwar on the Nira Bridge line, which is more direct for Jejuri and Poona than Supa.

MEMORANDUM from the SUPERINTENDING ENGINEER, Central Division, No. 3,364, dated 5th October 1876.

Forwards the above, and states that the most advantageous line for the road proposed to be constructed between Baramati and Supa appears to be that indicated in Mr. Havelock's memorandum, via Moreshwar, as the road will then follow for a considerable distance the beaten track communicating from Jejuri to Baramati, and beyond to Pandharpur, and that the estimates relating to the following roads, referred to, have been prepared by the Executive Engineer, and submitted through his office to the Revenue Commissioner, Southern Division, for approval and sanction:—

1. Supa to Baramati.
2. Indapur to the Nira, passing through Bowra.
3. Indapur to Sugaon.

MEMORANDUM from the REVENUE COMMISSIONER, Southern Division, No. 3,353, dated 6th October 1876.

With reference to Government Resolution No. 123 C. W.—672, dated 22nd September 1876, and in continuation of his memorandum No. 3,230, of the 26th September 1876, submits, for sanction, a letter from the Superintending Engineer, Central Division, forwarding survey plans, with estimates, as follows, prepared by the Executive Engineer, Poona District, for constructing certain local roads in that district:—

	Rs.
Estimate No. 152, for Baramati and Supa Road - - -	9,503
" " 156, for Baramati and Moregaon Road - - -	9,655
" " 154, for Indapur and Nira River Road through Bowra - - -	7,190
" " 153, for Sugaon and Indapur Road - - -	2,319

MEMORANDUM from the REVENUE COMMISSIONER, Southern Division, No. 3,357, dated
6th October 1876.

Submits a letter from the Collector of Poona, forwarding, with reference to paragraph 6 of a letter No. L. F.—699, dated 25th September 1876, for sanction, an estimate amounting to Rs. 3,000, for making special repairs to the road from Kumbhargaoon to Kalas, taluka Indapur, and requesting early instructions regarding the source from which the cost is to be met.

RESOLUTION.—As these are all local works they are within the competency of the Revenue Commissioner to sanction, and he should sanction them accordingly. He should also issue such orders as he may think fit in regard to the alignment of the road between Baramati and Supa. It seems to be of very little consequence what particular direction the road takes; the chief object in putting the work now in hand is to afford relief, and this object should not be lost sight of while discussions are carried on regarding what is practically a very minor point.

2. As regards the provision of funds, when the local funds resources are exhausted the requisite means will be found by Government, and the papers should accordingly be transferred to the Financial Department, in order that the Accountant General may be directed to afford the Collector the necessary credit. The expenditure should for the present be carried to a separate head of "Famine Relief Expenditure," to be hereafter adjusted.

RESOLUTION by the GOVERNMENT OF BOMBAY in the Financial Department, No. 4,256, dated
Bombay Castle, the 16th October 1876.

Resolution of Government in the Public Works Department, No. 142, C.W.—718, dated 9th October 1876. Transferring a memorandum from the Revenue Commissioner, Southern Division, No. 3,340, dated 5th October 1876, together with a letter from the Collector of Sholapur regarding famine relief works in that district; and requesting that the Accountant General may be directed to afford the Collector the necessary credit to admit of his obtaining funds to carry on the works enumerated therein.

Letter from the Accountant General, No. R.-10,490, dated 12th October 1876, stating with reference to the above resolution that the sum of Rs. 34,800 has been placed to the credit of the Collector of Sholapur, by telegram, to the debit of Famine Relief Expenditure, in accordance with paragraph 3 of the resolution quoted, and soliciting the necessary sanction for the same.

RESOLUTION.—The Accountant General is to be informed that the Government of India are being kept informed of all expenditure that is being incurred to meet this emergency, and he is to be directed to open a separate head of "Famine Relief Expenditure," to which all charges of this nature that have been and may be sanctioned should be debited.

2. On the question of importing grain, Government are most averse to interfere with the course of trade, and cannot sanction any such measure as that proposed by the Collector, unless it is satisfactorily proved that there is a positive scarcity of the article. If it should be found necessary to undertake relief works on a large scale then it will probably be advisable to invite tenders for the supply of grain for the maintenance of the labourers.

NOTE ON the CONDITION and RESOURCES of the DISTRICTS in the BOMBAY PRESIDENCY
which are threatened with SCARCITY.

Simla, October 21, 1876.

1. THE following particulars on this subject may be found useful for reference.

2. The official communications which have been received in this Department from the Bombay Government up to the present date do not go further than to report distress in the Poona, Ahmednagar, and Sholapur districts. But from the accompaniments to a resolution of the Bombay Government, dated October 13th, which was published in the Bombay daily papers of the 14th, it appears that relief works have been also sanctioned in the districts of Khandesh, Násik, Kaládgi, and Dharwar, and the weekly "season and crops" telegrams, especially those published in to-day's Gazette, show serious distress in Satara and Belgaum likewise.

3. The whole of the nine districts of the Bombay Deccan, containing an area of 54,203 square miles and a population of 7,966,061 persons, and yielding in 1874-75 a realisable land revenue of Rs. 1,39,40,000 and an abkari revenue of about ten lakhs, may therefore be considered as more or less affected. The Bombay Government say, in a letter dated the 9th instant, that "in the parts affected nearly the whole of the monsoon crops have perished, and there have been no later rains to admit of sowing the rabi." The telegram published to-day says, "No improvement in the prospects of the Deccan and the Southern Mahratta country, where famine relief works have been started. Distress general, and scarcity widespread in those parts."

4. Of Khandesh we only know that Sowda, a town and railway station on the eastern side of the district, near the Bhosawal junction of the Berar and Jubbulpore lines, is said by the Collector to be "in the very centre of the famine-stricken districts," and that the local government have sanctioned a road there as a relief work. The telegram published to-day, moreover, says, "Crops in the same bad state as before; prices rising rapidly; scarcity of grass felt in the eastern and central talukas; water supply decreasing generally."

5. Regarding Násik, it appears from official documents that the crops have failed in "several points of the Collectorate." Privately, I learn that the crops have failed in three talukas, that others will follow unless a little rain fall, and that such scarcity is anticipated "that it will be difficult to get any revenue collected." I presume this refers to the talukas where the crops have failed. Relief works have been started in two talukas, but no definite grants have been made. The Bhils are uneasy.

6. The condition of Poona is that two talukas are most seriously affected, and all the others are more or less so. The Collector states that "the rivers and wells are drying up, and the cattle are dying of absolute starvation. The people are looking very thin and ill," &c. It is estimated that one-fifth of the whole population, or 63,000, will have to be fed by Government for several months. The people are said to be "becoming disorderly," and one riot has occurred. The famine is worst in the talukas where the riots occurred last year. Numerous works from local and provincial funds have been started, and Rs. 25,000 have been separately sanctioned "for preserving the lives of those who may be too infirm to work and too poor to buy," &c. The Government have also ordered the recommencement of the works of the Mutha Irrigation Canal.

7. Ahmednagar also is a district in which riots occurred last year. Its condition appears to be nearly as bad as that of Poona. Works to the extent of Rs. 66,000 have been sanctioned out of the provincial budget, in addition to others regularly provided for out of local funds. A special grant of Rs. 25,000 has also been made, as in Poona. The Dhond and Munmar Railway was urged on the Government of India, with the view of giving relief to the three Collectorates of Poona, Ahmednagar, and Násik, which it would traverse in a direction corresponding generally with the most distressed talukas.

8. Sholapur is a peculiarly poor and bare district, which has suffered from drought on more than one previous occasion. It is reported that "there is now no part of the district in which the condition of the mass of the people is not most deplorable; * * * there is no prospect of any crop whatever throughout by far the greater portion of the Collectorate." Local and provincial funds are being taxed to the utmost here, as elsewhere, and a special grant of Rs. 25,000 has been sanctioned, as in Poona.

9. Kaládgi is a poor district, lying along the eastern border of the Presidency between Sholapur and Dharwar. Very little appears to have been done about or for it, but the Collector, in a private letter dated the 13th instant, tells me that "there is apparently no chance of rain now. The kharif here has, almost without an exception, withered away, and the rabi is not even sown."

10. Dharwar.—Two talukas are said officially to be "very distressed," and the local and provincial funds are being exhausted before other relief is given. The Collector has been holding a public meeting and forming a committee of Europeans and natives to assist him—chiefly, it would appear, against a combination of the grain dealers, who are said to be withholding grain from the market. He stated that the relief works already sanctioned were to cost a lakh and a half. Dharwar is a district which profited enormously during the high prices of cotton, and the people have, no doubt, a fair amount of money in hand. The difficulty of Dharwar, Kaládgi, and the adjacent Belgaum will probably be from a want of grain, as these districts have no railway communication, and are cut off by the Gháts from the sea. The telegram in to-day's "Gazette" says, "Crops worse than last week; distress increasing; price of grain rising."

11. Regarding Belgaum nothing has come from the Bombay Government, but the telegram published to-day runs thus, "No rain at Belgaum, but slight showers on the 16th in the neighbourhood; accounts from all talukas very gloomy; kharif crops have entirely failed in Gokole, Athni, and in part of Chikori, and

" little hope of their surviving in other parts ; great mortality of cattle in northern talukas ; prices of grain continue to rise."

12. Of Satara, also, nothing has been said yet by the Local Government, but the telegrams for some time past have indicated approaching distress. Last week the report was, " Rain urgently wanted ; scarcity of pasture severely felt ; prices of grain risen high ; distress among poor people." The telegram of to-day says, " Want of rain severely felt throughout the district ; distress general."*

13. The Bhils, Mangs, Ramoosees, and similar classes who inhabit the Ghât talukas of Násik, Poona, and Satara, and are to be found in parts of Ahmednagar, are not those who will sit down and die. They are naturally predatory, and have risen more than once within my recollection, with fatal results.

14. I have collected a few of the leading statistics of the districts affected, with the view of giving some idea of their respective extent and resources, the means and classes of the population, and the Government revenues involved. The figures are taken from the census of 1872 and the Bombay Administration and Jamabandy Reports. The subjoined table gives the principal features of the population.

DISTRICTS.	Area in Square Miles.	Population.	Population per Square Mile.	Per-centage on Total Population.		Per-centage on Adults.		Per-centage of Proprietors on Total Persons engaged in Agriculture.
				Of Inhabitants of Houses of better sort.	Of Inhabitants of Houses of inferior sort.	Agriculturists.	Non-agriculturists.	
Khandesh - -	10,162	1,028,642	101·22	6·54	93·46	32·86	67·14	83·63
Násik - - -	8,140	734,386	90·22	5·84	94·16	30·74	69·26	87·03
Ahmednagar - -	6,647	773,938	116·43	7·88	92·12	35·67	64·33	82·52
Poona - - -	5,099	907,235	177·92	7·78	92·22	38·87	61·13	91·21
Sholapur - - -	3,925	662,986	168·91	6·12	93·88	26·03	73·97	65·85
Kaládgi - - -	5,695	816,037	143·27	·64	99·35	33·54	66·46	34·42
Satara - - -	5,378	1,116,050	207·52	4·08	95·92	34·86	65·14	95·88
Belgaum - - -	4,591	938,750	204·44	4·91	95·09	32·95	67·05	32·29
Dharwar - - -	4,564	988,037	216·44	1·89	98·11	33·76	66·24	26·03
Total - - -	54,203	7,966,061	—	—	—	—	—	—

The variations in all these particulars between one taluka and another are, of course, very considerable. But the inferiority and comparative poverty of the whole Deccan may be inferred from the fact that in Gujrat the population is 279 to the square mile, and 23 per cent. of them live in houses of the better sort. The three southern districts are remarkable for the larger size of holdings, subordinate to which there are from 40 to 45 per cent. of tenancies.

15. The following statement gives the land in acres, the proportion of it, and consequently of the revenue from it, in which Government is directly interested, and the incidence of the Government assessment. The latter is a fair measure of the fertility and resources of the several districts.

DISTRICTS.	Area in Acres.	Per-centage.		Per-centage of Government Land occupied on Total Government Arable Land.	Gross Land Revenue, 1874-75.	Land Revenue realisable by Government, 1874-75.	Incidence per Acre per Annum of Government Revenue on Revenue-paying Cultivated Area.			Abkari Revenue, 1873-74.
		Of Government Land.	Of Inam Land.				R.	A.	P.	
Khandesh - -	6,505,202	92·69	7·31	50·59	Rs. 33,30,798	Rs. 30,21,890	1	2	10	Rs. 2,13,605
Násik - - -	3,503,518	91·13	8·87	78·71	14,95,211	11,67,169	0	10	5	65,824

The foregoing statement shows how largely all the districts are dependent upon kharif crops, such as rice, bajri, and jawari, which are very generally reported to have almost entirely failed. Jawari is in some districts to a considerable extent cultivated, as rabi also. The statement in the margin for the same year further illustrates the subject, and shows how little aid the cultivation receives from artificial means of irrigation.

DISTRICTS.	RICE LANDS.				Total.

to a considerable extent responsible for dealing with it.

19. In conclusion, it may be mentioned that the weekly telegrams (1) from the Central Provinces report rise of prices in one district owing to exports to Bombay; (2) from Madras, indicate a certain amount of distress, except in Malabar; and (3) as to Mysore and Coorg, state as follows: "Failure of expected rain most disastrous to such crops as had survived drought; distress among people and cattle already acutely felt; prices rising everywhere; markets only moderately supplied; the condition of the country is most critical."

T. C. HOPE.

Telegram, 22nd October 1876.

From the SECRETARY, Department of Revenue, Agriculture and Commerce, Simla, to the CHIEF SECRETARY TO GOVERNMENT, Bombay.

The President in Council requests that all communications relating to the scarcity may be addressed to this Department; also that no communications to the Government of India on the subject may be made public until the answers have been received, but there is no objection to publication of periodical narratives of the condition of the several districts, and of relief operations actually sanctioned. Indeed such publication is desirable. His Honour wishes to receive, at the earliest practicable date, separate statements regarding each taluka in the districts of Ahmednagar, Khandeish, Nasik, Poona, Satara, Sholapur, Kaladgi, Belgaum, and Dharwar, showing its area, population, government, realizable revenue in 1875-76, rough proportion of kharif to rabi cultivation, average annual rainfall, actual rainfall this season, ordinary price of staple food of the taluka at this season, actual present price of the same, probable extent of failure of crops, and amount, if any, sanctioned for relief works and other relief. These statements may be prepared from the best materials now available to Government, and corrected or supplemented afterwards, and should be forwarded as they can be got ready.

Telegram No. 921 A.—G., 23rd October 1876.

From the GOVERNMENT OF INDIA, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

Yours of 9th October, enclosing letter from the Collector of Sholapur, is transferred to Department of Agriculture and Commerce, to which Department of the Supreme Government that of Bombay will for the future address direct on all matters touching the initiation of measures for relief of famine, limiting the correspondence between this Department and that of the Works in Bombay to the usual professional and other details, after the orders of the Government of India have been issued through the Agriculture and Commerce Department, on the policy on action to be taken and on the projects of works approved for execution. Letter follows.

No. 923 A.—G., 23rd October 1876.

From the GOVERNMENT OF INDIA, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

I am directed to acknowledge receipt of your letter No. 142 C. W., dated 9th October 1876, forwarding copy of a letter received from the Collector of Sholapur, describing the state of distress in his district which has to be met by Government, and in reply to say that the further report promised on the subject will be awaited.

2. I am at the same time to request that, apart from the professional or ordinary departmental customs involved in reference to special or ordinary works, which should be dealt with in the usual way, all references to the Government of India in regard to the initiation of works undertaken as famine work may, with a view to consistent action, be submitted through the Department of Revenue, Agriculture, and Commerce.

Telegram, 24th October 1876.

From GOVERNOR OF BOMBAY TO COMMERCE, Simla.

This Government is grateful for the support given by the Government of India in their telegram of the 16th instant, without which they would not hope to contend with success against the present difficulties. They are preparing complete statements of the works sanctioned for the relief of the population in the distressed district, together with full statistical information, and all shall be sent with an explanatory map, as soon as possible. The impression gains ground that the proportion of the population to be employed or relieved will much exceed the calculation given in our resolution of the 16th. Rain is reported by telegraph to have fallen at Dharwar, Belgaum, and Kaládgi. Effect on crops not yet stated.

No. 365.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY.

Simla, 25th October 1876.

I have had the honour to receive your letter No. 5,891, of the 16th instant, with accompaniments, which concludes with a request for the earliest communication of the views of the Government of India on the proposals contained in the Resolution of the same date, and also your letter, No. 5,953, of the 19th instant, giving particulars regarding the distress in the Satara and Dharwar Collectorates. The letter of the Secretary to the Bombay Government in the Public Works Department, No. 142 C.W.—718, dated the 9th instant, has also been transferred to this Department. A memorandum in the Public Works Department, dated the

13th instant, communicating various documents, including the letter of the 9th instant, to the public press, which has not been forwarded to the Government of India, but which appeared, with its accompaniments, in the "Times of India" of the 14th instant, further illustrates the views and proceedings of the Bombay Government in connexion with the prevailing and anticipated scarcity in certain districts.

2. His Honour the President in Council has perused with much concern the accounts contained in these papers of the serious calamity which appears to be impending over a large portion of the Presidency of Bombay.

3. In Khandeish it would appear that in the eastern and central talukas the crops have suffered severely, a scarcity of grass is felt, the water supply is generally decreasing, and a rapid rise of prices is taking place. Regarding Násik, it is understood that the crops have failed in at least three talukas, that the sowing of rabi is doubtful, unless some rain should fall soon, and that the Bhils have shown symptoms of uneasiness.

4. In the district of Poona the Collector estimates that all the talukas will be more or less affected, and that one-fifth of the whole population, or 63,000, may have to be fed by Government for several months. The people are reported to be "thin and ill," and also to be "becoming disorderly." The adjacent district of Ahmednagar appears, from the report of the Revenue Commissioner and the Superintending Engineer, whom you have deputed on a special tour of inquiry, to be in a nearly similar condition. The condition of Sholapur is evidently somewhat worse than that of either Poona or Ahmednagar, and the various reports submitted afford full confirmation of the statement that the "condition of the mass of the people" is "most deplorable," and that "there is no prospect of any crop whatever throughout by far the greater portion of the Collectorate."

5. Distress in the Satara Collectorate appears to have been only very recently brought officially to notice, but to be severe in some parts, while the peculiarities of the district, in being less accessible to relief by rail and road and in the large number of the population belonging to the predatory classes, will necessitate special care in its administration. Regarding Belgaum no special communication has yet been received from the Bombay Government, but it is stated in the last weekly telegram that the kharif crops have already failed in three talukas, that the accounts from other parts are very gloomy, and that there is great mortality of cattle in the northern part of the district.

6. The districts of Kaládgi and Dharwar remain to be noticed. Regarding the former no specific official representation has reached the Government of India, but it is understood that the kharif has very generally failed and the rabi is unsown. The pooriness of the district will, no doubt, tend to make all losses felt with special severity, while its remoteness from the railway and the sea will render relief unusually difficult. Of Dharwar it is known that two talukas are suffering severely, and that others are little better. Here, as in certain other parts, enhanced prices are observable, which are probably aggravated by the comparative inaccessibility of the district.

7. It thus appears that the area over which serious scarcity extends to a greater or less degree consists of Khandeish and eight of the districts of the Bombay Deccan, containing an area of 54,203 square miles, and a population of about eight millions, and yielding in 1874-75 to Government a realizable land revenue of Rs. 1,3940,000, together with an abkari revenue of about ten lakhs. But the fact must not be overlooked that, in addition to the above, which is British territory, there are encircled by and interlaced with it numerous Native States, comprising a total area of about 8,536 square miles, with a population of fully 1,800,000, and an estimated revenue of about 50 lakhs of rupees. Of the condition of these States the Government of India have received no information, but it is probably not materially different from that of the surrounding British territory, and as several of the States, including Kolapur, are at present under British management during the minority of the Chiefs, the responsibility of dealing with it will, to a considerable extent, fall upon Government.

8. For the alleviation of distress the Bombay Government were, in the first instance, on the basis of such limited information as was then before the Government of India, requested on September 29th to make full use of the local and provincial funds; but, on the receipt of further particulars, full authority was conveyed in the telegram of the 4th instant from this Department for the starting

of whatever relief works or relief operations the Governor in Council might consider necessary, and the question of the incidence of the expenditure was reserved for future consideration. The Government of Bombay have, in accordance with these instructions, been very fully utilising all the local resources, and have also made to four districts special grants of Rs. 25,000 each. But as it is now evident that considerable Imperial expenditure will be required, both in providing work, and in supplying food to those who cannot work, I am directed to communicate the following remarks as to the nature of the works and other measures which may most usefully be undertaken.

9. With regard to the proposed Dhond and Munmar Railway, to which further reference is made in the accompaniments to your letter of the 16th instant under reply, I am to state that the decision of the Government of India is contained in the telegram of the same date from this Department. In the construction of railways in India, it is absolutely necessary that each project should be taken up in succession, in the order of its necessity as compared with others, that no projects should be undertaken under present financial circumstances which cannot be depended on eventually to return full interest on the outlay, and that only so many should be in hand at one time as the borrowing powers of the State permit. In works designed to afford relief during scarcity, moreover, it is now an established principle that those ought to be selected, as far as practicable, which can be completed, or far advanced towards completion, by the outlay which the scarcity demands. Testing the Dhond and Munmar Railway project by the above conditions, the information at present before the Government of India does not appear to justify the immediate commencement of the line, while the relief outlay which it would provide would bear a very small proportion to the entire expenditure which it would involve, and would be confined to a comparatively small area of the affected tracts.

10. His Honour the President in Council trusts that the Government of Bombay will apply these principles, as far as they are applicable, to all projects which may be suggested to them for commencement at the present juncture. The prominent position held by tank clearances, and repairs or improvements of existing roads, among the works which, as appears from the accompaniments to the memorandum of October 13th above referred to, have been sanctioned by his Excellency the Governor in Council, is entirely in accordance with these principles. The remarks of the Collector of Poona as to the inexpediency of collecting large gangs away from their homes on large works have the full concurrence of the Government of India. How far the sums which have been sanctioned for new roads will go towards their completion, instead of leaving them to be for years a burden on local and provincial funds, does not appear from the correspondence. But the commencement of so expensive an undertaking as a new ghât from the Deccan to the Konkan, which is proposed in joint report of Mr. Havelock and Colonel Finch, would probably be unadvisable.

11. With regard to the various general measures which may be adopted for relief in times of scarcity, some of which are discussed in the Resolution of the 16th instant which accompanies your letter, I am directed to invite the attention of his Excellency the Governor in Council to the Resolution of the Government of India of February 18th, 1875, which was published in the "Gazette of India" of the 26th idem, and specially to paragraphs 9, 11, 14, 20, and 23.

12. While organizing suitable relief works, attention will, no doubt, be given to ascertaining, as far as possible, the extent of the grain reserves existing in each district, and how far they are being, or are likely to be, supplemented from without by private enterprise. This inquiry appears to be of special importance in the case of Satara and the Southern Mahratta country, the people of which are probably, on the one hand, better able to afford to purchase grain than those of the poorer districts further north and east, but, on the other, are less likely to obtain grain to purchase, owing to the absence of railway communication, and the difficulties of getting supplies up from the sea. The President in Council cordially approves of the decision to invite tenders for the supply of grain to persons employed on works and to those needing to be fed, as also that the Government should abstain from making purchases in the general market on its own behalf, except in the last resort.

13. The President in Council has observed with much satisfaction the efforts which have been made in some parts by the more wealthy or influential native

gentlemen for the relief of their suffering countrymen, and the support which they have given to the measures of the district officers, and to the endeavours of the latter to allay panic, and he trusts that every scope will be afforded to such benevolent dispositions, whether in the formation of central and local relief committees to superintend the distribution of food, or in the raising and application of private subscriptions to specific charitable purposes, such as might be held to be beyond the scope of the action of Government.

14. The importance of strengthening the administrative establishments of the affected districts will not have escaped his Excellency the Governor in Council, and is a prominent feature in the Resolution of the Government of India, which is referred to in paragraph 11. The creation of an additional Revenue and Police Commissionership in the Bombay Presidency, in order to reduce the present divisions, has been urged by the Bombay Government on the Government of India at various times since the year 1867, and was sanctioned by that Government and the Secretary of State in 1868, but was subsequently held in abeyance for reasons which need not be recapitulated. In August last the Government of India intimated their willingness to accede to the proposal, provided corresponding reductions could be effected. Since that date it has been represented to the Government of India that by a redistribution of charges in connexion with the sanction of an additional commissioner, a better control over the excise revenue, and a corresponding increase in its amount might probably be attained. At the same time it seems probable that the present Revenue and Police Commissioner of the Southern Division will be especially unable in a time of famine to exercise due control, and to afford to the Government the necessary information in a charge comprising 43,923 square miles, with a population of 7,620,515, and a revenue, including excise, of Rs. 1,55,95,000. Under these circumstances I am to state that the Government of India are prepared to sanction, as a temporary measure, the appointment of an additional Revenue and Police Commissioner, in order that the Southern Mahratta country may have the benefit of the supervision of a separate controlling officer.

15. The President in Council will likewise have no objection to the temporary appointment of an extra Deputy Collector in each of the seriously affected districts, so as to liberate one covenanted assistant for special duty, and to the deputation on such duty of the Mamlatdar of every so affected taluka, his first Carkoon officiating for him, and a new man being engaged for the vacancy in the lowest post of the office. If necessity should arise for further strengthening the administrative establishment, the Government of India will give their favourable consideration to any proposals the Governor in Council may deem it proper to make. Whatever officers may be required for the supervision of special works will, of course, be independent of this addition to the regular administrative staff. In the event of any addition to the Public Works Establishments being needed, application should be made to the Government of India in the Public Works Department, whence orders will be issued for furnishing such officers as can be spared.

16. The telegram forwarded on the 21st instant will have made known his Honour's request that all communications touching the initiation of measures regarding the scarcity should be addressed to this Department. This course, which was the one adopted during the famine in Bengal, appears necessary to secure promptitude and unity of action, and will not interfere with the reference by this Department to that of Public Works of any matters in which professional questions may be involved. Whether a similar concentration of duties should be adopted in Bombay is, of course, entirely for the consideration of his Excellency the Governor in Council. At the same time I am to point out, as an illustration of the inconveniences of more than one Department dealing with the same subject, that, unless my letter of September 29th was unduly delayed in transmission, the Bombay Public Works Department were up to the 9th instant unaware that you had received it.

17. To what has been stated in the telegram regarding the publication of official communications to the Government of India it is unnecessary to add more than that, while the President in Council fully appreciates the advantages of securing the sympathy and confidence of the public, and the intelligent co-operation of traders and others by a frank statement of facts relating to the scarcity and of the measures of relief which are being adopted, the publication of proposals, involving important principles, which are under consideration by the

Government of India should be postponed until the decision of that Government has been received.

18. With reference to the request contained in the same telegram for statements showing the condition of each taluka in the nine districts of the Deccan which are more or less threatened, I am to explain that his Honour has no doubt that the Government of Bombay has already procured such information for its own use, but that without having some such comprehensive review before it, the Government of India is unable to estimate with accuracy what may be the exigencies of the situation, or to do justice to the proposals for relief which are submitted by the Government of Bombay. The statements need not be of an elaborate character, but, after giving the principal figures in tabular form, should conclude with general remarks, containing the best information procurable as to the condition and prospects of the taluka. In addition to these statements once for all, a slightly fuller account of each district in the weekly telegram on the "season and crops" will be all that the Government of India at present require.

19. In conclusion, I am desired to express the cordial acknowledgments of the Government of India of the promptitude and care with which the Government of Bombay and its officers are dealing with the emergency. His Honour the President in Council has no desire to impose upon the Bombay Government any restrictions beyond those which are afforded by the experience of the past, as authoritatively recorded by the Government of India, and has the fullest confidence that his Excellency the Governor in Council will exercise the discretion vested in him so as to prevent any loss of the lives of Her Majesty's subjects, without incurring an expenditure of the public money in excess of the necessities of the case.

I have, &c.

Telegram, 25th October 1876.

From COMMERCE, Simla, to CHIEF SECRETARY, Bombay.

Letter goes to-day expressing regret at the extended and serious aspect of the distress in the Deccan. The President in Council cordially acknowledges the promptitude and care with which the Bombay Government are dealing with the emergency, and the excellent spirit which the wealthy and intelligent classes of the native community are displaying in support of Government. In works for relief, those should be preferred which can be completed or far advanced towards completion by the outlay which the scarcity demands, and which will not collect large gangs at a distance from their homes. The decision to invite tenders for supply of grain, and that the Government should abstain from making purchases in the general market on its own behalf, except in the last resort, is approved. Administrative establishments may be strengthened by one temporary Deputy Collector in each affected district, and putting Mamlutdar of each affected taluka on special duty, first Carcoon acting for him. As a separate controlling officer for southern part of Presidency seems desirable, the Bombay Government may, as a temporary measure, appoint an extra Revenue Commissioner, on Rs. 3,000 per mensem.

Telegram, 24th October 1876.

From SECRETARY, Madras, to COMMERCE, Simla.

Condition of Kurnool, Kaddapah, and Bellary districts very bad, and daily becoming more gloomy. If north-east monsoon should not set in favourably within fifteen days, gravest results. Distress approaching famine will probably ensue in these districts, and great distress in some other districts. Present state of grain market causes us great anxiety. Prices prematurely reached famine rates. Following measures have been taken; relief works opened wherever distress prevails, food to aged and children given in some places, and local officers being aided by additional temporary officers. Member of Board of Revenue visiting all districts most distressed. Very heavy Imperial expenditure probably inevitable.

Telegram, 25th October 1876.

From COMMERCE, Simla, to CHIEF SECRETARY, Madras.

Your telegram of yesterday. The President in Council has received with much concern the accounts of distressed condition of Kuddapah, Bellary, and other districts, and fully approves of measures taken by Madras Government. His Honour wishes to receive, at the earliest practicable date, separate statements regarding each taluka in the distressed districts, showing its area, population, government, realisable revenue in 1875-76, rough proportion of early to late cultivation, average annual rainfall, actual rainfall this season, ordinary price of staple food of the taluka at this season, actual present price of the same, probable extent of failure of crops, and amount, if any, sanctioned for relief works and other relief.

Revenue Despatch, No. 44 of 1876.

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA.

7th December 1876.

1. The Despatch of your Excellency in Council, dated 26th October, No. 22 of 1876, relative to the scarcity which has arisen in the Presidency in Bombay has been considered by me in Council.

2. I fully approve of the proceedings which form the subject of report, and I concur in the commendation bestowed upon the Government of Bombay and its officers for the promptitude and care with which they are dealing with this emergency. I also recognize and am grateful for the excellent spirit which has been evinced by the more wealthy and influential members of the native community in that Presidency.

3. It is matter for much additional anxiety that scarcity would also seem to be threatening the Kurnool, Kuddapah, and Bellary districts of the Madras Presidency. I approve of the instructions which you have sent to the Madras Government, which appears to be acting with vigour and intelligence. I desire to have a weekly report of the progress of this calamity, both in Bombay and Madras.

I have, &c.
(Signed) CARNARVON.

No. 24 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

(Simla, 2nd November 1876.

1. In continuation of our Despatch

Telegram from the Government of Madras, dated the 27th October 1876.

Telegram to ditto, dated the 27th October 1876.

Telegram from ditto, dated the 27th October 1876.

Telegram to ditto, dated the 31st October 1876. Telegram from Resident at Hyderabad, dated the 30th October 1876.

Telegram to ditto, dated the 1st November 1876. Letter from Chief Commissioner of Mysore, dated the 3rd October 1876.

Telegram from ditto, dated the 25th October 1876.

Telegram to ditto, dated the 30th October 1876.

all cases of sales of movable property which may be deemed indispensable, the exemptions applicable to ryots which have been proposed in section 266 of the Civil Procedure Code Bill now before the Council of the Governor-General for making laws and regulations.

3. We are engaged in considering the particulars of the works referred to in paragraphs 3 and 4 of the Resolution of the Government of Bombay, No. 6,152, dated 27th October, which only reached us yesterday. The scheme of relief works which the Bombay Government have sanctioned as a whole, to be undertaken as necessity arises, involves a very heavy expenditure, amounting to little less than 62 lakhs of rupees, and we are not free from apprehension that the principle of the injunction contained in the telegram which we addressed to that Government under date of the 16th ultimo, to the effect that the works undertaken should be such as will not involve the continuance of heavy expenditure after the emergency has ceased, and repeated in paragraphs 9 and 10 of our letter of the 25th ultimo, may not have been sufficiently kept in view. Any further instructions that we may deem it necessary to issue on this subject will be communicated to your

of the 26th ultimo, and of our telegram of this date, we beg leave to forward, for your Lordship's information, copies of communications (as per margin) relating to the scarcity prevailing in the Bombay and Madras Presidencies, in the Nizam's territories, and in Mysore.

2. With reference to the communication from Bombay of the 21st ultimo, we have suggested to his Excellency the Governor in Council the probable expediency of taking steps to ensure the occupancy rights of ryots not being sold for default of payment of land revenue in any instances where the default may be to any reasonable extent attributable to the unfavourableness of the season, and of allowing, in

Lordship by the next mail. Allusion is made in the Resolution to a slight fall of rain which took place the week before last in some of the southern districts. We have not yet received information as to the effect of this fall, but it seems to have been confined to the districts of Belgaum, Kaládgi, and Dharwar. We append transcripts of the weekly telegraphic season reports with reference to these districts.

District.	Rainfall for Week preceding.	State of Agricultural Prospects.
Belgaum (25th Oct.) -	1·19	Total rainfall, 30·46 ; rain has fallen partially in eastern talukas, where part of kharif crops will be saved and rabi sown ; slight fall in price of grain.
Dharwar „ -	0·67	Total rainfall, 21·38 ; rainfall very partial in a few villages, in a few places heavy and beneficial ; late crops being sown where rain fell ; grain dealers refuse to sell ; prices rising ; distress very great.
Kaládgi (23rd Oct.) -	1·03	Total rainfall, 10·89 ; more rain urgently wanted for rabi sowing ; cholera in two talukas ; cattle dying from want of fodder ; distress amongst poorer classes ; relief works progressing.

4. The suggestion of the Resident at Hyderabad is still under consideration, because, although the charge consequent on reduction of the rate of railway freight on grain conveyed for the relief of the Nizam's subjects would necessarily be defrayed by the Nizam's Government, such a reduction could not be sanctioned without applying a similar measure to the whole of the distressed districts in the Bombay and Madras Presidencies.

5. In the case of Mysore, a failure of crops and of water supply, and the adoption of various minor measures of relief, were reported to us in January last, and the measures of the Chief Commissioner were approved. Subsequently we were informed of the continuance of drought during the present year, and a special grant of a lakh of rupees was sanctioned on the 12th of April last. The further grant of one lakh of rupees referred to in the Chief Commissioner's telegram was also sanctioned on the 20th ultimo, and detailed information, similar to that required from Madras and Bombay, has been called for.

6. We fear that the worst effects of the scarcity which has thus occurred over so large a portion of Western and Southern India cannot be averted without considerable loss of land revenue and expenditure of Imperial funds, but we shall not fail to adopt every precaution to confine the loss within the necessary limits.

We have the honour to be, &c.

(Signed) H. W. NORMAN, &c.

Telegram.

From the PRESIDENT IN COUNCIL, Simla, to the SECRETARY OF STATE FOR INDIA.

2nd November.

No material improvement in prospects of distressed districts of Bombay. Slight fall of rain in Belgaum, Kaládgi, and Dharwar. Bombay Government have sanctioned programme of relief works exceeding 61 lakhs. We are scrutinising details, fearing that our injunctions have not been sufficiently regarded. Madras Government have asked permission to commence railway from Bellary to Guduk as a relief work. We have declined for reasons given to Bombay on similar application.

No. 6,008, Bombay Castle, 21st October 1876.

From the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY to the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce.

In continuation of my letter No. 5,953, dated 19th instant, I am directed to forward, for the information of the Government of India, the accompanying copy of a report* from the Collector of Násik on the condition and prospects of that district, as also a copy of the Resolution passed by this Government thereon, No. 6,007 of this day's date.

* No. 3,252, dated 15th October 1876.

No. 3,252, Násik, 15th October 1876.

From the ACTING COLLECTOR OF NÁSÍK to the REVENUE COMMISSIONER, Northern Division.

I have the honour to send, for submission to the Government of India, the report on the state of the Násik Collectorate to date of this letter, as required by your endorsement, No. 5,196, of 13th instant, on memorandum of Government in the Revenue Department, No. 5,808, of 11th instant.

2. In the Yeola taluka, which comprises 120 villages, having a population of 59,313 souls, almost complete failure of the kharif crops has occurred, and there has been little or no sowing of rabi, of grass there is next to none, and water is very scarce, instead of being abundant, as is usual at this time of year. The cattle have mostly been driven away to neighbourhoods where there is more grass and water. This is true of all Yeola, except of a dozen villages in the north-east corner of the taluka, separated from the rest of it by a low line of hills, which have apparently attracted rain, for the grass and crops there are nearly in their normal condition.

3. In the Niphar taluka, which has 122 villages, containing a population of 86,017 souls, the kharif harvest will be rather under than over half an average crop. The villages north of the Great Indian Peninsula Railway have crops better than half average. But those south of the railway have crops less than half average, and as the southern division of the taluka is larger than the northern, the kharif harvest may be taken on the whole to be rather under than over half an average crop. Complete failure of the kharif crops has been confined to the villages of—

1. Mannore	-	-	-	Towards the Yeola taluka.
2. Bhorwas	-	-	-	
3. Dahigaon	-	-	-	
4. Wahegaon	-	-	-	
5. Gondegaon	-	-	-	
6. Gollegaon	-	-	-	
7. Maralgeo Khurd	-	-	-	
8. Maralgeo Budruk	-	-	-	
9. Pachora Khurd	-	-	-	
10. Pachora Budruk	-	-	-	
1. Mahal Sakora	-	-	-	Adjoining the Sinnar taluka.
2. Bhossa	-	-	-	
3. Tarrokhedle	-	-	-	
4. Chappargaon	-	-	-	
5. Khangaon Thadee	-	-	-	

The rabi prospects of the Niphar taluka are as bad as those of Yeola taluka, or very nearly so, and in each case there will be no rabi harvest at all, if rain does not fall during this month. In 37 villages of Niphar, here and there fields have been sown for rabi. In the balance of 85 villages no rabi has been sown at all; some cattle have been sent away from the taluka, others will have to go if there be no more rain, and water and grass are scarce.

4. Of the Sinnar taluka, having 103 villages, with a population of 64,872 souls, Mr. Charles, the assistant in charge, writes: "I have now seen a great part of the south of Sinnar, and the worst impressions have been fully confirmed.

There has, therefore, been no rain for more than a few miles east of Sinnar (except in two villages where showers fell on the Nagar border).

"It is therefore certain that no rabi can be sown in all the eastern half of the taluka.

"This of itself means the loss of one-fourth of all the crops.

"Bajri is now being reaped, and though nearly in every village there are some good fields, with an out-turn of perhaps annas 8 or 9, the great majority of all the fields are not two feet high, with the stalks yellow, and what little grain there is small and imperfectly developed. The out-turn of these I should put at about annas 4, while there are numbers of fields and parts of fields where there is no grain at all, and the stalks only a few inches high. The people are becoming very importunate. Yesterday large bodies of Kunhis, from six or eight villages, came to my tents demanding remissions, and asking what arrangements were to be made to feed them.

"I was obliged to tell them I had no authority to promise any remissions, and at this they were angry and even insolent. One set of people, after coming up three or four times and getting the same answer went away, and were heard by my peons to say that they would take an opportunity of knocking the Sahib (*i.e.*, myself) on the head, and then perhaps Government would pay attention to their condition.

"I do not fear that they will carry out their threats, but mention the matter that you may understand what their temper is.

"I think that it is highly desirable Government should make some distinct promise as to the revenue, and then the people could either leave their crops and seek work, or use them to feed cattle with. As it is, they are afraid to leave their villages for fear of being called upon to pay revenue, and having their occupancies sold up.

"I think from what I have seen that no revenue at all can be collected this year from the eastern half of Sinnar, and what I should propose is that the people should be told this as soon as possible, and informed that whatever proportion of the revenue may be finally settled upon as leviable will be collected not this year but the next.

"No half measure will satisfy them, and the good effect of what I am convinced must finally be adopted (*viz.*, no collection this year) will be much neutralized if they are kept in suspense and

It must be remembered that the bajri crop last year was a poor one, owing to excess of rain in September 1875.

irritation for months. I have now been twice over this part (in September and now again), and I cannot see what good further inspections can do, unless indeed a more experienced officer can come to check my conclusions." It will therefore be seen that the kharif harvest of the Sinnar taluka is very poor, especially in the eastern part of the taluka, and if no rain falls during this month there will be no rabi harvest. Mr. Charles says: "This of itself means the loss of "one-fourth of all the crop." I think he understates the calamity, but he knows the district better than I do.

5. Having described the state of things in the Yeola, Niphar, and Sannar talukas, where it is worst, I must say of the rest of the Collectorate that there has been an unusual shortness of rain, which I will show by a statement appended to this letter. The kharif harvest is by no means good, but rabi prospects are worse. There has not been rain enough in September to admit of the land being prepared for rabi crops; and if there be no rain during this month the rabi crops of the whole Collectorate will be very short indeed. In the Chandore taluka the kharif harvest will be very irregular, as was the rainfall, which came to some villages and did not touch others, and I hear that at least a dozen of 32 villages called the Deshi villages, which came to the Kalwan taluka from the Baglan taluka, have had very small kharif crops, and are not likely to have any rabi harvest.

6. Up to the beginning of this month the nagli and rice crops of the hilly or Dang country of the Igatpuri, Násik, Dindori, Kalwan, Baglan talukas promised fairly. But now there are rumours that, owing to cessation of rain since, say, the 26th of September, and unusual atmospheric dryness, the grain has not ripened, and if that be true, Bheels and hillmen about the Ghâts will suffer very much. On the 15th September, when I left the hills of the Kalwan taluka, nagli and rice were vigorous, and rain which fell on the 16th, 18th, 19th, 20th, 25th, 26th, and 28th of September appeared to have removed all cause for anxiety. But if the grain be not ripening very serious want among the hillmen must follow. This matter has my anxious attention.

7. Of remedial measures, I have to report that in the middle of September, finding that a downfall of rain which occurred almost all over the Collectorate on the last two days of August had not been followed by seasonable rains, I directed an expenditure of Rs. 8,176 to be made from local funds in the talukas of Malegaon, Baglan, Kalwan, Chandore, and Nandgaon, which seems to have supplied the demand for labour there, and on the 24th September a relief work was started on the Niphar and Yeola Road, which has been in progress since, and there are now about 2,000 men, women, and children at work there per diem on daily wages of 2 annas, 1½ annas, and 1 anna each. On the 29th September another relief work was begun at the Kopralla Ghât for the Sinnar Taluka; and by the last accounts I have had above 2,000 men, women, and children were working there at the same low rate of wages paid at the Yeola and Niphar Road. Another relief work will be started after the Dewali, say by the 20th of this month, on a small scale, on the Bhawad Bari and Vinchur Road, between the Bari and the Azra Road, to relieve distress which there may be in the 32 Deshi villages of Kalwan and in the Chandore taluka.

8. There are, I have shown, about 4,000 men, women, and children at work on the Yeola and Niphar Road and at the Kopralla Ghât. The numbers are not at this moment increasing, because the kharif harvest is being reaped. But if no rain fall between now and the end of this month, the numbers will, I think, double; and I believe that in November, and further on towards the hot weather, more works of relief will have to be opened. At present the local funds are undertaking the two relief works in progress; but if the increased necessity for work I look for occurs, the local funds will not be able to deal with the matter, and then, as I have represented to Government in my letters to the Revenue Commissioner, Northern Division, Nos. 3,173 and 3,189 of the 9th and 10th instant, some such imperial work as the contemplated railway between Munmar or Lasalgaon stations in the Násik Collectorate and Dhond in the Poona Collectorate will have to be undertaken. I mention this work because it would pass through the Niphar or the Yeola talukas, and be handy for the Sinnar people, and also afford work for a line of country east of the Násik Collectorate in Ahmednagar, where I am led to believe things are worse than they are in the Niphar and Yeola talukas. Here, however, I confess I am speaking out of my range, and from hearsay.

9. It seems to me that the very unusual want of grass and water, which is felt already by cattle in those parts of this Collectorate south of the Great Indian Peninsula Railway, will increase daily till June next, unless we have falls of rain in this month or in November and December, and no one can predict anything about such falls beyond that they are very irregular, and come what may I anticipate much difficulty in collecting the year's revenue due from the Sinnar, Yeola, and Niphar talukas in December of this year, and the first four months of next year. At other points of the district also remissions will have to be made to villages affected by the very irregular rainy season we are suffering from, which has in several cases watered a village, and left neighbouring villages without rain.

10. I am not anxious about grain supplies. There will be grain enough in the district, and if there were not the railway passes through it. But prices are rising, and will rise further as the hot season comes, and the poor people in many places will not have means to buy food. There will also be lack, great lack, of water. Even here, near the Ghâts, the streams are much drier than they are generally at this time of year. In nearly all parts of the district south of the railway grass will be gone in another month, and very little hay, and not as much grain straw as usual, has been collected. If there be no rain within this year there must be much distress south of the line of railway. The grain-sellers are in places holding up grain, and I hear that the Nizam's Government have prohibited export of grain from their territory. This will tend to raise prices. On Tuesday last, the Yeola market day, very little grain came there, which was not customary as there are no grain stores at Yeola, and the weekly market is generally well supplied. At Lasalgaon the large grain dalláls are fearful of their stores being broken into, and

have asked to be allowed to have police. However, I must state that the people of Yeola and Niphar are behaving very well indeed, and though the Sinnar people have complained and even threatened, still nothing like riot has occurred.

11. I have carefully refrained from using the word famine. There is not famine here. There is unusual scarcity of water, grass, and crops. There has been, and will continue to be, till rain falls, scanty earnings. Cattle are becoming burdensome to feed, and further on towards the hot weather, men, women, and children will feel want of money and scarcity of water very greatly.

12. There is a considerable acreage of irrigated lands south of the railway, which will, of course, bear full crops, and for the next two months I do not look for the drying up of the irrigational canals. But they will give out sooner than in ordinary years.

13. I should say that Mr. Cooke, the assistant in charge of the Yeola and Niphar talukas, has been there during this month and last month, when he has visited 38 villages of Yeola and 40 villages of Niphar, and as he is well acquainted with the talukas, his representations to me of their condition is very trustworthy, and I may say the same of Mr. Charles' inspection of the Sinnar taluka, which has been made very carefully and with excellent local knowledge.

14. It is as well to state that the Násik Collectorate comprises the talukas of—

	Population.	Square Miles.	Gross Land Revenue for 1874-75.
			Rs.
Niphar	86,017	370.5	2,78,299
Yeola	59,313	482	1,16,028
Sinnar	64,872	507	1,44,661
Násik	89,377	445.14	1,54,366
Igatpuri	57,735	672	89,631
Dindori	68,626	560	1,32,703
Kalwan	54,152	1,200	89,053
Peint State	47,033	960	51,779
Baglan	59,051	1,420	1,39,745
Malegaon	62,716	774.805	1,80,919
Nandgaon	30,230	424	66,603
Chandore	50,130	299	1,04,003
Total	729,252	7,913	15,47,790

If the nagli crops of the Ghât and hill regions have really failed to ripen, in parts of Igatpuri, Násik, Dindori, Kalwan, Baglan, there will be serious distress among the Bheels and hillmen. The condition of the rest of the Collectorate I have described. The Peint State is not in distress.

15. It strikes me to mention that the Great Indian Peninsula Railway are willing to spend Rs. 10,000 in making a new siding for their station at Igatpuri. This work, which they have for some time past been trying to be allowed to make, would help hill-people in that neighbourhood. In case of the nagli having failed in the Kalwan Dangs, the big dam at Chankapur, which is in the heart of a Bheel country, might be made, and would relieve all Kalwan and parts of Dindori, and as I have said the contemplated railway from Munmar or Lasalgaon to Dhond would relieve Niphar and Yeola, and perhaps Sinnar, and be of advantage to the distress of the Ahmednagar districts.

No. 6,007, dated Bombay Castle, 21st October 1876.

RESOLUTION by the GOVERNMENT OF BOMBAY, in the Revenue Department.

Memorandum from the Revenue Commissioner, N. D., No. —, dated 16th October 1876.— Submitting, with his remarks with reference to Government memorandum, No. 5,808, dated 11th idem, a report, No. 3,252, dated 15th idem, from the Collector of Násik on the condition and prospects of that Collectorate.

RESOLUTION.—This report should be placed on the editors' table, and copies forwarded to the Government of India and the Secretary of State.

2. As to remissions, the Collector should be informed that in villages where there is nothing but kharif, and where that crop has wholly failed, entire remissions may be granted; no remissions should, however, be granted where there has been an eight-anna crop, but where it is below that valuation the first instalment should be wholly foregone. Whatever inquiries may be necessary should be made by villages or groups of villages.

3. Government consider it premature to issue any instructions regarding rabi crops.

No. 6,152.

EXTRACT from the PROCEEDINGS of the GOVERNMENT OF BOMBAY in the Revenue Department, dated 27th October 1876.

Telegram, dated 29th September 1876.

Distress rapidly increasing, and prospects becoming worse in eastern districts of this Presidency. Almost inevitable that large relief works must be sanctioned immediately out of Imperial funds. The proposed railway from Dhond to Manmád will afford employment to three districts, and everything is ready for commencement in certain portions of the line. Authority to begin in case of necessity earnestly requested without delay.

Telegram, dated 3rd October 1876. (*See* p. 10.)

Telegram, dated 4th October 1876. (*See* p. 11.)

Telegram, dated 16th October 1876. (*See* p. 11.)

RESOLUTION.—His Excellency the Governor in Council, while regretting that the Government of India have deemed it their duty, for the reasons stated in their telegram, to withhold permission for the commencement of work on the Dhond and Manmád Railway, gratefully acknowledges the confidence which has been placed in this Government, and the authority conveyed to them to incur such expenditure in providing work and relief in the distressed localities as they may consider necessary.

2. The reports last received from those districts are certainly not of a more favourable character than the earlier ones, and the Government have therefore lost no time in calling upon the officers of the respective Departments to submit proposals for providing employment, as far as possible, for those in need, on the understanding that, for the present at any rate, railway works must be excluded from their calculations.

3. In the case of the three districts specially dealt with in the Resolution of the 16th instant, viz., Ahmednagar, Poona, and Sholápur, proposals have been submitted providing for an outlay on road works of Rs. 8,61,879, and on works connected with the Irrigation Department of Rs. 10,61,770, to which last may be added hereafter, if required, another work, the Neera Canal, on which the possible outlay is in eight months estimated at Rs. 6,00,000. The total cost of the works which are considered available is therefore Rs. 25,23,649, and it is matter of satisfaction to the Government to find the Irrigation Department in a position at this crisis to provide so much employment of a character which, if not all directly remunerative, cannot fail to be very beneficial in future years to the localities concerned. The statements show that, out of the total given above, works to the amount of Rs. 3,28,516 have been already sanctioned. Orders have been given for the resumption of work on the Mutha Canal, and tenders have been invited for the supply of food to the labourers to be employed on it. The other works will be proceeded with as needed, and as soon as the necessary arrangements have been made. The scheme having been sanctioned, it will rest with the local officers to represent the necessity for proceeding with any particular work.

4. Turning to the districts of Dharwar, Belgaum, Kaládgi, Satara, Násik, and Khandesh, the proposals submitted provide for an outlay on road works of Rs. 20,05,000, and on works connected with the Irrigation Department of Rs. 16,56,139, giving a total of Rs. 36,61,139. The statements show that, out of this sum, works to the amount of Rs. 2,16,341 have been already sanctioned. And the directions given above with respect to the commencement of particular works will apply to the districts now under notice.

5. Such are the arrangements by means of which the Government hope to be able to provide the chief part of the employment needed for some months. They have no intention of beginning all the works simultaneously, but one of the greatest difficulties with which they have to contend is uncertainty as to the extent of the demands which may ultimately be made upon them, and which they must be prepared to meet as the necessity arises. The impression is gaining ground that the proportion of the population to whom aid must be given, in some shape, will much exceed the calculation given in the Resolution of the 16th instant. On the other hand, it is possible that the rain which has lately fallen in some of the southern districts may greatly mitigate the distress. The proposed scheme of operations is now sanctioned as a whole, in order that the local officers may be prepared to act as soon as the emergency arises.

6. Another element of complication, and one which has of late become very prominent, is the question of the water supply. The reports now show that in many of parts of the country sources of supply, which at this season are usually ample, have already failed. Cattle are already dying in consequence, and as the drought increases, much attention must be paid to this question in the selection of the works to be undertaken.

7. In connexion with the scarcity of water it has been suggested, both by local officers and the Sarvajanic Sábha of Poona, that efforts should be made for the transfer to other localities of such of the population as might be willing to quit their present homes, and the Government is making inquiries with this object.

8. It will be the duty of the local officers, when requesting authority for the commencement of any work of magnitude, to state whether the local dealers may be expected to supply food, or whether it will be necessary for Government to invite tenders from other quarters.

9. The revenue and police officers should likewise submit to Government, through the Revenue Commissioners, their views as to any additional establishments that may be required for preserving order, for distributing relief to the infirm poor, or for the superintendence of the relief works, which must be undertaken from time to time under the control of the Collectors.

10. Statistical tables have been called for, showing in respect of each taluka of the Deccan and Southern Maratha Collectorates, the area, population, average produce, average rainfall, average price of grain, and those of the present season. A sketch map should be attached to these tables.

11. Copies of this Resolution, and of the reports and statements referred to, should be forwarded for the information of the Government of India.

Telegram, 27th October 1876.

From PRESIDENT IN COUNCIL, Madras, to PRESIDENT IN COUNCIL, Simla.

A fortnight's time must determine whether famine is inevitable. In that case concentration of relief labour most necessary; already upwards fifty thousand employed on scattered relief works in one district out of three. If famine contingency arises, we propose commencement of embankment work of Bellary-Guddak Railway, which traverses worse part of suffering district as State work. Please telegraph reply.

Telegram, No. 387, 27th October 1876.

From COMMERCE, Simla, to PRESIDENT IN COUNCIL, Madras.

Your telegram to President in Council of this date. The Government of India do not think it advisable in present emergency to sanction large and expensive works, the ultimate cost of which will greatly exceed the expense involved in providing labour for distressed poor. Local works should be organised. Bombay Government have been similarly instructed. The railway project must be decided on its merits.

Telegram, 27th October 1876.

From MADRAS GOVERNMENT, Madras, to FINANCIAL SECRETARY, Simla.

Sanctions for relief works already aggregate rupees three hundred and seventy-seven thousand seven hundred and seventy. Impossible to avoid expense, or to provide from provincial or local.

Telegram, 31st October 1876.

From COMMERCE, Simla, to the GOVERNMENT OF MADRAS.

With reference to your telegram of 27th to Financial Department stating amount of sanctions for relief works, it is very desirable that report called for in my telegram of 22nd should be furnished as soon as possible.

Telegram, 30th October 1876.

From RESIDENT at HYDERABAD, Deccan, to COMMERCE, Simla.

Price of grain has risen most seriously here and throughout Hyderabad territory. Rice four to five and wheat seven to eight seers per rupee. Merchants offer to import grain from north-west and other quarters if the railway charge for transport is lowered. I venture to suggest that this be considered in respect of all grain in transport between Madras and Bombay, or from Central Provinces or north-west to localities affected by scarcity.

Telegram, 1st November 1876.

From COMMERCE, Simla, to RESIDENT, Hyderabad.

Your telegram of 30th received, regarding lowering of freight of grain. Cannot decide immediately as question affects other Provinces.

From OFFICIATING SECRETARY TO THE CHIEF COMMISSIONER OF MYSORE to the SECRETARY TO THE GOVERNMENT OF INDIA, Foreign Department.

Bangalore, 3rd October 1876.

In reply to your telegram of the 27th ultimo, calling for detailed information regarding the present condition of the province, I am directed by the Chief Commissioner to submit the following report for the information of the Government of India.

2. As the Government of India have been made aware from this office, letter No. 7717/114 of 14th January 1876, the condition of the province excited considerable apprehension at that period owing to the almost total failure of the south-west monsoon of last year, 1875, and the consequent loss of the staple dry crops (raggi), which are grown in that season over the greater part of the province. The harvest of the previous year had, however, been fortunately an abundant one, and though the north-east monsoon, which is relied upon to fill the tanks, and thus furnish water for the wet crops cultivated under them, also failed, the difficulties of the year were tidied over with the aid of large grants for relief works, and considerable remissions of the revenue demand.

While the rainfall for 1857 was therefore very deficient, that of the present year computed for the same period of seven months, viz., from January to July, has been still more so, as shown in the subjoined table for the five districts which are chiefly affected.

		1876.	1875.	1874.
Tumkur	- - - - -	21·97	24·21	33·47
Kolar	- - - - -	29·22	29·80	44·12
Shimoga	- - - - -	14·59	18·69	22·77
Kadur	- - - - -	18·57	17·80	25·99
Chitaldroog	- - - - -	8·56	8·77	15·70

3. The effects of the present scarcity will be better illustrated, however, by reference to the subjoined statement of the price of the two staple grains, rice and raggi. This statement shows the selling prices of these grains on the 15th September 1876 and those which ruled on the same date last year and in 1874.

Districts.	Seers per Rupee.								
	Rice, 1st Sort.			Rice, Common.			Raggi.

Kolar - - - -	11·5	17·2	14·7	11·	17·5	15·1	16·5	33·2	43·4
Tumkur - - - -	7·5	15·	13·	8·5	17·	14·	15·	53·2	56·
Shimoga - - - -	8·5	11·5	13·	10·5	16·7	17·	14·7	29·5	46·
Kadur - - - -	10·	12·	12·5	11·	14·	16·	14·	24·	32·
Chitaldroog - - -	9·	12·	13·	10·	15·	15·	14·2	29·	49·

The following is summarised from the reports which have been recently received as to the state of the crops and the people in the districts.

5. Of the three districts composing the Nundydroog Division, Kolar and Tumkur are chiefly affected, the former chiefly in the five taluks on the eastern frontier bordering Her Majesty's territory, and the latter chiefly in the taluks of Sira and Honavalli, though the other taluks are also affected, but to a less degree. In these tracts the dry crops which, owing to the delay in the monsoon rains, had been recently put down have been more or less wholly lost by the absence of timely showers during August and September. There has been an absolute failure of pasture, and cattle, which are so indispensable to the ryot, have died literally in thousands. This is, fortunately, not the case throughout these districts, but had it not been for a good fall of rain which occurred on the 25th ultimo the standing crops would also have gone and famine would have inevitably supervened over the whole area. The fall of rain has saved, it is hoped, a portion of these crops, and if more rain falls the ryots will be able to raise crops of the inferior millet, horse grain, &c. before the ensuing hot weather. In the Bangalore District of the same division the crops have been parched, and in many cases destroyed, by the drought, but, though severe distress prevails, this district has not suffered in a similar degree.

6. In the Nagar Division the condition of the whole of the Chitaldroog District, and of large tracts of the Shimoga and Kadur Districts, has been worse probably than that of the Kolar and Tumkur Districts described above. In the table appended to paragraph 1 the rainfall in the Shimoga and Kadur Districts has attained in the seven months nearly the same average as in 1875, but the figures do not quite represent the actual facts, as they include the returns from the western taluks near the ghâts, where the rain has not been very deficient this year. In the eastern taluks the rainfall has been probably the same as in the Chitaldroog District adjoining, viz., 8 inches, against 15 inches in 1874.

7. In the Ashtagram Division the distress is most seriously felt in the eastern taluks of the Hassan District, and to a less extent perhaps in those of the Mysore Districts.

8. I am desired to state that, excepting in the Kolar District, where, on the urgent representation of the Deputy Commissioner, a sum of Rs. 3,000 was recently allotted as a Government contribution towards the maintenance of "feeding kitchens" or houses in six taluks, the assignments which have been made from the 1 lac grant sanctioned by the Government of India in your No. 821, dated 11th April last, as well as from local funds, to the amount altogether of Rs. 106,983 up to date, have been ordered to be expended wholly on relief works, such as the repairs of tanks, deepening of wells, &c. While the outlay has thus been of a useful and profitable character, these works, which have been in progress in some districts throughout the present year, have contributed beyond question to allay the distress and misery which would otherwise, in all human probability, have ere this culminated in actual famine among large classes of the people.

9. In conclusion, I am desired to solicit the sanction of his Excellency in Council to an additional special grant of Rs. 100,000 being placed at the disposal of the Chief Commissioner for expenditure on such further relief works as may be necessary in the districts most affected, and for providing pecuniary assistance in such form as may be deemed best calculated to afford timely succour to the distressed during the present scarcity, which must for some months at least exist among the poorer of the agricultural classes.

I have, &c.

Telegram, 25th October 1876.

From CHIEF COMMISSIONER, Bangalore, to FOREIGN SECRETARY, Viceroy's Camp.

My secretary's letter, No. 6,524, of 3rd instant. Owing to absence of rain the expectation of saving some portion of the raggi crops will not be realised, the area in which distress and famine may be looked for is enlarging, and relief works must be commenced in every district. The scarcity of food grains aggravated by increase of distress in Madras Presidency. The further grant of 1 lakh applied for will be needed at once.

Telegram No. 2,342 G., 30th October 1876.

From FOREIGN UNDER SECRETARY, Simla, to CHIEF COMMISSIONER, Mysore.

President in Council wishes to receive early separate statements regarding each taluka in districts where drought or scarcity prevails, showing area of taluka, population, realisable revenue in 1875-76, rough proportion of kharif to rabi cultivation, average annual rainfall, actual rainfall this season, ordinary price of staple food of the taluka at this season, actual present price of the same, probable extent of failure of crops, and amount, if any, sanctioned for relief works and other relief. These statements may be prepared from the best materials available, and corrected or supplemented afterwards, and should be forwarded as soon as possible.

No. 27 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA

Simla, 9th November.

1. In continuation of our Despatch of the 2nd instant, we beg leave to forward, for your Lordship's information, copies of communications (as per margin) relative to the scarcity prevailing in Western and Southern India.

Letter to the Bombay Government, No. 806, dated the 3rd November.

Reports of rainfall and state of crops in the Bombay Presidency for the week ending the 13th October 1876.

2. We are still awaiting the complete

Telegram from Chief Commissioner of Mysore, dated the 1st November.

Telegram to ditto, dated the 2nd November.

Accompaniment to Bombay Government Resolution, No. 6,152, dated the 27th October.

Telegram to Bombay Government, dated the 9th November.

Telegram to ditto, dated the 4th November.

Telegram to ditto, dated the 7th November.

Telegram from ditto, dated the 7th November.

Telegram to Government of Madras, dated the 7th of November.

information from Bombay and Madras which was called for in our telegrams of the 22nd and 25th ultimo respectively, but have reason to believe that the slight rainfall which took place in some parts of Bombay has practically afforded but little relief, and that no change for the better has taken place in the situation generally.

3. We have approved of a proposal received from the Chief Commissioner of

Mysore to contribute, on behalf of the State, an amount equal to any sum which may be raised by private subscription in the province for the relief of distress.

4. A preliminary scrutiny of the scheme of relief works sanctioned by the Government of Bombay, and referred to in paragraph 3 of our last Despatch, having been completed, we have intimated our disapproval of two large works, by which heavy future liability would have been incurred, and have directed that certain others shall not be commenced, pending the receipt of fuller information. We have, however, explained that if, previous to this being supplied and considered, other relief works should be necessary, minor works may be commenced in each distressed taluka on the system already adopted in the Poona District.

5. The question of the reduction of the freight of grain by railway is still under consideration, pending replies to a reference which we have made to the Governments of Madras and Bombay, but we append a telegram received from the latter, which shows that the importation of grain by the Great Indian Peninsula Railway is very satisfactory.

We have the honour to be, &c.

No. 806, Simla, 3rd November 1876.

From OFFICIATING SECRETARY to the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the CHIEF SECRETARY to the GOVERNMENT OF BOMBAY.

With reference to the Resolution of the Bombay Government, No. 6,007, dated the 21st ultimo, upon a report by the Collector of Násik, which was one of the accompaniments to your letter, No. 6,008, dated the 21st ultimo, I am directed by his Honour the President in Council to suggest to his Excellency the Governor in Council the expediency of taking steps to ensure that the occupancy right of ryots shall not be sold in any of the distressed districts for default of payment of land revenue in any instances when the default may be, to any reasonable extent, attributable to the unfavourableness of the season, and, further, of directing by executive order that in any sales of movable property for such default which may be deemed indispensable, such of the exemptions which have been proposed in section 266 of the Civil Procedure Code Bill (vide "Gazette of India," dated the 30th September 1876, Part V.) as may be applicable to ryots shall be allowed to them.

WEEKLY REPORT of RAINFALL and the STATE of CROPS, &c. in the several talukas of the Násik Collectorate from 7th October to 13th October 1876, inclusive.

No.	Talukas.	Fall of Rain during the Week ending 6th October 1876.	State of Crops, &c.
		In. Cents.	
1	Násik -	—	The kharif harvest is coming in, and will be about a half crop. If rain do not fall within this month the rabi harvest will fail very greatly; want of rain during this month and last has prevented rabi sowing. The rabi harvest is of much importance in the Collectorate, and without it I look for distress: and there will be scarcity of water, and grass, and grain straws in that part of the Collectorate south of the railway. 2,000 souls at work on the Niphar and Yeola Road. 2,000 at the Kappala Ghat in the Sinnar Taluka. Numbers will increase largely after the Diwali. No signs of rain.

No. 3,246 of 1876.

Forwarded to the private secretary to his Excellency the Governor, in accordance with the instructions from the Revenue Commissioner, N.D.

WEEKLY REPORT of RAINFALL and the STATE of CROPS in the several talukas of the Poona Collectorate for the week ending 15th October 1876.

No.	Taluka.	Fall of Rain during the Week ending 15th October 1876.	State of Crops, &c.
		In. Cents.	
1	Indápur	—	There was no rain throughout the Collectorate during the week under report. No change since last week in the prospects. The early crops in many places are being cut for forage. At the weekly markets held in the larger villages cattle are offered for sale at nominal prices, and find no purchasers. A water famine threatens the eastern districts. The prices of grain have been steady during the last week.

			Jowari.	Rice.	
		In. Cents.	Seers per Rupee.	Seers per Rupee.	
1	Belgaum -	—	8	6	No rain has been registered during the past week; a few showers fell in the neighbourhood of Belgaum, but not sufficient to do much good. The accounts from all the talukas are very unfavourable. The kharif crops have all withered in Gokak, and also in Athni, except on the banks of the River Krishna. In the north of the taluka of Chikori there has also been a total failure of the crops, and those in the other talukas are most indifferent. Continued complaints of want of water, the scarcity of which in some places threatens to become very serious. The mortality of cattle continues. There is a great dearth of grain in all the markets. In some towns it is scarcely to be obtained. Although grain is selling at very high prices in Belgaum, it is scarcely procurable, and the officer commanding the troops has complained that the sepoys are actually suffering in consequence of their not being able to buy the necessary supply of food. The merchants are most unwilling to sell, and declare that their stores are becoming exhausted. Very little importation takes place from the district, as the traders imagine that the roads are unsafe, and that the goods will be plundered. The price of grain having risen in Bombay the supplies from that quarter will run short. Local Funds Works are in progress throughout the district, but are insufficient to employ the many labourers out of work.

WEEKLY REPORT of RAINFALL and the STATE of CROPS, &c. in the several talukas of the Kaládgi Collectorate for the week ending 14th October 1876.

No.	Taluka.	Fall of Rain during the Week.	State of Crops, &c.
		In. Cents.	
1	Indi -	—	No rain since last report; consequently in every respect the condition of things has become more aggravated. Bazaar prices have very materially risen during the week, and will soon border on famine rates. The scarcity of fodder, has increased and the cattle are suffering much. Many people are taking their cattle off to Karwar and elsewhere for grazing; consequently carriage is very difficult to procure, and trade much impeded thereby. Water also is in many places very scarce. The Indi Mámlatdár reports that many people are migrating out of his taluka. Crime also is on the increase, and many are afraid to travel for fear of being robbed. The public health cannot be called good, in that the poor suffer from insufficiency and badness of food. In some talukas there is slight cholera. The weather has become hot again, and heavy clouds at times appear; but, judging from past experience, it is very doubtful whether they will lead to rain. Should they not do so, it will be necessary very shortly to commence relief works on an extended scale.

WEEKLY REPORT of RAINFALL and the STATE of CROPS, &c. in the several talukas of the Sholápur
Collectorate for the week ending 18th October 1876.

No.	Talukas.	Rainfall during the Week ending 18th instant.		State of Crops, &c.
		In.	Cents.	
1	Sholápur -	—	—	There may be said to have been no rain during the week, and, therefore, everything is almost as bad as it can be. 20,000 cattle in all have been taken from the Karmála Taluka into Nizam's territory. Many villages in different talukas are being deserted, and it will be the same in many more in a few days' time when the last hope of rain is gone. 32,000 persons employed on small relief works throughout the district.

Ahmednagar Collectorate for the week ending 10th October 1876.

No.	Talukas.	Fall of Rain during week ending 10th October.		State of Crops, &c.
		In.	Cents.	
1	Nagar -	—	—	Bajri has withered for want of rain. Rabi sowing has taken place in some villages and has already germinated, but the young plants are perishing. Sowing not commenced in some places for want of rain. People in want of food are employed in relief works.
2	Párner -	—	—	Jowari has been sown in some places where it had rained formerly, and has germinated; but without rain it is not likely there will be any yield. People in want of food are employed in relief works.
3	Shrigonda -	—	—	Kharif has entirely perished. Jowari sown in nine villages. If it rains in a week or so, rabi will be sown. For want of fodder, people are removing their cattle elsewhere. If it does not rain soon the condition of the people will get worse. People in want of food are employed in relief works.
4	Karjat -	—	—	Kharif has entirely perished, and rabi has not been sown at all. There is no fodder for cattle, which are being removed elsewhere. Cattle are dying for want of fodder. About 400 men are employed on relief works. Grain is very dear. People in want of food are employed on relief works.
5	Jámkhed -	—	—	Rabi has been sown in such places only where the ground was moist, and has germinated, but young plants are withering for want of rain. People are removing themselves, with their cattle, elsewhere. Kharif has been reaped. The yield is estimated at 6 annas.
6	Sheogaon -	—	—	There was no rain, otherwise the kharif and rabi crops would have been benefitted.
7	Newása -	—	—	Kharif crops doing fairly. The yield will be about 8 annas. Jowari sowing has been completed, and gram sowing is in progress, but rain urgently required to complete sowing operations. Prices are rising.
8	Ráhuri -	—	—	Kharif has perished or is withering. Rabi sowing delayed for want of rain; where rabi was sown without sufficient moisture the young plants are withering. Prices are rising. The kharif yield will hardly be 3 or 4 annas.
9	Kopargaon -	—	—	Rabi sown in places where the ground was moist is in villages to the south and east. Cattle are being removed elsewhere for want of fodder. Jowari has germinated. Bajri sown late is shooting into ear. Water in the Godáviri is running low, as in the hot weather. Prices are rising. People in want of food are employed on relief works.
10	Sangamner -	—	—	Rabi sowing delayed for want of rain. Kharif is being reaped. Cattle are suffering from want of fodder. Prices are rising. People in want of food are employed on relief works.
11	Akola -	—	—	Bajri ear has dried for want of rain, and there is no rain. The "Warai" and "Nágli" crops in the Dangi villages are withering. "Jiri" rice, and other miscellaneous crops, will give fair yield if it rains. Rabi sowing has not yet taken place. Rain urgently required. Kharif yield will be about 8 annas.

1	Satara -	—	33 59	33 59	52 32	40 4	Kharif crops, sweet potatoes, and sugar-cane, better for the present. Rabi, where sown, requires rain.
2	Jauli -	—	59 84	59 84	101 64	74 3	Sugar-cane not good. Rain urgently required. Kharif crops withering; people looking anxious.
3	Wai -	—	25 34	25 34	48 68	32 88	Kharif crops suffering from want of rain; rabi sowing suspended in some places.
4	Koregaon -	—	20 8	20 8	37 20	27 77	Kharif crops,—loss will be 8 annas in the rupee. Rabi sown in some places, in others still suspended.
5	Pátan -	—	48 82	48 82	95 56	61 71	Crops withered.
6	Karád -	—	19 75	19 75	34 79	27 97	Sugar-cane good. Kharif crops withered.
7	Wálwa -	—	12 80	12 80	25 55	25 24	
8	Tásgaon -	—	9 79	9 79	23 56	25 77	Kharif withering. Cattle are being fed on withered stalks.
9	Khánápur -	—	11 4	11 4	28 44	23 34	Kharif crops withered.
10	Khatau -	—	11 51	11 51	26 47	22 38	Loss of 14 annas in the rupee anticipated in the kharif crops.
11	Mán -	—	9 35	9 35	17 29	20 89	Kharif crops withering. Sugar-cane mid-dling.
12	Malcolmpeth -	—	243 18	243 18	336 40	273 22	

There was a total absence of rain in the district during the week. The cry for rain is general, and the prospects from present appearances are gloomy. The entire failure of the kharif crops is apprehended—those that are standing are to a great extent fast withering. The bare stalks in some places are being cut down for fodder to cattle. The sowing of the rabi is generally suspended. The people look anxious.

No. 3,182 of 1876.

From COLLECTOR OF DHARWAR to PRIVATE SECRETARY TO THE GOVERNOR, Bombay.

Dharwar, 17th October.

I have the honour to submit my Weather Report for the week ending 14th instant. From it affairs appear to be as bad, if not worse, than before.

2. On the 14th afternoon, however, and on the 15th and 16th, rain, it is privately reported, has fallen in several places; and while I now write, 17th, it appears that heavy rain must be falling to the east. Should we get rain we may be saved anxiety as regards drinking water, but there will still be dreadful distress from want of work, and assistance will have to be most liberally continued.

I have the honour to be, &c.

WEEKLY REPORT for Week ending 14th October 1876.

No.	Names of Talukas and Pethas.	Rainfall during the Week.	REMARKS.
		In. cents.	
1	Dharwar -	0 4	
2	Mugud Petha -	0 16	
3	Hubli -	—

12	Kalghatgi -	0 37	
13	Kod -	—	
14	Ron -	—	

No.	Talukas and Pethas.	State of Weather and Crops.
1	Dharwar - -	Crops not so good as last week; prices of grain rising, and dealers refuse to sell for cash.
2	Magad Petha -	Crops worse than last week.
3	Hubli - -	Report not received yet.
4	Nawalgund - -	Crops worse than last week. The sufferings of the poorer classes from the want of employment are greater than the last week. Many of the poorer classes hardly get a meal a day. Cholera prevails in eight villages. Some money must be given for the section of the Hubli Kaladgi Road in the Taluka.
5	Nargund - -	Crops worse than last week. The poorer classes are suffering considerably from want of employment. They hardly get a meal a day—in fact, they are in a state of destitution and bordering on starvation. Public health good.
6	Gadag - -	Crops worse than last week; in some places the crops have perished. The poorer classes are suffering very much from want of employment. The prices of grain are rising. The Mámlatdár of Gadag reports that the well-to-do in the town of Gadag Betigeri are about to raise funds to buy grain wholesale, and sell it to the poorer classes at the rates purchased. Cholera decreasing.
7	Mundargi Petha -	State of crops worse than last week; garden crops also withering. The poorer classes are suffering very much. The prices of grain are rising—jowari selling at 9 seers, of 80 tolas, per rupee. Holders, however, refuse to sell. Public health good.
8	Bankápur - -	Crops worse than last week; rain is reported to have fallen in a few villages; whether the fall was heavy or slight it is not stated. Prices of grain is rising. Employment required. Public health good.
9	Hangal - -	Crops worse than last week. In some places the rice crops are withered. Public health good.
10	Ránibennur - -	The crops worse than last week. The poorer classes are suffering much from want of work. At Ránibennur about 3,000 poor people are fed once a day by contribution from the well-to-do. Cattle are dying from want of fodder. Public health good.
11	Karajgi - -	Crops are worse than last week. The poorer classes are suffering very much from want of work, and are reported scarcely to get one meal a day. Holders of grain will not sell; many people cannot obtain grain to purchase. Public health good.
12	Kalghatgi - -	Crops worse than last week; great want of work. Public health good.
13	Kod - -	The crops are worse than last week. Public health good.
14	Ron - -	Report not received yet.

No. 3,360 of 1876.

From the COLLECTOR OF KHANDESH to the PRIVATE SECRETARY TO THE GOVERNOR OF BOMBAY.

Camp Dhulia, 12th October.

According to my promise made, when submitting the Weather and Crop Returns of the Khandesh Collectorate, under date 3rd October 1876, I have the honour to forward the accompanying memorandum for the information of his Excellency the Governor.

I have the honour, &c.

MEMORANDUM.

Instead of submitting the usual formal statement regarding the crops, rainfall, &c., for the information of his Excellency the Governor, I am now in a position to record information concerning the central and eastern talukas of the Khandesh Collectorate from personal observation.

2. I have been away from head-quarters for a fortnight, and, by rapid marching, I have been able to inspect the principal portions of the following districts :—

The Parola Petha,
The Erandol Taluka,
The Nusseerabad do.,
The Bhusáwal do.,
The Sauda do.,
The Páchora do.,
The Bhadgaon Petha,

as well as a portion of the Dhulia Taluka.

3. The state of affairs is worst in the Sauda Taluka, the pethas Ráver and Yawal being also very bad, but not as hopeless as the neighbourhood of Sauda itself.

4. The extensive black soil plains between the River Tápti and the level of Sauda itself are perfectly bare, instead of, as is usual at this period of the year, being covered with flourishing crops of every description. The early sowings failed, and the cultivators ploughed up their fields in the hope that the season would prove favourable for the rabi, or second crop. No late rain, however, has fallen, nor does there appear to be a likelihood of any. We must, therefore, accept the fact that in some parts of the taluka the ryots will this season fail to secure any crop whatever. In the lighter soil, in portions of the taluka and its two pethas, a small out-turn may be expected, but the value of the crops (to be ascertained hereafter) will be very small indeed.

5. Relief works have been carried on and are still in progress. The earthwork for the road from the railway station to Sauda has been completed, and the preparation of metal has been commenced. The fact that in the month of September over 1,200 local labourers flocked to the road work is in itself the best possible proof of the existence of distress.

6. Besides the preparation of metal (not in itself a very suitable form of labour for distressed persons) I am having a road survey made from the town of Yawal to the Tápti River opposite Bhusáwal. This work will provide labour for many persons for a long time.

7. It is feared that in the event of no more rain falling four or five thousand persons will be dependent on Government for work throughout the dry season.

8. Grass has failed entirely, except in the immediate neighbourhood of the Satpura Hills, and even in the large jungles it is poor and scanty.

2. *Bhusawul.*

9. In the taluka itself, except in a few villages to the south, the kharif crops are an utter failure, and in the neighbourhood of the Tápti River the country is as bare as on the opposite bank of the Sauda Taluka. The petha Edalabad is in better case; but I fear that the total absence of late rain will cause the harvest to yield less than half the usual amount.

10. Small relief works have been in progress in the Bhusáwal Taluka for the last six weeks. The railway provides a good deal of work, and if the company agree to carry out more extensive alterations and additions, concerning which I have addressed Government through the Revenue Commissioner, Northern Division, I fancy that large numbers of distressed persons will be able to get employment.

11. I am starting work at the Bodwad Tank, and also on a road from Warangaon.

12. A bad outbreak of cholera has occurred at the village of Susri, near Warangaon; half the number of persons attacked have died, and the accounts are still bad. I visited the village in company with my assistant, Mr. Woodward. I have now placed a hospital assistant on the spot. Medicine has been freely supplied since the commencement of the outbreak. No other village or town in the neighbourhood has been affected in any way.

3. *Jalgaon or Nusseerabad.*

13. Up to last month this taluka was in a better condition than its neighbours, but the absence of any late rain has caused immense damage. Crops there will be, but, with the exception of a few favoured villages, the yield will not exceed six or seven annas in the rupee.

14. The water supply at the important town of Jalgaon, always insufficient, is past failing altogether. Great difficulty will, therefore, be experienced during the ensuing season by the press and mill companies. Very strong representations on the subject of a water supply have been made from time to time by the European and native inhabitants of Jalgaon, and a scheme was prepared for supplying the town with water from the Mehrum Tank at a cost of Rs. 80,000; the greater portion of the above sum would, of course, be spent on improving and extending the tank. There appeared to be a difficulty, however, about providing funds, and up to the present time nothing has been done. I have now the plans and estimates before me, and hope to be able in a few days to make, on behalf of the Jalgaon Municipality, proposals to Government for raising the necessary funds. At the present time such a work would not only benefit the town permanently, but provide any amount of labour for the distressed poor.

15. Relief works are now in progress in the Nusseerabad Taluka, and a portion of the line between Jalgaon and Dharangaon has been taken in hand.

16. I fear that, as in the case of Sauda, there will be a steady demand for relief works up to the next monsoon in the Nusseerabad Taluka.

4. *The Pachora Taluka and Bhadgaon Petha.*

17. Like Nusseerabad, this taluka and petha for a portion of the monsoon did not suffer to any great extent, but, of late, crops of all kinds have been steadily failing. As regards cotton, although some of the fields visited by me appeared to be in a better state than those I had seen elsewhere, yet the cultivators themselves assess their cotton crop at 4 annas in the rupee. This is too low, but the real out-turn will not, I imagine, reach anything like 8 annas. Both Pachora and Bhadgaon will suffer greatly as regards the jowári crop; this in the Bhadgaon Petha is the staple product, and I am quite satisfied that, except in the case of a few favourably situated fields here and there, the crop of jowári will be hardly worth reaping.

18. The same outcry concerning the absence of grass exists in this taluka as elsewhere.

19. From Bhadgaon I visited the Government Model Farm, under the superintendence of Mr. Stormont. On the whole the crops are fair, and in some cases good. Jowári has failed of course, but the constant care and attention exercised by Mr. Stormont have borne satisfactory results. The general harvest at the farm will, in all probability, not be actually brilliant, but it will undoubtedly compare very favourably with the produce of the neighbouring lands cultivated by ordinary ryots.

20. I found a great cry for work among the Bheels and labouring classes both in Pachora and Bhadgaon.

21. A few small relief works have been in progress for some time past, and I am now taking in hand that portion of the Páchora and Bhadgaon Road to the east of the Titur River. Preparations are also being made for commencing a road from the town of Bhadgaon to the Kajgaon Railway Station.

5. *The Parola Petha of the Amalner Taluka.*

22. I found the state of the crops very unsatisfactory, cotton almost worthless, and the various grains withered and shrunk. The want of water in the town of Párola is a very serious evil at present. The supply is always bad, and towards the end of each dry season great inconvenience is felt, but on the present occasion the want of water at the beginning of October is as great as at the end of May in ordinary years. Some persons have already left the town, and what will become of the inhabitants in general I do not know, if it should appear that the present apprehensions as to the water supply not lasting for more than a month more be realised.

6. *Erandol Taluka.*

23. The crops are very inferior, but the necessity for relief works is not so pressing as elsewhere. In the eastern portion of the taluka, however, I received applications for work from distressed labourers. Little or no grass.

7. *The Dhulia Taluka.*

24. Is on the whole in an unsatisfactory condition. In some places the low rich land on the banks of the river, &c. has yielded fair crops, but the contents of the poorer and higher soil are hardly worth reaping. In the Dhulia market, on October 10th, there was a very serious rise in the price of grain.

25. Local works are being carried out as required, but the demand for work will probably very much increase as the season advances.

26. In the talukas of Chálisgaon, Jámner, Chopra, and Shirpur, according to the latest accounts, the kharif crops are withering, and there is but little prospect of a rabi crop; but at present the scarcity is not being very severely felt, and in some places labour has been provided for the present. The taluka of Virdel, which was originally in so bad a state, is again falling off. There is work for the people.

27. In the western talukas—Pimpalner, Nandurbár, Sháháda, and Taloda—the crops are very much better than elsewhere. They have fallen off of late, but there is no scarcity or distress, except in the Nizámpur Petha of the Pimpalner Taluka.

28. I have now somewhat fully described the condition of Khandesh up to the 7th instant, and will next week revert to the ordinary tabular form of return. The people of the district are at present quite quiet. The only outcry is for work and remissions of revenue; the former is being provided as actively as possible; the latter is under inquiry, and a report will be submitted hereafter. Remissions will have to be granted, and in some cases to a large extent.

Telegram, 1st November 1876.

From CHIEF COMMISSIONER, Bangalore, to FOREIGN UNDER SECRETARY, Simla.

Your telegram of 30th. Statements for talukas will be prepared and submitted. The failure of north-east monsoon has completed the destruction to the extent of 20 per cent. of the kharif crops in all districts. Great distress exists throughout from loss of harvest in two successive years. Relief works already in operation, and will be needed on a large scale in every district. Large imports of grain by rail. I have sanctioned purchase of grain in local markets for payments on relief works. Public meeting takes place to-morrow morning, when I propose, unless prohibited, to intimate the intention of local administration to supplement all local private subscriptions for relieving distress by an equivalent grant, as was done in the famine of 1866 by Mr. Bowring.

Telegram No. 2,382 G., dated 2nd November 1876.

From FOREIGN UNDER SECRETARY, Simla, to CHIEF COMMISSIONER, Mysore.

Your telegram of 1st. Government approves proposed intimation at public meeting that local administration will supplement all local private subscriptions for relieving distress by an equivalent grant, as was done in 1866.

STATEMENT OF PROPOSED EXPENDITURE ON FAMINE RELIEF WORKS in the Poona District.

Description of Works.	Amount.	Total.
SANCTIONED ALLOTMENTS.	Rs.	Rs.
<i>Provincial.</i>		
Road repairs (supplementary grant)	8,000

SUPPLEMENTARY STATEMENT OF PROPOSED EXPENDITURE ON FAMINE RELIEF WORKS in the Poona District.

Description of Work.	Amount.	Total.
	Rs.	Rs.
<i>Neera Canal.</i> —In the Purandhar and Indápur Taluks - - -	6,00,000	6,00,000
	Total Rs. -	6,00,000

REMARKS.

This canal forms a distinct portion of the Neera Project, estimated cost of which amounts to Rs. 44,71,080. It is proposed to construct the canal on a reduced scale (capable of enlargement hereafter), which might be utilized next year, with the addition of a weir across the river, estimated to cost Rs. 3,85,921, for the irrigation of lands in the above talukas which are now suffering most severely from drought. The district traversed by the proposed canal is one of most uncertain rainfall, and in which remissions have been heavy and frequent. The records of famine show that one out of every three is a bad year, and that remissions vary from 12 to 80 per cent. of the land revenue. In 1869 the remissions due to drought amounted to 45 per cent. of the land revenue.

Detailed plans and estimates for the various portions of this project are ready. They have received the approval of the Chief Engineer for Irrigation, and were laid before the Inspector-General of Irrigation in 1871.

The Storage Lake need not be undertaken till there is a demand for perennial water ; and the Government would only therefore be committed to the outlay for the weir and canal works on a reduced scale, or, at the outside, to about sixteen lakhs of rupees, including distributing channels.

Telegram.

From COMMERCE, Simla, to Bombay, 9th November 1876.

Your No. 6,153 of 27th ultimo. President in Council does not approve of Neera Canal and Malsej Ghaut as relief works. His Honour requests that pending submission of further information which will be communicated by letter, no steps may be taken to commence any of the following works, namely, new roads from Sholapoor to Sangola, and Sangola to Jutt Road from Dholkheir to Bellary frontier, Jakree Baree Road, Pimpulneir Tank, metalling of Pimpree Ghaut Road, Ahmednuggur and Dhond Road, mail road in Satara and Belgaum districts, except from provincial funds, Hooblee and Anigherry Road, Hooblee and Sungutteekop. Regarding other large irrigation tanks and canals, except the Mutha Canal, a further communication will be made shortly. If, pending explanation, other relief works are needed, minor works should be commenced in each taluka distressed, as has been done in Poona. It is also requested that full information may be forwarded as soon as possible of the probable proportion of failure of Kharif and rabi crops in each taluka.

Telegram, 4th November 1876.

From COMMERCE, Simla, to CHIEF SECRETARY, Bombay.

Please telegraph whether "Times of India" statement, Monday last, regarding increased traffic in grain on the Great Indian Peninsula Railway is correct.

Telegram Nos. 407-408, 7th November 1876.

From COMMERCE, Simla, to GOVERNMENTS OF MADRAS AND BOMBAY.

Resident, Hyderabad, urges reduction railway freight of grain for distressed parts of Nizam's territories. Is similar reduction necessary for ^{Madrás} ^{Bombay} districts on railway? Are high prices sufficient attraction for adequate supplies? Please telegraph as soon as possible to Simla.

Telegram, 7th November 1876.

From WORKS, Bombay, to COMMERCE, Simla.

Your telegram of 4th instant. Statement about grain traffic in "Times of India" of 30th ultimo is generally correct. Very abnormal grain traffic on Great Indian Peninsula Railway.

Revenue Despatch, No. 46 of 1876.

From the SECRETARY OF STATE FOR INDIA to the GOVERNMENT OF INDIA.

21st December.

1. The Despatches of your Excellency in Council, dated 2nd and 9th November, Nos. 24 and 27 of 1876, relative to the scarcity prevailing in Western and Southern India, have been considered by me in Council.

2. The proceedings of your Government, which form the subject of report in the Despatches under reply, have my approval.

I have, &c.
(Signed) CARNARVON.

No. 28 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Calcutta, 17th November.

1. In continuation of our Despatch of the 9th instant, relative to the scarcity in Western and Southern India, we beg leave to forward, for your Lordship's information, copies of the communications specified in the margin.

Telegram from Government of Bombay, dated the 9th November 1876.

Telegram from ditto, dated the 11th November 1876.

Telegram to ditto, dated the 17th November 1876.

Letter from Government of Madras, dated the 7th November 1876.

2. We have now received most of the information regarding the Bombay Presidency which had been called for, and are giving it our careful consideration. We are also to receive weekly narratives in future. The aspect of affairs has not improved, and continues to be extremely serious.

3. We stated in our last Despatch that we had deemed it necessary to stop two large works included in the programme submitted by the Government of Bombay, and to direct that certain others should not be commenced pending the receipt of more detailed information with reference to them. Among the papers now submitted will be found a telegram from the Government of Bombay, under date the 11th instant, remonstrating against these orders, as being inconsistent with the discretionary authority accorded to the local Govern-

ment in our telegram of the 16th ultimo, stating that some of the works adverted to have been commenced, and requesting to be informed whether they are to be stopped. In reply we have requested the Government of Bombay to inform us of the names of the works to which they allude. On the receipt of this information we shall issue such further instructions as the circumstances may appear to call for. At present we will only observe that it is very far from being our desire to impose any unnecessary restrictions on the action of the local Government, but that we regard it of great importance, from a financial point of view, that large projects should not be commenced, under the stress of the present emergency, which are likely to involve a continuance of heavy expenditure after the scarcity has ceased, and that the apparent departure from this rule, especially in the case of the Malsej Ghât and the Nira Canal, led us to issue the order to which the Bombay Government object. As we have left the Government free to substitute smaller and more strictly local works for those which we have stopped or suspended pending inquiry, we cannot think that any practical inconvenience is likely to result from our orders.

4. The question of taking every precaution which may tend to diminish the mortality among cattle is so pressing and so important, that with reference to a Resolution which has been sent to your Lordship by the Government of Bombay with their Despatch of the 6th instant, No. 44, we have thought it right to intimate to that Government that we see no objection, under the circumstances, to their

going even further than they appear to have contemplated in the direction of making the Government forests available for the sustenance of cattle, and that, should his Excellency in Council deem it proper, it may be well to proclaim as free grazing grounds for the distressed districts any forest reserves which may be conveniently situated, and which are not of a description to sustain serious permanent injury from cattle being admitted into them.

5. Your Lordship will observe that we have not felt justified in assenting to the recommendation made by the Resident of Hyderabad, in his telegram of the 30th October, that with reference to the very high prices obtaining at Hyderabad and in the Nizam's territories generally, and with a view to the early replenishing of the grain market from the north and south, the rates of freight for the transport of grain on the railways should be reduced. Before disposing of this recommendation, we deemed it advisable to refer to the Governments of Madras and Bombay for their opinion as to its necessity as respects the Madras and Bombay Districts; for the rates could hardly have been lowered in the case of grain destined for Hyderabad without adopting a similar course in the case of grain destined for the distressed districts in Madras and Bombay. The replies of those Governments satisfied us that it would not be advisable to adopt Sir Richard Meade's recommendation. The Resident's telegram of the 11th instant, which must have crossed ours of the same date, has not led us to alter our opinion.

The Bombay Government state that the railway brings up every day as much grain as it can carry; that the prices demanded on the retail trade bear no proper proportion to the cost of transit; that there has been over speculation in the grain trade; that prices are beginning to fall. The Government of Madras consider any reduction unnecessary and undesirable; that private trade is active, and that a reduction of the rate of freight would not benefit either the consumers or the railway, but only the traders already largely profiting.

6. The detailed statements explanatory of the condition of the affected districts in the Madras Presidency, which the Government was requested to furnish, have not yet been received; but we learn from the letter from Madras under date the 7th instant, which is enclosed, that the district officers, acting under the direction of the members of the Board of Revenue, who have been deputed to visit the affected districts, are doing all that is necessary. We regret, however, to have to report for your information a measure which has been taken by the Government of Madras without any previous reference to us, and which we regard as open to very grave objections. On the 9th instant we received from the Government of Madras a telegram, dated the 4th instant, which had been delayed in transit, intimating that with reference to the high prices and the uncertainty as to the stores of grain in the distressed districts in that Presidency, the Government had confidentially contracted with a local firm for the purchase of 30,000 tons of rice at a cost of 32 lakhs of rupees, and requesting us to provide for the payment in Calcutta of four lakhs of rupees per week. This step appears to have been taken by the members of Council in the absence of the Governor, who at the time was away from the Presidency on a tour, and who did not return to Madras until the 7th instant. In the present state of the finances such a measure should only have been resorted to upon the strongest grounds of proved necessity, and not then, until full explanation of the necessity had been submitted to and accepted by the Government of India, upon whom rests the entire responsibility for the financial administration of the Empire. In the absence of detailed information, for which we have called, but which has not yet reached us, we are not at present in a position to express a confident opinion as to whether the circumstances are such as to justify a measure which is open to the grave *primâ facie* objection that it may seriously interfere with the course of private trade, to say nothing of the loss which it may entail upon the State; but, so far as we are able to form a judgment from the scanty information before us, we feel bound to say that the action of the Madras Government appears to be singularly inconsistent with the chief ground assigned by them for deprecating any reduction of the rates of freight for the transport of grain, viz., the activity of private trade. In bringing the subject thus prominently to your Lordship's notice in the present stage of the question, we are influenced by the consideration that if local Governments are to be permitted that to embark in financial transactions of such magnitude without the permission or knowledge of the Government of India, the most serious embarrassment must ensue. We have instructed the Madras Government to make no further purchases of grain without our permission, and have called for full explanation of

their recent action, which, as soon as it reaches us, will be submitted to you with our remarks.

We have the honour to be, &c.

Telegram, 9th November 1876.

From SECRETARY, Bombay, to REVENUE SECRETARY, Simla.

Your telegram of 7th. We have already urged the railway to reduce their rates. But the railway brings up every day as much grain as it can carry, some of which remains at Poona, and some goes on. The prices demanded on retail rate bear no proper proportion to the cost of transit, and I cannot see how we can secure any reduction being made in the retail price in consideration of the reduced railway charge for which Government will have to pay.

Dated the 10th November 1876.

From SECRETARY, Bombay, Public Works Department, to REVENUE SECRETARY, Simla.

Collector of Sholapur reports officially, in reference to telegram of 6th instant from "Times of India" special correspondent, that not a single death from starvation is known to have occurred in the Sholapur District, and that he does not anticipate any such deaths will occur. The deaths that have occurred have been due to an outbreak of a choleraic type in a party employed on a relief work. Party has been broken up, and people transferred to other works, and all precautions taken.

Telegram, 9th November 1876.

From SECRETARY, Madras Public Works Department, to SECRETARY, Government of India, Public Works Department.

Reduction railway freight of grain considered unnecessary and undesirable. Private trade active. Reduction not benefit consumers or railway, but only traders, already largely profiting.

Telegram, Hyderabad, Deccan, 11th November 1876.

From RESIDENT, Hyderabad, to REVENUE SECRETARY, Calcutta.

The minister earnestly solicits that railway charge on consignments of grain of 15,000 maunds and upwards from North-west Provinces to Hyderabad may be reduced by one half to facilitate importations by Hyderabad merchants from that quarter. I trust the question may receive early consideration. Much grain has been exported from Hyderabad to suffering British districts, and Nizam's Government has forbidden any interference with or obstruction to such exportations. This drain has caused great rise in prices, and much distress here.

Telegram, 11th November 1876.

From SIR A. ARBUTHNOT, Simla, to RESIDENT, Hyderabad.

Both Madras and Bombay Governments object to reduction of railway freights for grain. Railways already carrying as much as they can. President in Council does not think reduction advisable.

Telegram, 8th November 1876.

From SECRETARY, Government of Bombay, to REVENUE OFFICIATING SECRETARY, Simla.

Your telegram of yesterday. Collectors of Poona, Ahmednagar, Sholapur, Kaladgi, and Satara authorised each to expend Rs. 25,000 for preserving lives of those too infirm to work or too poor to buy grain.

Telegram, 9th November 1876.

From REVENUE OFFICIATING SECRETARY, Simla, to SECRETARY, Bombay.

Your telegram of yesterday's date. The President in Council wishes for explanation of the organization which has been adopted for preserving lives of those unable to work or buy grain.

Telegram, 10th November 1876.

From SECRETARY, Government of Bombay, Works, Poona, to SECRETARY, Government of India, Revenue Department, Simla.

My telegram of 7th. Enormous traffic in food-grain over Great Indian Peninsula. Conder reports on 9th, 10,000 tons on line between Egutpoora and Tanna, and in past three weeks 21,000 tons conveyed to Poona and stations beyond, only a small portion of which was for stations on Madras line. From information received there has been over speculation in grain trade, and prices, which are abnormally high, now beginning to fall. Large exports to southern ports, 16,000 kandies in October. Grain from Persian Gulf, Sind, and Guzarat coming in large quantities to Bombay. Will keep you informed of grain movements.

Telegram, 13th November 1876.

From SECRETARY, Bombay, Public Works Department, Poona, to REVENUE SECRETARY, Calcutta.

Discretionary allowance made to Collectors. Collectors place at disposal of Assistant Collectors, Mamlutdars, and local district officers, portions of allowance to enable them to give aid to incapable and destitute persons. Patels ordered to feed and pass on to nearest Mamlutdars' stations indigent and incapable travellers. At present these allowances availed of only to very small extent. Relief is given on works. Later on may be necessary to increase discretionary allowance and staff for distribution.

Telegram, 4th November 1876.

From SECRETARY, Government of Madras, Revenue Department, to FINANCIAL SECRETARY, Calcutta.

In consequence of extreme uncertainty grain stores in distressed districts, and extraordinarily high prices prevailing in distressed districts in Madras, and difficulty in obtaining food for money, this Government have confidentially secured a Government reserve during this month of 13,000 tons rice, to be supplemented in this month by 2,000 tons wheat, and in next month by further 15,000 tons rice. These supplies are to be strictly held as reserve to meet contingency of local markets and private enterprise failing. Action of Government has been kept secret, and district officers encouraged to rely on local contracts. Estimated cost, whole transaction, 32 lakhs. Accountant General, under instructions of Government, arranged immediate payment five lakhs in Calcutta through Currency Office, leaving explanation to this Government with view to secrecy. This Government rely on Government of India to place four lakhs of rupees a week in Bank of Bengal at credit of Arbuthnot and Co. for next five weeks, keeping transaction secret.

Telegram, 11th November 1876.

From SIR A. ARBUTHNOT, Simla, to CHIEF SECRETARY, Madras.

Your telegram, 4th instant, to Financial Secretary. President in Council requests that no further purchases may be made without previous reference and full explanation to Government of India. Proceeding now reported calculated to cause serious financial embarrassment. Please explain fully by letter to Calcutta.

No. 6,346, Bombay, 6th November 1876.

From the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY to the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA.

I am directed to acknowledge the receipt of your letter No. 365, dated the 25th ultimo, communicating the observations of the Government of India on the measures that have hitherto been taken, and those which are about to be taken, by this Government for the relief of the distress prevailing throughout a large portion of this Presidency.

2. His Excellency the Governor in Council is grateful for the confidence that has been reposed in this Government, and the freedom and latitude of action that have been conceded to them. The suggestions conveyed in your letter will receive his Excellency in Council's best attention, and care will be taken to keep the Government of India regularly and promptly informed of the course of events.

Telegram, 10th November 1876.

From SECRETARY, Government of India, Revenue Department, Simla, to SECRETARY to Government, Bombay, Revenue Department, Bombay.

President in Council requests that full information may be submitted about irrigation relief works, and no work undertaken which exceeds Rs. 30,000 estimate without the sanction of the Government of India.

No. 412, Simla, 9th November 1876.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY.

1. With reference to my telegram of this date on the subject of the programme of relief works, estimated at Rs. 61,84,758, which was sanctioned by the Bombay Government Resolution, No. 6,152, of October 27th, I am directed by the President in Council to communicate the following remarks.

2. The construction of a ghaut road between the Deccan and Konkan is, under all circumstances, an undertaking involving very heavy expense during a series of years. One lakh of rupees, which it is proposed to devote to the Malsej Ghaut, would go but a short way towards its completion, but might prove a foundation for inconvenient demands in future years. The work, moreover, is not very conveniently situated with regard to the homes of the more distressed population, and there would appear to be doubts as to the healthiness and water supply of the locality. The Neera Canal, likewise, is a project by the commencement of which

the Government, and in this case the Imperial revenue, would be committed to a heavy future outlay. On these grounds the President in Council requests that the Malsej Ghaut and its approaches, and the Neera Canal, may be excluded from the programme of relief works.

3. I am to request that, with the permission of his Excellency the Governor in Council, you will be so good as to submit full explanation as to the necessity of the under-mentioned works :—

- (a.) Metalling of the Pimpree Ghaut Road (Rs. 40,000). This is understood to be a line much disused of late years, the metalling of which is of doubtful advantage compared with other works.
- (b.) Metalling the Ahmednagar and Dhond Road (Rs. 1,00,000). In the event of the railway being eventually constructed, this expenditure will be thrown away. Would it not be better to add the amount (when required) to the line from Khande to Kashti, and possibly to the branch from it to Deksal Station? Part perhaps might be added to the Ahmednagar and Karmala grant. All these will, apparently, relieve nearly the same locality as the Dhond and Munmar line.
- (c.) The proposed road from Sholapur to Sangola (Rs. 30,000) will, it would appear, have a break of several miles of foreign territory and the unbridged Bhima River in the middle, and will hardly serve traffic better than the road between these places via Pandharpur. The road from Sangola to the Jutt frontier (Rs. 15,000) would seem to be of at best remote necessity. Might it not be better to add the amount of these two lines (if required) to the road from Janoni to Wangi?
- (d.) The metalling of the Hubli and Anigherry and the Hubli and Sunguttikop roads (Rs. 1,86,000) will probably be thrown away if the proposed line from Bellary to Karwar is constructed. Part of the amount would perhaps be better laid out, if required, on the road from Hubli towards Kaladgi. The same objection apparently is applicable, to some extent, to the line from Guduk to Hesrur; but, as this work is understood to be in progress, its abrupt suspension might cause embarrassment.
- (e.) The metalling of the mail road in the Satara and Belgaum Districts (Rs. 6,43,000) would appear to be a measure of very doubtful expediency. The work is essentially provincial in its nature, and it will be distant from the homes of a great portion of the distressed population of these large districts. The same remark applies, though possibly with less force, owing to the conformation of the district, to the metalling of the mail road (Rs. 3,15,000) in the Dharwar District. Would it not be preferable, and perhaps more economical, to organise minor works in the several talukas?
- (f.) The road from Dholkheir to the Bellary frontier (Rs. 2,00,000) would not appear to be very necessary as a thoroughfare, and it is a question whether feeders falling into the road from the Bhima to the Malpurba, or small local works, would not be preferable.
- (g.) The account of the Khandeish District, given by the Collector's letter of the 12th ultimo, shows that the eastern talukas are the most distressed, those in the centre doing indifferently, and those to the west not suffering materially, except the Nirampur Peta.

	Rs.
Pimpalneir Tank	2,50,129
Jakri Bari Road	1,00,000
	3,50,129

Under these circumstances, the necessity for devoting a large proportion of the proposed relief to the western talukas is not apparent. I am desired to request that, pending the submission of full explanation,

none of the works referred to in this paragraph may be commenced.

4. Irrespective of the Neera Canal already referred to, and of the Mutha Canal, to the continuance of which there is no objection, the programme contains irrigation works amounting to Rs. 24,29,909. These are under scrutiny in the Irrigation Department of the Government of India, and I am to request that, pending a reference which will shortly be made and final decision thereon, no work of this nature may be commenced involving an expenditure of more than Rs. 30,000.

5. The President in Council would invite the attention of his Excellency the Governor in Council to the somewhat scanty nature of information contained in the statements which are now under consideration, and to the necessity which they indicate for the presence, especially in the Southern Marhatta country, of an

efficient and active controlling officer, both to report on the condition and wants of the several talukas, and to authorise the commencement of relief works in accordance with the policy which has been determined upon.

6. I am therefore to request that full particulars regarding, not only the works referred to in paragraph 3 of this letter, but the others in the programme, may be submitted at the earliest practicable date, explaining in the case of each road the present condition (if existing), or the objects it is to serve, the amount of total estimate, the amount expended already (if any), expenditure proposed, and the taluka or portion of taluka it is intended to relieve. Regarding other works analogous particulars should be supplied. In all cases correspondence with the Government of India should be quoted if any has taken place. Finally, the works should, as far as possible, be arranged in the order of their precedence or importance in the several districts, so that the least needed may only be taken up in the last resort.

7. While thus obliged to request the suspension, pending the receipt of fuller information, of a large number of the works comprised in the programme, the President in Council has no objection to the commencement of minor works in talukas actually distressed, like those already started in the Poona District, where this course may be deemed necessary.

8. In conclusion, I am to request that the Government of India may be favoured as soon as possible with an estimate of the proportion of failure of kharif and rabi crops in each taluka, and of the amount of land revenue which is expected to be lost.

Telegram, 11th November 1876.

From SECRETARY, Bombay, Public Works Department, to REVENUE SECRETARY, Simla.

Your telegram of 9th. This Government wish to point out that, by their telegram of 16th October, the Government of India stated that the Government were authorised to incur such expenditure in providing work and relief in the distressed localities as they might consider necessary to meet the emergency, avoiding large projects which would involve the continuance of heavy expenditure after the emergency had ceased. This Government accordingly made a very careful selection of the works which would probably afford the greatest amount of relief, observing as far as possible the principle just adverted to; the essential conditions of geographical distribution and water-supply being kept in view. They stated distinctly that they had no intention of beginning all the works simultaneously, but that the scheme was sanctioned as a whole, in order that the local officers might be prepared to act as soon as the emergency arose. They likewise endeavoured, as they are still doing, to employ the people, as far as possible, on purely local works, but these have been in a great measure exhausted, whereas pressure for employment much increases. The President in Council now disallows specific works, some of which have, under the existing pressure, been already commenced. Every day brings urgent applications for others. Does the President in Council desire works which have been commenced to be stopped, and the applications for others to be refused? Does he withdraw the authority given by Government of India in the telegram 16th October?

Telegram, 17th November 1876.

From REVENUE SECRETARY, Calcutta, to SECRETARY, Government of Bombay.

Your Government Resolution, No. 6,230, of 31st ultimo. If his Excellency in Council thinks it advisable to throw open, as free grazing grounds for the distressed districts, such forest reserves as may be conveniently situated, and not likely to be permanently injured thereby, the Government of India have no objection.

No. 1,599A.

From the SECRETARY TO THE GOVERNMENT OF MADRAS to the SECRETARY TO THE GOVERNMENT OF INDIA.

7th November 1876.

1. In my telegrams of the 24th and 27th ultimo the distressed condition of Kurnool, Cuddapah, and Bellary, consequent on a scanty south-west monsoon, was briefly reported; with a short statement of the measures adopted, and those proposed to be carried out in future, in the event of the total failure of the north-east monsoon.

2. In the telegram of the 28th ultimo the Government of India ask for more specific and full information regarding the areas affected, the extent of cultivation, rainfall, prices, &c. These will be shortly submitted; in the meantime, I am directed to place before the Government of India such particulars as are already

to hand; and which will allow of a tolerably fair idea being formed of the extent of distress prevailing in this Presidency, and the measures inaugurated for affording relief.

3. In Bellary* the western taluqs—Harpunhally, Huvinhudgally, and Kudlighy—suffered severely from want of rain last year. The cholum crop, which is their staple, was barely saved from destruction by

*Area.	Population.	Land-revenue.
11,182.	1,668,000.	25 $\frac{3}{4}$ lakhs.

a late fall of rain. In the present year, the south-west monsoon, due to commence in the first week of June, failed to so great an extent that no water was received into the tanks, and the early dry crops were either left unsown or withered before they came to maturity. The failure was very general, and by the month of September the indications of distress were so clear that the Collector sought permission to open relief works. These were accordingly opened in several directions; and the resort of large numbers to them, including respectable ryots and heads of villages, notwithstanding the low rate of wages fixed, showed unmistakably that the distress was very severe. The distress gradually extended eastward to the neighbourhood of Bellary Town, and thence to the whole district, as the failure of the south-west monsoon became more and more apparent.

4. In Kurnool†, where want of rain, with the consequent restriction of cultivation, has led, as usual, to scarcity of food and high prices, a marked increase in crime has manifested itself. In Markapur and Cumbum

†Area.	Population.	Land-revenue.
7,676.	960,000.	15 lakhs.

relief works have been set on foot, and it is hoped that the circulation of money by this means will cause grain-sellers to open their stores, as when money is scarce they are naturally disposed to hold back rather than sell on credit, as they would certainly be pressed to do if their shops were open. As far as present information helps to form an opinion, the general impression is that there is grain in Kurnool, is not absolutely deficient but it is at present withheld.

5. Cuddapah‡ shares the general distress which prevails in the above-mentioned districts. The failure of the last north-east monsoon proved disastrous to the wet cultivation in the district, but the dry crops were

‡Area.	Population.	Land-revenue.
8,050.	1,351,000.	19 $\frac{1}{2}$ lakhs.

to a great extent saved. The subsequent failure of the south-west monsoon rains of this year, however, has affected the latter most seriously. The sub-division, separated from the rest of the district by ranges of hills, and without any railway communication, is the most backward portion of the province, and every endeavour is being made to afford relief to the people by providing them with employment and encouraging importation of grain.

Besides these three districts some distress has shown itself in portions of Salem, North Arcot, and Nellore.

6. In my letter, dated 4th July 1876, No. 900, the unfavourable character of the season last§ year, and the condition of some of the districts, were described. The

§1875-76.

accounts received for the last fasli year show that there was a falling off in land-revenue of upwards of 30 lakhs of Rs. as compared with the previous year, and that the decrease was apparent chiefly in Bellary, Chingleput, North and South Arcot, and Tinnevely. More detailed information in regard to the revenue and agriculture of last year will hereafter be furnished. The subject is here referred to, to show that as the present bad season succeeds one which was by no means favourable, the effects now experienced are far more serious than they would otherwise have been.

7. The measures adopted for affording relief in the districts where distress prevails are as detailed below:—

Before the failure of the south-west monsoon was definitely known, the unfavourable character of the previous season had served as a warning, and in view to be prepared beforehand in case the rains of June and July should happen not to fall as usual, lists of relief works were called for in April from the various districts, so that they might be fully considered and decided on, and the works selected set on foot on the shortest notice. Matters were accordingly put in readiness for prompt action in case of emergency, and the condition of the districts was being narrowly watched. On the first indications of distress being reported, Mr. Thornhill, senior member of the Board of Revenue, was deputed to the affected tracts. He returned, after a tour in Cuddapah, Kurnool, and Bellary, at

the close of last month. His report, and the order of Government thereon, are herewith submitted for the information of the Government of India. He has now

G.O., 30th October 1876, No. 1,529.

started on a second tour through Cuddapah and Bellary; while another member of the Board, the Hon. David Arbuthnott, who is well acquainted with Kurnool, has been deputed on special duty to that district. These deputations leave the Board with one member at Madras; it has been found absolutely necessary to call up an additional member, and Mr. Puckle, Director of Settlements, has been selected for this duty; he will continue to carry on the work of his own department, and the expense will be small. The reports already received show that relief works have been organised on a sufficiently extensive scale to provide employment to the large number of people who flock to them. They are generally minor works of local utility, such as construction of wells, tanks, roads, repair of roads, &c., which do not require much skill. To control large bodies of men thus employed in various places, and to direct, guide, and pay them regularly, additional European officers* have been appointed; while native agency has been increased to

*Mr. Price, C.S., for Bellary,
Mr. Spencer, C.S., for Cuddapah; and Mr.
Swan of the Police.
Mr. Gibson, for Kurnool.

relieve Tahsildars of their magisterial functions, in view to their giving undivided attention to the supervision of the relief operations entrusted to them. Crimes against property are, of course, prevalent; in

Kurnool especially some very serious dacoities have occurred; the town is full of budmashes, to overawe whom a wing of a native regiment has been ordered to proceed there forthwith. The police force has, meanwhile, been strengthened where necessary; and large additions made to the staff of Public Works officers. The number of people employed on relief works in the Bellary District alone

† Viz., at or near Bellary	- 43,500
In the taluqs	- 51,600

is returned at 95,100† per diem; while food is distributed to 7,000 paupers, who are physically incapable of labour.

8. The necessity for economy is kept in view; and every endeavour made to prevent expenditure from becoming unduly large or wasteful. Unfortunately, the state of the provincial funds in this Presidency does not permit of any outlay from that source to the relief of Imperial funds; while, as to local funds, the land-cess (the principal item) is entirely dependent on the land revenue, on which it levies a per-centage. The contributions from provincial funds, usually made to Local Fund Boards in consideration of the transfer to the latter of works which were formerly a charge on the general revenues, have been considerably reduced during the current year; and this has materially crippled the resources at the disposal of those local bodies. Already nearly 6½ lakhs of rupees have been sanctioned, of which upwards of four lakhs appertain to Bellary.

9. Hope is still entertained that the north-east monsoon may yet set in and take large numbers of the ryots back to their fields. Ten days' time is necessary before we can pronounce on the exact magnitude of the calamity that now threatens this Presidency. In many parts, all chance of the people deriving immediate benefit from the rains that may hereafter fall is believed to be lost; and it is now considered too late in some parts for the monsoon to do much good even if it did set in. It would appear that when the north-east rains fall, cholam can be sown in the black lands of the ceded districts up to November, and if a good crop is obtained considerable relief will follow; in the red soils it is too late for any dry crop, except horse-gram and other pulses. Mr. Thornhill writes: "Three months paddy or raggy may be sown where tanks of any capacity receive a supply; this will afford employment to the people for some three or four months; but, as the staple food-grains (cumboo and dry raggy) cannot be reaped until the following August, it is possible that some relief may be required in the red-soil taluqs during the next hot weather."

10. Mr. Thornhill's observations apply only to the ceded districts. In the southern districts of Madura, North and South Arcot, Salem, Chingleput, the scanty fall of rain during the last monsoon has raised a partial crop of paddy. In some localities the usual average out-turn from cumboo and varagoo has been secured. This has operated to prevent real serious distress in the districts concerned up to date; but latterly the aspect of affairs is fast changing. High prices are ruling, and continued drought is leading to the gradual abandonment of cultivation. In Tanjore, with the commencement of the south-west monsoon on the west coast the Cauvery received its usual freshes; and, till recently, the agricul-

tural operations of this most important of our southern districts proceeded satisfactorily; but now famine prices have set in, and unless rain falls immediately, and the rivers receive accession of water, the standing crops must wither and die. The same is more or less the case in all river-irrigated eastern districts. On the west coast the south-west monsoon rains, although not so heavy as usual, have not produced any serious decrease of cultivation. The delta districts of Godavery and Kistna, with the exception of the uplands, are fairly prosperous, and supply grain to the greater part of the Presidency. Ganjam and Vizagapatam have not suffered from the last season, which was not particularly bad in those districts.

11. Floods have been reported from four districts, South Canara, Kistna, Vizagapatam, and Ganjam, but no serious damage has ensued from them to the crops.

12. The most noteworthy feature of the times, and one which intensifies distress wherever it prevails, is the series of prematurely high famine prices which has begun to rule everywhere. The last returns from the three districts of Cuddapah, Bellary, and Kurnool show the prices of the chief staples as noted below, but telegraphic information shows that they are still rising. The rates which prevailed during the famine year 1866 are shown for comparison. They are not available for Kurnool.

	Rice, Second Sort.			Cholum.			Raggy.

NOTE.—The figures denote the number of measures per rupee.

13. Information giving the particulars regarding relief works, the areas cultivated, the loss of revenue anticipated, &c. will be shortly submitted.

I have the honour to be, &c.

No. 30 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Calcutta, 24th November.

1. In continuation of your Despatch of the 17th instant, relative to the scarcity in Western and Southern India, we beg leave to forward, for your Lordship's information, copies of the communications specified in the margin.

Letter from Resident at Hyderabad, dated the 11th November 1876.

Telegram from ditto, dated the 19th November 1876.

Telegram to Government of Bombay, dated the 15th November 1876.

Telegram from ditto, dated the 17th November 1876.

Telegram to ditto, dated the 18th November 1876.

Letter from ditto, dated the 11th November 1876.

Letter to ditto, dated the 24th November 1876.

Letter from the Government of Madras, dated the 13th November 1876.

Telegram to ditto, dated the 20th November 1876.

Telegram from ditto, dated the 23rd November 1876.

Telegram to ditto, dated the 24th November 1876.

Memorandum from Foreign Department, dated the 16th November 1876.

2. The only matters in this correspondence to which we deem it necessary to draw your Lordship's special attention are the application made by the Government of Madras in their telegram of the 23rd instant, for permission to purchase a further supply of 20,000 tons of grain, and the orders reported by the Government of Bombay in their letter of the 11th instant, concentrating in the Public Works Department of their Secretariat, the whole of the correspondence relating to the scarcity. The reasons which lead us to regard the last-mentioned arrangement as open to grave objections are fully stated in our letter to that Government of this date.

3. Your Lordship will observe, on reference to the telegram which we have this day addressed to the Government of

Madras, that we have not considered ourselves justified in permitting that Government to make the large additional purchase of grain which they propose, without being furnished with more specific and detailed information as to the condition of the Madras Presidency than is at present in our possession. We find it impossible to reconcile their recent action and their present proposal with the great activity of private trade in grain, to which allusion was made in their telegram of the 9th instant, and which is the subject of daily notice in the local newspapers; and we cannot but regard it as very unsatisfactory, that while making such an application the local Government should have omitted up to this time to furnish us with the full explanation of their recent action, which was called for in our telegram of the 11th instant. The letter from the Madras Government of the 13th instant, which we enclose in this Despatch, and which must have been written after the receipt of our telegram of the 11th instant, contains no allusion to the telegram in question, and contains no statement of facts which, in our opinion, can be regarded as affording any justification of the local Government having committed itself, especially in the present state of the Imperial finances, to so heavy an expenditure without the permission, and indeed without the knowledge, of the Government of India; and, although we repeated our call for such explanation on the 20th instant, there is no indication in the present telegram that it has been responded to.

4. So far as we can judge from the information before us, we consider the course upon which the Madras Government have entered to be one of very questionable expediency, and we are satisfied that important measures of the nature of that recommended by the Governor in Council should not be sanctioned upon the comparatively imperfect information which can be supplied in a telegram.

5. We trust that the course which we have thought it right to take in this matter will meet with your Lordship's concurrence.

We have the honour to be, &c.

No. 47, 11th November 1876.

From the RESIDENT AT HYDERABAD to the SECRETARY TO THE GOVERNMENT OF INDIA.

In continuation of my message dated 30th ultimo, I have the honour to forward, for the early consideration of Government, translation of a note from His Highness the Nizam's Government, soliciting a reduction in the railway charges on the transport of grain from the north-western provinces to Hyderabad.

2. The Minister has been informed that a reduction of quarter of the railway charge is ordinarily made in the case of consignments of grain under transport of not less than 5,000 pullahs (15,000 maunds), and he asks that a further reduction to the same extent may be made to meet the existing difficulties in this quarter; in other words, that consignments of grain to Hyderabad of the quantity above stated may be conveyed at half the fixed ordinary rates.

3. I venture to express an earnest hope that the question of facilitating, in the way proposed, the supply of grain to Hyderabad and the suffering districts generally in the tract between Madras and Bombay may be taken into early consideration by his Honour the President in Council.

4. Though there is reason to believe that the stores of grain in parts of this tract are not inconsiderable, in other parts there is undoubted scarcity, which can only be supplied by large importations from more favoured localities, the result of which has been a general and most alarming rise in prices, even in the latter, which is already causing very great suffering and distress.

5. In connexion with this subject, I beg to forward, for the information of Government, translation of an order issued under the Minister's directions forbidding the interference of the State officials with the free exportation of grain from the Hyderabad districts. I am informed that large quantities of grain have already been exported to the British districts from Hyderabad territory, and that the rise in prices in the latter is as much due to this drain as to the partial failure of the khareef crops and the fears anticipated regarding the failure of the rabi harvest from continued want of rain.

6. The Minister's request for a remission of the entire railway charge, on the Nizam's State railway, on consignments of grain of 5,000 pullahs and upwards, between Wadi on the Great Indian Peninsular Railway Line and Hyderabad, has been referred to the agent of the Great Indian Peninsula Railway Company, as its adoption will affect the existing arrangement with that Company for working the State railway.

7. As the present communication is of an urgent nature, I have addressed a message to you on the subject, of which I beg to enclose a copy.

TRANSLATION.

No. 3,269, dated 9th November 1876.

From the MINISTER TO HIS HIGHNESS THE NIZAM OF HYDERABAD to the RESIDENT AT HYDERABAD.

In continuation of my letter No. 3,220, dated 7th current, requesting to be supplied with a letter to the Benares authorities permitting the export of grain to the Hyderabad City, I have the honour to inform you that the scarcity of grain is being felt more day by day. The past season has been a very favourable one in Hindustan (Northern India), and large harvests have been reaped, and grain is very plentiful, and if assistance is rendered by Government large quantities will be imported. The merchants say, that according to railway rules a remission of one fourth fare is allowed when 5,000 pullas are being conveyed. They now submit for consideration the proposal to grant them a further remission of one fourth fare, thus reducing it to half, by which a greater impetus will be given to the importation. I would therefore request that, paying regard to the friendship existing between the two Governments, you will give this matter your favourable judgment; and taking into consideration the object in view, viz., the welfare of the suffering public, you will submit the proposal for the orders of the Government of India. Should that Government grant the prayer of the merchants it will confer a great obligation on His Highness' Government.

Should it not be found possible to sanction the remission now sought for by the merchants, I request that you will issue orders to the Great Indian Peninsula Railway authorities to remit the remaining three fourths of the fare on such consignments from Wadi to Hyderabad, charging to His Highness' Government the loss occasioned by such remissions.

I am of opinion that by adopting these measures the importation of grain into the country will be increased, and the present high rates will fall.

In conclusion, I beg that I may be favoured with an early reply, as it is my earnest desire to make some definite arrangements towards relieving the anxiety evinced by the public in connexion with the daily increasing high rates at present obtaining in the market before I start with His Highness for Delhi.

TRANSLATION of a RUBAKAR issued by the SECRETARY to the MINISTER in the REVENUE and MISCELLANEOUS DEPARTMENTS. (No. 2,006, dated 26th October 1876.)

In accordance with instructions issued by Madur-ul-Maham (Sir Salar Jung), the Minister of the Revenue Department, I have the honour to state, in consequence of the failure of rainfall, deficiency of water, dearness of grain, and scarcity of fodder for cattle, the public are very much distressed, and the removal of this direful calamity is entirely in the hands of a merciful Providence, as indeed there is no other help but that which comes from Him above. Yet it is incumbent on humanity to do something to alleviate, as far as lies in its power, the present far felt want. With this object in view, all officials of the Revenue and Public Works Department are directed to give special attention to the following orders of His Highness' Government in the matter of relief works, and it is earnestly hoped that the Revenue and Miscellaneous Minister will exercise an active supervision in carrying out to their fullest extent the wishes of Government on this subject.

ORDERS of the GOVERNMENT of the NIZAM OF HYDERABAD.

Government officials are hereby positively prohibited from interfering in any way with the fixing of prices of grain, &c., as it is found from experience that any interference in this direction tends to lessen the importation and sale of it.

Although it is the hearty desire of the Minister to see grain sold as cheap as possible, thus relieving the wants of those starving, yet he considers the practice of meddling with the rates of selling as highly objectionable. It is certain that if no interference is shown in fixing rates the grain merchants will, with greater confidence, expose their grain for sale, thus increasing the importation, whereby the prices will fall of themselves.

2. There is not the slightest doubt that the suffering public are anxious that the prices of provisions, which have risen high from failure of rain, should fall. It is, therefore, the duty of all officials to pacify them, as far as possible, and take proper steps to alleviate the immediate wants of such as are actually starving, as well as to relieve the anxieties of the public in general, as herein-after suggested.

3. In districts where the rainfall has been most scanty, and which are most famine stricken, it will be necessary to organise such unskilled relief works as making of roads, digging of wells and drains, and heaping earth on the banks of tanks; early submission of plans and estimates are called for. These plans and estimates must, however, be submitted in each case before sanction of Government can be accorded.

4. In organising such relief works consideration must be given to the following points:—That the work thus carried out improves the cultivation of the surrounding country, or facilitates the transport of grain and other merchandise from one locality to another, more particular attention being paid to such roads as will lead to an easy communication with railway stations.

5. In such districts as are not much affected by the famine, and where the necessity of organising relief works does not exist, such works need not be undertaken during the current year, but, instead, such works of importance as will benefit the public in general should be gone on with. Full orders on the subject have been issued in the Public Works Department.

6. It will therefore be seen that it is the incumbent duty of all officers belonging to the Revenue, Public Works, and Municipal Departments to supply, as far as possible, food to the starving, as well as to attend to the water supply of such places where its want is felt. Officers of the Revenue

Department must address the Public Works and Municipal Departments in regard to carrying out such works as they may deem necessary, endorsing their opinion on the plans and estimates received on such works from the Public Works and Municipal Departments before submitting them for sanction, so that Government may be fully informed of the necessity and utility of the work thus undertaken.

7. It has come to the knowledge of the Government that certain Revenue officials have interfered with the exportation of grain, while others are of opinion that Government aid should be called for in importing grain into the afflicted district. Such opinions, being wrong, should at once be removed, as on consideration it will be apparent that if the inhabitants of other parts of the country were similarly selfish, how much inconvenience would be felt by the public. The same consideration should be shown to the wants of others in such a matter as is desired by ourself.

8. It is highly desirable that all grain merchants may be fully made to understand the wishes of Government in this matter, and that it now becomes incumbent on them to do their utmost in increasing the importation of grain, and that in proportion to the trouble taken by them in this matter will depend the obligation they will confer on Government, and to the furtherance of this object the Government are willing to give all possible and proper assistance, if required by any merchant.

9. All Revenue officers are warned in affording such assistance that no undue advantage is taken of the indulgence thus proffered by Government by unscrupulous merchants in having their private transactions settled through the intervention of Government, but that all legitimate aid, which is in accordance with Government orders, and incurring no inconvenience to the public, may be afforded.

10. Orders of Government have been conveyed by the Secretary to the Revenue Minister to Public Works Department and the amaldar concerned regarding the prohibition placed on the irrigation and cultivation of the land under the Mia Sagar Tank, which orders must be carried out without any delay.

11. Orders have also been issued to the Public Works Department and the suburban talukdar directing the discontinuance of cultivation under the Husen Sagar Tank, and for preventing the wastage of water contained therein. These orders, it is hoped, will be carefully carried out. The water required for wet cultivation must also be disallowed. Should any loss accrue to any ryot by this step, consideration must be given to the convenience afforded thereby to the public, as well as to the object in view, viz., of storing up of water for drinking purposes. The village officials will submit accounts and pay compensation for such loss.

12. It is apparent from the revenue settlement of some villages, which has recently been effected by Moulvie Mahdi Ali, that the present rent of land is not higher than that of the surrounding country, but, on the contrary, below the average, but there are cases in which complaints of heaviness of rent on land are true. This is due to the land not having been properly assessed the consequence being that some tracts are over assessed, while others pay much less than they really should. These circumstances should also be taken into consideration, with the fact of failure of rainfall during last season, when Revenue officers are making collections.

13. The procedure indicated above should be adopted simply on the assertion of the village officers, but should be inquired into by the tahsildar and talukdar, whose reports should be submitted to the Sadar-ul-Maham for orders.

14. All officers of the Revenue, Public Works, and Municipal Departments will, within one month, submit detailed reports of the measures taken by them to ensure the proper management of the several districts under them in accordance with the wishes of Government.

Copies of above forwarded for information and guidance to the Miscellaneous Minister, all sadar talukdars, Nazim of the Sarf-e-kas, Amaldars in Nawab Mukhtar-ul-mulk's Jagirs, and Secretary to His Highness, Public Works Department, and for communication to those subordinate to them.

Telegram, 11th November 1876.

From RESIDENT, Hyderabad, Deccan, to REVENUE SECRETARY, Calcutta.

The Minister earnestly solicits that railway charge on consignments of grain of 15,000 maunds and upwards from North-West Provinces to Hyderabad may be reduced by one half, to facilitate importations by Hyderabad merchants from that quarter. I trust the question may receive early consideration; much grain has been exported from Hyderabad to suffering British districts, and Nizam's Government has forbidden any interference with, or obstruction to, such exportations. This drain has caused great rise in prices and much distress here.

Telegram, 19th November 1876.

From A. L. HOME, Esq., Simla, to REVENUE OFFICIATING SECRETARY, Calcutta.

Hyderabad Resident telegraphs to you: "My letter number 47, of 11th instant, and message of 11th idem, explained to Minister, who quite accepts the decision of the President in "Council."

Telegram, 15th November 1876.

From REVENUE SECRETARY, Calcutta, to SECRETARY TO GOVERNMENT OF BOMBAY, Public Works Department.

Your telegram of 11th. Please telegraph names of works already commenced which would be suspended under our telegrams of 9th.

Dated 17th November 1876.

From the SECRETARY, Government of Bombay, to REVENUE SECRETARY, Calcutta.

Your telegram 15th. Works already commenced; metalling Dhond-Nuggur Road, Sholapur, Sangola, and Sangola and Jutt Roads; metalling Hubli-Sunguttikop, Hubli-Anigherry Roads, Belgaum-Kaladghi Road by transfer from metalling Belgaum mail road. Irrigation works already commenced referred to in your telegram of 10th, Dumkul, Nehr, and Pingli tanks, Mhaswar and Ashtee tanks, and Krishna extension, urgently called for by local authorities, and on point of commencement. If Government of India will fix limit beyond which they are not prepared to supply funds in meeting present emergency in this Presidency, this Government will do the best they can up to that limit; but it is hoped that specific works may not be indicated by Government of India, either for stoppage or execution, for character and position of relief works must depend on local circumstances, which vary rapidly. No road-works proposed will entail serious liabilities after emergency has passed. And, though irrigation works are heavier, they will prevent recurrence of similar future emergency in their neighbourhood.

Telegram, No. 417, 18th November 1876.

From REVENUE SECRETARY, Calcutta, to SECRETARY TO GOVERNMENT, Public Works Department, Bombay.

Your telegram of 17th. The President in Council does not consider the information before him sufficient to enable him to give instructions until receipt of the full explanation by letter asked for in our letter of 9th instant. Pending a further communication the Mhaswar Tank and Krishna Canal should not be commenced.

No. 119 P., Poona, 11th November 1876.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF INDIA.

I am directed by his Excellency the Governor in Council to acknowledge the receipt of your telegram of the 4th instant, as well as that of the letter from the Financial Department, No. 3,741, of the 31st October, relative to the temporary appointment of a third Revenue Commissioner for this Presidency, in consequence of the present scarcity.

2. In reply to the telegram, I am to explain that it appeared to his Excellency in Council undesirable, for a mere temporary purpose, to unsettle all the existing arrangements of so important an office, when conducted by so able and experienced an officer as the late Mr. Havelock; but I am to state that since that objection was taken to the measure this Government have unfortunately lost the services of that excellent officer, and as fresh arrangements must be made, involving the employment of officers of less experience, and who are not at present so well acquainted with the districts affected by the scarcity and with their general condition, his Excellency in Council is not disposed to incur the responsibility of declining the additional assistance which in this respect the Government of India have been good enough to offer. His Excellency has therefore nominated Mr. E. P. Robertson, Collector of Dharwar, to the temporary office, and no time will be lost in giving full effect to the arrangement.

3. I am to take this opportunity of stating that before the receipt of your letter, No. 365, of the 25th October, his Excellency in Council had become aware that it was absolutely necessary to follow the example of the Government of India, and to concentrate the whole correspondence respecting relief operations in one Department of Government; and fortified by the recommendation contained in the 16th paragraph of your letter, he has directed that concentration to be effected in the Department of Public Works. His Excellency in Council has, I am directed to say, resolved to work through the Public Works Department, instead of through the Revenue Department, because, from the character of the present difficulty, it is clear that relief to the people will have mainly to be afforded by means of public works, and the arrangements that must be made, and the numerous questions that will arise in connexion with these works, could not, without great loss of time, and probably also loss of efficiency, be dealt with in any other Department than the Public Works Department.

4. His Excellency in Council, bearing in mind the great increase of correspondence and work of every description which must thus be devolved on the Government in consequence of the scarcity, and the necessity of strengthening the Public Works Department for the time with the services of an officer specially qualified for the purpose, has appointed as a Supernumerary Under-Secretary, Mr. C. Macpherson, at present assistant to the Collector of Poona.

5. His Excellency trusts this arrangement, which he believes to be indispensable, will meet with the approval of his Excellency the Governor General in Council.

No. 435.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

Calcutta, 24th November 1876.

I have had the honour to receive your letter, No. 119P., of the 11th instant, which, having been directed to Simla, only arrived the day before yesterday. In reply, I am directed to state that the President in Council is glad to learn that his Excellency the Governor in Council has deemed it proper to appoint an

additional Revenue Commissioner as a temporary measure, with the view of augmenting the administrative supervision available for the distressed districts.

2. I am to add a few remarks on the other subject referred to in your letter. The Government of India regard the concentration in one Department of the Secretariat, as far as may be practicable, of all correspondence relating to the regulation of relief operations as a very necessary measure, but they consider the selection of the Department of Public Works for that purpose to be open to grave objections, and likely to lead to serious difficulties in the future.

3. The inexpediency of directing such operations through the Department of Public Works was fully exemplified in the case of the Rajputana famine in 1869; and during the Orissa famine of 1869, and the Bengal famine of 1873-74 the entire direction and control of relief operations was exercised by the Civil Department of the local and supreme Governments, the Public Works Department acting as adviser on purely professional questions, and carrying out specific works when called upon to do so. A similar course has invariably been followed in the several famines of greater or less severity with which the Government of Madras has had to deal.

4. To be intimately acquainted with the circumstances of the people in all parts of their charges, to decide in what particular localities relief is required, and what the extent and the form of that relief should be, is essentially the function of the Collectors of districts, aided by their assistants and deputies, and acting under the supervision and direction of the Commissioners. It appears to be far more likely that these officers will, in their several grades, perform their functions with zeal and alacrity if they are left under the Department of the Government under which they habitually act, than if they are placed under another, which they will not unnaturally consider to be in some degree wanting in the special qualifications necessary for a due appreciation of their difficulties and duties. From the latter course it appears to the President in Council that considerable friction, involving detriment to the public service, may be expected to arise, especially where, as may in some instances be the case, the relations between local officers and the Public Works Department are already more or less strained.

5. As regards the Government itself, I am to observe that the Civil Secretariat, which in Bombay is represented by the Chief Secretary and the Departments at present under him, may be presumed to possess special knowledge of the nature of that above adverted to, and to be better fitted to deal with the majority of the questions submitted by the Commissioners and Collectors than the Department of Public Works. The Civil Department may be expected to view such questions from a broader standpoint, embracing finance and general policy, while availing itself freely of the advice of the Public Works Department on any engineering points which may happen to be involved.

6. I am to express the hope of the President in Council that the foregoing observations will receive the careful consideration of his Excellency the Governor in Council.

7. The appointment of Mr. C. Macpherson as a temporary measure is approved. The pay and allowances which it is proposed to assign to him should be reported.

I have the honour to be, &c.

13th November 1876.

From the CHIEF SECRETARY TO THE GOVERNMENT OF MADRAS to the SECRETARY
TO THE GOVERNMENT OF INDIA, Financial Department.

I am directed to confirm my cipher telegram of 4th instant, intimating that the very seriously threatening circumstances of part of this Presidency have compelled this Government to arrange for securing at present and holding a State reserve of 30,000 tons of grain, to guard against possible disaster and risk of great loss of life; and that the estimated cost of the transaction is 32 lakhs of rupees, of which the payment of five lakhs has been arranged by the Accountant General, under instructions of this Government, through the agency of the Madras Bank and the Calcutta Currency Office. While for the payment of 27 lakhs of rupees, by instalments of 4 lakhs a week for the following five weeks, including that of intimation, this Government rely on the Government of India; payment of the balance of seven lakhs being again undertaken by the Accountant General after the above period.

The purchase of the grain has been effected through the agency of Messrs. Arbuthnot and Co., who were confidentially employed by the Government of India in a similar manner in 1874, and the payments are to be made to their credit with the Bank of Bengal.

The transaction has been kept, as far as possible, a strictly secret one, and the reserve is intended to be held as an insurance, so far as it will go, against the possible catastrophe of failure of supply to the local market, by ordinary trade and private enterprise, or such an entire temporary withholding of stores by grain merchants as has already led to very serious inconvenience.

The bulk of the grain is intended to be used, if necessary, in payment of grain wages on relief works by the Collectors of the distressed districts, instead of their being forced to have recourse to the general markets where its supply may be inadequate or prices exorbitant.

Meanwhile, they are being encouraged to rely, as much as possible, on contracts with local dealers for the grain they require for relief wages, and are not informed of the existence of this reserve; which the Government trust it may not prove necessary to employ to the full extent for the special purpose, in which case any balance remaining in store will be resold.

The contingency of failure of supply is one which needs to be guarded against at all costs.

The letter addressed in the Revenue Department the Government of India to under date 7th instant, gives full details of the progress of this disastrous season, and the Government greatly regret to state that there is no longer room to doubt that distress, which is even now threatening to culminate in famine requiring extraordinary State measures, must for some months to come be experienced by the poorer portion of the population, and especially of the agricultural section in the district of Kurnool, Bellary, and Cuddapah, where the north-east monsoon rains have completely failed, after a very insufficient south-west monsoon fall and an inadequate north-east monsoon supply in 1875.

These three districts aggregate about 27,000 square miles of country, with a population of about 4,000,000, paying ordinarily a land revenue of about 60 lakhs, and throughout great part of them the crop has utterly failed, and the means of renewed cultivation are absolutely non-existent until sufficient rain falls.

The records of the meteorological observatory unfortunately preclude the hope that even if abundant rain fall on the east coast in the present month it will reach the distressed tracts in the Ceded Districts, and the Government are forced to the conviction that, until April next at earliest, large numbers of people who depend on agriculture for earning the means of daily life must be provided with work and wages by the State, on which also devolves the responsibility for ensuring the presence of a sufficient supply of food.

The numbers already employed on the State relief works are not less than 150,000 persons in round numbers, while there are some 10,000 more of aged and infirm folk and children, ordinarily dependent on these workmen, who are receiving from Government sufficient food to maintain life, under careful supervision to guard against fraud.

If it should unfortunately happen that the north-east monsoon rains finally fail extensively, the numbers dependent on State relief will very rapidly and largely increase to an extent which it is impossible to estimate, but which cannot fail to be of serious magnitude.

Telegram, No. 423, 20th November 1876.

From OFFICIATING REVENUE SECRETARY, Calcutta, to SECRETARY, Madras.

Your letter of 13th instant to Financial Secretary does not contain any explanation of the necessity for taking action without previous reference to Government of India. Please send full and immediate explanation by letter on this point. The action of the Madras Government seems inconsistent with the alleged activity of private trade as stated in your telegram of 9th instant.

Telegram, 23rd November 1876.

From CHIEF SECRETARY, Madras, to REVENUE SECRETARY, Calcutta.

In Ceded Districts quarter million already depend State relief. Serious distress arising in other districts. Distress increasing, and will increase for four or five months. Relief number will largely increase. Having considered capacity and capital of local trade and transport, and uncertainty of direction of trade with other contingencies, this Government considers provision

of moderate State reserve obtained at reasonable price essential to safety. No interference with trade contemplated, except in some pressing emergency.

Grain payments impossible on relief in many places, and reserves necessary where large accumulation of labourers remote from communications. Do not fear our allowing State stock to accumulate beyond absolute necessity.

We are, therefore, arranging purchase of 20,000 tons ; delivery and payment in equal portions, January, February, March. Arrangements to be decided Saturday.

We estimate can now secure this purchase not exceeding seven rupees six annas per bag, delivered Madras. Price last year five rupees, present price nearly ten. Every day now increases cost of even new crop, as magnitude of difficulty publicly realised. Cipher acknowledgment.

Telegram, 24th November 1876.

From REVENUE SECRETARY, Calcutta, to CHIEF SECRETARY, Madras.

Your telegram of yesterday. The Government of India cannot sanction any further purchases of grain until furnished with far more explicit and detailed information than that now before them regarding the condition of the Madras Presidency, and with the explanation called for in telegrams of 11th and 20th instant. Present telegram by no means clear, but it is not desirable that such important measures should be carried out on telegraphic information. A full and detailed explanatory statement should be sent by post. Government of India cannot reconcile present proposals with activity of private trade as reported in your telegram of 9th instant and in newspapers. Purchase contemplated must be postponed. Arrangement already made with Gillanders, Arbuthnot and Co., is known in Calcutta.

EXTRACTS from the DIARY of the AGENT TO THE GOVERNOR-GENERAL in Central India,
for the week ending 14th October 1876.

NATIVE DEPARTMENT.

No.	Date of Issue.	Abstract of Indore Durbar Intelligence.
22	8th Oct. 1876	The Sooba of Rampoor reported that 2,600 head of cattle had died in his district, and that the cultivators stood in need of some pecuniary assistance. The Maharaja sanctioned a grant of Rs. 9,000.
23	9th Oct. 1876	An apprehension of the rise in the price of corn owing to the famine in the Deccan induced His Highness to convene a meeting of corn-dealers, who were advised to lay in grain sufficient for the consumption of the whole year. The Maharaja expressed his willingness to advance them a lac of rupees, but the dealers said they had made their own arrangements and stood in no need of this aid. * * * * *
25	12th Oct. 1876	His Highness contemplates affording relief to the starving population of the Deccan through the Agent to the Governor-General. Raojee Gooria was directed to lay in grain to the value of one lac. An advance of Rs. 30,000 was sanctioned to be made to the cultivators of the Depalpoor District, on condition of their repaying the amount within three years, the cultivators having lost 3,160 head of cattle.

Revenue Despatch, No. 3, 5th January 1877.

From the SECRETARY OF STATE FOR INDIA to the GOVERNOR-GENERAL OF INDIA
IN COUNCIL.

1. The Despatch of your Excellency's Government, dated 24th November, No. 30 of 1876, relative to the scarcity in Western and Southern India, has been received and considered in Council.

2. Attention is specially drawn in this Despatch—

- 1st. To the intention of the Bombay Government to concentrate in the Public Works Department of its Secretariat the whole of the correspondence relating to the scarcity ;
- 2nd. To the proposal of the Madras Government to purchase 20,000 tons of rice.

3. Your Excellency's Government has stated its objections to the course which the Government of Bombay wishes to follow, but, before expressing a final opinion on the subject, I will await the reply of that Government to your Secretary's letter of the 24th November, No. 435 of 1876. It may possibly happen that the views expressed by your Lordship's Government may induce the Government of Bombay not to persevere with the proposed arrangement, but in unusual emergencies of so serious a character I should be indisposed to interfere with the discretion of the local Government, which seems, by the manner in which it has

addressed itself to the arduous and difficult work, to deserve all possible support and encouragement.

4. With respect to the action of the Government of Madras, I do not understand whether the 20,000 tons of rice which that Government proposes to purchase are in addition to or a part of the 30,000 tons which are alluded to in your Despatch of the 17th November. But, under any circumstances, I am of opinion that your Excellency's Government was right in suspending its sanction to the proposed measure in the absence of the complete information as to the state of the Presidency for which it had previously called.

I have the honour to be, &c.

(Signed) CARNARVON.

No. 31 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Calcutta, 1st December.

Do. from ditto	"	25th "
Statistical statements regarding famine districts in the Bombay Presidency.		

Letter to Government of Bombay, dated 30th Nov. 1876.

in that Presidency, which is under consideration; but as sufficient details of the relief works in progress or contemplated have not been supplied, the reasons which, in our opinion, make it necessary that such details should be furnished have been explained in our Secretary's letter of the 25th ultimo. We have also requested that a complete review of the condition of affairs may be prepared and forwarded to us by the 15th of January next, similar to that which has, as will be presently explained, been called for from Bombay.

3. Your Lordship will observe that we have received a communication from the Government of Madras suggesting that their efforts to keep secret their operations for the purchase of grain will have been rendered futile in consequence of our telegram to them of the 11th ultimo not having been sent in cipher. In reply, we have explained that the course which was taken was, under the circumstances of the Government of India being in process of moving from Simla to Calcutta, unavoidable, and that there are no grounds for supposing that the transaction has become public from any other cause than its being in its nature practically incompatible with secrecy. Previous to the receipt of the letter in question from the Government of Madras, but after it was despatched, we had learnt, and had informed that Government, that the fact of their purchases had become known in Calcutta.

We may here take the opportunity of correcting an error of date which occurs in the 6th paragraph of our Despatch of the 17th ultimo, where we stated that the Madras telegram of the 4th had reached us on the 9th ultimo. This was a mistake. On the 9th ultimo our President received a telegram from the Financial Secretary, then on his way to Calcutta, communicating the fact of the Madras purchases, but the copy of the actual telegram from Madras did not arrive at Simla until the 11th ultimo.

4. The Chief Commissioner of Mysore has submitted an important correspondence, showing the measures which have been adopted under his orders for relief in that Province. We have approved generally of the instructions which he has issued, but have deemed it necessary to draw his attention to the objections to concentrating large bodies of labourers at a distance from their homes. We have also requested him to prepare and forward a general review, similar to that called for from Bombay, as will be presently explained. Your Lordship will observe that a statement made in the newspapers to the effect, that the Chief Commissioner had made large purchases of grain at Madras, turns out to be without foundation.

5. With reference to our letter, No. 806, of the 3rd instant, which we reported to your Lordship with our Despatch of the 9th, the Bombay Government state that they consider the general orders which they have issued regarding remissions to be sufficient; but we have pointed out that those orders do not provide for the cases to which our suggestion was directed, in which, if the existing law were enforced, the ryot's occupancy right and his necessary movables might be sold for arrears of land revenue attributable to the drought.

6. The transport of grain upon all the railways continues to be in excess of the capabilities of transport possessed by the various lines. The Government of Bombay state, in answer to our inquiries, that the Great Indian Peninsula Railway Company are doing everything in their power to meet the emergency. A similar inquiry addressed to Madras has not yet been replied to, but from a statement which appeared a few days ago in one of the local newspapers we gather that this subject has also engaged the attention of the Madras Government.

7. Our examination of the statistical statements submitted by the Government of Bombay having been completed, we beg leave to forward them for your Lordship's information, together with the instructions which, on consideration of them and of the weekly progress statements (which are submitted to your Lordship by the Bombay Government direct), we have deemed it advisable to issue. We believe a thorough review of the present position, and of the prospects for the future, up to the time when fresh harvests may be reaped, to be indispensable, in order to prevent either undue expenditure or unforeseen distress among the people.

8. We may remark, in conclusion, that the situation is such as to cause very serious anxiety from a financial point of view. From a telegram which has reached us from the Bombay Government since the preceding paragraphs were written, and a copy of which we enclose, it appears that the outlay on relief works is estimated at no less than 54 lakhs for the months which remain of the current financial year, and at 86 lakhs for the first seven months of the ensuing financial year. We trust that this estimate will prove to be greatly in excess of the actual expenditure, and we shall not relax our endeavours to limit that expenditure, as far as possible, to the necessities of the case; but the matter is one in which a great deal must be left to the discretion of the local Government, and we cannot now entertain any expectation that it will be possible to avoid an outlay, which in the present position of the finances will necessarily be most embarrassing. We have not yet received any estimate of the probable expenditure in Madras, nor any statement from either Presidency of the probable loss of revenue; but we fear that in both the loss of revenue will be very serious; and, in regard to Madras, we have now reason to apprehend that the area of distress will be considerably extended by the almost entire failure, up to the present time, of the north-east monsoon. The information which we have received from the latter Government has been hitherto much more scanty than that which has been furnished by the Government of Bombay; but we trust that the requisitions which we have addressed to the Government of Madras will lead to our being kept in future more fully and more regularly informed as to the state of affairs in that Presidency. It is probable that the local Government have kept your Lordship fully informed as to their proceedings; but, if so, they have not supplied us with copies of any of their Despatches. We have requested both Governments to send us, in future, copies of these documents as they are despatched. While the emergency is a very serious one in a financial point of view, and while it cannot fail to cause much distress, suffering, and loss to the people of the affected districts, we are glad to think that there is no reason to apprehend any serious difficulty in regard to the importation of food supplies into the places where they are needed, the grain trade in all parts of the country being most active.

We have the honour to be, &c.

No. 439, 25th November 1876.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF MADRAS.

With reference to your telegram of yesterday, and my reply of this date, regarding the details of relief works sanctioned and in contemplation, I am directed by the President in Council to explain that, as the relief expenditure will eventually, to such extent as provincial funds may be deemed unable to bear it, be supplied from Imperial resources, the Government of India consider

it necessary that they should be supplied from time to time with the fullest information on the subject, and that the operations should be conducted in general accordance with principles which meet with their approval.

2. In the similar case of the Bombay Presidency, the Government of India have directed that large projects which will involve heavy ultimate expenditure after the necessity for relief has ceased, as also such as will collect large bodies of persons at a distance from their homes, should be avoided. It is obvious that the works ought also to be proportioned in number or extent to the relative wants of the several taluks, and that they should be of such a nature as to employ a large proportion of unskilled, as compared with skilled, labour.

19th November 1876.

From the CHIEF SECRETARY TO THE GOVERNMENT OF MADRAS to the SECRETARY TO THE GOVERNMENT OF INDIA, Financial Department.

I am directed to acknowledge receipt of Sir Alexander Arbuthnot's telegram of 11th "en clair" from Simla, requesting that no further purchases may be made without previous reference to the Government of India.

I am to state that it is feared this abandonment of the cipher system will have rendered futile all the efforts this Government have made to keep their operations secret, so as not to discourage private dealers.

No. 456.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY TO THE GOVERNMENT OF MADRAS.

Calcutta, 29th November 1876.

I am directed to acknowledge the receipt of your letter of the 19th instant, addressed to the Secretary to the Government of India, in the Financial Department, expressing the apprehensions of the Madras Government that the abandonment of the cipher system in the case of the telegram addressed to you by Sir Alexander Arbuthnot on the 11th instant from Simla, will have "rendered" "futile all the efforts this Government have made to keep their operations secret, so as not to discourage private dealers."

In reply, I am directed to inform you that the telegram in question was necessarily despatched in words and not in cipher. Your telegram of the 4th instant did not reach the President in Council at Simla until the 11th idem. By that time nearly all the offices had left Simla, and when Sir A. Arbuthnot's telegram was despatched no copy of the cipher code was available at that place. The President in Council was clearly of opinion that in the absence of stronger grounds than those assigned by the Madras Government, it was necessary to prevent, without a day's loss of time, any further expenditure of the nature of that which had been reported, and, under the circumstances, this could only be done by despatching a telegram "en clair." If any inconvenience has resulted from what has occurred, it is due to the action of the Government of Madras in carrying out, without any previous reference to the Government of India, and without, as would appear, any reasons for urgency, a measure which obviously required the previous sanction of this Government.

But the President in Council does not see the slightest grounds for supposing that any knowledge which may have been obtained by the public of the recent operations of the Madras Government has been communicated from the Telegraph Department. Experience shows that the contents of telegrams very rarely become public in this way. In the present case, as intimated in my telegram of the 24th instant, the fact of the purchases arranged for by the Madras Government, and several details connected with them, which could not have been learnt from Sir A. Arbuthnot's telegram, were known in Calcutta some days ago. The fact is that the nature of the transaction was incompatible with secrecy. Large purchases of grain cannot be made without their destination becoming known.

I have the honour to be, &c.

No. 7,958-132G., Bangalore, 8th November 1876.

From OFFICIATING SECRETARY TO THE CHIEF COMMISSIONER OF MYSORE to the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA, Foreign Department.

In continuation of my letter, No. 6,524-104G., of 3rd ultimo, I am desired by the Chief Commissioner to submit a further report on the condition and prospects of this province and Coorg, and the measures taken to alleviate the existing and anticipated distress.

2. In paragraph 5 of my letter above quoted, the Chief Commissioner expressed the hope that with the fall of rain which was then looked for, on the change of the monsoons, the loss of the standing crops of ragi, which were ordinarily harvested in this month, would be to some slight extent averted, and the ryots would be enabled to raise such minor crops as horse-gram, dhall, &c. This hope has unfortunately, however, not been realized, and no rain whatever having fallen in the interval, the result has been a total failure of the dry crops, except in a few isolated patches, where a moderate crop of 2 to 4 annas in the rupee may be harvested. The area of the tract affected has in consequence been largely extended, and may be said now to comprise the whole province, with the exception of the western taluks of the Nagar Division, where a fair rice harvest is anticipated, the taluks of the Mysore and Hassan districts, which are watered by irrigation channels, and a portion of two taluks in the south-west of the Mysore District, where the ragi crops have fared better.

3. To the distress arising from the failure of the dry crop cultivation is to be added that occasioned by the failure of water supply for the cultivation of the wet land crops (rice) under

tanks. These crops, which are known generally as "vyshak," are sown about October and reaped in May and June, and are dependent wholly on the larger tanks, which as yet, however, have received no supply of water.

4. A serious feature in the present circumstances of the country is the absence of pasturage and fodder for cattle, and the mortality among these has been disastrous; the loss in one district (Tumkur) in a single month being estimated at 11,400.

5. The distress has been greatly aggravated at the present time by the circumstance, which was adverted to in my previous letter, of this being the second year in which the country has suffered from a greatly diminished rainfall, and from a more or less general deficiency in the grain harvest. The Chief Commissioner has reason to believe, however, that there is a fair quantity of grain stored by the wealthier ryots, and available for purchase by Government for distribution in lieu of wages to labourers on relief works; but there are necessarily large numbers of the people who have been rendered destitute by a succession of bad seasons, and for the relief of these works of a suitable character have been for some months past in operation in several districts, and funds are now being allotted for the grant of the additional lakh of rupees sanctioned in your telegram of 20th October for carrying out similar works in the other districts.

6. With regard to the measures which have been adopted to meet this state of things, I am desirous to enclose printed copies of the Chief Commissioner's proceedings marginally noted. These papers will apprise the Government of India of the steps which have been taken as regards the alleviation of the distress and famine in one division (Nundydroog), and the general principles which have been laid down for the guidance of the executive officers, and also as regards the extent to which it has been found necessary at present to relax the Government demands on the ryots. On the latter point I am to observe that in the continued absence of rain the Chief Commissioner apprehends that it will be necessary to forego the claims of the Government, as regards the land revenue, to a further extent than here indicated; but, in view of the wide-spread character of the drought, and the disastrous loss of revenue which may be apprehended, the Chief Commissioner desires to act with deliberation, in the hopes that events may prove more favourable than can at present be predicted.

7. In the district of Coorg there has been hitherto no cause for apprehension, as up to September last the rainfall, though somewhat deficient, had sufficed for the standing rice crops. The failure of the rains subsequently, however, has affected these crops, and the Superintendent of Coorg reports that much loss has already occurred among them, and if no rain falls shortly the consequences will be very serious. Distress from high prices of food grains has already appeared among the people, and the necessity of commencing relief works in that locality will probably become necessary.

8. Among the measures of relief which the Chief Commissioner has found it necessary to adopt has been the grant of an extra allowance of Re. 1 per mensem to every salaried official on the permanent establishment of this province who is in receipt of Rs. 15 and under, and with respect to the local troops (Silladars and Barr Infantry) a compensation which has been fixed at 1 seer of ragi and 3 seers of horse-gram per diem, when such articles are selling above a fixed rate, was granted to all below the rank of commissioned officers. In both cases the concession has been limited, so as not to extend beyond the 31st December next; but the Chief Commissioner has no expectations that the price of food will fall sufficiently to admit of its being withdrawn for some months to come. I am desirous to solicit the sanction of the Government of India to these measures, which the circumstances of the time has rendered inevitable.

9. Lastly, I am to state that, at a public meeting convened by the Chief Commissioner at this station on the 1st instant, it was resolved to organise famine relief committees, whose operations would extend to the outlying districts, and in accordance with the instructions of his Honour the President in Council communicated by telegram, the local Government has promised to supplement the amount of private subscriptions by an equivalent grant.

No. G. 298, Bangalore, 26th October 1826.

From the COMMISSIONER OF THE NUNDYDROOG DIVISION to the OFFICIATING SECRETARY
TO THE CHIEF COMMISSIONER OF MYSORE.

In continuation of my letter, No. G. 290, of the 23rd instant, I have the honour to transmit copies of the reports received from the Bangalore and Kolar districts.

2. Mr. Ricketts did not send a tabular statement. So I have, to some extent, tabulated his report for more ready reference.

3. As matters are daily getting worse, and the ragi crop may be said to have almost entirely failed, there is every probability of the most serious scarcity throughout this division. I will not use the word "famine" yet, as a heavy fall of rain would bring on the later crops, and would give forage for the cattle and water for the population, but, in the absence of some additional rainfall within the next week or ten days, I shall begin to fear the worst. I have therefore drafted a number of proposals, which will, I hope, meet with the early and favourable consideration of the Chief Commissioner.

I. Permission to be given to sow cholam in the beds of all dry tanks, and to allow ryots to sink wells for irrigating the crop. The Government share to be one fourth, and to be at the disposal of the District Officer for distribution to the poor.

II. Wells to be sunk in the beds of all dry tanks, in the hope of obtaining thereby a supply of water for domestic purposes. These may be relief works.

III. The Irrigation Department to be directed to proceed with projects on as large a scale as their means will admit of in all taluks where they are now working.

IV. Railway embankments to be started on the line to Mysore, and at such points as may be decided on, without fear of taking up a bad line, between this and the border of the Shimoga District, via Tiptur, as the crops have utterly failed along nearly the whole of that line of country.

V. Permission to be given me to allot to the taluks, marginally noted, sums of Rs. 5,000, 3,000, 2,000, and 1,500 respectively per mensem, to be expended on relief works until such time as matters improve.

	Rs.
Bangalore	5,000
Hoskote	3,000
Devanahalli	3,000
Dodballapur	3,000
Srinivasapur	3,000
Sidlagatta	3,000
Magadi	2,000
Anekal	2,000
Closepet	2,000
Kankunahalli	2,000
Nelamangala	2,000
Malur	2,000
Chikballapur	2,000
Gummayakanpalaya	2,000
Kolar	1,500
Mulbagal	1,500
Gudibanda	1,500
Goribidnur	1,500
Betmangala	1,500

Total - - - 48,500

VI. To permit me, if the necessity should arise, to purchase grain through merchants at Madras or elsewhere and contract for its being laid down at certain central points where large relief works are going on for the purpose of paying in kind the poor who are employed thereon.

VII. If matters do not improve, the Munsiffs' Courts to be closed in the outlying localities, and the establishment to be placed under the Deputy Commissioners for the purpose of supervising relief works, each of these establishments being under the general supervision of their own Munsiffs.

Mr. Krishnaiengar has made some excellent suggestions on this point.

VIII. A liberal allowance to be granted monthly towards the maintenance of public kitchens at each taluk head-quarters for the purpose of feeding the very old, very young, and in fact those among the poorer classes who are unable to work. Half of all chattram and other feeding allowances in each taluk where feeding chattram, &c. exist to be

transferred to the public kitchens.

IX. In the case of tank repairs, I would further advocate that authority be given to suspend for this season taking "mutchalkas" from ryots for contributions.

4. Captain Ludlow's report will be transmitted as soon as it is received. In a demi-official he gives a bad account of the Tumkūr District, and has asked for 48 hours time to send in his report.

No. 741, Camp Krishnarajpur, 24th October 1876.

From the OFFICIATING DEPUTY COMMISSIONER, Bangalore District, to the COMMISSIONER, Nundydroog Division.

I have the honour to acknowledge receipt of your letter of yesterday's date calling upon me to report, within 24 hours of receipt of your letter, very briefly to the best of my ability, regarding the actual position of matters in each taluk of my district, and in reply to state as follows:—

II. Matters are beginning to assume such a critical aspect throughout the whole district that what has to be said of one taluk applies almost equally to all the other taluks.

III. In every taluk, save perhaps Dodballapur, there are or have been patches of fair cultivation, alternated by patches of entire failure, and on the whole the ragi crop of the entire district may be estimated at not more than one eighth of an average year.

IV. Hopes were entertained that late rains might save much horse-gram, tuvar, ballar, and the like grains; but it would seem that these hopes are fated to be disappointed, and if this unhappily turns out to be the case we shall, in addition, have no such crops at all, and consequently the people will be liable to all the horrors of a water famine if suitable measures be not taken at an early date.

V. It has been stated by good authority that the Indian labourer and petty ryot live almost from hand to mouth, and consequently there is hardly a line of demarcation between scarcity and actual famine. Such scarcity, almost synonymous with famine, has in my deliberate opinion already set in, and the continuous absence of rain forbodes a far worse state of affairs ere long. If further proof of this statement be wanted, I submit it is plainly indicated in the present ruling price of the chief foodgrains.

VI. In my opinion relief works are urgently required in every taluk, and that from 2,000 to 3,000 rupees at least will be required monthly in each taluk, to begin from the 1st of November and to end when next year's rains have fairly set in to an extent to restore confidence and lower prices.

VII. The first thing, as soon as money is available, is to sink numerous wells in places where there is scarcity of water, or even none at all. Then earthwork labour of a kind at which all can work will be required to be furnished, and minor work, such as collecting and heaping gravel for road repairs and the like.

VIII. If, however, the district be not favoured with rain ere long, even the above suggestions and money expenditure will be far from sufficient, and some large works must be inaugurated which will give daily wages to thousands of people. Such works cannot be carried out by the district officer. He is already being overwhelmed with criminal work, and his free moments hampered by the necessity of trying large gangs of dacoits only in such places where they can be conveniently guarded, fed, and lodged.

IX. As very large sums of money will have thus to be expended to give such employment to the destitute as will serve to keep them and their families alive, it would seem highly advisable to utilize the labour as far as possible on some work that will be permanently useful. A work of this nature, and which will be national in its benefits, is the commencement of the earthwork for the Mysore Railway. This undertaking admits of thousands being employed on it. The rumour of the starting of the work will attract the poor and starving to it from miles around, and with labour and supervision so concentrated, grain payments and other famine relief operations

can be systematically carried out. At present along the proposed line there is much scarcity, especially at and around Bidadi. The money expended on this work will be gain rather than loss. In fact, I know of no work which will enable the Government to grapple so satisfactorily, both as regards extent of country and number of people to be benefitted, with the famine which is now steadily but surely setting in.

X. Kitchens have been established at some of the kasba towns, and in which thousands have been fed, but some of these are now being closed, just as they are most wanted, for lack of funds. It will be necessary for Government to encourage the revival of the same by promising contributions to the extent of the money raised by private efforts. And, as regards the town and cantonment of Bangalore, the initiative, I humbly conceive, should be soon made by convening a public meeting.

XI. It will not be advisable, in my opinion, to purchase in the local markets and make grain payments; for if this were generally resorted to local traders would considerably enhance their prices. In the event of a large work of great magnitude being undertaken, then it would be expedient to import the necessary grain from foreign markets and distribute it through means of a suitable agency.

XII. There are certain other comparatively minor, yet still important, points in connexion with the famine which require special consideration. It is particularly necessary to restore confidence among the monied and influential classes who reside in kasba and other large towns in the interior. At present the lawless and even the poorer classes are aggravating the existing scarcity by demanding loans of money or of grain of these well-to-do men; and, in alarm, the latter lessen their transactions, or even begin to leave their homes for Bangalore. This is a serious evil, and can be best met, I think, by strengthening the hands of each Amildar by the location of a Biradari of Siledars at each kasba, where there are none now, and also by the addition of 10 or 12 sepoys to each Kasba Treasury Guard.

XIII. In addition to this, I would beg strongly to recommend the very early, if not immediate increase of the police force by some 30 men in each taluk. Already the number of gang robberies that are being committed tax the energies of the police to the utmost, especially in guarding and escorting such large numbers of prisoners. Prevention is at all times better than cure; and even in an economic sense the money will be well expended, as being the means of deterring gang robberies, and which, when committed, end in the sending to jail of a large number of men there, not only to be fed at the cost of Government but also to be guarded.

XIV. Village Totis and Talaris in ordinary seasons are fairly trustworthy; but as famine goes on the police cannot expect much aid from them, as many of their number, it is feared, will be conniving at crime, whilst the remainder will be pinched from want and partial starvation.

XV. I have issued a circular to Amildars which I trust will meet with your approval, viz., to do all in their power to induce ryots to sink temporary wells or ponds in tank beds, so as to be able to raise some cholam crop, &c., for food as well as fodder. This to be done on "Batayi," but Government only to take one fourth, instead of the usual half, in consideration of the ryot's labour in sinking such wells.

XVI. I have also issued another circular to the effect that ryots can hardly promise contributions at this season, and that Amildars should send in as many estimates for tank repairs as they can, without the usual preliminary of taking contribution "mutchalkas."

XVII. I have necessarily had to write in haste, but the subject matter of this letter has been under my consideration for some time past.

No. 1,577-504, Kolar, 24th October, 1876.

From the DEPUTY COMMISSIONER, Kolar District, to the COMMISSIONER, Nundydroog Division.

As directed in your circular, No. 329, of the 23rd instant, I have the honour to submit a tabular statement, in the form prescribed by you, showing the condition of the different taluks of the district, the relief works already started, the amount required for those to be started hereafter, and the number of poor at present fed in each taluk.

2. I exceedingly regret to state that though ragi was extensively sown in this year it has almost failed in every part of the district, and if it can be at all harvested in any locality it will be so scanty and insufficient even for the consumption of the grower himself for a few months. The wet crops have been cultivated under very few tanks, and these too have almost hopelessly withered, except those irrigated by wells and river channels, which are very limited.

3. Ballar, tuvar, and kulthi (horse-gram) are up to this date in a pretty fair state, but their out-turn depends upon future rain and dew.

4. The water supply for domestic purposes is also very scarce, as all the tanks are dried up, and much difficulty is already felt in procuring forage.

5. It therefore appears to be necessary that relief works should be started on a large scale in every taluk of the district, and measures should be adopted for water supply. Several projects having been submitted by the Irrigation Department for works in the taluks of Kolar, Betmangala, and Srinivasapur, I beg that early sanction may be accorded for commencing these works without delay, and for employing on them the able-bodied poor, instead of giving them to anybody on contract. In other taluks also it appears to be advisable to undertake the tank repairs as relief works, for it will not only give employment to the able-bodied poor and improve the tanks, but also enable us to provide water for domestic purposes by sinking large wells in the beds of tanks where springs could be found generally.

6. In his order, No. 6,960-162, dated 14th instant, the Chief Commissioner has been pleased to direct that in those taluks where the pressure of want is already severely felt, no time should be lost in procuring supplies of grain (ragi) for issue to the labourers at the equivalent of one

seer for two annas in cash, and in your Circular Memorandum, No. 320, of the 17th idem, it has been directed that payment in kind should be started without a moment's delay wherever practicable. In order to carry out these instructions it appears to be necessary to import grain, as there is very little of it in the country, and what is exposed for sale in the local markets is mostly imported. If we purchase such imported grain from the local merchants in large quantity we will have to pay exorbitant price demanded by them, and the public may also suffer, as the merchants' store will be soon exhausted. Under these circumstances, it appears to be desirable to make arrangements for the grain required by the Government for issue to labourers to be imported from such places where it could be had cheaper than in the local markets, and stored in one or two localities in each taluk where relief works are extensively carried on.

7. These relief works will be so numerous and scattered all over the taluk that it is next to impossible for the Amildar, with his ordinary establishment, to manage them properly, and it is therefore necessary that some special arrangements should be made. In doing this it would be advisable to utilize the services of some other permanent establishment, instead of entertaining temporary hands, on whom it is difficult to place much reliance in matters of considerable expenditure, and the establishment which may be employed on these works without any inconvenience is, in my opinion, the civil. At this time of scarcity people would not mind resorting much to the civil courts, and there would therefore be no harm if the civil work is put off for a time.

8. I would, under these circumstances, beg to submit for consideration whether the Munsiffs may not be vested with 2nd class magistrate powers, and authorised to transact the headquarter duties of the taluks where they are now located, superintending the relief works and feeding kitchens started therein, and attending at the same time to any urgent duties of their own courts. This arrangement, if approved of, will obviate the necessity of any extra expenditure to the State in the shape of establishment, place at our disposal several of the clerks and members of the process establishment for employment on relief works, and enable the Amildars to move about constantly in the country, which is very necessary not only for superintending the relief works, but also for ascertaining correct information about the state of crops in different parts of the taluks where we may have occasion to grant remissions.

9. As regards the feeding of the poor who are unable to work, the people have hitherto very liberally contributed to the public kitchens, and maintained them; but I fear that they will not be able to continue long, and therefore the Government will have to undertake this charity, for which purpose it would be necessary for the present to give a monthly grant at least of Rs. 200 to each taluk.

10. If the north-east monsoon also unfortunately fails there is no hope of improvement in the condition of the country till June next, by which time we may expect kambu or sajjie crop, if the succeeding south-west monsoon or mungar rain sets in early. I have in the meantime issued orders, as a precautionary measure, to have javari sown at once in such beds of small tanks incapable of containing water for Vaisak as are still wet enough to admit of the seed being sown, and to do the same as regards other tanks, the beds of which are now quite dry and hard, as soon as some rain falls sufficient to moisten the ground. This, if all goes well, as I hope, will supply javari about February, and might mitigate the present distress to some extent.

No. 7,414-167, Bangalore, 27th October 1876.

ORDER thereon by the CHIEF COMMISSIONER OF MYSORE.

The Commissioner of the Nundydroog Division submits reports from the Deputy Commissioners of Bangalore and Kolar Districts, describing succinctly the present condition of those districts, and the measures proposed for mitigating the effect of an almost complete loss of the ragi (dry) crops, as well as of the rice crops under tanks.

2. The failure of the north-east monsoon at a time when it may have been looked for has proved most disastrous, and the Deputy Commissioners apprehend that, if no rain falls shortly, the loss of the ragi crop will be followed by that of gram and other minor crops which have been sown. The water-supply for domestic purposes is reported to be failing, and forage for cattle difficult to obtain.

3. The measures with which it is proposed to meet the existing scarcity and impending famine are embodied in the Commissioner's letter, and will be considered *seriatim* :—

I. Permission to be given to sow cholam in the beds of all dry tanks, and to allow ryots to sink wells for irrigating the crop. The Government share to be $\frac{1}{4}$, and to be at the disposal of the District Officer for distribution to the poor.

II. Wells to be sunk in the beds of all dry tanks in the hope of thereby obtaining a supply of water for domestic purposes. These may be relief works.

III. The Irrigation Department to be directed to proceed with projects on as large a scale as their means will admit of in all taluks where they are now working.

IV. Railway embankments to be started on the line to Mysore, and at

4. The Chief Commissioner approves of this measure, excepting as regards the disposal which Colonel Pearse proposes to make of the Government $\frac{1}{4}$ share of the batayi crops. It is observed that the Deputy Commissioners have already taken steps to have water-holes excavated in tank beds wherever practicable.

5. This proposal is apparently embraced in the preceding one. The Chief Commissioner considers that relief works should not at this time be too scattered, but should be selected with reference more particularly to the means available for effective supervision.

6. This proposal will be referred to the Secretary, Department Public Works, for disposal under the Chief Commissioner's orders, which have already been issued in the spirit of the recommendation here made.

7. This proposal, which has already been considered by the Chief Commissioner, has much to recommend it,

such points as may be decided upon
* * * between this and the border
of the Shimoga District *via* Tiptur
* * *

V. Permission to be given (to the Commissioner) to allot to the taluks marginally noted sums of Rs. 5,000, 3,000, 2,000, and 1,500 respectively, per mensem, to be expended on relief works.

VI. To permit the Commissioner to purchase grain, if the necessity should arise, through merchants at Madras or elsewhere, and contract for its being laid down at certain principal points where large relief works are going on for the purpose of paying in kind the poor who are employed thereon.

in affording employment for large bodies of those who are willing to work, and in concentrating relief works to a great extent. But, even if the preliminary difficulties to such an undertaking be removed, the Chief Commissioner entertains considerable doubts whether it will give relief to those who are more especially in need of it, *i.e.*, the ryot classes, who will not leave their villages and fields and seek work at a distance. The subject will, however, receive further consideration in the Public Works Department.

8. The proposed allotments, amounting for two districts only to Rs. 43,500 monthly are, altogether excessive, and the Chief Commissioner is satisfied that such sums, if granted, would not be properly expended. The Government of India have been asked, by letter some time since, and again very recently by telegram, to sanction a further grant of one lakh of rupees for relief works, and on receipt of sanction, appropriations will be made, either in renewal of assignments recently made when the amount is nearly expended, or on fresh projects, on the Commissioner's application. In the meantime the Chief Commissioner will be prepared to make a suitable grant of funds for relief works in taluks, on receiving from the Commissioner some detail of the manner in which it is proposed to expend them. The grants recently made for works in the division must still be unexpended, but the necessity has clearly arisen for extending the area of these operations.

9. This proposal raises an important question, *viz.*, the extent to which the Government can interpose to buy grain in the market for expenditure on its relief works. The Chief Commissioner learns that rice and other food grains are being imported into Bangalore at the rate of 700 to 1,000 tons per diem, chiefly for removal into the districts. The principal markets are understood to be well supplied, but in out-lying taluks there is, undoubtedly, a difficulty in bringing grain to the market, owing to a general feeling of insecurity among dealers, as well as owners of grain, and the fear of their stocks being broken into by bands of desperate men. The Chief Commissioner has reason to believe that these stocks are available for purchase at moderate rates, if suitable measures be taken to protect the holders against violence, and to remove the grain to places where it can be securely stocked for distribution either on relief works or at public kitchens, where such have been opened under Government or other adequate supervision, and conducted on proper principles.

10. In order to effect the object in view, the course that best commends itself to Mr. Saunders is, that tenders should be invited by the Commissioner or Deputy Commissioner for delivery of a specified quantity of grain, whether rice or ragi, or both, at certain centres in each district, in proximity to large relief works in progress or in contemplation. The tenders should be notified also in the taluks, and should be accompanied by a promise to afford due protection to the conveyance of the grain while *en route*. It will be necessary that the localities where the Government granaries may be established should be selected with regard to the means of transport and other considerations, to be considered by the Commissioner, in conference with the Deputy Commissioners, and no delay should occur in carrying them into effect. The amount required for the purchase of the grain will be advanced from the Public Treasury, on application to this Office, and adjusted hereafter as an allotment from the relief grants.

11. Mr. Saunders is desirous that no measures should at this crisis be adopted which will in any way militate against the principles of free trade; for if the idea should get abroad either that the Government have taken upon itself the direct responsibility of regulating the demand and supply of grain, or that they have any intention of buying up grain on an extensive scale to sell it at a lower rate to the ryots than the local merchants can afford to do, and thus to compete with them in the exercise of

VII. If matters do not improve, the Munsiffs' courts to be closed in the outlying localities, and their establishments to be placed under the Deputy Commissioners for the purpose of supervising relief works, &c.

VIII. A liberal allowance to be granted monthly towards the maintenance of public kitchens at each taluk head-quarters for the purpose of feeding the very old, very young, and in fact those among the poorer classes who are unable to work. Half of all chat-tram and other feeding allowances in each taluk * * * to be transferred to the public kitchens.

IX. In the case of tank repairs the Commissioner advocates that authority be given to suspend for this season taking "mutchalkas" from ryots for contributions.

16. The proposal of the Deputy Commissioner to increase the police force in every taluk is not adverted to by the Commissioner. Such an increase will be needed to a small extent, probably, where granaries may be located, or where large bodies of labourers are employed on relief works. For purposes of protection generally, the Mysore Siledar Horse must be held available, and the Chief Commissioner desires that the Military Assistant will, in communication with the Commissioners, take steps to detach small bodies of Siledars, from regimental or Risala head-quarters, to a few well selected points in each district, where their presence will serve to allay alarm, and, if necessary, repress disorders. It must be understood that they cannot be employed in apprehending dacoits or police duties generally.

their legitimate commercial functions, it is needless to say that the result will be of the most pernicious character, and have a very direct and certain effect in checking the importation and proper diffusion of grain throughout the country.

12. This measure may be adopted by the Commissioner under the orders of the Judicial Commissioner, who is authorised to place the services of the Munsiffs and their establishments at the disposal of the Deputy Commissioners, wherever and whenever they may be needed for the supervision of specific relief works.

13. The Judicial Commissioner is requested to submit the names of those Munsiffs upon whom it is proposed to confer magisterial powers temporarily.

14. The Chief Commissioner is not prepared to sanction this proposal at present, excepting to a limited extent, as he is not satisfied that sufficient safeguards exist for the proper distribution of the benevolence. To aid, however, the local efforts that are being made for this object in particular localities, the Chief Commissioner authorises a sum of Rs. 1,000 being distributed monthly for gratuitous distribution of food to supplement private subscriptions at large towns where the services of Assistant Commissioners and Munsiffs can be made available for superintending the work. The distribution of the amount may be left to the discretion of the Deputy Commissioner.

15. Approved.

No. 301G., Bangalore, 27th October 1876.

From the COMMISSIONER OF THE NUNDYDEOOG DIVISION to the OFFICIATING SECRETARY TO THE CHIEF COMMISSIONER OF MYSORE, General Department.

In continuation of my letter of yesterday's date, No. 298 G., I have the honour to enclose, for the Chief Commissioner's information, copy of the report just received from the Deputy Commissioner of the Tûmkûr District.

I would bring to notice that this district seems worse off than either of the others, and large payments in money will doubtless have to be made and grain payments also resorted to ere long. The Deputy Commissioner suggests expenditure in taluks as marginally noted; but probably Rs. 3,000 for each of the first five taluks will suffice.

	Rs.	
Tûmkûr	3,000	
Moratagere	5,000	
Maddagiri	5,000	
Sira	5,000	
Chiknayakanhalli	5,000	
Kunigal	1,500	
Kadaba	3,000	
Honnnavalli	5,000	

If a State railway from Bangalore to Tiptur, and on through Shimoga to the Bombay side, should be decided on, a work of this kind would not only open up the country and repay Government in the end, but large gangs of people could be employed on the embankments, and their work would ultimately prove a highly remunerative investment. I would strongly urge this proposition on the consideration of the Chief Commissioner, as in the present state of the line of country through which this railway will pass Government would not, I should think, refuse consent to such an excellent and suitable method of turning the labour of the population to profitable account.

No. 7,501-172, Bangalore, 31st October 1876.

ORDER by the CHIEF COMMISSIONER OF MYSORE.

The report of the Deputy Commissioner of Tûmkûr District, which has been received subsequent to the issue of the Chief Commissioner's Proceedings, No. 7,414-167, dated 27th October 1876, shows that, excepting in a few hoblis of the Kunigal Taluk, where the yield may amount to a 4-anna or even a 6-anna crop, the crops on dry and wet lands alike have been completely lost; and, as no rain has since fallen, there is little or no prospect of raising the subsidiary crops, such as gram, dâl, &c.

2. It is evident that relief works must be actively commenced in this district, and the Commissioner will be authorised to place such sums at the Deputy Commissioner's disposal as may be required in addition to the funds already allotted from the relief grant.

3. The other special measures authorised in Chief Commissioner's Proceedings, No. 7,414-167, dated 27th October 1876, should be carried into effect at once in the Tûmkûr District, as well as in the districts of Ashtagram and Nagar divisions, the circumstances of which are reported to be equally critical.

No. 7,675-35, Bangalore, 2nd November 1876.

ORDER by the CHIEF COMMISSIONER OF MYSORE.

In continuation of proceedings No. 7,414-167, dated 27th October 1876, the Chief Commissioner directs it to be intimated that, as a further measure of relief called for by the circumstances of the present time, the following modifications of the Government demand have been prescribed for the current official year, and will be carried into effect by the Deputy Commissioners of districts under the orders of Commissioners of divisions.

- I. The number of instalments (kists) of land revenue will, as in last year, be extended from 4 to 7, and fixed as follows:—

December.	January.	February.	March.	April.	May.	June.
Annas 2	3	3	2	2	2	2

Exception.—This concession is not applicable to the Malnad Taluks of the Nagar and Ashtagram divisions.

- II. The orders directing interest at $\frac{1}{2}$ pie per rupee per diem on all arrears of land revenue, mohatarfa, &c. are suspended for the current year.

- III. The sale of grazing on unoccupied lands (Hulbanni) will not be enforced during the present year in those taluks or parts of taluks which have been seriously affected by drought. The Commissioners will notify within their divisions the areas which under this order will be wholly exempted from the Hulbanni sales.

2. The measures above detailed will be notified in the "Mysore Gazette," and the Chief Commissioner desires that every means may be taken by District Officers and Assistant Commissioners in charge of sub-divisions to make them generally known.

8. As the season advances, and extent of the failure of the north-east monsoon can be fully ascertained, the Chief Commissioner will be able to determine what further measures of relief may become necessary in respect of remissions or suspensions of land revenue. The Deputy Commissioners of districts may be authorised, however, to grant remission of one half the assessment on all wet lands under tanks which have received no supply of water this year. This remission will comprise the kists from March to June inclusive.

No. 445, 27th November 1876.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF COMMISSIONER OF MYSORE.

I am directed to acknowledge the receipt of your Secretary's letter, No. 7,958, of the 8th instant, and to inform you that the President in Council approves generally of the orders which you have issued to meet the existing and anticipated distress in Mysore. The observations contained in paragraphs 9, 10, and 11 of your order of the 27th ultimo, regarding the expediency of abstaining from any measures likely to interfere with private trade in grain, have in particular his Honour's entire concurrence.

2. With reference to certain remarks contained in the 5th, 7th, 10th, and 16 paragraphs of the order above referred to, I am desired to inform you that the President in Council considers it undesirable to concentrate large bodies of labourers on relief works at a distance from their homes, and would much prefer that minor work should, as far as practicable, be carried on at numerous places throughout the distressed localities. The Governments of Bombay and Madras have, some time ago, received instructions to this effect.

3. I am directed to request that a narrative, showing concisely the condition of each district and the measures of relief in progress, may be submitted once a fortnight to this Department.

Telegram, 27th November 1876.

From OFFICIATING REVENUE SECRETARY, Calcutta, to CHIEF COMMISSIONER, Mysore.

Is statement made in Calcutta "Englishman" that you have bought two hundred thousand bags of grain at Madras correct? President in Council considers it most important not to interfere with private grain trade, and desires that no large purchases of grain be made without sanction of Government of India.

Telegram, 28th November 1876.

From CHIEF COMMISSIONER, Mysore, to OFFICIATING REVENUE SECRETARY, Calcutta.

Statement in Calcutta "Englishman" referred to is devoid of foundation. Mysore Administration has bought no grain, but Central Relief Committee have purchased five hundred rupees worth of ragi and five hundred bags of rice for charitable distribution in kitchens and on works.

No. 6,655, 18th November 1876.

From the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY to the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA.

In reply to your letter, No. 106, dated 3rd instant, I am directed to state, for the information of the Government of India, that this Government were fully alive to the considerations which

have prompted the suggestions therein made, and believe that the instructions* recently issued by them regarding remissions, a copy of which is now forwarded herewith, will fully provide for all the cases entitled to consideration. If, however, it were generally made known that the ordinary laws regarding compulsory process were to be held in abeyance, then the danger would be great that many who could and ought to pay would withhold payment.

No. 6,557, 15th November 1876.

RESOLUTION by the GOVERNMENT OF BOMBAY.

READ.—Letter from the Revenue Commissioner, Northern Division, No. A-16, dated 5th November 1876, forwarding with reference to Government Resolution, No. 6,007, dated 21st ultimo, a letter, No. 3,450, dated 2nd instant, from the Collector of Násik on the subject of the principles on which remissions are to be granted; and stating that he thinks that patels and kulkarnis should prepare an asámiwár statement of each man's kháta, showing (1) name; (2) caste and occupation; (3) acres of bagáyat, jiráyat, kharif and rabi, with the crops in each, and the amount of produce in annas which they consider each crop has yielded; and (4) the amount which he has to pay to Government; that Mámlatdárs should test 20 per cent. of these returns and Assistants 5 per cent.; that the Collector should then fix, in consultation with Assistant Collectors and Mámlatdárs, the maximum remission that is to be granted to each village or group of villages, and that pancháyats should then be appointed, who should decide the amount to be granted to each cultivator within the maximum limit, and also in which cases final remissions should be granted, and those in which the collections should only be postponed for one or two years.

RESOLUTION.—The Revenue Commissioner is to be referred to Government Resolution No. 6,414, dated 9th instant.

2. In a season like the present much liberty of action must be left to Collectors, and it is not the wish of Government to hamper them by detailed rules and instructions.

3. Where, as is the case in a large number of villages in the Sinnar Taluka, there has been what practically amounts to an entire failure of crops, there the revenue is to be wholly remitted.

4. Where the crop of the village has been an average one, but where there are isolated instances of failure, then individual inquiries must be instituted under such arrangements as the Collector may think best. Broadly speaking, where the loss has been less than eight annas no remission should be granted, where it is more than eight and less than twelve one instalment may be remitted, and where it is above twelve then the whole may be remitted, as the Collector and his assistants think proper.

5. It is the wish of Government to show the people the utmost consideration, but at the same time not needlessly to forego public revenue.

6. In estimating the amount of loss, entire holdings and not separate numbers should be considered.

7. These instructions may be considered generally applicable to all the districts in both divisions in which there has been a failure of crops.

No. 458, 30th November 1876.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY.

I am directed to acknowledge the receipt of your letter, No 6,655, dated the 18th instant, forwarding a copy of the instructions* issued by the Government of Bombay on the subject of granting remissions of land revenue during the failure of crops in certain districts in the Bombay Presidency.

2. In reply, I am to point out that those instructions do not appear to provide for the cases intended to be met by the suggestion contained in my letter No. 806 of the 3rd instant, which had reference to (1) sale of land in distressed districts for default of payment of land revenue, and (2) exemption of necessary movables in case of any sale of movable property for such default. The difficulty felt by the Government of Bombay is undoubtedly worthy of consideration, but perhaps it might be met by instructions of a confidential nature.

Telegram, 25th November 1876.

From the OFFICIATING REVENUE SECRETARY, Calcutta, to the SECRETARY, Public Works Department, Bombay.

Is statement in "Pioneer" 24th, that there are three miles and a half of wagons of grain at Kallian Junction correct? If so, and this be owing to insufficient railway establishment, there or elsewhere, the company should be pressed to make ample increases.

Telegram, 25th November 1876.

From the SECRETARY, Public Works Department, Bombay, to the OFFICIATING REVENUE SECRETARY, Calcutta.

"Pioneer's" statement exaggerated, but there is great block on Great Indian Peninsula Railway, owing not to want of establishment, but to deficiency of wagon stock, station, and siding accommodations. Railway company repeatedly urged to do all in their power to clear their line; have borrowed stock wherever available, increased their traffic staff, and are doing all they can. Agent suggested booking no more grain, but this Government did not approve, as the measure was likely to check trade.

STATEMENTS regarding the FAMINE DISTRICTS in the DECCAN and the SOUTHERN MAHARATTA COUNTRY, called for by the Government of India by Telegram, dated 22nd October 1876, and furnished by the Government of Bombay in their Letters, Nos. 6,331, 6,406, and 6,561 of the 4th, 8th, and 15th November 1876.

* Kaládgi is the head station, and is in the taluka of Bégalkot.

† This represents the fall as shown by the Revenue authorities; that registered at the Civil Hospital and submitted by Sanitary Commissioner is only 31-28. The actual rain-fall there up to date, as shown by the returns prepared from the Sanitary Commissioners record, is 14-26. The average prices prevailing during the past three years in the month of October are given.

NOTE.—The prices at Nipani, in Chikóri taluka, Belgaum Town, and Nandgaon, in Bidi taluka, only are given; but being taken from the principal market towns they very fairly show the prevailing prices of grain throughout the district.

No. 459.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY
TO THE GOVERNMENT OF BOMBAY, Public Works Department.

Calcutta, 30th November 1876.

I am desired to inform you that the statements which accompanied the letters from the Government of Bombay quoted in the margin, as also the weekly progress statements up to No. III., have been carefully considered by the President in Council.

No. 6,331, dated 4th November 1876.

„ 6,406, „ 8th „ „

„ 6,561, „ 15th „ „

2. The object of the Government of India in obtaining general and periodical information of the condition of the districts affected by the scarcity is two-fold. It is necessary to ascertain that the expenditure which is taking place is neither excessive nor contrary to the principles which have been laid down for the selection of relief works, and also that a sufficient and safe forecast has been, and is being, made of the exigencies of the situation, up to the time when the reaping of fresh crops at the close of the next rains will, it is hoped, bring relief. This object is thus partly financial and partly administrative, and its attainment evidently depends entirely upon the soundness and the sufficiency of the forecast.

3. His Honour the President in Council fully recognises the difficulties by which the ascertainment of facts and the preparation of programmes are surrounded, and the efforts which have been, and are being, made by the Government of Bombay to ensure the correctness of the returns now under consideration, and to obtain more complete information hereafter on the points they comprise, and others equally important. At the same time he is constrained to observe, and his Excellency the Governor in Council will probably be glad to be made aware of the fact, that the data at present available are still far from free from obvious contradictions and inaccuracies, and are by no means so complete as those which the Government of India has had before it on previous occasions of scarcity in other parts of India. They do not, moreover, in most cases, comprise the opinions of the mass of local officers, to which, when given deliberately, fully, unreservedly, and promptly, considerable value has always justly been attached.

4. Seeing, therefore, that the materials for a forecast which may be safely relied on have not yet been obtained, I am to request that a more complete review of the situation may be submitted, comprising—

- (a.) A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas; kharif and rabi should be shown separately. If there be any prospect of further sowings it should be mentioned.
- (b.) An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.
- (c.) Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.
- (d.) The nature of the water supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.
- (e.) The course of prices, weekly, of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.
- (f.) The local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies are being, or may be, drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.
- (g.) The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.
- (h.) The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.

- (i.) The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.
- (j.) The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c., who are unable to work.
- (k.) The number of persons whom the Government has on its hands, at date of report, for relief (1) by works, (2) by charitable measures, and the number, roughly estimated, which it is likely to have on its hands on March 1st, May 1st, and July 1st.

5. The above information, I am desired to say, should be given for each taluka separately, and should be, in the first instance, prepared by the Mamlatdars, the permission already given to place them on special duty being freely availed of for the purpose. The Assistant or Deputy Collector in charge should test, verify, or supplement the statements of each Mamlatdar, and then submit as his own, and in his own language, a complete report for the taluka on the points indicated, with full and free expression of his own opinions. Each taluka report should be passed on by the Collector, with his remarks, to the Commissioner, and by him similarly to the Bombay Government, who will forward it to this Department. No report of any one taluka should be detained anywhere because others have not come to hand, and the whole of the reports should have reached the Government of India by the 15th of January next. As many of the details above specified have already been partially collected, or are in process of collection, and the welding of the whole, including the new matter, into a complete form will be of obvious use to both Governments, the President in Council trusts that the call now made will not prove especially difficult or irksome.

6. In conclusion, I am desired to remark that no information has yet reached the Government of India as to the condition of the political territory comprised in the distressed tract, and to request that full information, as above, may be submitted in the case of all states under British management, and such details as may be procurable in the case of the others.

I have the honour to be, &c.

Telegram, 30th November 1876.

From SECRETARY, Public Works Department, Bombay, to OFFICIATING REVENUE SECRETARY, Calcutta.

Population distressed talukas 5,000,000. Estimated maximum number who will require assistance at worst season one fifth, or 1,000,000. On this basis, and allowing, as well as can be calculated, for increase to and decrease from the maximum, also for cost of organization, supervision, and all attendant expenses, outlay up to 31st March next will probably be 54 lakhs, from 1st April to 31st October 86 lakhs.

Revenue Despatch, No. 4, 5th January 1877.

From the SECRETARY OF STATE FOR INDIA to the GOVERNOR GENERAL OF INDIA IN COUNCIL.

1. The Despatch of your Excellency's Government, dated 1st December, No. 31 of 1876, relative to the famine in Western and Southern India, has been received and considered in Council.

2. I approve of the orders issued by your Lordship's Government, and I desire that the complete reviews of the condition of affairs which the Governments of Madras and Bombay have been directed to submit by the 15th of January may be forwarded to me with all practicable despatch.

3. I have been kept informed of the progress of the scarcity by the Government of Bombay, but, until the present mail, I have received no Despatch on the subject since July last from the Government of Madras. My only knowledge of the condition of affairs in connexion with the famine in that Presidency has been derived from the Despatches of your Lordship's Government. I have now, however, received a comprehensive Despatch, with copies of a considerable correspondence with the Board of Revenue, from the Government of Madras, and I feel bound to record that the Governor in Council of that Presidency seems alive to the gravity of the situation which is presented to his attention, and has addressed himself to the duty of dealing with it with vigour and promptitude. He also appears to have been well supported by the Board of Revenue and the local authorities. I have impressed upon the Governments both of Madras and

Bombay the necessity of being guided by the instructions which they may receive from your Lordship in Council as to the construction of such relief works as may involve a large expenditure.

4. I approve generally of the measures adopted in this emergency by the Chief Commissioner of Mysore.

I have the honour to be, &c.

(Signed) CARNARVON.

No. 32 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Calcutta, 8th December.

1. In continuation of our Despatch of the 1st instant, we beg leave to forward, for your Lordship's information, copies of the communications specified in the margin, relating to the scarcity in Western and Southern India.

Letter from the Government of Madras, dated the 24th November 1876.

Telegram from the Madras Board of Revenue, dated the 1st December 1876.

Letter from the Accountant General, Bombay, dated the 28th November 1876.

Letter from the Government of Bombay, dated the 30th November 1876.

Telegram from the Government of Madras, dated the 1st December 1876.

Telegram to the Government of Madras, dated the 2nd December 1876.

Telegram from the Government of Madras, dated the 5th December 1876.

Letter to the Government of Madras, dated the 8th December 1876.

2. With reference to the concluding paragraph of our Despatch above quoted, your Lordship will observe that we have now received estimates from both Madras and Bombay of the loss of revenue and the relief expenditure which is anticipated during the current and the coming years. According to the latest Madras estimate, the loss of revenue is calculated at 97 lakhs and the expenditure at 89 lakhs for the current year, and at 26 and 20 lakhs

respectively for the coming year, thus making a total of 2 crores and 32 lakhs as the cost to the State of the famine in Madras. The estimate for Bombay is 46 lakhs loss of revenue and 54 lakhs for relief expenditure for the current year, and 20 and 86 lakhs respectively for the coming year, making a total of 2 crores and 6 lakhs. The aggregate for the two Presidencies thus reaches 4 crores and 38 lakhs, or, converted at two shillings per rupee, no less than 4,380,000 $\frac{1}{2}$ l. The prospect is very alarming, but we are not without hopes that the anticipations of both local Governments may prove to have been exaggerated. The only data for forming an opinion regarding Bombay are those furnished by that Government in their letter of the 30th instant, which appear to be based on so excessive an estimate of the proportion of the population likely to be dependent on the State for relief as to give reason to hope that, if due care and economy be exercised, the actual expenditure will fall considerably short of the estimate given. What the loss of revenue will be it is impossible to predict until we receive the detailed review for which we recently called. In the case of Madras we have even still less upon which to base our judgment. In regard to expenditure we have hardly any information beyond the amounts already sanctioned and estimated, which are 14 and 75 lakhs respectively, up to the end of the current year. As to the nature of the relief works which have been or are to be set on foot, the localities where they are to be undertaken, or the data on which the necessity for this large outlay has been assumed, we have no knowledge whatever. As the requisitions which we have made continue to be disregarded, we have thought it necessary to call the earnest attention of the Madras Government to the subject.

3. The Madras Railway being unequal to carry the grain consigned to it, we have approved of a notification issued by the Government of that Presidency that food-grains shall, for the present, have preference over other classes of goods.

4. Consequent on a report from the Madras Government of a large influx of people from the Nizam's territories into the Kurnool District, and of much embarrassment having been caused thereby, we have requested the Resident at Hyderabad to address the Minister with the view of obtaining the organization of relief works by the Nizam's Government.

5. We have received from the Bombay Government a letter, No. 220, C. W.—904 of the 27th ultimo, in reply to our's of the 9th idem, No. 412, affording certain information regarding their programme for relief works. Our remarks on this letter, which is still under our consideration, will be communicated to your

Lordship in our Despatch of next week. We are glad to learn, from the weekly progress report of the 29th ultimo, that the question of water supply is not considered by the Bombay Government to be a cause of very grave apprehension at present.

We have the honour to be, &c.

No. 1,797, 24th November 1876.

From the SECRETARY TO THE GOVERNMENT OF FORT ST. GEORGE to the SECRETARY TO THE GOVERNMENT OF INDIA.

With reference to your telegram, dated 20th instant, requesting me to send the best estimate obtainable of the loss of revenue during the current and ensuing years under the several heads so as to reach Calcutta by the 1st December, I am directed to give you the under-mentioned estimates, framed on the latest information obtained from the districts, and to state that should it be found necessary to revise these estimates materially on receipt of later information, which has been called for from the district officers, the figures will be telegraphed to you on the 1st December.

	1876-77.		1877-78.
	As per sanctioned Estimate.	Regular Estimate.	
	Rs.	Rs.	Rs.

Total - - - -	7,27,30,000	6,93,75,250	7,23,21,400

Telegram, 1st December 1876.

From BOARD OF REVENUE, Madras, to COMMERCE, Calcutta.

Your telegrams 20th and 21st ultimo. Latest revised estimates of receipts for the current year are, land revenue 3,52,68,000; excise, spirits, and drugs 53,32,500; sea customs 25,40,000; land customs 2,08,300; salt 4,10,58,500; stamps 48,00,000; total 6,12,07,200. Estimates for 1877-78 on latest data are, land revenue 4,23,12,000; excise, spirits, and drugs 61,99,400; sea customs 6,23,200; land customs 2,28,200; salt 1,33,69,300; stamps 49,00,000; total 6,96,12,100. Expenditure on famine relief works already sanctioned 14,27,000, estimate direct relief works up to end current year 74,45,000, total 88,72,000, exclusive of extra establishments, tools, and plant, police, &c. Considerable reduction in above estimate anticipated. About 15 lakhs will be required in first six months, 1877-78, for relief works in Ceded Districts. In other districts expenditure will be necessary to end of May only, if next south-west monsoon prove favourable. Estimate this expenditure five lakhs.

No. 13,102 B., Bombay, 28th November 1876.

From the ACCOUNTANT GENERAL, Bombay, to the SECRETARY TO THE GOVERNMENT OF INDIA.

Under instructions from the local Government, I have the honour to forward a copy of my revised estimate for the current year, on account of the several heads of Imperial revenues and receipts, the original of which was submitted to the Government of India, in the Financial Department, on the 21st current. From this return it will be seen that the net loss of revenue during the current year would amount to Rs. 36,39,000.

2. The anticipated probable loss of land revenue in the coming year is estimated at Rs. 20,19,000. This result has been arrived at by comparing the amounts estimated by the Collectors of the drought-stricken districts for the next year with the amounts actually realised in last year, 1875-76. A similar comparison of excise and stamp revenues exhibits a decrease of Rs. 2,386 under the former, and an increase of Rs. 70,000 under the latter, head. I am disposed to doubt the correctness of these last figures, and think that there will be a considerable falling off under "IV, Excise" and "IX. Stamps"; but, in the absence of more reliable data, it is impossible to ascertain the probable loss under these heads.

3. The Conservators of Forests, Northern and Southern Divisions, were telegraphed to, on the 21st ultimo, to report the loss of revenue of their respective circles. No reply has yet been received from them.

The realization under the other heads of Imperial receipts for the coming year will not, it is believed, be materially affected by the present scarcity.

REVISED ESTIMATE of the REVENUE and RECEIPTS of the BOMBAY PRESIDENCY for the year 1876-77.

Revenue and Receipts.	Budget Estimate for 1876-77.	Revised Estimate for 1876-77.	Increase.	Decrease.

XVIII. Miscellaneous -	1,50,000	1,40,000	—	(11) 10,000
Total receipts -	9,35,27,000	8,98,88,000	14,51,000	50,90,000

1. The decrease is due to (a) the failure of crops in the Deccan and Southern Maratha country, (b) abandonment of land in Ahmedabad and Surat, (c) damage to crops in various talukas of the Shikarpur Collectorate in consequence of heavy flood passing through the Khesmore and Jhalli Bund, (d) a sum of Rs. 45,000 included in the original estimate on account of Grass allowance due by the Baroda State having been excluded in accordance with instructions conveyed in Government of India's Financial No 3,747, dated 2nd current, and (e) the transfer to "IV, Excise," under orders from the local Government, of fees for tapping toddy trees in the Rutnagiri Collectorate hitherto credited under this head.

2. The amount proposed by the Conservator of Forests for the Regular Estimate has been adopted.

3. *Excise.*—The Collectors of Nasik, Shikarpur, and Karachi propose an increase of Rs. 29,000 owing to better rates at which Abkari farms have been taken up by contractors, adding to this amount Rs. 18,000 on account of fees for tapping toddy trees transferred from "Land Revenue." These cause a gross increase amounting to Rs. 47,000. On the other hand, the Collector of Puna anticipates a decline of Rs. 13,000; this, plus Rs. 7,000, the probable amount of reduction on account of Khat license fees made over to the Aden Municipality, *vide* Financial No. 1,000 of the 17th June last, causes a total decrease amounting to Rs. 20,000, deducting this amount from the gross increase the result is a net increase of Rs. 27,000. The Accountant General does not, however, consider it advisable to raise the original estimate, as he doubts whether the original estimate will be realized in the present distressed state of the country.

4. One lakh of rupees were over estimated by the Collector of Customs, Karachi, on account of import duty, owing to his having calculated the receipts at the old tariff rates.

5. The Collector of Salt Revenue has proposed a reduction of Rs. 13,00,000 from his original estimate of one crore of rupees, owing to the recent orders of the Supreme Government regarding the issue of free salt to British Malabar and the Native States of Travancore and Cochin, but Rs. 11,00,000 have already been reduced by the Government of India, the balance of Rs. 2,00,000 has therefore been now reduced.

6. The actual realization up to the end of last month has amounted to Rs. 1,61,62,000. The opium officers at Malwa and Ahmedabad anticipate that the number of chests which would pass through their agencies during the remaining five months of the year would be 18,400, yielding a revenue of Rs. 1,10,40,000, thus the total for the year would be Rs. 2,72,02,000. We have therefore raised the original estimate by Rs. 9,00,000, anticipating that a balance of Rs. 2,02,000 will remain outstanding at the close of the year.

7. Reduced in consequence of the distressed state, of people in the Deccan. We expect a larger falling off on this account, but the extent cannot be correctly ascertained so early in the year.

8. Raised at the instance of the Mint Master, who states that owing to the India Office having raised a sterling loan of 4,000,000% there will be a larger exportation of bullion to India than originally expected.

9. Raised in consequence of the larger amount of interest having been realised than originally estimated on the loan to the Bombay Port Trust.

10. Increased, in reference to the actuals of the six months of the current year, which amounts to Rs. 1,04,000. This sum includes an amount of Rs. 14,000 recovered in excess from the Bombay Port Trust, but subsequently refunded and charged to "3 Refunds and Drawbacks."

11. Reduced on account of the transfer of revenue from the Shiek Ottoman waterworks at Aden to the Public Works Department under the orders of the local Government.

No. 638 A.-932, 30th November 1876.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY to the SECRETARY TO THE GOVERNMENT OF INDIA.

I have the honour to acknowledge the receipt of your telegram of the 25th instant, requiring that the best estimate obtainable of expenditure on famine relief in this Presidency during this and the next year may be sent, so as to reach Calcutta by the 1st December.

* Population, distressed taluqas, five millions. Estimated maximum numbers who will require assistance at worst season, one fifth, or one million. On this basis, and allowing, as well as can be calculated, for increase to, and decrease from, the maximum, also for cost of organisation, superintendence, and all attendant expenses, outlay up to 31st March next will probably be 54 lakhs. From 1st April to 31st October, 86 lakhs.

2. I have to-day sent you a telegram as quoted in the margin,* and I am now directed to explain in more detail how the results reported in that telegram have been obtained.

3. The population of the affected portions of the Collectorates of this Presidency is, in round numbers, 5,000,000. It is manifestly impossible to say, with any degree of accuracy, how many of these persons will come upon the hands

of Government, or for what time; but it may be sufficient to assume that it will not, at any time, be necessary to afford relief in any shape that will take the form of a direct expenditure of Government money to a greater number than 20 per cent. of the above population, i.e., to 1,000,000 of people. This is altogether exclusive of any demands which the Government may be compelled to meet in consequence of the inability or failure of any of the small Native States to do what may be necessary to preserve the lives of their people.

4. There are now about 150,000 persons employed on relief works of different descriptions, but the cost of their employment up to the present time will, in a great measure, be met from ordinary resources, provincial and local, and there has as yet been little or no almsgiving by Government. The heavy expenditure calculated as coming against the extraordinary grant for relief may, therefore, be considered as commencing from the 1st of December.

5. The state of the people will probably be worst in April next, just before the May showers, which usually usher in the monsoon, begin to fall. In this month it would be prudent to provide for the maximum number requiring relief in some shape or another; and the numbers, on this supposition, will increase from the present time up to April, will remain stationary during that month; and will decrease as agricultural operations are resumed on the commencement of the monsoon; and, if all goes well, a normal state will probably be reached by the end of September 1877.

6. Proceeding on the above assumption, a calculation, which can at the best be only very rough and approximate, may be made as follows:—

7. There are now, as stated, nearly 150,000 persons receiving relief, and these are assumed to have been so far provided for.

	Persons.
In December their number may be	200,000
„ January 1877	300,000
„ February	450,000
„ March	750,000
„ April	1,000,000
„ May	800,000
„ June	500,000
„ July	300,000
„ August	100,000
„ September	50,000
Total	4,450,000

Of these, probably one tenth will have to be supported by alms, and nine tenths by employment on relief works, and the number will therefore be—

	Rs.
4,005,000, or say 4,000,000, at Rs. 3 each per month (average cost)	1,20,00,000
445,000, or say 450,000, at Rs. 2 each	9,00,000
Total Rs.	1,29,00,000

or say 13,000,000 of rupees = 1,300,000% at 2s. the rupee.

8. To this must be added a further sum of, say, 10 lakhs of rupees, or 100,000%, to cover the extra expenditure incidental to organization, establishments, medical attendance, extra police, transport of grain to particular points, if necessary, loss on sale of grain when supplied by Government, compensation for land taken up for works, transport of cattle, compensation for grazing, damages, &c. &c., and the total will, in this way, be raised to, say, 1,400,000%. This will not include any advances it may be necessary to make to cultivators to enable them to subsist while preparing their fields, or to furnish them with seed-grain; but if, as will probably be the case, the decrease in numbers after the 1st April next be more rapid than has been estimated, outlay on this account will have been to some extent at all events provided for.

9. His Excellency in Council will be glad if the above should prove to be an outside estimate, but it cannot be materially reduced at the present time, and with the present knowledge in the possession of Government, without running the risk of misleading the Government of India as to the liabilities which are probably before them. It is quite possible, however, that by the close

of the year a much more accurate estimate may be framed of the expenditure which will have to be incurred.

10. On the data assumed above, the probable outlay to 31st March next will be 54 lakhs of rupees, and subsequent till 30th of September 86 lakhs of rupees.

Telegram, 1st December 1876.

From GOVERNOR, Madras, to PRESIDENT IN COUNCIL, Calcutta.

Prices and scarcity of food continuing ; famine in ceded districts, while railway unequal to carry the grain consigned ; have notified that food shall have preference on railway until further notice.

Telegram, 2nd December 1876.

From PRESIDENT IN COUNCIL, Calcutta, to the GOVERNOR, Madras.

Your Excellency's telegram of yesterday; the Government of India quite approve of your orders about carriage of food on railways under the circumstances.

Telegram, 5th December 1876.

From SECRETARY, Madras, to COMMERCE, Calcutta.

Large numbers of people in distress flocking from Nizam's territory into Kurnool District, aggravating our difficulties. This Government hope immediate measures may be taken to obviate mischief by Hyderabad establishing relief works near our frontier.

No. 488.

From the Officiating Secretary to the Government of India, to the CHIEF SECRETARY TO THE GOVERNMENT OF MADRAS.

Calcutta, the 8th December 1876.

I have the honour to receive your letter No, 1,797, of the 24th ultimo, and the telegram from the Board of Revenue of the 1st instant, according to the latter of which the total loss to the State by the famine in Madras is computed at 2 crores

	1876-77.	1877-78.
	Lakhs.	Lakhs.
Loss of revenue	- 97	26
Relief expenditure	- 89	20

and 32 lakhs of rupees, as shown in the margin.

2. In reply, I am directed by the President in Council to observe that the Government of India are still uninformed as to the nature of the relief works which have been or are intended to be set on foot, the localities where they are to be organized, and the data upon which the necessity for so large an outlay has been assumed, as also regarding the grounds on which so large a loss of revenue is anticipated. Moreover, the full explanation called for, so far back as the 11th ultimo, of the grounds upon which the Government of Madras deemed themselves justified in incurring an expenditure of 32 lakhs in the purchase of grain, without any previous consultation with the Government of India, has not been received. Finally, if the proceedings of the Government of Madras in regard to the famine have been reported to the Secretary of State, as is presumed to have been the case, no copies of the Despatches have been furnished, as required by the standing orders on the subject.

3. I am to solicit the earnest attention of the Governor in Council to these omissions, and to request that they may be supplied without further delay. A complete and detailed programme of such relief works and operations as have been already sanctioned, or are contemplated, should be submitted ; and, pending the approval or revision of this programme, no work which involves a total expenditure of more than Rs. 30,000 should be commenced without the previous sanction of the Government of India. If any works which, with reference to their magnitude and cost, are inconsistent with the above condition, have been already set on foot, the fullest explanation of their nature, and of the grounds upon which it has been deemed expedient to select them, should be furnished. The President in Council trusts that he need hardly assure His Grace in Council that the Government of India do not under-rate the difficulties with which the Government of Madras have to contend, or the necessity of according to the local Government a large measure of discretion in dealing with the distress which has visited a considerable portion of the territory under their charge ; but it is absolutely essential that the authority which is responsible for the financial safety of the Empire, should be kept fully informed of the actual state of things,

and that no measures involving heavy expenditure should be carried out without its knowledge and approval.

I have the honour to be, &c.

No. 33 of 1876.

From the GOVERNMENT OF INDIA to the SECRETARY OF STATE FOR INDIA.

Calcutta, 15th December 1876.

In continuation of our Despatch of the 8th instant, on the subject of the

Letter from the Government of Bombay, dated the 27th November 1876.

Letter from ditto, dated the 8th December 1876.

Letter to ditto, dated the 15th December 1876.

Letter from the Government of Madras, 30th November 1876.

Telegram from ditto, dated the 12th December 1876.

Telegram to ditto, dated the 13th December 1876.

Letter to ditto, dated the 15th December 1876.

scarcity in Western and Southern India, we beg leave to forward, for your Lordship's information, copies of the communications specified in the margin.

2. We have given our most careful consideration to the observations made by the Government of Bombay in their Secretary's letter of the 27th ultimo, in which exception is taken to the interference which we have deemed it necessary to exercise, and

the requisitions which we have made for information in connexion with the expenditure on relief works in that Presidency. We should be very unwilling in any way to hamper the discretion which must necessarily be entrusted to a local Government called upon to deal with and, as far as possible, to avert the results of a grave disaster, but we conceive that it is clearly our duty to lay down and enforce general principles of action, to keep ourselves supplied with such information as is necessary to enable us to ascertain that the principles laid down by us are being duly followed, and to interpose in those cases in which it may appear that our orders have not been observed. In such a matter as that with which we are now dealing the entire financial responsibility rests upon the Government of India, and of that responsibility it is not in our power to divest ourselves. We have now deemed it necessary to repeat our instructions as to the policy which should be acted on, to state somewhat more in detail than had previously appeared requisite the mode in which effect should be given to that policy, and to exemplify it by instances taken from the returns which we have received. Our view has been that at the commencement of a scarcity rendering it necessary for the State to set on foot relief works, such works should be, as far as possible, of a local character, so arranged as to admit of the employment of the people in the immediate neighbourhood of their homes, and of such a character as not to commit the Government to an expenditure in excess of the requirements of the case, postponing the commencement of large and extensive projects until such petty works as are available have been exhausted. The expediency of acting on this policy at the beginning of a scarcity was remarkably exemplified last year during the scarcity in North Behar, which proved to be far less severe than was at first expected. At the same time we fully recognize the possibility, in the case of scarcity so wide spread as that which now afflicts the Presidencies of Bombay and Madras, of its being necessary before very long to fall back upon larger projects, and this question is engaging our careful attention.

2. The Madras Government, in their letter of the 30th ultimo, explain the reasons which led them to make the large purchases of grain adverted to in our Despatch of the 17th idem, without previous consultation with the Government of India. We regret that we cannot regard the reasons adduced as at all satisfactory, or as affording any sufficient justification of the course taken by the local Government. The case was one involving, not only principles of the utmost importance, but a financial liability of the first magnitude, and in our opinion there was nothing in the circumstances to necessitate the Government of Madras taking upon themselves to dispose of it. Your Lordship will observe that we have negatived a fresh proposal to purchase a further supply of grain. Whether this supply is intended to be merely an additional reserve for the payment of wages in kind to labourers on relief works, or for sale to the general public, so as to bring down the rates of the local grain sellers at principal markets, and to supply their deficiencies and want of enterprise in remote ones, is not very clear from the terms of the telegram, but the proposition appears to us inadmissible on either supposition, as we have no information to show that the large supply

already purchased is insufficient as a reserve, and the assumption by Government of the functions of the grain-traders would be, under present circumstances, wholly indefensible.

4. With reference to paragraph 6 of our Despatch of the 17th ultimo, your Lordship will observe that we have addressed a letter to the Government of Madras on the subject of the information regarding the condition of that Presidency which is afforded by the letter of the 7th ultimo, and certain statements subsequently received, as also by the Despatch of the Madras Government to your Lordship, No. 20, of the 2nd instant, and its accompaniments. We view the position of that Presidency with much anxiety, and are reluctant to remain without such information as may be available until the 15th proximo, when the general review referred to in paragraph 2 of our Despatch of the 1st instant will become due.

5. We would take this opportunity of explaining that the estimates of loss of revenue in Madras referred to in the 2nd paragraph of our last Despatch related to land revenue only. Besides this there will be a loss, estimated at nearly 20 lakhs, under the other heads mentioned in the accompaniments, which may be in some measure attributed to the famine.

We have the honour to be, &c.

(Signed) H. W. NORMAN, &c.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department,
to the SECRETARY TO THE GOVERNMENT OF INDIA.

27th November 1876.

I have the honour to acknowledge the receipt of your letter No. 412, of the 9th instant.

2. Before replying in detail to your remarks regarding the system of relief works in the Deccan and Southern Mahratta Country contemplated by this Government, and authorised by them to be undertaken from time to time, as the necessity for affording relief arises, I am directed briefly to recapitulate the circumstances under which this Government found themselves when they passed their Resolution No. 6,152, of the 27th October 1876, in the Revenue Department.

3. The monsoon crop had failed over a large area, comprising the whole or parts of nine Collectorates, and owing to the absence of the latter rains the rabi crops had not been sown. The prices of food-grains throughout the country had risen to almost famine rates. The cultivators who were in possession of grain stocks would not part with them, either waiting for higher prices or fearing the future on their own account, and the Marwarrees, Bunias, and grain dealers were not only holding out for exorbitant rates, but refusing altogether to give credit to the poorer classes of the people, who were without food or the means of purchasing it. Little or no field labour was available to this latter class to admit of their earning wages, either in money or in grain, for the support of themselves and families. This state of things, though prevailing more or less in six other districts, was, at the time referred to, understood to be more specially severe in the three Collectorates of Poona, Ahmednagar, and Sholapur.

4. On the 4th October last Government had despatched the Revenue Commissioner Southern Division, and the Superintending Engineer Central Division, to the three districts above referred to, with orders to report in what condition they found the country to be, and to recommend such relief works as might be found to be most suitable on which to employ people who were unable to find means of support in any other manner; such works to be in addition to the numerous small local works which Government had at that date from time to time authorised as charges against provincial and local funds grants, and as advances against the local funds future revenue.

5. The late Mr. Havelock and Colonel Finch, R.E., reported the result of their observations under date the 10th October last, and the information thus obtained from these officers and from other sources was made known to the Government of India in letter No. 5,890, dated 16th October, from this Government.

6. On the 27th of October, the date of their Resolution No. 6,152, this Government, so far from having received any assurance that the situation described in letter No. 5,890, of the 16th idem, had become or was becoming less serious, were then in the receipt of reports showing that not only was the distress increasing, but that all hope of rain likely to be of any use to the country had

passed away, and there was nothing for it but to face and be prepared for a difficulty which, in all probability, would augment from day to day, and which could not disappear until the arrival of the monsoon of 1877.

7. In addition to the failure of crops, which involved the loss of fodder, the rainfall had been so scanty over the affected districts, even as far as the crest of the Western Ghats, that all but the large rivers and streams at this early period of the season had almost ceased to carry water; village tanks were empty, and wells were rapidly drying up.

8. It was, however, believed that there were considerable stocks of food-grain in the country, though they were not brought to market; and it was confidently anticipated that the ordinary laws of demand and supply would begin immediately to operate, and that there would be large importations of foreign grain. This anticipation has been fully justified. At this moment the Great Indian Peninsula Railway has much more grain offering than it can carry, the Bombay market is full, and the imports can hardly be dealt with on the wharves and bunders. The ports of the Southern Mahratta Country are choked with grain, and the roads leading from the ports to the interior are covered with grain carts. Prices have fallen both at the great central market and at the more distant points, and there is no present reason to anticipate any insufficiency of grain.

9. The fact, however, remained and still remains, that at the date of this Government Resolution No. 6,152, although grain was beginning to come more freely within reach of the people, large numbers of them were entirely without the means of purchasing it; and only two courses appeared open to this Government, either to give alms to people who had no means of support and by pauperising to demoralize them, or to find them work, and thus to enable them to earn wages with which to buy food.

10. In arranging a system of works to effect this it was not open to this Government absolutely to select those which, under ordinary circumstances, might be best, or those which from their intrinsic value they would most desire to see carried out. Their choice was limited by various considerations, among the chief of which were the following:—

1. That the works should be so geographically distributed that each district should to some extent be provided for.
2. That they should be arranged with reference to the general water supply, *i.e.*, that while works should be provided for in the eastern or driest district as near as possible to the homes of the people who were the greatest sufferers, provision should be made to the westward for giving employment to the people as soon as the more eastern works became unavailable for large bodies of men from failure of water supply or other causes.
3. That they should be of such a character as to impose as little liability as possible on Government after the present emergency has passed away.
4. That they should, as far as possible, be defined works which had been considered and estimated for and previously contemplated on general grounds, rather than that they should be mere impromptu efforts of possibly doubtful after-utility, and, therefore, involving waste both as regards construction and maintenance.

11. It will at once be seen by a reference to the statements of works which were provisionally sanctioned in Government Resolution No. 6,152, of the 27th October, how these principles were applied. In addition to the various shorter pieces of roads, and to the larger tanks in the Sholapur, Nagar, Poona, Satara, and Dharwar Districts, all situated to the eastward, and in the driest portion of the country, the improvement of the long line of road from Sholapur to Hubli, passing through the most eastern districts, was provided for, and also the improvement of the road from near Sholapur to the frontier of the Kaladgi districts in the direction of Bellary. These roads constituted, so to speak, the eastern line of operations, and passing westward various intermediate works, both roads and irrigational, were arranged for until to the westward the great mail line is met with, the metalling of which throughout is much needed, and has been going on for several years with such scanty means as have been available.

12. This road, which runs for a length of 350 miles through the Deccan and Southern Mahratta Country to the westward (as the road from Sholapur to Hubli to the eastward traverses 208 miles of the same part of this Presidency), with its branch feeders, may be considered to be the reserve of the whole system, and to be capable of giving employment to large numbers of people when water or food

supplies fail in the eastern parts of the affected districts. Along this line water is always available, and on it, and by its feeding westerly branches, grain can always be passed with facility.

13. It may be here observed that none of the road operations included in the scheme involve the construction of bridges, drains, or masonry works. The intention is merely to improve existing fair-weather roads or tracks, and to metal the better class of roads. On any of the roads, therefore, work may be suspended without any great loss as regards what may have been done, and without imposing on the Government of India any great liability for after outlay in completion.

14. I am now directed to notice specially the remarks contained in your letter under reply. The Malsej Ghaut has already been opened out as a narrow track, and the useful expenditure of one lakh of rupees upon it can be arranged for without necessarily committing Government to any larger outlay after the present emergency has ceased. This Ghaut and its approaches have been strongly advocated by the Collector and the Revenue Commissioner, but this Government does not regard it as a work to be immediately commenced, but as one that will probably be required later on in the season, when water fails to the eastward; the water supply upon it and in its neighbourhood is not likely to fail, and the locality is a particularly healthy one.

15. The Neera Canal was not set down in the scheme for immediate execution, but it was alluded to as a work which might possibly be required, and which, if needed, would give employment to large bodies of men. It passes through one of the most arid tracts of the Deccan, with this peculiarity, that the line is never far distant from the Neera River, in the bed of which water can always be found.

16. I am, however, to observe that there are now many indications that it will be necessary very shortly to commence the Neera work, or some other large work, such as the Dhond and Manmar earth-works in this locality. Already the force of the labourers on the Mutha Canal amounts to about 14,500 persons, and is day by day increasing. At this rate the Mutha works will not afford sufficient employment for the whole season to the force likely to come upon it, and if any outbreak of disease were to occur, necessitating the breaking up of the labour parties, unless some other large works were ready to which to transfer them, the only alternative would be to camp them in suitable localities, and feed them.

17. (a.) The Government of India have been misinformed as regards the Poona and Pour Road; this road has not been disused of late years, on the contrary, the traffic along it is very considerable, and the Local Funds Committee of the district have long had it in contemplation to metal the line as far as Pour, and to improve the portion of it westward of the latter place as far as the Pimpree Ghaut; the local officers have strongly urged the work, and it is one that can be carried out without imposing additional liabilities.

(b.) When this Government proposed to the Government of India the construction of the earth-works of the Dhond and Munmar Railway, they suggested a work which, in their own opinion, and in that of their responsible officers, was more suitable than any other that could be named to afford relief to large bodies of labourers in three of the most affected districts. The section had been made from Dhond to Ahmednagar, the line had been thus far carefully located and marked out, the quantities had been calculated, and everything was ready for commencement at a day's notice. The Government of India did not, however, approve of this proposal, on grounds of general policy, and his Excellency in Council at once accepted their decision. As a substitute, in some small measure, for the work thus disallowed, this Government then arranged to undertake the improvement (metalling) of the existing road from Dhond to Ahmednagar, a mail road, and a line carrying a very considerable traffic. The Government of India now object to the work on the ground that it may be rendered useless by the railway which they have refused to allow to be commenced, and they suggest that the money it is proposed to expend upon it should be transferred to other roads in the neighbourhood. It is not known how the Government of India have arrived at any opinion as regards the relative merits of these local lines, but I am to explain that on the road from Kandi to Kashti, on the branch from that line to Deksal, and on the road from Ahmednagar to Karmala, it is not considered that more than the sums set down can, with advantage, be expended, or without commencing the works on a scale disproportionate to their importance, with the

risk of leaving them in an unfinished state at the close of the present emergency, and the certainty of throwing on the local resources a burden for the maintenance of the works which they are not in a position to accept. On the other hand, by undertaking the metalling of the Dhond Road as a relief work, no additional after-liability will be incurred, except as regards the maintenance of the improved parts, and the work itself can be stopped at a day's notice, with the advantage that all that may have been done will be useful. Further, the work, if done, will probably pay for itself, should the railway from Dhond to Ahmednagar, and thence to Manmar, be hereafter undertaken, by the facilities it will afford to the construction of the railway. I am to add that the metalling of the road under reference is now in progress. The consideration is not, however, now so much whether this or that road is better upon its merits as an undertaking, as how relief can best be given to certain people who are in need of help; and it is impossible that this Government can make satisfactory arrangements for relief works if they are to be met by objections such as those now put forward by the Government of India; if they are to be told that a certain railway should not go on as a relief work on grounds of general policy, and that a road substituted for it cannot be permitted to proceed, because this railway may eventually be constructed. This remark applies with equal force to the similar case of the road in the Dharwar Collectorate noted under paragraph (d.) of your letter. If the Government of India will sanction the construction of the earth-works of the Hubli and Belgaum Railway, this Government will not ask to be allowed to employ destitute people on metalling the Dharwar roads, but they trust that their efforts may not be frustrated by a ruling that these roads should not proceed, because there may, at some distant day, be a railway; for what is now wanted is the means of affording immediate relief in the way of employment to people who must otherwise be supported by alms, or must starve.

(c.) As reported in my telegram of the 15th, the roads from Sholapur to Sangola, and that from Sangola towards Jutt, have already been commenced. But other similar works will, undoubtedly, be required immediately in the Sholapur Collectorate, and this Government will bear in mind the suggestions made by the Government of India as regards the road from Janoni to Wangi; the selection of the particular works most suited for relief must, however, to a great extent, depend upon the reports and recommendations of the local officers.

(d.) In paragraphs 11 and 12 ante, the subject of the metalling of the mail road in the Satara and Belgaum Collectorates has been touched upon, and it has been advanced that, owing to the circumstances of this road, as regards water and food supplies, and looking to the nature of the work itself—breaking metal—the undertaking is one particularly suitable for affording relief; and the intention was, and is, that it should be regarded as a reserve work to be commenced when the more eastern lines have been completed, or when the water supply upon them fails. I am, however, to state, with reference to the provision made for metalling in the Belgaum District, that on the urgent requisition of the Civil and Public Works Department local officers, a transfer of Rs. 1,00,000 has been authorised from the sum of Rs. 4,00,000 set down for metalling the mail line, to the improvement of the road from Belgaum to Kaladgi, an existing fair-weather road greatly in need of improvement, and on which a considerable traffic already exists; this road passes through a part of the district where relief is greatly needed.

(e.) In answer to the inquiry made under this section of your letter, “whether it would not be preferable, and perhaps more economical, to organise minor works in the several Talukas,” I am to draw attention to the assurance from this Government in telegrams of 3rd October and 11th November, and in letter No. 5,890, dated 16th October, that, as regards minor and local works, the resources of this Government have already been virtually exhausted. Apart from the question of funds, it must also be apparent to the Government of India that this Government, and their local officers, cannot, at a moment's warning, improvise local works that would be of any real value, and if an extensive system of petty works scattered all over the surface of the country were undertaken without consideration, and without sufficient superintendence, a waste of public funds would undoubtedly ensue, which it is the desire of this Government to avoid, and which they think may, to a great extent, be avoided by the plan they have adopted. Already in the districts affected, outlay on minor works, as shown in

Rs. 12,88,930

the margin, has been authorised and is in progress, and from the corresponding statement which is attached to this letter, the Government of India

will learn the details of the proposals, and will see that this Government endeavoured to cope with the difficulty that has arisen at its commencement, in the hope that it would pass away without necessitating the greater efforts on the part of the Imperial Government which must now inevitably be made. I am to add, however, that this Government has not overlooked the question of minor works, and is from day to day authorising their commencement in different localities; but such works must not be regarded as in substitution of the larger operations that have been determined on, but in addition to them.

(f.) The road from Dholkeir to the Bellary Frontier already exists as a fair-weather road, but admits of great improvement; it is not, it may be allowed, very urgently necessary to improve it as a thoroughfare, but that, it is submitted, is not the entire question; the road passes through that part of the Kaladgi District which is most affected by the drought; it is locally very useful, and its improvement was suggested and very strongly advocated by the late Mr. Havelock as a work particularly needed to afford relief. No feeders falling into the road from the Bhima to the Malprabha have been projected, and none are known to be required by the local officers; at all events, there is no time to search for or to discuss them, and, if put in hand, they would not, in the opinion of this Government, be such good relief works, or prove of so much permanent value, as the line already selected, which traverses the eastern parts of the district from end to end.

(g.) It is quite true that the drought has been most serious in the eastern parts of the Khandesh Collectorate, but it has been serious also in the western parts; the Nagli crop, on which the Bheels for the most part subsist, has, in a great measure, failed, and it is absolutely necessary that Government should be prepared to provide work for the hill-men near their homes; in this view, and looking to the necessity that will probably arise, the Jakria Bari Road was set down as a part of the general scheme, but it will not be commenced until it is really needed.

18. As regards your paragraph 4, the further communication as regards irrigation works will be awaited; in the meantime, it is observed that several works whose estimated cost is in excess of the limit assigned by the Government of India have been commenced, and cannot be suspended without causing very great distress.

19. It is admitted that the information which this Government has hitherto been able to place before the Government of India as regards the scheme of works contemplated has not been as full as it is desirable that it should have been, but it is hoped the Government of India will understand that the efforts of this Government, and of its officers, have been directed heretofore, and must continue to be directed, to coping with the practical difficulties of the situation in which they find themselves. By your telegram of the 16th, and your letter No. 365, of the 25th October, the Government of India were pleased to authorise such expenditure in providing work and relief as this Government might consider necessary, and expressed their "fullest confidence that His Excellency the Governor in Council would exercise the discretion vested in him, so as to prevent any loss of the lives of Her Majesty's subjects, without incurring an expenditure of public money in excess of the necessities of the case." It has been my duty to show in this communication in what way this Government have endeavoured to prove themselves deserving of the confidence thus reposed in them. The district officers have cordially co-operated in giving effect to their instructions; and this Government, I am to say, are not aware up to this moment that their measures have failed in any way, or have been attended by any evil results. The emergency has arisen very suddenly; it applies to a large area; the difficulty of getting returns and information from, and of directing operations at, remote points is very considerable; there is little time for correspondence or discussion; and if this Government is to be subjected to the necessity, before taking any action, of proving its position step by step to the Government of India, and of making clear to them the intrinsic and relative merits of every local road or work, and the opportuneness of the time selected for its commencement, his Excellency in Council, I am desired to say, does not see how the necessary operations are to be sufficiently, promptly, or successfully carried out, for circumstances alter suddenly, and materially, from day to day.

20. If the Government of India desire to withdraw their expression of confidence in this Government in regard to the selection of relief works, or think that this Government are disposed to adopt needlessly extravagant measures, it would, as stated in my telegram of 15th instant, be better that the Government of India should name some specific amount beyond which they are not prepared to sanction

outlay, and this Government will then endeavour to meet the difficulty in the best way that they can, without exceeding any limit that may be laid down; but I am to remark that in all probability the sum that is already contemplated by this Government will be insufficient to deal successfully with the case, even in the manner that this Government propose to deal with it, *i.e.*, by organising and carrying out relief works, and if it were decided to deal with it in the only other possible way, *i.e.*, by organising relief circles, and feeding that portion of the population who are in want with grain purchased or imported by Government, the outlay would, undoubtedly, be very much larger, while there would be less to show for it.

21. When the scheme of relief works which has, to a great extent, been objected to by the Government of India was devised, there were present, in addition to his Excellency the Governor and his colleagues, and the Secretaries in the Revenue and Public Works and Irrigation Departments, the Revenue Commissioner of the Southern Division, the late Mr. Havelock, and the Collectors of Poona, Ahmednagar, Sholapur, and Satara; and it was in consultation with these officers, and especially with the late Mr. Havelock, who had great experience in the Deccan and Southern Mahratta Country, and who was an officer of recognised ability and judgment, that the plan of relief was laid down. His Excellency in Council has now availed himself of the permission of the Government of India to appoint a third Revenue Commissioner of the Southern Mahratta Country, and the officer who will fill the appointment is a gentleman of experience and ability, and whose advice and assistance will, no doubt, be very valuable to this Government at this juncture in carrying out the arrangements that have been made in accordance with the policy that has been determined on.

22. Attached to this letter is a statement, which will supply, to a great extent, the information called for in your 6th paragraph. It has not been found practicable to obtain all the details asked for in time to accompany this communication, but the rest will follow as soon as they can be collected.

23. The information called for in your concluding paragraph has already been furnished to you in part, with letter from this Government, No. 6,331, dated 4th November, in the Revenue Department. This information will be revised and completed in another communication, and every endeavour will be made to keep the Government of India thoroughly informed of the state of matters in this Presidency.

I have, &c.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce.

8th December 1876.

I have the honour to acknowledge your telegram of yesterday's date, in which you state that the reference alluded to in paragraph 4 of your letter No. 412, of the 9th ultimo, "necessarily awaits information urgently called for in paragraph six" of the same letter.

2. In reply, I am directed to observe that, after commenting in considerable detail on the road works of relief proposed by this Government, in paragraph 4 of your letter, you state, as regards irrigation works—

"These are under scrutiny in the Irrigation Department of the Government of India, and I am to request that, pending a reference, which will be shortly made, and a final decision thereon, no works of this nature may be commenced involving an expenditure of more than Rs. 30,000."

Looking to the context of your paragraph 6, which appeared especially to refer to roads, and also to the nature of the inquiry, and suggestions contained in your 3rd paragraph under letters from (a) to (g), it was understood by this Government that, as regards irrigation works, inquiry and criticisms similar to those which had reference to roads, would be forwarded by the Government of India to this Government, after a previous reference to the Irrigation Department; and on this interpretation of your letter, the information regarding irrigation works was withheld by this Government, as reported to the Government of India in the 18th paragraph of my letter No. 220 C.W.—904, dated 27th ultimo.

3. I am, however, directed to submit to the Government of India, a statement of the irrigation works in question, and to add that, as reported in my telegram of to-day, the following works, estimated to cost over Rs. 30,000, have been commenced, *viz.*—

In the Dharwar Dambul Tank.

Do. Medleri "

In the Satara Nehr Tank,

Do. Pingli "

I have the honour to be, &c.

No. 521.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY
TO THE GOVERNMENT OF BOMBAY, Public Works Department.

SIR,

Calcutta, 15th December 1876.

I HAVE had the honour to receive your letters quoted in the margin, and in reply am directed by the President in
No. 220 C. W.-904, dated 27th November 1876. Council to communicate the following obser-
,, 257 C. W.-986, „ 8th December „ vations for the consideration of His Excellency the Governor in Council.

2. The President in Council regrets to observe from various parts of your letter first quoted, that the Government of Bombay are disposed to consider the requests for full information regarding relief works which have been made, and the orders suspending certain works, and works above a certain money-limit, pending the receipt of explanation, as indicative of a withdrawal of the expression of confidence in the Bombay Government which was conveyed in the telegram of the 16th October and the letter of the 25th idem, and of an intention to subject that Government to the “necessity, before taking any action, of proving its position step by step to the Government of India, and of making clear to them the intrinsic and relative merits of every local road and works, and the opportuneness of the time selected for its commencement.” With reference to this impression on the part of the Government of Bombay, nothing was further from the intention of this Government than the withdrawal of the confidence which was formerly expressed. The Government of India has laid down certain principles upon which relief works are to be organised, and has given to the local Government full authority to organise works on those principles, with an expression of confidence that they will be borne in mind. Within the broad lines of the policy which it deems necessary to prescribe, the Government of India has every desire to leave to the local Government the greatest practicable freedom, and has no intention of entering into detailed criticism of individual works, otherwise than under wholly exceptional circumstances. But the Government of India has not divested itself,—and cannot, in view of its own responsibility to the Secretary of State in Council, and its duty to the tax-payers of India, divest itself—of the duty of obtaining full information of what is going on, and of interposing, if it should appear that the limitations placed on the authority conferred are not being duly observed.

3. The general principles which were laid down in October last, on the information then before the Government of India, while there was still doubt in regard to the extent of the scarcity with which we should have to deal, may be very briefly summarised as follows:—

(a.) That provincial resources should in the first instance be fully utilised (*vide* letter of September 29th, No. 350).

(b.) That local works near the homes of the people should be organised, and large projects avoided. On this subject the following instructions may be noted:

Telegram, October 4th.—“Local relief works and other relief operations may be started, selecting such works as can be found near the homes of the people, in preference to committing Government to commencement of large projects.”

Telegram, October 16th.—“Local works of a character to give employment for some months should be organised. * * * The district officers ought to have had no great difficulty in organising such works. * * * It is not deemed advisable to embark on any large project which will involve the continuance of heavy expenditure after the emergency has ceased.”

Telegram, October 29th.—“In works for relief, those should be preferred which can be completed or far advanced towards completion by the outlay which the scarcity demands, and which will not collect large gangs at a distance from their homes.”

(c.) That the administration should be strengthened at the outset, in order to give early assistance and obtain full information: *vide* letter of October 25th, No. 365, by which sanction for an extra Commissioner and for an extra officer in every distressed district and taluka was conveyed.

(d.) That the Government should abstain from making purchases of grain in the general market on its own behalf, except in the last resort: *vide* letter of October 25th, No. 365.

- (e.) That the Government of India must be supplied with full information in order to enable it "to estimate with accuracy what may be the exigencies of the situation, or to do justice to the proposals for relief which are submitted."

4. The President in Council is here glad of the opportunity of recognising the efforts which have been made by the Bombay Government to utilise provincial resources and to avoid interference with the grain trade, as well as the success by which those efforts have hitherto been attended.

5. In order to carry out the policy of minor local works in the several distressed talukas, it would have been desirable to explain it clearly to the Collectors, and to direct them, in the first instance, to commence at once such works within a certain limit, as were *then* urgently required, and subsequently to submit as soon as possible, for regular sanction, programmes of further works in order of utility, which it would be practicable to carry out at future successive periods if the pressure increased. The feasibility of finding such works is shown both by the examples of the Poona and Sholapur districts, in which they have been ably and fairly spread by the Collectors over the more distressed portions of their charges, and by the recent applications of the Collectors of Satara, Belgaum, and Kaládgi to be allowed sanction for them in preference to the mail road metalling, and other single works, which had been proposed. As auxiliary to, and equally important with the above, was the immediate division into two of the unwieldy charge of the Revenue Commissioner, Southern Division, in order to control and stimulate the action of the Collectors, and the increase of the district and taluka staff, with the view of early and accurate information being procured, and of minor works being rapidly started and efficiently supervised.

6. Upon the receipt of the programme which accompanied the Resolution of the Bombay Government, No. 6152 of 27th October 1876, it appeared to the Government of India that the principles above referred to had not been fully borne in mind in the case of several districts, and of some specific works; that a large tract, such as the east of Khandesh, was almost unprovided for, while Satara, though nearly the lowest in the scale of distress, obtained the largest money assignment; that works, such as the Nira Canal, were in contemplation which would involve a heavy future responsibility; and that in large areas, such as Belgaum and Kaládgi, the minor works proposed were not sufficient to meet the requirements of the districts. Certain roads, moreover, were set down for metalling, which would be superseded if railway projects, still under consideration, were ultimately carried out.

7. Under these circumstances, the President in Council deemed it his duty to point out two projects which he considered ought not to be undertaken; to request explanation regarding certain works which seemed to be of doubtful expediency, and to suspend in the meantime the commencement of those works, as also that of all irrigation works of magnitude, without the previous sanction of the Government of India. As the Government of Bombay were expressly left free to substitute smaller and more strictly local works for those which have been stopped or suspended pending enquiry, it is hoped that no practical inconvenience can have resulted.

8. I am now directed to communicate the instructions of the Government of India on the explanations afforded in paragraphs 14 to 17 of your first-quoted letter under reply.

- (a.) *Malsej Ghát*.—This project still appears of doubtful expediency under existing circumstances, both as being a large work likely to involve heavy expenditure during a series of years, and as regards the locality. A further representation may be made hereafter, if it be still considered necessary.

- (b.) The *Nira Canal* project may be submitted to the Government of India in this Department, with special explanations as to (1) the feasibility of undertaking distinct portions of it without committal to the whole, which the Bombay Government are understood to affirm, and (2) the proportion of earthwork or other employment for unskilled labour which it will afford. If the Public Works Department, to whom it will be referred, should be satisfied with it in all respects, its commencement may be sanctioned, if that measure be hereafter thought necessary. In the meantime no work should be begun upon it.

It may here be explained that the Government of India has never intended to affirm that minor works will be sufficient to afford relief

during a famine of prolonged duration, but it considers they should be drawn on almost entirely at the first while doubt remains in regard to the actual amount of relief that will ultimately be required. Larger works should be held in reserve, and should be undertaken when it becomes certain that provision must be made for the support of the large numbers of the able-bodied poor.

- (c.) *Poona and Pour Road*.—Under the explanation given, the objection is withdrawn. The work may be commenced when absolutely required.
 - (d.) *Dhond and Nagar Road and Anigherry to Sunguticop Road*.—As these works are on the lines of railways, neither of which have been condemned by the Government of India, and which may eventually be constructed, expenditure on metalling appears undesirable. It is open to the Government of Bombay to make any complete proposition regarding either line which they may think necessary. The amounts in the programme should be appropriated to other local works, and operations suspended as soon as practicable, without throwing labourers out of employ. It is observed that the Government of Bombay has lately found one transfer from the first-mentioned work practicable.
 - (e.) *Sholapur—Sangola-Jutt Road*.—It is hoped that a transfer to the Janoni-Wangi or other roads may be practicable. In any case, no further assignment should be made without reference.
 - (f.) *Mail Road metalling in the Satara, Belgaum, and Dharwar Districts* (nine lakhs). This assignment cannot be approved, and should be reduced to two lakhs in all, to be expended on such portions of the road as may actually traverse distressed talukas.
- A thorough organisation of local relief works should be substituted when and to such extent as may be required.
- (g.) *Dholkheir-Bellary Road*.—As the work has been begun it may proceed, but the grant should be reduced to one lakh at most, and minor works substituted, such as tank clearances, which it appears the Collector is able to start. There could be no better and more ultimately useful work throughout the whole of the distressed districts than clearing, repairing, or deepening the tanks, and digging new ones. There are also doubtless many cross roads in the Collectorate capable of improvement.
 - (h.) *Pimpalner Tank*.—This should not be commenced till full explanation of the project has been afforded, and the necessity for so large a work in West Khandesh has been established. A revised programme for the whole of Khandesh is evidently required.

9. With reference to irrigation works, I am directed to observe that the telegram from the Government of India of the 10th ultimo was intended to shew that the statements were not to be delayed. The statement now received does not, as already explained in my telegram of the 12th instant, contain sufficient information to enable the Government of India to accord sanction either generally or in specific instances. The principle on which it is framed is moreover uncertain, as it would appear from the records of the Government of India that the estimate for the Bhokur tank is not Rs. 56,945, but Rs. 6,03,815, and that the work is difficult, involving much masonry. I am to request that a revised statement may be submitted, showing in each case the full estimate, proportion of unskilled labour the work will afford, locality it is intended to relieve, *probable* period when it may be required if a reserve work, and any other details necessary for a decision, including whether the sanction of the competent irrigational authority has been obtained.

10. The President in Council also requests that full effect may be given to the objects which the Government of India had in view in sanctioning an additional Commissioner, by requiring both the Commissioners to visit at an early date all the important points of their charges, and investing them with such discretionary powers of sanctioning or transferring grants for specified objects, within suitable limits as may ensure effective and prompt action in accordance with the policy which it has been determined to follow.

11. In conclusion, I am to add that whenever complete information has been submitted and the review called for in my letter of the 30th ultimo, together with the proposals of the Government of Bombay based on it, has been received and considered, the President in Council contemplates leaving the local Government perfectly free in carrying out the plan of operations which may be decided

on. It is hardly necessary to urge the paramount importance, not only on financial but on other grounds equally serious, of undertaking no relief works, whether great or small, which the Government of Bombay is not satisfied are absolutely required to save the lives of the people, or to prevent excessive and dangerous suffering.

I have, &c.

(Signed) T. C. HOPE,
Additional Secretary to the Government
of India.

30th November 1876.

From the CHIEF SECRETARY TO GOVERNMENT, Madras, to the SECRETARY TO THE
GOVERNMENT OF INDIA.

I am directed to acknowledge, with thanks, the receipt this day of your cipher telegram intimating that the Government of India have arranged to meet the draft of this Government on them for the part purchase of the reserve of grain which they have found it imperatively necessary to secure.

In previous telegrams explanation has been asked of the action of this Government without prior communication with the Government of India, and in reply I am directed to lay before the Government of India the circumstances which, in the opinion of His Grace the Governor in Council, rendered prompt action indispensable.

The public conviction of the absolute failure of the north-east monsoon was, necessarily from the nature of the event, arrived at suddenly. The result was that prices sprang at a bound to a point which they have scarcely ever been known to reach before, and from which they have hardly, even now, at all receded. The rise was so extraordinary, and the available supply, as compared with well-known requirements, apparently so scanty, that merchants and dealers, hopeful of enormous future gains, appeared determined to hold their stocks for some indefinite time, and not to part with the article which was becoming of such unwonted value. It was apparent to the Government that the facilities for moving grain by the rail were rapidly raising prices everywhere, and that the activity of apparent importation and of railway transit did not indicate any addition to the food stock of the Presidency, or really afford security from temporary disaster. So it speedily proved. Grain was hurriedly withdrawn by rail and sea from the more remote districts, to their serious prejudice, and poured into central depôts, but retail trade up-country was almost at a standstill. Either prices were asked which were simply beyond the means of the multitude to pay or shops remained entirely closed. Grain riots by hungry mobs of men, women, and even children, and more serious dacoities, accompanied by violence, followed in many parts of the country, and elsewhere outbreaks occurred in the hope of checking exportation, and thus preventing dreaded scarcity. These disorders, though speedily and effectually suppressed, added another element of confusion and danger.

The Government found themselves suddenly confronted with this position, that a large proportion of the labouring population of a wide tract of country had become at once dependent on State relief works for the means of earning their daily food, but that that food was not obtainable with whatever money they could earn.

In this emergency, and to meet these peculiar circumstances, the Government decided at once that a reserve of grain was indispensable. The objection to interference with ordinary trade was not for a moment absent from the consideration of Government, nor was the possibility of the crisis being of short duration, although liable to constant recurrence, left unnoticed. But the Government could not wait for the restoration of a more normal condition of trade. They had to secure the supply of food for vast numbers, daily increasing, who could not purchase grain, at any rates of wages it would have been prudent to issue, for the local grain merchants raised their prices daily, with the special object of forcing up the rate of wages. Payment in grain, and direct purchases from the local markets by the Government, was the only course left. The Government knew that the purchase of grain would have to be continued for months, and it seemed to them that there was an absolute necessity that they should not be entirely dependent on a most uncertain condition of the grain trade, insufficient from indisposition to sell regularly, and extravagant in its demands when willing to sell. While the Government were satisfied that a moderate reserve was an essential resource on emergency, they were very desirous to avoid their transaction being immediately known. A knowledge that Government was in the market would immediately alarm the native trade, and cause an immediate rise in prices. It was for this reason that they employed Messrs. Arbuthnot and Co. confidentially, whose purchases of grain and re-sales at Bellary, where matters were most critical, had the effect of inducing other English firms to enter actively into the grain trade, with the greatest advantage as regards the supply of grain where it was dangerously deficient, and in promoting some activity in the retail trade and a slight downward tendency in prices.

On this occurring, the Government ceased to draw to any considerable extent on their reserve and have since resorted mainly to the local markets.

The idea of a Government reserve to meet the various difficulties arising from the caprices of native trade, and the actual insufficiency of local capital, was not novel or original. It had been advantageously adopted in the North-West Provinces in 1873-74, and was the main feature of the policy of Lord Northbrook's Government during the Bengal famine.

The Government did not much count on secrecy being long secured, but they hoped—and in this have not been disappointed—that they should be able to purchase their first reserve without any considerable adverse influence on the foreign or home markets, and in this they believe they have succeeded.

There was no time prior to action to discuss the policy of holding a reserve of grain with the Government of India. A disaster from failure of food supplies occurring in the distressed districts was in the opinion of Government imminent, which opinion was confirmed by subsequent facts, and the responsibility for this could not, even had it been desired, have been placed on the Government of India. At the same time the Madras Government felt they could count on the generous support and confidence of the Government of India, which they are assured will be continued.

The Government have every inducement to husband the reserve carefully. The real prospect before them is in no wise improved, and for months to come growing numbers must remain dependent on the State works for wages, whether in cash or grain, and many of these works will be in places where the means of private trade are small, and transport difficult and costly.

They may hope, with even their present reserve, to tide over the interval which must elapse before they obtain a large share of a future abundant grain crop in Burma. But the condition of a large portion of the Presidency causes them the very greatest anxiety. Throughout the Presidency the last year's seasons were unfavourable, causing a reduction in the stocks of food in store, and in this year the rains of the south-west monsoon, on which the cultivation in the ceded districts especially depends, failed; and now there is the certainty that the rains of the north-east monsoon, on which the greater portion of the Presidency relies, are no longer to be expected. Cultivation cannot now be resumed until the heralding rains of the next south-west monsoon fall, and even then many weeks must elapse before any crop can be grown and reaped. The impending inevitable loss of cattle will sorely aggravate the distress of the small ryot, who, it must be remembered, derives but little benefit from the high prices which the merchants obtain from grain.

The Government are, however, sanguine as to the capacity of the country to recover from the disaster when this extraordinary season of drought shall have passed, and meanwhile are relieved from their most pressing anxiety by the knowledge that they hold in their hands the means, to some extent, of meeting any sudden emergency in the grain market, and of averting the catastrophe of localised famine. As a financial transaction they are satisfied that their swift action was a most wise economy.

Of the pressing need for its immediate adoption on the present occasion, the Government are now more than ever convinced.

12th December 1876.

Telegram from GOVERNOR OF MADRAS, to the PRESIDENT IN COUNCIL.

Emergency great and serious; markets rising; auction price at Kurnool yesterday eleven three quarters; private trade does not supply remote districts; grain payments on relief works essential; unless exorbitant wages paid and many local works abandoned, must either purchase at high rates in local market, or purchase prospectively as proposed from growing crops; the first course will cost nine or ten rupees, the second will cost seven eight a bag or thereabouts; unless otherwise directed shall adopt latter course.

13th December 1876.

Telegram from SIR A. ARBUTHNOT, to GOVERNOR, Madras.

Your cipher telegram of 12th instant. We cannot sanction large expenditure in further purchases of grain without more full and complete information than can be given in a telegram. Your proposal to purchase growing crops is new to us and is not understood. As at present advised, we think it better to incur the risk of paying highly in local markets for such grain as may be immediately required than to incur immediately the heavy liability which appears to be contemplated.

From the OFFICIATING SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY TO THE GOVERNMENT OF MADRAS.

Calcutta, the 15th December 1876.

I AM directed to convey to you the following remarks upon the communications of the Madras Government specified in the margin, with their respective enclosures, which have been considered by the President in Council.

Letter to the Government of India, No. 1,599 A., of November 7th.

Letter to the Government of India, No. 1,648 A., of November 14th.

Letter to the Under Secretary of State for India, No. 40, of November 18th.

Despatch to the Secretary of State for India, No. 20, of December 2nd.

2. On the 25th of October the Government of Madras were requested, by telegram, to forward, at the earliest practicable date, statements showing the condition of each Taluk in the distressed districts and the amounts sanctioned for relief works, and on the 24th ultimo explanation was given, by telegram, of the particulars regarding relief works which were required.

3. These requests have as yet been complied with only to the extent of some of the particulars in the case of the ceded districts, but the extent of failure of crops and the details of relief works in those districts, as also specific information under all heads for the remaining districts understood to be distressed, are still wanting. As it appears from the Proceedings of the Board of Revenue, No. 184, of November 7th, that the Collectors of the ceded districts

were called upon to supply what was wanting, and as a similar requisition will no doubt have been made in the case of other Collectors, I am directed to request that such information as may have been received may be submitted with the least practicable delay. It will be understood that this will not supersede the complete review which will be due on the 15th of January, in accordance with my endorsement of the 30th ultimo.

4. I am further directed to request that for the future the Government of India may be regularly furnished with weekly reports of the same general nature as those which are furnished by the Bombay Government, and which it would appear from paragraph 7 of the Despatch of the Madras Government, No. 20, of the 2nd instant, to be intended to forward to the Secretary of State. As an introduction to these reports the President in Council would be glad to have a brief review, like that issued for Bombay, of the scarcity and the measures taken to meet it, down to the date of the first weekly report.

5. In continuation of my letter No. 439, of the 25th ultimo, and in further explanation of the imposition of a pecuniary limit by my letter No. 488, of the 8th instant, I am to state that the President in Council, while fully recognising the probable necessity of eventually falling back upon large works, as a reserve for relief purposes at a certain advanced stage of a famine of prolonged duration, considers that they should not be resorted to until extensive use has been made of minor projects which do not involve risk or future expenditure, and do not draw the people to a distance from their homes, and which usually afford ampler scope for unskilled labour.

Revenue Despatch No. 6, 12th January 1877.

From the SECRETARY OF STATE FOR INDIA to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

1. I have received and considered in Council the Despatch of your Excellency's Government of 15th December last, No. 33, on the subject of the famine in Western and Southern India.

2. This Despatch, together with other Despatches from your Government and the Governments of Bombay and Madras received by this and preceding mails, which have for the most part been separately answered, but more especially your Excellency's telegram of the 5th January, have now enabled me to form a more adequate estimate of the present and probable future extent of the calamity with which your Government and those of the two Presidencies have to deal.

3. I have been informed, by successive Despatches of your Government and of the Government of Bombay during the months of October and November, of the increasing failure in the crops which had become apparent in several districts of Southern and Western India, as well as of the measures which had been taken to relieve distress and to provide employment for the people. Reports had indeed been previously received indicating that in some parts of Madras the failure of the rain had, as early as July, been such as to involve local failure of the crops and some loss of revenue. But it was only on the receipt of the Despatch of the Government of Madras of the 2nd December that I was made fully aware of the vast area in that Presidency which has been more or less affected by the prevailing drought, and the magnitude of the operations which it has become necessary to undertake in order to preserve the population from extreme distress.

4. It now appears that in Madras the scarcity more or less affects the districts of—(1) Cuddapah, (2) Bellary, (3) Nellore, (4) Kurnool, (5) Madura, (6) North Arcot, (7) Salem, (8) Chingleput, (9) Coimbatore, (10) Kistna. It apparently also threatens (11) Trichinopoly, and (12) Tanjore. It should further be added that distress has made itself felt in Mysore, and in some parts of the Nizam's country, a further element of difficulty which I cannot exclude from my consideration. I observe also that the area of the distressed districts of Madras amounts approximately to 80,000* square miles, and the total population amounts to nearly eighteen millions.

* These figures are given from general statistical tables, exact details not having been yet received.

5. The drought in Bombay has extended to nine districts in the Deccan and Southern Mahratta country, including the districts of—(1) Khandeish, (2) Nasik, (3) Ahmednuggur, (4) Poona, (5) Sholapur, (6) Sattara, (7) Kaladgi, (8) Belgaum, and (9) Dharwar. It must be added to this that some adjoining Native States, such as Kolapore, Phultun, Akulkote, and Sawunt Waree have also been affected. The area of this territory, exclusive of Native States, comprises about 54,000 square miles, and the total population amounts to eight millions, of which five millions are reported to be included in the tracts immediately affected.

6. Such being the case, both Governments have, as reported in correspondence with your Excellency's Government, organised with great activity relief works, the particulars of which are stated in the Despatches noted in the margin.† Large gangs have been employed in making roads digging wells, and constructing and clearing tanks. Greater works, such as railroads and canals, are, as I understand, in con-

† Madras, 2nd December 1876.
 " 9th December 1876.
 Bombay, 6th November 1876.
 " 13th November 1876.
 " 27th November 1876.
 " 4th December 1876.

templation, and, should necessity arise, they will be undertaken with the sanction of your Lordship in Council. By the last accounts, the very large number of 840,000 men are reported as employed on the relief works of Madras, and 250,000 on those of Bombay.

7. I gather from a letter from the Government of Bombay, dated 30th November last, that it is anticipated by that Government, that the distress will increase in intensity until the month of April, and from that date will gradually diminish, as the crops raised in the monsoon of this year are matured, until its cessation may be expected about the month of September next. The numbers for whom relief will have to be provided in the Bombay districts, by public employment, in each month during that period, were estimated (though, of course, on data to some extent conjectural) by the Government of Bombay, in the letter above referred to, as follows :

	Persons.
In December their number may be	- 200,000
" January 1877	- 300,000
" February "	- 450,000
" March "	- 750,000
" April "	- 1,000,000
" May "	- 800,000
" June "	- 500,000
" July "	- 300,000
" August "	- 100,000
" September "	- 50,000

8. No similar table or estimate is to be found in the papers which have been received from Madras, but as it must be assumed that the intensity of the distress in that Presidency will increase as the season advances, it is alarming to find that the number of persons already employed on relief works amounts, as before stated, to 840,000.

9. The impossibility of applying adequate tests to applicants for relief on such occasions is unfortunately notorious, but I trust that there will be no practical difficulty in checking any serious abuse which may arise out of the measures adopted by Government for the present and pressing relief of destitution.

10. I observe with satisfaction that, although the price of grain has advanced in the affected districts in some cases to three times the ordinary rate, the operations of private trade appear, at all events in Bombay, to have been also considerably stimulated, and that the supply of food imported from other districts not affected by the present drought has been hitherto apparently sufficient to support the population.

11. On the other essential condition to the success of the relief operations, namely, effectual means of transport, the reports are somewhat more reassuring, and the Governments of Bombay and Madras do not appear to entertain any apprehension of an inability to carry the necessary supplies to the affected localities. I cannot, however, regard without uneasiness the consequences of imperfect communications in districts which cover so wide an area, and some of which lie at so great a distance from the lines of railway.

12. I have instructed your Excellency, by telegram of the 29th December, to cause me to be furnished regularly, week by week, with a telegraphic summary of the leading facts as they arise in each Presidency, and with special narratives by mail of the progress of the famine, and of the proceedings of the two Governments under your Excellency's directions ; I have also expressed the deep concern with which Her Majesty's Government have received the painful intelligence of the visitation which has befallen so large a portion of Southern India, and I have conveyed to you the assurance of their hearty support in the measures which may be necessary to mitigate its effects, and to provide adequate relief to the suffering districts.

13. I have abstained from any remarks on the particular measures which have been already taken, because, so far as the information before me enables me to form an opinion, I have no reason to doubt their sufficiency or the general judgment which has been displayed in the difficult task which has devolved on the two Governments.

14. I desire to leave to your Excellency in Council the widest discretion in all administrative details, entertaining as I do the fullest confidence in your judgment and ability, and that the experience at your command, especially that derived from the late famine in Bengal, will enable you, while sparing no efforts for the relief of distress and the preservation of life, to take all reasonable precautions against any waste or unnecessary strain upon the resources of the State. It is clear that the strain in any case must be very severe, and I await with much anxiety the views of your Excellency in Council as to the financial measures which you propose to adopt.

15. I have also conveyed to you by telegram my full approval of the special mission of Sir R. Temple to Madras and Bombay to confer with the respective Governments, and to visit in person the distressed districts. I cannot doubt that his recent and valuable experience, and his great administrative ability, will be of the highest service in assisting the local Governments in the further organization of relief operations, and in promoting that unity of principle and action which it is desirable to secure in circumstances so grave and so complicated as the present.

16. I desire now briefly to advert to the two special questions which form the subject of the Despatch from your Government of 15th December. The first question arises out of a correspondence between your Government and the Government of Bombay on the subject of the construction of works which would "commit the Government to an expenditure in excess of the requirements of the case," and which would continue after the cessation of the existing distress.

17. Some difference of opinion appears to have arisen between the two Governments on this point, but I gather from your Excellency's telegram of the 5th instant that you have withdrawn the objection of your Government to the larger works which have been proposed by the Government of Bombay, in consequence of explanations submitted by the Governor of that Presidency.

18. Under these circumstances, I reserve all expression of opinion on this question until I am in possession of further information as to your views on the principle involved.

19. The second question is that of the disapproval expressed by your Government of purchases of grain—some already effected and others in contemplation—by the Government of Madras, in order to provide a reserve, in the event of a deficiency in the supply of food through private enterprise.

20. It is obvious that a measure of this importance, affecting, as it does, one of the most vital principles of famine administration, should not have been adopted without the full concurrence and sanction of your Excellency's Government. Telegraphic communication being at the command of the Government of Madras, I can see no reason why full explanation should not have been given, and the requisite sanction solicited.

21. In the Resolution of the Government of India, of 26th February 1875, on the reports of the scarcity of 1873-74, which sum up the results of the large experience gained on that occasion, the following passage occurs:—

"It is only where there is a great deficiency, and there is also reason to believe that traders will be unable to meet that deficiency, that it is right for the State to interfere for the purpose of supplementing the general food supply. Under such circumstances, however, this is the only means whereby a dearth of food can be prevented."

It is only upon an accurate estimate of the extent of the deficiency and of the means of supplying it that a decision can be based, and I am glad to think that, on a review of the conditions which led the Government of Madras to an opposite view, your Government was able to come to the conclusion that the deficiency was not so great as to justify an interference with the ordinary operations of trade.

22. The Despatches before me do not, however, afford any complete information as to the probable food supplies which will be available during the ensuing year, or as to the general effect which has been as yet produced on the price of grain

by the abnormal diversion of so large a trade from its ordinary channels, both in the exporting and importing districts. I observe that in Bombay the tendency to a downward movement of prices has already manifested itself, and I trust that a similar effect will soon become apparent in Madras.

23. Such a result, or its contrary, will afford a valuable indication of the condition of the supply of food. The state of prices will therefore need close and constant attention from your Excellency's Government, and upon which I shall wish to receive the fullest information which can be obtained.

24. In your Despatch, under reply, you inform me that the Governments of the respective Presidencies have been instructed to send to Calcutta, by the 15th January, a complete and revised report on the condition and prospects of the affected districts. Your Excellency will, I doubt not, already have communicated to me by telegraph such portions of those reports as are essential, and I shall hope to receive the reports themselves at as early a date as will allow of their being accompanied by a mature expression of your views upon them, after they have received the careful consideration of your Excellency in Council.

25. I have sent a copy of this Despatch to the Governments of Madras and Bombay,

I have the honour to be, &c.

TABLE OF CONTENTS.

Page.	From	Date.	Subject.
1	Secretary of State -	January 31, 1877, No. 13 (Revenue).	Her Majesty's Government, while leaving the widest discretion to the Government of India as to the measures of relief, are prepared to take their full share of responsibility for the policy adopted; but require to receive regular and full communications, to enable them to accord their concurrence and support. Her Majesty's Government withhold their conclusive opinion on the instructions to Sir R. Temple, pending receipt of full text of document; but they agree in deprecating indiscriminate relief. The working out of these instructions will probably throw light upon problems involved in famine administration, and Her Majesty's Government will give their immediate attention to the financial measures necessary to meet recurring famines when in possession of the views of the Government of India.
3	Government of India -	January 5, 1877, No. 1 (Revenue, Agriculture, and Commerce).	Appointment of additional secretary to Government of India in Department of Revenue, Agriculture, and Commerce for famine work. The Bombay departmental arrangement for conduct of correspondence agreed to. The Bombay Government have been informed that the general objection to commence large relief works is withdrawn, on the understanding that any excess expenditure beyond the actual requirements will be met from provincial resources. Sir R. Temple has been deputed on a special mission to visit the districts of Madras and Bombay, and confer with the local governments.
ENCLOSURES.			
4	Secretary to Government of Bombay.	December 18, 1876	Preferable that correspondence relating to relief operations should be concentrated in Public Works Department.
4	- - - - -	- - - - -	Memorandum and annexures explaining necessity for and expected return from certain relief works under construction in Bombay.

CORRESPONDENCE.

Revenue, No. 13.

From the SECRETARY OF STATE FOR INDIA to the GOVERNOR-GENERAL OF INDIA
IN COUNCIL.

India Office, London, 31st January 1877.

Para. 1. The accounts contained in the latest Despatches which have reached me on the subject of the prevailing scarcity in Western and Southern India clearly indicate its increasing gravity, and the magnitude of the task which has devolved both upon your Excellency's Government and the Governments of Madras and Bombay.

2. In leaving to your Excellency the widest discretion as to the measures of relief which must be undertaken at this juncture, Her Majesty's Government in no way desire to decline their full share of responsibility for the policy adopted, and the results by which it may be followed, but they feel that this duty can be best discharged in an emergency such as this by giving every confidence to the Indian Executive, and by supporting to the utmost the humane and enlightened efforts of those whose knowledge of facts and local experience render them most competent to deal with the various questions which arise from day to day, and which, in the majority of cases, call for prompt and practical decision.

3. In dealing, therefore, with the many grave questions which at such a time have forced themselves on my consideration, I have abstained from instructions or suggestions which, under less urgent circumstances, it might have been my duty to make, for I have felt it right to avoid every expression of opinion on the part of Her Majesty's Government which might in any degree have the effect of embarrassing your Excellency's Government in the execution of the arduous task before it, and lead to hesitation and delay at a moment when action and decision are of paramount importance.

4. I have followed this course the more readily on this occasion, from my reliance on your Excellency's ability to deal with the difficult questions which have already arisen, and must continue to arise, in connexion with the work of relief, and also from my confidence in the devotion of all those who in different places, and in the discharge of different duties, are serving the Crown to the utmost of their power. The unhappily too recent experience of famine administration acquired by many distinguished officers in India has, in one sense, given to your Excellency an exceptional advantage, by affording you the means of discriminating between conflicting theories and obligations, so that whilst, on the one hand, adhering to principles the value of which has practically been tested, you may, on the other, avoid the repetition of any mistakes which subsequent inquiry and a larger knowledge have disclosed.

5. But, while abstaining from any attempt to trench upon your Excellency's full liberty of action in matters which can only be dealt with in India itself, I may remind you that it is of the highest importance that the Government of India should obtain, in their acts and decisions, the concurrence and support of Her Majesty's Government, as the authority which is finally responsible to Parliament for the administration of Her Majesty's Indian Empire, and that for this purpose, regular and full communications are quite essential, even though the necessity of attending to this duty should make some addition to the heavy labours of those engaged in the work of relief.

6. You may, nevertheless, rest assured that so far as I can, consistently with the objects which I have now indicated, avoid imposing any burden on the already heavily taxed machinery of Indian administration, I will do so.

7. There are several questions of principle to which the present calamity has given a character of urgency, and which are among the gravest which can arise in connexion with British rule in India. It is, for example, the duty of Her

Majesty's Government, in concert with the Government of India, to adopt a policy by which some provision can be made for meeting what, unhappily, our experience shows are periodically recurring calamities, without causing grave financial embarrassments to the State, or throwing upon the people of India fiscal burdens which are beyond their power to bear.

8. Your Excellency has transmitted to me by telegraph a more or less condensed statement of the instructions issued to Sir R. Temple. It would be obviously premature for me to express any conclusive opinion on these instructions until I am in possession of the full text of the document, but it is not too soon for me to approve the general principles, as I understand them, on which your Excellency proposes to proceed. I need raise no question of detail as to the best system of relief operations, the limits of State interference with private trade, the means of transport, or the distribution of famine charges, all of them matters of the gravest importance, and all of them referred to in your telegrams of the 5th, 16th, and 21st instant. I will only say that I feel assured that, in common with successive Governments, both in England and India, on similar occasions to this, the principal aim which your Excellency's Government has before it, as undoubtedly it is that of Her Majesty's Government, is the saving of life and the protection of the people from the extremity of suffering by famine; and it has been a source of unqualified satisfaction to learn your belief that this end may be attained without disastrous expenditure. At the same time I recognise with your Excellency the concurrent obligation of regarding the general interest of that vast Empire which Providence has placed under British rule in the East as the great end for which, as a whole, each separate part of your policy must be framed. And duly appreciating the heavy responsibility thus placed upon you not to permit the extremely grave dangers of the future to be outweighed by the immediate and more obvious difficulties of the present, I trust that, by the careful and firm action of your Government, the balance between the various requirements of such a position will be truly maintained, so that while the lasting interests of the generations to come are guarded, your earnest endeavours will be successfully directed to the protection of the existing population from the evils that now threaten them.

9. I agree, therefore, with your Excellency in deprecating an indiscriminate distribution of relief, which can only swell the amount of distress and ultimately demoralise the persons relieved. Whatever relief is given by the State should, as far as possible, in my opinion, as I understand also in yours, be given in combination with, and in return for, some kind at least of labour which, whilst it serves as a test of the necessity of the relief, may tend to keep alive in the mind of the people a sense of self-respect, and a reliance on their ability to work for their livelihood. I am, consequently, fully alive to the necessity on every ground, financial, political, and moral, of exercising as rigid a test in all relief operations as is possible, and though on occasions such as these, where the extent of those operations is so vast and complicated, the difficulty is unusually great, I have no doubt that your Excellency will know how to maintain an even course between the conflicting obligations of a care for human life on the one hand, and a strict and even severe administration of relief on the other.

10. Famine administration has, unfortunately, become in India a subject of more than occasional importance, and in the working out of the instructions issued to Sir R. Temple I hope that fresh and valuable light will be thrown upon the serious problems involved. Her Majesty's Government will await with anxious interest your reports as to the measure of success which attends the application of these rules to the conditions of the existing scarcity, as well as the expression of your Excellency's own opinion as experience is gained of the results of the operations which you are now conducting.

11. I have only to add that to the financial measures which it will be necessary to adopt in order to enable the fiscal system of India to meet this heavy liability, I shall be prepared to give immediate attention whenever I am placed in possession of the conclusions of your Excellency's Government on this important question, and of the details connected with the subject which you will doubtless forward.

12. Whether it will be possible, by new fiscal arrangements, to obtain the necessary financial equilibrium, and whether any reduction in some branches of expenditure is still a possible resource, are matters which will, I know, receive

your most careful consideration, and on which I shall await the expression of your Excellency's deliberate opinion.

13. On a review of what I have now written, I am aware that it may be open to the charge of suggesting nothing new, nothing that has not already passed through your Excellency's mind, and how much it dwells on the gravest difficulties, without attempting the task of precisely defining lines and limits of duty in such an emergency as this. But, in spite of the possibility of such a construction being placed on my words, I have yet felt bound to put them on record, as the strongest proof which I can give of the desire of Her Majesty's Government to bear their full share in the responsibilities now pressing on all the Queen's servants entrusted with the administration of Her Majesty's Indian Empire.

I have, &c.
(Signed) CARNARVON.

No. 1 of 1877.

From the GOVERNMENT OF INDIA Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Delhi Camp, 5th January 1877.

IN continuation of our Despatch dated the 15th ultimo,* on the subject of the Letter from the Government of Bombay, No. 88, dated 18th Dec. 1876. scarcity in Western 109.
Ditto. ditto, No. 309, „ 23rd „ and Southern India,
(Substituted) letter to ditto, No. 521, „ 15th „ we beg leave to forward for your Lordship's information
Telegram to the Secretary of State, dated 5th Jan. 1877.
Letter to the Government of Bombay, dated 5th Jan. 1877.
Gazette of India (Extraordinary) of the 5th Jan. 1877.

copies of the communications specified in the margin.

2. In consequence of the great increase of labour caused by correspondence relating to the famine, we have found it necessary to relieve the Honourable Mr. Hope of the duties which devolved on him in the capacity of Officiating Secretary to the Government of India in the Department of Revenue, Agriculture, and Commerce, and to appoint him, as a temporary measure, to be Additional Secretary to the Government of India in that Department. Mr. Hope will receive, in addition to the usual emoluments of an additional member of the Council of the Governor-General, which office he will continue to hold, the same deputation allowance (Rs. 777-10-8) as before. We trust that Your Lordship will approve of this arrangement.

3. After full consideration of the explanation afforded by the Government of Bombay on the subject of the concentration in the Public Works Department of that Presidency of all correspondence relating to relief operations, we consider that the arrangement was, under the circumstances, the most suitable which it was practicable to make.

4. We have received from that Government a statement, forwarded herewith, affording certain further information regarding the irrigation works commenced and contemplated in the Bombay distressed tracts, and have also conferred personally with his Excellency Sir Philip Wodehouse on the general condition of affairs and the policy to be pursued. We have in consequence determined to substitute for our letter to Bombay, No. 521, of the 15th ultimo, another letter of the same date,† of which a copy is appended. This letter expresses in a clearer, and at the same time somewhat modified, form the policy which at that date, and on the information then before us, we deemed advisable, and is accompanied by a further letter of to-day's date by which our restriction upon large works which the Government of Bombay may deem to be indispensable for the preservation of life in any of the affected tracts is withdrawn, on the understanding that any excess expenditure beyond the actual requirements of the scarcity will be met from provincial resources under the new system of finance about to be introduced. † Part I., p. 116.

5. Your Lordship will have learned from the Despatch of the Madras Government, No. 22, dated the 23rd ultimo, the very serious dimensions which the distress in that Presidency has already attained, and the apprehensions entertained for the future. After careful personal conference with his Grace the Governor

of Madras, we have decided upon deputing Sir Richard Temple on a special mission to visit the distressed districts, to confer with the Government on the spot, and to offer for their consideration any suggestions which he may deem proper. Considering the advantage of dealing with the entire famine upon consistent and harmonious principles, together with the contemplated future connexion of Sir Richard Temple with Bombay, we have deemed it advisable to include that Presidency within the scope of his mission.

6. We trust that the arrangements referred to in the two last preceding paragraphs, which have already been communicated to your Lordship by telegraph, will meet with your Lordship's approval.

We shall not fail to keep your Lordship duly informed, by telegraph and letter, of the progress of affairs.

We have the honour to be, &c.

(Signed) LYTTON, &c.

Local, No. 88 E.—1063 of 1876.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY to the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce.

V.—Establishments.

Public Works Department, Bombay, 18th December 1876.

I am directed to acknowledge the receipt of your letter No. 435, of the 24th November 1876, stating that the Government of India regard as open to grave objections the concentration, in the Public Works Department, of all correspondence relating to the regulation of relief operations in this Presidency.

2. This arrangement was proposed by his Excellency to his colleagues in the Government after careful consideration of existing circumstances, with the advantage of nearly five years' experience in the working of this Government, and with the full belief that it offered the best prospect of beneficial results. It was at once and unreservedly accepted by the other members of the Government. In the resolution by which it was brought into operation, the Government prominently noticed that it was for the Revenue Commissioners and Collectors to take care that the wants of the people received all practicable attention. These officers have shown their thorough appreciation of their duties in this respect. In so doing, they have met with the cordial co-operation of the officers of the Public Works Department, and nothing has occurred to warrant an apprehension that the considerable friction anticipated by the Government of India will arise.

3. I am to observe that the Government is the same, whether it be administered through the Revenue or the Public Works Department. The member of the Government who deals ordinarily with revenue questions, also deals ordinarily with public works matters. His Excellency the Governor himself supervises all arrangements relating to the relief of the distress in the Deccan and the Southern Mahratta country; and, therefore, so far as the policy that has been adopted in dealing with the difficulty, or the application of that policy is concerned, it is quite immaterial through what channel the correspondence is conducted. Promptness of action is essential, and this, his Excellency in Council believes, can best be secured through the instrumentality of the Public Works Department, in which the great mass of the business must necessarily arise.

4. In conclusion, I am to convey the thanks of this Government for the prompt confirmation of the appointment of Mr. Macpherson to be Under Secretary. It is proposed to assign to him the salary of the office, viz. Rs. 1,250, while so employed.

IRRIGATION DEPARTMENT.

MEMORANDUM of further INFORMATION relating to RELIEF WORKS, containing explanation of necessity for, and expected return from, each work, and proportion of Earthworks or other work for unskilled labour which it will afford. (Forwarded with Letter of 23rd December 1876, from the Secretary to the Government of Bombay, Public Works Department, to the Secretary to the Government of India.)

Mutha Canal.—Information in respect of the necessity for, and expected return from, this work has already been separately afforded in the reports on the projects submitted from time to time.

The portion of the sanctioned project remaining incomplete at the time of its resumption as a relief work comprises earthwork to the extent of Rs. 2,46,524, and other work requiring unskilled labour to the extent of about Rs. 50,000, or Rs. 2,96,524 in all. It has been suggested that the extension of the canal 5½ miles beyond the present sanctioned terminus will be desirable as a famine relief work. This would involve a further total outlay of Rs. 84,949, of which Rs. 29,878 would be for earthwork.

17,483 people are now employed on this work, and the number is still increasing.

It is computed that this work may afford employment for another 3½ months, when the people must be transferred elsewhere.

Vide letter No. 328 W. I.
—739 of 11th November
1876, to the Government of
India.

3rd section	-	Rs. 58,618
4th do.	-	77,492
5th do.	-	42,315
6th do.	-	68,099
		Rs. 2,46,524

Supa Tank.—This work is more of a village water supply tank than an irrigational work. It may, during good seasons, furnish water for a limited area of irrigation. The necessity for it may be stated to be the general want of water that exists in this part of the collectorate, as proved by the rain returns. The revenue from the work cannot be estimated. Its chief benefit will be indirect in maintaining and increasing springs for water supply to the people and cattle. The work is almost entirely earthwork.

Motaba Tank.—The Motaba tank is situated in the vicinity of Yewat, and will form a very important auxiliary to the Mutha Canal, from which it can be filled during the monsoon months, when the water supply is abundant. The necessity for the work is explained by the circumstance that the rainfall of the district, on which the cultivation is entirely dependent, is excessively small and very uncertain. The site of the work is situated between Kásurdi and Pátas, where the rainfall has been as follows:—

						Pátas.	Kásurd.
1863	-	-	-	-	-	*9.52	—
1864	-	-	-	-	-	*7.38	—
1865	-	-	-	-	-	*11.69	—
1866	-	-	-	-	-	*6.57	—
1867	-	-	-	-	-	*10.88	—
1868	-	-	-	-	-	*10.32	—
1869	-	-	-	-	-	22.86	25.62
1870	-	-	-	-	-	26.31	25.99
1871	-	-	-	-	-	21.75	17.99
1872	-	-	-	-	-	—	10.94
1873	-	-	-	-	-	—	7.67
1874	-	-	-	-	-	25.84	10.39
1875	-	-	-	-	-	13.00	12.90
1876	-	-	-	-	-	6.03	8.22
Total						172.60	119.72
Average						14.37	14.97

The tank is estimated to cost Rs. 1,60,373. It will furnish a never-failing supply to an area of 3,172 acres in quadrennial rotation, from which the revenue at rates now in force will be Rs. 21,411. The working expenses will not exceed Rs. 5,000, including establishment and collection charges; and the net revenue will thus ultimately exceed 4.9 per cent. on the gross outlay, which will amount to Rs. 2,03,666, as per margin.

Almost the entire estimate for this work is for earthwork and excavation eminently suited for famine labour. It will employ about 4,500 people for six months.

Seersophal and Mullut Tanks.—The necessity for these works may be explained on the same grounds that would exist for the storage of water in any district where the crops are at present entirely dependent upon a most uncertain and capricious rainfall, which is seldom, if ever, sufficient to produce good crops, and frequently fails altogether, as it has done in the current year.

The Pátas Tank is designed principally for water supply. As in the case of Supa, there may in good seasons be a limited area of irrigation under the tank, but the return from it will be principally indirect. The estimate is almost entirely for earthwork.

Nira Canal.—Two-thirds of the whole area (2,79,680 acres) to be brought within easy reach of the means of irrigation by this work are in the Indápur Taluka.

The necessity for the work may be best explained by the following extracts:—

EXTRACT from a REPORT by Colonel J. T. FRANCIS, Survey and Settlement Commissioner, N. D.,
Vide Selections from Records of the on the Revision of the Settlement of the Indápur Taluka, dated
Bombay Government, No. CVII. January 1867.

Para. 151. The climate of Indápur has unfortunately, however, prevented the cultivators from realising that material wealth which is indicated by the immense rise in price of grain referred to above. The rainfall is most precarious. For two and three consecutive years together it is either insufficient or the falls so untimely, and at such long intervals apart, that no crop is brought to maturity. Such has been the case with part of the Kullus division. A good average crop every other year is too liberal an allowance as an average of the general run of seasons. From the Jamabandi reports it would appear that the cultivators get a good crop about once in three years; that of the other two, one is a year of almost complete failure, and one of middling crops only.

Para. 152. It is only within the last few years that pluviometers for gauging the rainfall have been introduced into inland districts.

* Monsoon fall only.

I have been able to get but five years' returns for Indápur, which give the following result:—

			Inches.	Cents.
Year of 1861-62, total fall gauged	-	-	1	50
Do. 1862-63, no return	-	-	0	0
Do. 1863-64, total fall gauged	-	-	3	18
Do. 1864-65, do.	-	-	11	40
Do. 1865-66, do.	-	-	6	95
Do. 1866-67, do.	-	-	5	24
			29	27
Average fall for the five years	-	-	5	85

This speaks volumes regarding the climate; for what can be said of a district which has an average rainfall of somewhat less than six inches per annum.

Para. 188. It will, I trust, have been made evident from the general tenor of my remarks that a remarkably short and capricious rainfall has had a very material effect in retarding the prosperity of the Indápur district. In short, that unless we can cure this lasting defect, it can never attain to a permanent state of prosperity. Capital will accumulate in a cycle of good seasons, to disappear again, however, to a considerable extent as each unfavourable cycle comes round.

Para. 189. Irrigation is the only means of remedying this defect, and I would here draw attention to the importance to this district of a project* recently brought forward by Colonel Fife for damming up the Mutha River in a locality about 12 miles west of Poona. It is calculated that the head of water which will be raised by this work will furnish a supply for irrigating the country from Poona to a distance of nearly 100 miles eastward, extending throughout a considerable tract of Indápur. To a drought-stricken district, irrigation which will afford a supply to compensate only for the regular rainfall will be inordinately valuable. But how incomparably greater will be the value of a supply which can be obtained after the season for the monsoon falls is past; and Colonel Fife's project would do this. It would supply water sufficient for raising a rabi crop; and instead of Indápur being at this season a parched and barren-looking country, with scarcely a trace of vegetation, we should see crops ripening with the golden autumn tint upon them.

Para. 190. I have estimated that two rupees per acre might be levied as an average rate for all lands for which water would be available for rabi crop. The estimated supply would raise the average out-turn fully tenfold in excess of the ordinary monsoon crop produced. Instead of having to fight against seasons, pledging his land to the money-lender in bad, and paying off the debt in good, the cultivator could calculate on his regular annual return of produce, and would soon become independent of such pernicious assistance.

Para. 191. But besides the actual supply of water obtainable from the canal, an increased supply would be afforded to the wells of the district by percolation from the canal. A striking example of this, connected with the new Jamda Canal in the Khandesh Collectorate, has recently come under notice. Wells that were dry before the canal was opened have now a good supply: nallas which had ordinarily little or no water at this season, have a good running stream in them: and thus not only directly, by means of its canal, but indirectly also, has this work been the means of spreading a supply of water throughout the country; and equally important results may be expected to follow upon the extension of Colonel Fife's project to the Indápur district.

Para. 192. Supplemented by a work of this kind, the district would rapidly attain to a state of prosperity under the assessment now proposed. The horrors of famine would for ever be averted; and the people, whilst accumulating wealth, would become large contributors of the articles of export produce, and consumers in an equal degree of the manufactured imports—the cotton and the woollen goods, and the hardware articles—which form the staple wealth of the British manufacturer.

EXTRACT from a LETTER from Mr. J. W. HADOW, C.S., Revenue Commissioner, S. D., No. 2,026 of 1867, forwarding above Report by Colonel Francis.

Para. 19. According to the statement embodied in paragraph 163, the amount of the proposed re-assessment exceeds the present assessment by Rs. 43,309, an addition of 57 per cent. on the present assessment of the taluka. Still with this addition the average rate upon the whole culturable area will be only 7 annas 6 pies per acre.

Para. 20. This is moderate enough, it must be allowed, as an average rate, but I do not consider it the least too low for Indápur. With reference to existing prices, and probability, if not certainty, of their continuing as high as they are now for years, improved communications, new markets, and such-like considerations, if the Indápur Taluka had an average rainfall which could be depended upon, be it more or be it less, the proposed rates might be pronounced too

* See Government Selection, Irrigation of Series No. II.

Note.—The project now being carried out from the Mutha is not that referred to by Colonel Francis in his para. 189, but a smaller scheme with canal at a lower level, which does not reach the Indápur districts at all.

low for a 30 years' settlement; but it must not be overlooked when considering the question of rates that Indápur is one of the most unfavourably circumstanced of any of the talukas in the Deccan or Southern Mahratta country as regards its rainfall. In some parts of the taluka rain appears never to fall seasonably, and it is generally when seasonable scanty and precarious. Year after year lands are left unsown for a want of moisture, and those that are sown produce next to nothing; failures of crops, more or less general and extensive, appear to be the rule, and a good, or even a fair, average harvest, the exception.

EXTRACT from a REPORT by a COMMITTEE, consisting of the Survey and Settlement Commissioner Northern Division, the Collector of Poona, and Executive Engineer Irrigation, Poona. convened under G. R. No. 98 I.—2,666 of 1867, to determine the survey operations to be undertaken for Irrigational Works.

"The locality most urgently deserving of attention is the valley of the Indápur Taluka lying between the Bhima and Nira Rivers, as the annual falls of rain are so uncertain and capricious, that there is frequently a failure of crops for several years in succession, and it may with reason be termed a drought-stricken district. It would, therefore, be advisable to have preliminary surveys undertaken to see whether it would not be feasible to afford relief to the district by throwing a bund across the Nira River at some point above the old bridge on the Satara road, and cutting an irrigational canal."—Government Resolution in the Revenue Department, No. 715, dated 19th February 1869.

LETTER from the AGENT, REVENUE COMMISSIONER, S. D., No. 339, dated 1st February 1869—submitting Correspondence from the Collector of Poona relative to the serious failure of rain in a portion of the Indápur Taluka; stating that, owing to a succession of bad seasons, the failure has necessitated in 43 villages a remission of rent varying from four to eight annas in the rupee; and soliciting Government's approval of the measures of relief, adopted under the emergency of the case.

RESOLUTION.—The proceedings of the Revenue Commissioner are fully approved.

2. Remissions to the extent of 50 per cent. have been granted in 43 villages in the case of Jirayet or arable lands, and to the extent of 25 per cent. in 13 other villages in the Indápur Taluka.

3. As there was a considerable enhancement of rates consequent on the recent revision, the revenue for collection will still be in excess of that hitherto levied.

4. The Right Honourable the Governor in Council considers that much credit is due to Mr. Jardine for the careful inquiry he has made into the condition of this taluka.

5. Kulwar, or individual, remissions should never be permitted; but in cases where it is necessary to forego a portion of the revenue, this should be done by a percentage on the entire village.

6. Government sanction an expenditure of Rs. 1,000 on clearing the prickly pear from the kurans near Alligaon, and will avail themselves of Major Berthon's offer to superintend the work. The Kharackwasla works, on which it is calculated 1,000 men will be engaged, will, it is hoped, afford sufficient employment for those in search of it; but Government will be prepared to take into favourable consideration any further proposals that may be submitted for affording relief in the shape of work.

7. These papers should be transferred to the Irrigation Department for perusal. The drought from which the districts comprised in the Nira and Bhima valleys have continuously suffered, renders it absolutely necessary that some steps, if possible, should be taken to utilise the water of these rivers.

TABLE of RAINFALL at Indápur, extracted from the "Government Gazette."

1863	-	-	-	-	-	-	-	3.01
1864	-	-	-	-	-	-	-	9.78

1872	} not forthcoming.							
1873								
1874								
1875	-	-	-	-	-	-	-	22.90
1876	-	-	-	-	-	-	-	4.89

These extracts prove indisputably the necessity for the work, and it is merely necessary to note that the work now proposed for execution is precisely that recommended by the Committee which met in 1868.

The complete scheme, for which detailed plans and estimates are ready, comprises storage works in addition to the canal, which is to carry 945 cubic feet a second and will be 129 miles

long, commanding an area of 2,79,680 acres. The storage works will largely supplement the existing rabi supply, besides furnishing water for the irrigation of perennial crops, such as sugar cane, fruit trees, and garden crops. It is proposed, however, to construct the canal, chiefly for monsoon irrigation, on a reduced scale as a distinct project to afford relief. The cost is estimated at Rs. 16,00,000, or including establishment, tools, and plant, Rs. 19,52,000. It is calculated that the water supply available without the aid of storage will suffice for the irrigation of an area of 56,849 acres, which, at water rates current on existing works recently brought into operation, will yield a gross revenue of Rs. 1,42,993, or deducting maintenance, which may be taken at one rupee per acre irrigated, the net revenue would amount to Rs. 86,144, or 4·4 per cent. on the gross outlay of Rs. 19,52,000.

Of the total estimate for works, Rs. 16,00,000, it is calculated that earthwork to the value of Rs. 6,00,000 might be undertaken, thus affording relief to about 25,000 people for eight months.

As the Mutha Canal Works become completed, the people might be transferred to this canal without much difficulty.

Bhatodi Tank, and Ojhar Canal.—These are sanctioned works for which allotments exist in the current budget. They are included in the statement of relief works, as they will, of course, afford employment to the persons requiring relief. No further explanation as to their necessity, or the return to be derived from them, appears necessary.

About one half of the expenditure in the case of Bhatodi is for earthwork. On the Ojha Canal it is principally for the completion of necessary works required to pass the water for irrigation on to the tail of the sanctioned canal.

Ojhar Canal Extension.—The original scheme comprised a canal 19 miles in length, but pending experience of the proportion of the area commanded which would be irrigated each year, the water supply being limited, the length of the canal was restricted to 10 miles. The extension, besides distributing the advantages of irrigation over a wider area, will afford an abundant supply of water for monsoon crops during periods when the rainfall of the district fails, and will be indirectly as well as directly of great benefit.

The area under command of the canal will be increased by the extension from 3,840 to 23,040 acres, of which it is calculated that 7,680 acres will be irrigated annually, yielding a net revenue of Rs. 21,024, or 7 per cent. on the gross direct outlay for the entire project. These figures will, however, require revision, which will be made before sanction is applied for to commence the work.

The cost of the earthwork on extension is estimated at Rs. 20,000.

Ekruk Tank.—*Vide* remark under Bhatodi and Ojhar Canals.

The expenditure is principally upon masonry works required to complete the scheme.

Ashteh Tank.—The necessity for works of irrigation in the district in which this work is situated is sufficiently demonstrated by the fact that during the current year the rainfall has been only 8·09 inches, the average being 21·72, and that a similar drought occurred only five years ago, when the rainfall was 11·49 for the whole year. The cultivated area of the taluka is 2,21,066 acres, of which 8,823 acres, or 3·9 per cent., is now irrigated principally by wells.

The cost of the work is estimated at Rs. 5,28,760, or Rs. 6,45,260, including all direct charges. The net direct revenue is estimated at Rs. 33,400, or 5·1 per cent. on the outlay of Rs. 6,45,260.

The canals costing Rs. 1,06,051 it is not contemplated to undertake at present. Of the balance, Rs. 4,22,708, the cost of earthwork is estimated at Rs. 3,64,000, and the remainder is for land compensation which, if paid later in the season, will give some of the people the means of purchasing seed for their next season's crop and subsisting during the period between the cessation of relief works and the next harvest.

Yelwiji Tank, Mavinkop Tank, Tiliwali Tank, Madag Tank, Hereh Kerur Tank.—These are all works for which detailed plans and estimates have been prepared, and which are under execution from funds sanctioned to the debit of the current budget grant. Further detailed explanation regarding them does not therefore appear necessary.

In each case almost the entire sum is for earthwork.

Dambal Tank.—The improvement of this work is necessary as a means of extending the irrigation existing under it.

Estimated revenue is Rs. 3,175, or 5·4 per cent. on the total direct outlay, which will amount to Rs. 59,004.

Almost the entire amount of the estimate is for earthwork, and therefore suitable for relief.

Medleri Tank.—The object of the work is to increase the irrigated area of the district, which has an average rainfall of 19·44 inches. This sufficiently explains the necessity for the work.

The net return on the outlay is estimated at from 2·5 to 4·7 per cent. The revenue, it is estimated, will ultimately be Rs. 3,400.

Out of the total estimate, Rs. 46,644, the earthwork amounts to Rs. 39,644.

Doni Tank.—This work is necessary as a means of storing water and utilising it for the irrigation of land in a district where the rainfall is both light and uncertain, the total for this year being 5·17 and average 22·32, instead of allowing it to flow to waste in the sea; *vide* this Government No. 244 A. I.—652 of 1875.

The revenue is estimated at Rs. 6,488, giving a net return of 5·4 per cent.

The sanctioned design is principally masonry work; but if undertaken as a relief work, it is intended to substitute earthwork for the masonry to the extent of Rs. 65,426.

Bankeri Tank.—The average rainfall for six years in this district was 14·48 inches, and under such conditions it is hardly requisite to enlarge as to the necessity for storage works for irrigation.

The tank is an old one, constructed by the former Government of the country, and is breached, and has been useless for a very long period. The restoration is estimated to cost Rs. 1,75,351, and the net return on the gross outlay is estimated at 5 per cent.

The expenditure is all suitable for famine relief.

Mayni Tank.—See remark under Yelwiji, Mavinkop, &c.

Yerla Irrigation, Nehr Tank.—Information as to the necessity for, and probable return from, this work, is contained in the printed reports submitted to the Government of India; *vide* their No. 173 I., dated 8th April 1876.

The amount provided for expenditure is for earthwork, and excavation suitable for relief.

Pingli Tank.—The following extract from Colonel Fife's report, submitting this project to Government, will explain the necessity for it:—

EXTRACT FROM REPORT by the CHIEF ENGINEER for IRRIGATION, No. 4,102 of 1875.

"The Mán Taluka, it will be remembered, is one of the driest in the Deccan, and the revenue officers have for years represented it as standing in urgent need of irrigation.

"The average rainfall, it now appears from Major Penny's carefully prepared statements, is about 25 inches, but it is very irregular, varying from 16'42 to 38'60, and as the country is steep and the soil light, it is easy to understand that the district cannot prosper without the aid of storage works."

The rainfall of the current year has been 8'42 inches.

The work will, it is estimated, yield a gross revenue of Rs. 19,200, giving a net return of 4'37 per cent. on the expenditure now proposed, or 3'15 per cent. on the total expenditure, including outlay incurred on the canal at Gondowli, the supply to which is to be supplemented by the tanks. The revenue estimate is based on agreements made with the people.

The expenditure provided for is for earthwork, and excavation suitable for relief.

Mhaswad Tank.—The following extracts explain the necessity for this work:—

FROM REPORT by Colonel W. C. ANDERSON, Survey and Settlement Commissioner, Southern Division.

"The country through which the proposed canal is to pass, which I know well, is situated in a tract where irrigation is more required than in any other part of the Presidency. The annual fall of rain is always very small and also uncertain as regards opportuneness. The realisation of fair crops is a matter of greater uncertainty there than in any other part of the country I have seen."

The rainfall in the district under command of the proposed work varies from a maximum of 44 inches, which occurred in 1874, to a minimum of 8'09, the fall registered this year. The fall in 1871 was 11'49 inches. The current year's fall at the site of the reservoir has amounted to 5'58 inches only.

The work commands over 1,00,000 acres, of which it is calculated 29,700 acres will be irrigated. This area will be diffused throughout 58 villages of the Pandharpur and Sangola talukas.

	Rs.
* Works - - -	14,76,235
Establishment - -	2,95,250
Tools - - -	29,525
	Rs. 18,01,010

The net revenue is estimated at Rs. 1,19,400, and the total outlay being Rs. 18,01,010,* the net return will be 6'6 per cent.

The whole of the expenditure provided for is for earthwork.

Krishna Canal Extension.—This work is necessary to complete the scheme as originally designed. It will, if carried out, largely increase the area under command, and ensure a speedier return upon the outlay already incurred.

The return may be stated as follows:—

	Rs.	
† Works - - -	99,978	this will annually be irrigated during the rabi season, the whole of the perennial water being used on the upper portion of the canal, the revenue would be Rs. 9,388, or after deducting for maintenance, say, 5'25 per cent. on the total outlay on the extension, including establishment and tools.†
Establishment - -	19,296	
Tools - - -	2,026	
	Rs. 1,22,000	

The estimate for earthwork alone amounts to Rs. 32,462.

Chunkapur Tank.—This work is necessary to supplement the supply of water in the Girna River, on which there are a large number of bundaras irrigating a very considerable area, which would be greatly extended if the supply of water were increased and made reliable.

The project was called for by the Government of India, *vide* their No. 204 I., dated 5th April 1873. It will very shortly be submitted; and meanwhile has not been commenced.

Mukti Reservoir, Mhaswa Tank.—Sanctioned works in progress from current budget assignments.

Chowpalla Tank, Doodala Tank.—Small works for which detailed plans and estimates have been submitted to Government, and which only await funds.

No further explanation appears necessary.

Bhokur Tank.—Restoration of an old work for irrigating land in vicinity of Párola. Net revenue estimated at Rs. 4,218, or 5 per cent. on the gross outlay, Rs. 84,045.

The expenditure is almost entirely for earthwork.

Dhywell Tank.—In consequence of the falling off in the supply of water in the Pánjhra River, the patuuthal assessments on lands irrigated from the bundaras on the river was reduced at the last revision of the settlement from Rs. 32,000 to 23,000, or by Rs. 9,000. The tank is designed to repair this deficiency, and also to provide water for an extension of the irrigated area.

The total cost of the work is Rs. 2,90,000, on which a return of fully 5 per cent. may be anticipated.

The work is almost entirely earthwork.

Dewjipura Tank, Pimpalner.—This is a work of restoration similar to the Bhokur.

The revenue is estimated at Rs. 1,928, and would give a return of 5·7 per cent. on the gross outlay, Rs. 33,865, including establishment, &c.

The work as designed is of masonry; to undertake it as a famine work, earth can be substituted.

(Signed) C. J. MERRIMAN, Colonel, R.E.,
Acting Under Secretary to Government,
Public Works Department (Irrigation).

TABULAR STATEMENT of IRRIGATION WORKS under Construction or Authorised as Relief Works.

No.	Collectorate.	Name of Work.	Expenditure proposed or Allotment.	Amount of Estimate.	Outlay up to 31st March 1876.	Sanctioned by	Number and Date of Sanction.	REMARKS.
1	Poona.	Mattha Canal	Rs. 4,18,014	Rs. 46,57,644	Rs. 37,69,222	Government of India	No. 516—L, dated 11th August 1878, and reply No. 132 W. I. 382, dated 9th July 1876.	Out of the allotment of Rs. 4,18,014, the sum of Rs. 1,30,000 had been expended before relief works were commenced.
2		Supa Tank	5,118	5,118	—	Government of Bombay	No. 338—W. I. 763, dated 18th Nov. 1876	14,512 people are now employed on the earth-works east of Poona, and the muster is still daily increasing.
3		Seersophal Tank	2,59,085	2,59,085	—	—	—	Land compensation not yet settled, so not included in sanction.
4		Mullat Tank	54,570	54,570	—	—	—	Not yet commenced.

No. 521.

From the SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY, dated Calcutta, 15th December 1876. (See page 116, Part I.)

No. 5B.

Telegram, dated the 5th January 1877.

From VICEROY, DELHI CAMP, to SECRETARY OF STATE.

Your telegrams of 23rd and 29th December and 3rd instant. We have fully discussed with Governors of Madras and Bombay present position of affairs in respective Presidencies, and have decided on sending Sir Richard Temple to visit distressed tracts in both Presidencies, and confer with the two Governments. The situation is very grave, especially in Madras, where 13 districts out of 21, containing a population of 20 millions, are more or less affected. We consider the policy of making large purchases of grain adopted by Madras Government to be very erroneous, and calculated seriously to interfere with operations of trade, and so to intensify our difficulties a few months hence. We have instructed the Governor to abandon this policy, and shall take means to make publicly known our intention to leave trade unfettered. The number on relief works in Madras exceeds 840,000, in Bombay 250,000. We apprehend that in Madras admission to the works has not been sufficiently restricted, and that the actual pressure may, therefore, be less than the numbers would indicate. But on this point and on others Sir Richard Temple's inspection will enable us to form an opinion. The latest Madras estimate of expenditure and loss of revenue amounts to about five millions; Bombay estimates unaltered. Report of deaths at Sholapore proved to be unfounded. One or two isolated cases appear to have occurred in Madras Presidency. No efforts have been wanting on part of Local Governments to prevent mortality. Cholera had in some districts, especially Kurnool and Belgaum. Under explanations furnished by Governor of Bombay, we have withdrawn our prohibition of large works, on the understanding that any excess expenditure beyond requirements of the famine will be met from provincial resources under the new system about to be introduced. Please consider our letter to Bombay of 15th December as cancelled. It will be replaced by a modified letter, bearing same date, of which copy goes to you by this mail.

No. 5A.

From the SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

Delhi Camp, the 5th January 1877.

I am directed to acknowledge the receipt of your letters quoted in the margin, and to communicate the following observations.

Ashtek tank, No. 270, dated 14th Dec. 1876.

Pinglee " " 301, " 22nd "

Matoba " " 302, " 23rd "

Irrigation statement, No. 309, dated 23rd Dec. 1876.

Mhaswar tank, No. 319, dated 27th Dec. 1876.

The Government of India, in October last, on receipt of information of the scarcity which had arisen in certain parts of three districts of the Bombay Presidency, and while considerable uncertainty prevailed as to the dimensions which the

question might eventually assume, deemed it essential that such relief works as were set on foot should be, as far as possible, of a local character, so arranged as to admit of the employment of the people in the immediate neighbourhood of their homes, and of such a nature as not to commit the Government to an expenditure in excess of the requirements of the case, and that the commencement of large projects should be avoided. The expediency of acting on this policy at the beginning of a scarcity was remarkably exemplified last year during the distress in North Behar, which proved to be far less serious than was at first expected. At the same time the Government of India fully recognised the possibility of its being necessary in due time to undertake larger projects, and in paragraph 11 of my letter No. 365, of October 25th, the policy laid down in the resolution of the Government of India of February 18th, 1875, a material feature of which is the organisation of large works, was indicated without reserve as that which would as a whole be adopted. My letter No. 521, dated the 15th December, contains further explanation of the views of the Government of India on this subject.

In the absence of a complete review and forecast of the condition of the distressed districts of the Bombay Presidency, such as that the submission of which has been requested in my letter No. 459, of November 30th, the President in Council considered it necessary (*vide* my letter No. 521, of December 15th) that the preference of small works to large ones should be maintained.

4. In consequence, however, of the representations contained in your letters quoted above, and of the information as to the condition of certain districts which has since been received in personal conference with his Excellency Sir Philip Wodehouse, his Excellency the Governor-General in Council directs me to state that the general objection to commencing large relief works, and the prohibition to commence irrigation works exceeding Rs. 30,000 estimate which was contained in my telegram of November 10th, may be considered as removed, subject of course to the condition which has already been laid down, that no works, great or small, should be undertaken unless in each case the Local Government is satisfied by evidence which it considers sufficient that delay in commencing work will involve serious danger to the lives of the people.

5. I am, however, to add that it must be distinctly understood that, in the event of his Excellency the Governor in Council directing that any great irrigation works, or other works of local or provincial importance, involving heavy future responsibilities for their completion and maintenance, should be undertaken, the principles which the Government of India proposes to carry out in regard to the enforcement of provincial responsibility for meeting the charges for Extraordinary Public Works shall be held applicable to their case, and that the four tanks named at the commencement of this letter will be similarly dealt with.

EXTRACT from the GAZETTE OF INDIA, EXTRAORDINARY, dated Camp Delhi, Friday, January 5, 1877.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

NOTIFICATION.

Camp Delhi, the 5th January 1877.

His Excellency the Governor-General in Council having had the advantage of personal conference with the Governors of Madras and Bombay regarding the condition of parts of their respective Presidencies which are at present afflicted by scarcity, deems it expedient that a high officer, fully acquainted with the views of the Government of India, should visit those Presidencies for the purpose of inspecting the distressed districts and communicating personally with the two Governments regarding the measures which are being carried out, and which will have to be carried out, for the relief of distress, and of offering for their consideration any suggestions he may deem suitable. His Excellency in Council has accordingly resolved to depute the Hon'ble Sir Richard Temple, Bart., K.C.S.I., Lieutenant-Governor of Bengal, on a special mission for the above purpose. Sir Richard Temple will report his proceedings from time to time to the Government of India in this Department.

Revenue, No. 18.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 8th February 1877.

Para. 1. The Despatch of your Excellency in Council, dated 5th January, No. 1 of 1877, on the subject of the scarcity in Western and Southern India, has been considered by me in Council.

2. I approve of and accord my sanction to the appointment temporarily of the Hon. Mr. Hope as an additional Secretary to the Government of India in the Department of Revenue, Agriculture, and Commerce.

3. I consider that your Lordship in Council has, under the explanations offered, exercised a just discretion in permitting the Government of Bombay to concentrate all its correspondence on the subject of the famine and relief operations in its Public Works Department.

4. I also approve of the proceedings of your Government in permitting the Government of Bombay to undertake the construction of large works, and I shall await the more complete explanation, which you doubtless will furnish in due course, of the arrangements under which you propose to require that any excess expenditure beyond the actual requirements of the scarcity shall be met from provincial resources.

5. I have already expressed by telegraph my approval of the special mission of Sir Richard Temple.

I have the honour to be, &c.,
(Signed) SALISBURY.

No. 2 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Calcutta, the 12th January 1877.

In our Despatch of the 5th instant, and the telegram of the same date, we reported that, after personal conference with the Governors of Madras and Bombay, we deemed it necessary, in view of the rapidly increasing numbers on the relief works, the doubtful expediency of the policy of importing grain favoured

by the Madras Government, and the heavy estimates of relief expenditure received, to depute Sir Richard Temple on a special mission to the distressed districts. Sir Richard Temple started from Delhi for Bombay on the following day, accompanied by Mr. C. E. Bernard as Secretary.

2. Our weekly Despatches, together with those forwarded by the Governments of Bombay and Madras, will have conveyed to your Lordship in detail all the information regarding the famine which is at present in our possession. This information is not, in some respects, as complete as could be desired, and will not be materially supplemented until the receipt of the detailed accounts of the condition of the distressed districts, which were called for in our letter of the 30th November last, and which will not be due until the 15th instant. These accounts are to be distinct for each taluka (or subdivision of a district), showing fully its condition and prospects, the measures undertaken and required, and the probable number of persons for whom relief must be provided at successive periods up to the next year's harvest. In the meantime we may submit the following brief review.

2. About the middle of August the scantiness of the rainfall in certain Collectorates of the Deccan and Southern Mahratta country excited some apprehension, and early in September the necessity for relief in portions of the Poona district, together with the existence of distress in the adjacent districts of Ahmednagar and Sholapur, were brought to the notice of the Government of India; but it was not until the latter part of October that the hopes which had been entertained of a fall of rain sufficient to save portions of the withering crops and to enable the rabi sowings to be begun were dissipated, and that serious and extended distress was recognised as inevitable.

4. It was soon apparent that the area which was to a greater or less degree

DISTRICTS.	Area.	Population.	Land Revenue realisable by Government in 1874-75.	Excise Revenue.
	Sq. M.		Rs.	Rs.
Khandesh	10,162	1,028,642	30,21,890	2,18,605
Nasik	8,140	734,386	11,67,169	65,824
Ahmednagar	6,647	773,988	13,30,602	22,745
Poona	5,099	907,235	12,83,771	1,59,962
Sholapur	3,925	662,986	10,44,010	46,801
Kaladgi	5,695	816,037	12,18,256	1,32,643
Satara	5,378	1,116,050	16,53,136	27,320
Belgaum	4,591	938,750	12,59,977	1,27,455
Dharwar	4,564	988,037	19,60,635	2,20,366
Total	54,208	7,966,061	1,39,39,446	10,16,824

affected comprised Khandeish and eight districts of the Bombay Deccan, as specified in the margin, with a population of eight millions, and a revenue, from land and excise, of a million and a half. Moreover, the affected districts enclosed Native States, under our political control and in some instances under our manage-

ment, containing a population of nearly two millions more.

5. The failure of crops has of course varied greatly throughout this large tract, and we have not as yet any precise statistics on the subject; but according to returns received in November, the failure was almost entire in 21 out of 91 talukas (or subdivisions of districts), it amounted to half but less than the whole in 59 more, and was under half in 11 only. Taking the districts by name, in Sholapur the failure was complete; in Kaladgi very nearly so; Dharwar came next, and not far behind these; then Belgaum and Poona. Ahmednagar had talukas both well and ill off. In Khandeish and Nasik the loss was believed to be about one half, and Satara on the whole had suffered least of all. These estimates were extremely rough, and have in some instances been since modified for the better. Regarding the Native States we have no detailed information, but they are believed to be in much the same condition as the adjacent British districts.

6. Recently we received accounts of distress in certain parts of the Colaba and Ratnagiri districts, which are on the coast, below the Ghâts, but we have every hope that it will be confined in area and moderate in severity.

7. The relief which has as yet been afforded has been principally in the form of minor works, intended not to draw large bodies of people away from their homes, as we consider such to be the best form of relief at the commencement of a scarcity, before its limits have been fully ascertained. In October last we informed the Government of Bombay that we did not consider that sufficient grounds then existed to justify the commencement of the Dhond and Manmar Railway, which they desired, or of other works involving heavy expenditure, after the necessity for relief had ceased. More recently, however, the ascertained importance of the scarcity, together with the representations of the Bombay

Government that minor works were in some districts becoming exhausted, have induced us to approve of the commencement of large products, on the understanding that any excess of expenditure over relief requirements will be borne by provincial funds. As regards the grain trade, we have supported the determination of the Bombay Government to leave the trade entirely free, the result of which is that supplies have poured into the distressed districts from all quarters, and are offered to an extent in excess of the carrying powers of the railways, while prices have been considerably lowered in consequence. By a fortunate coincidence, the harvests in other parts of India, except Madras, have been excellent.

8. The Bombay Government have placed a sum of Rs. 25,000 at the disposal of each of the Collectors of the most distressed districts for the purpose of charitable relief to the aged, infirm, and others unable to work; but Government assistance of this kind has not as yet been much needed, partly in consequence of the very liberal efforts which have been made by private individuals and public subscription.

9. The want of rain having very materially affected the sources of water supply, the condition of the cattle, which are very numerous, nearly equalling the population in the affected districts, caused from an early period much anxiety, and many thousand head are reported to have perished. The Government forest reserves have, however, been thrown open for grazing, under as few restrictions as possible; arrangements have been made for sending the cattle to them from all quarters, under certificates from the several mamlutdars, and the privilege has been availed of to an extent which affords reason to hope that a large proportion of the more valuable cattle at least will be saved.

10. According to the latest returns which are available, the number of persons on the relief works was about 287,000, and the famine expenditure, exclusive of about six lakhs borne by provincial, local, and municipal funds, amounted to Rs. 12,15,359. The total loss of revenue and relief expenditure is estimated by the Local Government at

two crores and six lakhs of rupees.

11. The south-west monsoon having been but scanty in the Ceded Districts of the Madras Presidency (Bellary and Cuddapa) and in Kurnool, distress appeared there in August last, and a few relief works were set on foot, as also the distribution of food to the aged and others unable to work. To this failure of rain was gradually added that of the north-east monsoon also, which, it had been hoped, might have saved a portion of the fast withering crops, and facilitated larger sowings than usual of the later crops usually produced under its influence. The condition of these three districts, which had already, it may be remarked, suffered from two previous bad seasons, thus became, by the end of October, extremely critical.

12. The failure of the north-east monsoon above alluded to has also extended to a large portion of the rest of the Madras Presidency. In some quarters the failure has been complete, in others only partial, and although rain has very lately fallen to a limited extent in some of the southern districts, severe distress has overtaken large masses of the population.

13. Two tracts are thus affected. The first, consisting of the Ceded Districts and Kurnool, is compact and well defined, and the distress is far more severe in it than elsewhere; the second comprises nine districts, within which the distress depends upon the varying local failures of the north-east monsoon, regarding which no details are available sufficient to enable the population actually affected to be stated. The general statistics of the districts are given in the margin. Only eight districts in the whole Madras Presidency are

thus as yet free from actual famine; but even among these, a certain amount of distress, accompanied by high prices, had appeared in South Arcot, Tinnevely, and Malabar, and causes apprehension regarding the future.

Ganjam.	Tinnevely.
Vizagapatam.	Nilgiris.
Godavery.	Malabar.
South Arcot.	South Canara.

14. The distress in the Ceded Districts and Kurnool far exceeds, as has been said above, that elsewhere. Taking the remaining districts in rough order, Nellore and Chingleput appear to come first, North Arcot and Salem next, followed by Coimbatore and Madura, while Tanjore, Trichinopoly, and Kistna are comparatively well off.

15. Speaking in general terms, the Madras Government has followed the policy of previous famines in that Presidency by commencing with relief works at the head quarters of taluks and districts, and giving charitable relief freely, and then extending its operations to minor works in the villages. At the end of October that Government also requested permission to commence the earthwork of the railway from Bellary to Guduk in the Dhârwar district of the Bombay Presidency, but we withheld our sanction on the same grounds as those which led us to a similar course in the case of the proposed Dhond and Manmar line. The Madras Government then commenced the remaining 85 miles of the east coast canal, the conversion of the Arcunum-Conjeveram Railway to the metre gauge, and a canal in the town of Madras.

16. The Madras Government likewise purchased, at the beginning of November, 30,000 tons of grain, which it would appear was intended for use either in payment of wages on relief works, or for sale to the general public, as circumstances might be. We lost no time in intimating our disapproval of this transaction, which was effected without previous communication with the Government of India, and have since negatived two proposals for further purchases, and emphatically expressed our desire that no interference with the operations of trade should be attempted.

17. The number of persons on the relief works, according to the latest accounts, was 1,125,117, to which must be added 119,363 persons receiving charitable relief almost entirely at the expense of the State. The relief expenditure already sanctioned by the Madras Government up to the 30th ultimo was Rs. 55,69,059. The Local Government, in their more recent reports, estimate the total relief expenditure which will be required up to the end of September 1877 at Rs. 3,41,05,875, and the loss of revenue at Rs. 1,17,00,000, making, with extra establishments, a probable total of above four and a half millions sterling.

18. The Province of Mysore, like portions of Madras, is undergoing a second year of scarcity, and the failure of both monsoons during the current year has affected the whole Province except a few taluks to the westward, the crops dependent on irrigation from tanks suffering almost as much as the others. The absence of water has also destroyed the pasturage for cattle, the mortality of which, in one district alone, in one month, has been estimated at 11,400 head. The area of Mysore is 27,346 square miles, the population 5,055,000, and the land, forest, and excise revenue Rs. 70,39,819. Relief works were started at an early stage, and in addition to extensive transfers in the budget of the year, special grants, amounting to three lakhs of rupees, have at various times been sanctioned. Expenditure in Mysore does not, of course, fall on imperial revenues. The Chief Commissioner has carefully abstained from all interference with private trade in grain.

In the adjoining district of Coorg, which is British territory, no failure of crops has as yet occurred sufficient to warrant the commencement of relief operations.

19. The western and southern portions of the territories of His Highness the Nizam have not escaped the effects of the deficient monsoon. In October last we were urged through the Resident to reduce the freight of grain carried by railway to Hyderabad districts, but did not sanction the measure, as it was deemed by both the Bombay and Madras Governments to be unnecessary. The Nizam's Government has since started relief works, which suffice, as far as we are aware, to meet the exigencies of the case.

20. It will have been seen from the above brief sketch that the entire area of British territory affected by scarcity is 138,911 square miles, the population 26,898,571, and the realisable annual revenue Rs. 4,54,26,315. The estimated loss of revenue is 183 lakhs, and the estimated relief charges 481 lakhs, or a total, including establishment and various unestimated charges, of probably not less than six and a half millions sterling. The number of persons in receipt of relief is 1,531,480.

21. The prospect is thus serious in the extreme. While the necessity of preventing, as far as practicable, death by starvation is paramount, the financial embarrassment which must in any case arise will be most difficult to overcome, and any departure from the most rigid economy, or from the principles in dealing with famine which experience has confirmed as sound, may aggravate it to a degree which cannot be estimated. These considerations, together with doubts which we entertained regarding the policy of the Madras Government respecting the purchase of grain and the sufficiency of existing restrictions on employment on the works in both Madras and Bombay, have, as already stated, induced us, after personal conference at Delhi with the Governors of the two Presidencies, to depute Sir Richard Temple on a special mission to visit the distressed districts, confer with the Local Governments, and offer to them such suggestions as he may deem the occasion demands. We have every hope that, under his advice, and by the light of the complete review and forecast above referred to as shortly to be received, the operations may be confined within limits commensurate with the occasion, and that both loss of life and an extravagant outlay may be avoided.

We have the honour to be, &c.

(Signed) H. W. NORMAN, &c.

Revenue, No. 20.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 15th February 1877.

Para. 1. I have to acknowledge the receipt of the Despatch of your Excellency's Government, dated 12th January, No. 2 of 1877, relative to the scarcity in Southern and Western India.

2. This Despatch gives a comprehensive view of the state of affairs in the distressed districts, and shows that the prospects are extremely serious. On many of the points noticed more recent and complete intelligence has been supplied by your Lordship in Council through the telegraph. On other matters I have already expressed my views, and I have, therefore, no special remark to offer on the present communication.

I have the honour to be, &c.

(Signed) SALISBURY.

No. 4 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Calcutta, the 19th January 1877.

Your Lordship will have become acquainted, from our telegram of the 16th instant, with the substance of the instructions which we caused on that date to be addressed to Sir Richard Temple with reference to his mission to the Bombay and Madras Presidencies. We now enclose a copy of these instructions, which we trust will meet with your Lordship's approval.

2. Considering it to be very important that the public, and especially the trade, should be furnished with definite information regarding the extent of the famine and the policy by which the Government of India will be guided in dealing with it, we deemed it advisable to publish these instructions in the "Gazette of India," together with our Despatch to your Lordship's address of the 12th instant.

3. Sir Richard Temple has visited the Bombay Presidency, and has reached Bellary in the Presidency of Madras. We are glad to find that he is of opinion

that in Bombay the local officers are fully and successfully grappling with the distress around them, and that the substantial safety of the people has been secured, while at the same time there is room for the introduction of some economy in expense. We have received four Minutes from him communicating his impressions on the condition and prospects of the Bombay Presidency. As these Minutes, copies of which are enclosed, have been communicated by him to the Local Government direct, we have thought it best to leave that Government time to consider them, and to take such action on them as it may deem proper before adding any opinion of our own, excepting in two particulars. We have, in deference to Sir Richard Temple's reiterated representations, requested the Bombay Government to abstain for the present from making, or positively promising, remissions of land revenue. We have also placed at Sir Richard Temple's disposal, in compliance with his request, an officer of the Railway Branch of the Public Works Department of the Government of India. The Government of India in the Railway Department have for some time past been adopting all means in their power to increase the rolling stock, and promote its due distribution among the various lines in accordance with their several exigencies, and we have every hope that ere long no difficulties will remain except such as are inherent in the nature of the case.

4. Regarding the Presidency of Madras, we have this day received a telegram from Sir Richard Temple stating that the number of relief labourers is too great to be controlled, and the cost of the operations excessive, but that he is devising suggestions for submission to the Local Government.

5. With reference to your Lordship's desire expressed in a telegram of the 29th ultimo, that special famine narratives should be kept in both Presidencies and forwarded to you periodically, we beg leave to state that we some time ago desired the Government of Madras to prepare a weekly report, similar to that already issued by the Government of Bombay, and have again addressed them by telegraph on the subject. The Bombay report is forwarded to your Lordship weekly by the Local Government, and we presume furnishes the information you require. The substance of these reports, and of such other information as we may receive, will be embodied in a weekly telegram to your address.

6. We regret to state that we have not received from either Bombay, Madras, or Mysore any of the reports of talukas which were due on the 15th instant. We learn by telegraph that a few of them have been dispatched from Bombay and Mysore, and we have telegraphed to expedite the remainder.

We have the honour to be, &c.

(Signed) LYTTON, &c.

No. 62.

Telegram, dated 16th January 1877.

From VICEROY, Calcutta, to SECRETARY OF STATE.

Instructions to Temple issued and published to-day.

Para. 2 explains that while Government will spare no effort consistent with resources of State for prevention of deaths from famine and of extreme suffering, it is essential in present state of finances to practise severe economy. According to estimates, relief of existing scarcity in Madras and Bombay, including loss of revenue, will reach six and a half millions sterling. Considering that the revenues are barely sufficient to meet the ordinary expenditure, and heavy additional taxation both financially and politically impossible, the task of dealing with famines, and saving life irrespective of cost, is beyond the power of Government. Relief measures on that principle would involve debt and taxation more fatal to the country than famine itself. Government, however, believes that efficient measures are possible without disastrous expenditure.

Para. 3 enjoins attention to extent and principles of relief. Whilst not questioning the reality of the calamity, reminds Sir Richard Temple that the mere collection of enormous numbers is no proof of serious suffering, and that careful inquiry is necessary. If relief works be carried out on wrong principles; if labour be not strictly exacted; if proper supervision be wanting, and people obtain wages for inadequate work, the numbers in receipt of relief become overwhelming, and population becomes demoralised.

Paras. 4 to 7 explain general principles for relief operations as established by past experience. The small local relief works, which, if well supervised and selected, may be useful as a purely tentative measure before the probable character and extent of a threatened scarcity can be ascertained, become insufficient and unsuitable as soon as it is clear that there will be serious and widespread distress. Large works should then be undertaken where large gangs of labourers can be employed with adequate labour tests. These works must, whenever possible, be of a permanently useful and remunerative character, and in some cases it is easier and wiser to carry

people to works than food to people. Those unfit for hard labour can be employed in poor-houses or on easy work near their homes.

Paras. 8 to 10 state that it is very important to ascertain how far private trade, if left quite unfettered, may be counted on to supply wants of Madras; affirm non-interference with private trade as leading principle of Government action; approve payment of labourers on relief works in money as long as possible; deprecate attempts of local officers to reduce price of food, as high prices curtail consumption and encourage importation; public purchase of grain may be unobjectionable if made on commissariat principles from nearest depôts of the trade for supply of relief works, and possibly for certain localities remote from railroads.

Para. 11 directs inquiry into sufficiency of arrangements for transport and landing of grain.

Para. 12 communicates general principles in regard to manner of meeting famine charges; states opinion that the main portion of the charges incurred on public works, which permanently protect people against famine and add greatly to their wealth, should be borne by the people protected and benefited rather than by the general taxpayer, and that every Province should, as far as practicable, be held responsible for meeting cost of its own famines; quotes paragraphs 11 and 12 from Secretary of State's Despatch No. 59 (Revenue), of 25th November 1875, and affirms that the general principles thus laid down are under consideration, and must be borne in mind with reference to present famine.

No. 45.

From the SECRETARY TO THE GOVERNMENT OF INDIA to the HON. SIR RICHARD TEMPLE, Bart., K.C.S.I., Lieutenant-Governor of Bengal (on a Special Mission).

Calcutta, the 16th January 1877.

His Excellency the Governor-General in Council having been pleased to depute you on a special mission for the purpose of inspecting the districts suffering from scarcity in the Presidencies of Madras and Bombay, and conferring personally with the Governments of those Presidencies regarding the measures which are being carried out, and which will have to be carried out, for the relief of distress, I am directed to communicate to you the following observations, indicating the general views of the Government of India on some of the more important questions with which you will have to deal.

2. I am to observe in the first place, that while it is the desire of the Government of India that every effort should be made, so far as the resources of the State admit, for the prevention of deaths from famine, it is essential in the present state of the finances that the most severe economy should be practised. The distress is so widespread, extending over 21 districts in the two Presidencies, and more or less affecting a population of 27,000,000, and threatens to be protracted for so many months, that the utmost care is necessary to restrict the expenditure to the absolute requirements of the case. Even, however, if financial considerations were less overpoweringly strong, it would still be true that a Government has no better right in times of scarcity than in other times to attempt the task of preventing all suffering, and of giving general relief to the poorer classes of the community. False and mischievous ideas on this subject have become so prevalent, that the Government runs some risk of being charged with inhumanity, when it declares that these are the principles by which it intends to be guided. The Governor-General in Council will not be deterred by such considerations as these from a course of action which he knows to be right. Everyone admits the evils of indiscriminate private charity, but the indiscriminate charity of a Government is far worse. The Government of India is resolved to spare no efforts which may be necessary and practicable, with reference to the means at its disposal, to save the population of the distressed districts from starvation, or from an extremity of suffering dangerous to life; but it will not sanction a course of action which must tend to demoralise the people themselves, who are passing through a time of temporary trial, and inevitably lead to the imposition of heavy and permanent burdens on the industry of the country. Even for an object of such paramount importance as the preservation of life, it is obvious that there are limits which are imposed upon us by the facts with which we have to deal. If the estimates of the Local Governments are to be accepted, the relief of the existing scarcity in the Madras and Bombay Presidencies, including loss of revenue, will not cost less than six and a half millions sterling. Considering that the revenues are barely sufficient to meet the ordinary expenditure of the Empire, and that heavy additional taxation is both financially and politically impracticable, we must plainly admit that the task of saving life, irrespective of the cost, is one which it is beyond our power to undertake. The simple fact is this, that the recurrence of a few famines, such as that from which the country is now suffering, or such as that which occurred three years ago in Behar, would, if measures of relief were carried on upon that principle, go far to render the future Government of India impossible. The embarrassment of debt, and the weight of taxation, consequent on the expenditure thereby involved, would soon become more fatal to the country than famine itself. Happily, however, the Government are not placed in any such dilemma. They believe that from the history of past famines, rules of action may be learnt which will enable them in the future to provide efficient assistance for the suffering people without incurring disastrous expenditure.

3. One of the first points which should engage your attention is the extent to which relief is given, and the principles on which it is afforded. The numbers on the relief works are so great,

Madras—		
On relief works	-	1,125,117
Fed gratuitously	-	119,363
Bombay—		
On relief works	-	1,244,480
	-	287,000
		1,531,480

that the Government of India see reason to apprehend that many persons must be employed to whom such relief is not absolutely essential, and who without it would have been able to maintain themselves, at all events for some time to come. The Governor-General in Council does not for a moment doubt the reality of the calamity that has fallen upon the country, a calamity which unhappily

threatens to become ere long still more disastrous. But it is necessary to remember that the mere collection of enormous numbers of people on relief works in seasons of scarcity is in itself no sufficient proof of serious actual suffering. If relief works are carried on upon wrong principles; if labour is not strictly exacted from all who are physically able to work; if proper supervision is wanting, and people find that they can obtain, almost for the asking, and in return for next to no work at all, wages in money or in grain, there is hardly any limit to the numbers who even in prosperous times may be attracted to them. "When," as Sir George Campbell has observed, "a lax system is established, and everyone down to the merest child gets paid for the merest pretence of work, with probably a good many abuses besides, the thing becomes too attractive, the whole country tends to come on the works, the numbers threaten to be absolutely overwhelming. The people, too, become demoralised; works, where real work is exacted, are deserted, and many evils follow." A good illustration of this may be found in the official narrative of the scarcity of 1873-74 in the North-western Provinces. "In a season of considerable pressure, but not of absolute famine, the relief works in Gorakhpur and Basti were for some weeks daily thronged by more than 200,000 men, women, and children, who found an attraction in the light work, in the liberty of going at night to their houses after attending a sort of vast picnic during the day, and in the wages earned at a time when ordinarily they had no employment in the fields, and had to live on their harvest savings. But when the wages were cut down to a mere subsistence allowance, when a full day's labour was insisted on, and when the liberty of living at their homes was threatened, these immense crowds melted away as rapidly as they had collected, and it was found that there was hardly anyone who really stood in need of relief." The Governor-General in Council does not assert that a similar condition of things now exists in any of the districts of Madras or Bombay, but the matter is one which requires the most careful observation.

4. The general principles on which operations for the relief of famine in India should be conducted, have been established beyond question by past experience. When, as may easily happen, at the commencement of a period of distress, it is a matter of doubt whether serious scarcity is actually threatening a tract of country, it may be desirable, in the first instance, to open, as a tentative measure, small and well supervised local works. The Government may thus avoid the risk of finding itself committed to serious expenditure on large public works which there was no immediate necessity for undertaking. It was for reasons of this kind that the Government of India, at the commencement of the present scarcity, and while still in doubt regarding the extent to which relief operations might ultimately become necessary, thought it right, both in the Madras and Bombay Presidencies, to encourage, in the first instance, the organization of works of a local character in preference to those of greater magnitude. But when it becomes no longer a matter of doubt that serious scarcity is impending, and that relief will have to be provided upon an extensive scale, the great difficulty of insuring adequate supervision for numerous scattered works renders it necessary to resort to large works on which large gangs of labourers can be employed, and on which adequate labour tests can be exacted. As soon, therefore, as it is clear that the Government will have to undertake serious measures for the relief of scarcity, no time should be lost in giving to the people, to the greatest extent practicable, the means of employment on large public works. Such works supply the means of subsistence to the able-bodied poor; they prevent, instead of merely relieving, distress.

In choosing such works it is obviously of great importance that those selected shall be of a permanently useful and remunerative character; for it is in the last degree unsatisfactory that when the necessity for employing great multitudes of people is forced upon the Government, their labour, which might have been devoted to works which would have conferred lasting benefit on the country, should be thrown away. The works should also be such as are calculated to absorb in comparison with their entire cost a sufficient proportion of labour during the anticipated period of famine. They need not always be in the distressed districts, or near the homes of the people who require relief. When railways or other thoroughly good means of communication are available, it may sometimes be easier and wiser to carry the people to the works and to their food, than to carry the food to the people. Temporary migration from their homes has always, in times of scarcity, been the natural and one of the best remedies to which the people have had recourse, and the organization of public works in places where food is plentiful, and to which access is not difficult from the distressed districts, may in some cases be more useful than works at places where the supply of food is already insufficient. No apprehension need be felt that the people will not return to their homes when the period of distress has passed away. It will be for you to consider how far these principles are being acted on, and if necessary to recommend to the Local Governments the discontinuance of any works, or system of works, which, in your opinion, cannot be usefully proceeded with.

6. When, by undertaking large public works, employment has been provided for the able-bodied poor, it may still be necessary, even before the pressure of famine has become extreme, to afford means of support to persons who are physically unable to give a full amount of labour in return for the wages they receive. These must either be employed in poorhouses or on roads and other easy work, every effort being made to prevent relief being given to anyone who does not really require it. It has often been found a most useful test of actual distress to insist, when charitable relief is necessary, that it shall ordinarily be given in the shape of cooked food.

7. It should be added that when distress becomes extreme, and a state of absolute famine has been reached, that large public works may become insufficient to afford relief to the numbers of people in need of it. At such a time the Government may be driven to set up relief works near the homes of the people on a scale inconsistent with careful supervision or searching tests. Such measures as may be practicable must then be adopted for reducing to a minimum the inevitable evils that will then arise. The Governor-General in Council leaves it to you to communicate to the Local Governments the results of your own experience in regard to this very difficult part of the question,

8. A very satisfactory feature in the course taken by the Bombay Government in dealing with the present famine is their adherence to the principle of non-interference with private trade, which up to the present time they have acted on with marked success. In Madras a different policy has been observed. At an early stage in the scarcity, the Government of Madras contracted through a local firm for a supply of 30,000 tons of grain, to be used as a reserve to meet deficiencies in the local markets. Applications for authority to make further similar purchases have since been received, but have not been sanctioned, the Government of India being of opinion that such purchases are seriously calculated to discourage the operations of private trade, and to increase, instead of diminishing, the difficulty of procuring the supplies which will be necessary to augment the deficient food supply of the Presidency. Inquiry has been made whether this objection would apply to the Government advertising for tenders for the supply and delivery of grain in the immediate neighbourhood of certain works on which gangs of labourers are employed at a distance from all local markets. The answer must of course be in the negative. There is no more objection to such purchases than there is to the Government making purchases through the Commissariat for the troops. The objection is to the Government entering into transactions which may excite apprehensions on the part of traders, that the Government are about to take their place, and so to disarrange the bases on which they found their calculations of profit. This objection is especially applicable to purchases of a secret character. In such cases the fact that the Government are in the market is almost certain to become known, and thereupon doubts are raised as to the nature and extent of the transaction, and private trade is paralysed. In regard not only to this but all other matters connected with the management of famines, the general rule should be that the operations of the Government, and the reasons on which those operations are based, shall receive full and complete explanation and publicity.

9. One of your most important duties in connexion with the present state of things in the Madras Presidency will be to ascertain how far private trade, if left perfectly unfettered, may be counted on to supply the wants of that Presidency. As at present informed, the Governor-General in Council entertains a strong opinion that the supply of that Presidency from foreign sources, such as Burma, Bengal, &c., should be left altogether to private trade, and that the intention of the Government so to act should be widely made known, together with full and frequent information regarding the prices of food grains and other articles of consumption in the distressed and other districts. It is possible, however, that in certain localities at a distance from the lines of railway and from large markets, it may be requisite for the Government to intervene by making purchases at the nearest local depôt to which the trade will convey the grain. In such cases, where the local trade, from whatever cause, is not active, the direct intervention of the Government may probably tend rather to facilitate than to discourage the importation of grain, by affording confidence to the trade that importations will find a certain purchaser. Finally, it must not be overlooked that there is a great advantage in paying labourers on relief works in money, wherever and so long as this mode of relief is practicable.

10. The Governor-General in Council would have hoped that it was hardly necessary to impress upon local officers the importance of exercising no interference of any kind with the object of reducing the price of food; but cases have come to his notice which show that a warning on this point may not be uncalled for. It is obvious that, especially in a time of scarcity, nothing could be more mischievous than such interference, and that high prices, by reducing consumption and encouraging the importation of fresh supplies of food, are not only necessary but highly beneficial.

11. Another matter of importance is the question of transport of grain, both on the railways and to parts of the country with which the existing means of communication are insufficient, as well as of providing additional facilities for landing it at the ports. These matters, the Government of India have reason to believe, have not been at all overlooked by the Local Governments, but it is probable that your experience will enable you to offer valuable suggestions on the subject.

12. There is one other subject to which the Governor-General in Council thinks it desirable to refer, not because it is one with which you will have at present in any way to deal, but because he wishes to place you generally in possession of the views which are held by the Government of India on all the more serious questions connected with the treatment of Indian famines.

You will observe that his Excellency in Council, in my letter to the Government of Bombay, No. 5A., dated the 5th instant, has laid down the principle that if any great irrigation works or other works of local and provincial importance, involving heavy future responsibilities for their completion and maintenance, be undertaken, certain rules will be held applicable, which will hereafter be prescribed, in regard to the enforcement of provincial responsibility for meeting the charges for extraordinary public works. This is not a convenient time for entering into a full discussion of these questions, but his Excellency in Council desires to take the present opportunity of declaring his opinion, not only that the main portion of the charges incurred on public works which protect the people against famine, and which add greatly to their wealth, should be borne by the people protected and benefited, and not by the general taxpayer, but also that every Province ought, so far as may be practicable, to be held responsible for meeting the cost of the famines from which it may suffer. The Governor-General in Council believes that until these principles are enforced, the only real security for wise and economical management will be wanting. When Local Governments and local officers understand that the inevitable consequence of unnecessary expenditure will be the imposition of heavy burdens upon their own people, and not upon those of other Provinces, a powerful and most useful check upon extravagance will have been established. On this subject the opinions of Her Majesty's Secretary of State for India have been expressed in a passage which may properly be quoted here:—*

"There is a further point, though not one to fall within the scope of such an inquiry as that which you have directed to be made, which should, in my opinion, be carefully considered

* Despatch from Secretary of State to Government of India, No. 59 (Revenue) dated 25th November 1875.

by your Excellency's Government before the questions that arise in connexion with the occurrences of 1873-74 can be regarded as fairly met. I refer to the proper incidence of the charges that are necessarily incurred in providing for the requirements of the population of a district in a period of drought. However plain may be the primary obligation on the State to do all that is requisite and possible towards preserving the lives of the people under such circumstances, it would be most unwise to overlook the great danger of tacitly accepting, if not the doctrine, at least the practice, of making the general revenues bear the whole burden of meeting all local difficulties or of relieving all local distress, and of supplying the needful funds by borrowing in a shape that establishes a permanent charge on the general revenues for all future time. In Bengal, where (as the Lieutenant-Governor observes in reference to the objections of the Government in relation to emigration) the beneficial interest of the Government in the land is limited by the permanent settlement, these considerations are of special and more pressing application.

"The question which is thus raised, of how to make local resources aid in meeting local wants, is no doubt one of great difficulty and complexity, particularly in a country like India. But the difficulty of providing any satisfactory solution of it should not be allowed to obscure the perception of its vital importance to the future well-being of the country, as well as of the troubles to the Government and the demoralisation of the people which must necessarily result from postponing too long the introduction of some system under which shall be suitably recognised the undoubted responsibility which rests on the people themselves to provide for their own support and well-being. The duty of the State does not extend further than to see that the needful means are supplied for giving effect to this principle, and for distributing the local burdens arising from its practical application in the manner which shall be most equitable and least onerous to those who have to bear them."

The manner in which these principles shall be carried into practical effect is under the consideration of the Government. It is sufficient at present to say that the Governor-General in Council is of opinion that they ought to be kept in view in connexion with the present scarcity, and that a considerable portion, if not the whole, of the permanent charges which relief operations now in progress may entail ought to be borne by the Presidencies in which the expenditure is being incurred.

13. The above are the only observations that the Government of India deem it at present necessary to place on record in connexion with the onerous and delicate duty which you have undertaken; and they have been made, not so much the view of advising you on a subject which you have probably studied more thoroughly than any other public officer in India, as for the purpose of furnishing you with a statement of the views of the Government of India, to which you can refer in your communications with the Local Governments. I am directed, in conclusion, to convey to you the cordial thanks of the Governor-General in Council for the promptitude with which on this, as on other occasions, you have responded to the call made upon you.

I.—MINUTE by SIR RICHARD TEMPLE, dated Calcutta, 9th January 1877.

I have had the advantage of meeting some of the civil officers of Khandesh and Násik, and of conferring with them on the condition and prospects of their districts. The officers who, under the orders of his Excellency the Governor of Bombay, met me, were Mr. Erskine, the Collector of Násik, Major Probyn, the District Superintendent of Police and Bheel Agent in Khandesh, and Mr. Pollen, Assistant Collector in charge of the more distressed parts of the Khandesh district. Mr. Probert, the Collector of Khandesh, sent me a short written account of the prospects of his district, being prevented by indisposition from meeting me in person. As I am pressing forward towards more distressed tracts in the south, my inquiries were only of a summary and cursory character. Still I deem it right to record, for the information of the Government of India, such information as I have gathered, and such general impressions as I have subject to future correction received.

2. *Khandesh*.—First, with reference to the Khandesh district. This district is divided into two parts by the Agra road, which passes through Dhoolia, the head quarters of the Collector. In the part of Khandesh westward of the Agra road, the autumn (kharif) harvest has yielded a

* NOTE A.

I observe that in the Honourable T. C. Hope's letter of the 30th November, the average yield is taken at 12 annas, but the figures given me by the Collectors were on the assumption that 16 annas represented an ordinary good yield.

yielded on the average a six-anna (or less than half the ordinary) crop; but in this part of the district the out-turn has varied much, one village having a fair harvest and another yielding hardly any crop. The yield of the coming spring (rabi) crop will, so far as present appearances show, be about the same as the autumn (kharif) crop in both sections of the district.

3. The grain markets are well supplied. Prices were very dear some weeks ago, ranging

† NOTE B.

The latest printed summary issued by the Bombay Government, under date the 5th January, reached me after this minute was written; I see the price of millet there quoted at 30 lbs. per rupee. Prices are known to vary; and this is cheaper than the quotations given me by the Khandesh officers. In any case prices are clearly not dear.

up to six and seven seers per rupee; but prices are now cheaper, and millet, the food of the common people, is now quoted at 12† seers per rupee. It is said that the dearness of November was partly caused by the interference of municipalities in the grain trade; and the present comparative cheapness is ascribed to unrestricted trade and large importations from other parts of India.

4. On the relief works are about 6,000* persons, mainly employed on about three roads ;

* NOTE C.

The printed summary cited in the foregoing Note B. puts the number at 3,341, which is considerably less than the number given me by the local officers.

these works are under engineering supervision, and it is reported that taskwork is rigorously exacted. The relief wages paid on these works are one anna, plus half a *local* seer (equal to about $1\frac{1}{2}$ lbs.) of flour per diem for an able-bodied man ; women and children are paid at proportionately lower rates. The labourers on these works consist partly of immigrants from the Ahmednagar, and even from the Sholapur district ; the rest belong to Khandesh, and are chiefly field labourers who are out of work by reason of the failure of the harvest. It is believed that without this employment some of the people in Khandesh would drop into severe distress ; whether they would die is doubtful. At present but few ryots are on the relief works ; but the numbers resorting to relief works will probably increase as the hot weather comes, and the total numbers on the Khandesh relief works are expected to reach 9,000 in all, or about one per cent. on the total district population of one million. The peasantry are said to very much in debt.

5. There are some hundreds of persons receiving charitable relief, which number may increase.

6. The cotton crop, on which the people chiefly rely to pay the land revenue, has failed to a considerable extent. The Collector expects that four or five lakhs (40,000% or 50,000%) of land revenue will have to be remitted.

7. The condition of the Bheels in the Taptee Valley and on the hills beyond is reported to be now quite satisfactory. The men of the tribe are taking much trouble to graze the distressed cattle and to make themselves useful.

Next as to Násik district. In the eastern part of this district, towards Ahmednagar, the yield of the autumn crop is estimated at two annas only, or one-eighth of an ordinary harvest, and there is no prospect of any spring crop, as the seed was not even sown. Happily, the area of Násik coming under this category is comparatively small. In the rest of the district, the yield of the autumn and spring crops will be from five annas to seven annas, or from one-third to nearly one-half of an ordinary harvest. A good deal of green healthy rabi (spring) crop came under my observation.

9. The condition of the people and the supply of grain in the Násik markets is much the same as in Khandesh ; but the price of millet is somewhat dearer, being about ten† seers per rupee.

† NOTE D.

The printed summary mentioned in Note B. above gives the prices of millet at 32 and 28 lbs. per rupee, which is cheaper than the quotation given me by the Collector.

Khandesh district. At present 16,000‡

‡ NOTE E.

The summary puts the total at the somewhat higher figure of 18,900.

I could not ascertain the exact cause of this difference, but the Collector informed me that food is always a little dearer in the Násik than in the persons are employed on relief works. This total, coming to about 2 per cent. on the district population of 700,000 persons, is higher than in Khandesh. The Collector explains that many of his labourers are from the adjoining district of Ahmednagar. Relief wages are two annas a day for able-bodied men, with proportionate rates for women and children. Taskwork is said to be exacted ; and the work is mainly on roads as in Khandesh. In each of these district, one tank is to be undertaken as a relief work ; but it is said that the trap formation underlying the soil of these parts is not favourable to the construction of tanks. It is expected that the total of relief labourers in Násik will rise to 20,000 in the hot weather ; but the Collector hopes that, when the fields have to be prepared in the month of May, the numbers on relief works will rapidly decrease. Here also the ryots are said to be much in debt.

10. Some apprehension is felt regarding the supply of drinking water in the hot weather, as the Godavery and other rivers are already extraordinarily low. The grazing grounds are becoming overcrowded by cattle from the more distressed parts of the Ahmednagar district.

11. There are some hundreds of persons in receipt of charitable relief ; and these numbers will probably increase.

12. The cotton crop has been poor in Násik also ; and it is expected that three lakhs (30,000%) of land revenue will have to be remitted. The recent settlements of the land revenue have resulted in some enhancement of the Government demand.

13. *General impressions.*—Looking to the circumstances and prospects of these districts of Khandesh and Násik, I have received, subject to possible future correction, the following general impressions :—

(1.) That the local officers have no apprehension whatever of serious distress ; and the circumstances of the neighbouring districts of Nemar and Berar, where the crops have been good and distress is not felt, seem to warrant this view. I passed through the whole length of the Nerbudda Valley and saw the spring crop excellent.

(2.) All that is necessary is already being done, and well done on a regular system, carefully administered by the district officers.

(3.) If any criticism is to be made it is this,—that perhaps the local officers may be doing slightly more than is absolutely necessary for the saving of human life, and that the strictest economy should be practised and severe caution exercised as to admitting more labourers on relief works, or more persons to charitable relief.

(4.) That it is difficult to make a precise calculation of the proportion which persons receiving relief bear to the distressed population, by reason of the number of immigrants from other districts, and it is desirable to ascertain what proportion of the relief labourers are local and what proportion are from without.

(5.) That while suspension of the Government land revenue may be very proper, yet it may be prudent for the present to abstain from either remitting or promising the people any remission on account of the scarcity. I should deprecate promises of remission of land

revenue until such time as the development of the facts of scarcity shall have established the absolute necessity of such action.

- (6.) That the rate of wages on Khandesh relief works, where there is a mixed payment of cash and grain, may be a little too liberal; and perhaps this rate deserves a more detailed consideration on the spot than I am at present able to give.

RICHARD TEMPLE.

No. II.—MINUTE by SIR R. TEMPLE, dated Hyderabad, 12th January 1877.

I have had the advantage of meeting at Sholapur, and conferring on the condition and prospects of the country with some of the principal civil officers of the Deccan, with the engineer officers of the Sholapur district, and with Dr. Hewlett, the Sanitary Commissioner. These officers had, by the kindness of the Government of Bombay, been directed to meet me. The Revenue Commissioner, Mr. Robertson, had just visited the district of Ahmednagar, and he was able to describe generally the condition of the Dharwar, Satara, Belgaum, and Kaládgi districts; his information regarding the two latter districts was not quite complete or recent, because they are now under the supervision of Mr. Grey, the additional Commissioner, whom I was not able to meet. For the Poona district, Mr. Norman, the Collector, was able to give me complete information; while Mr. Grant, the Collector of Sholapur, and the engineers, Major Mathews and Mr. Burke, were ready with a full statement of facts with regard to the Sholapur district.

2. The area and severity of the failure of the crops may be thus shown for each district:—

Ahmednagar.—One-half severely affected, having secured only a one-anna crop at the autumn harvest; in this part of the district there will be only a one-anna spring crop. In the less distressed parts a six-anna (nearly half an average) crop has been secured. In the printed summaries, three-quarters of this district are shown as “affected,” but it was explained to me that only half is severely, the rest of the district being partially, affected.

Poona.—Half the district severely affected. In those parts the people ordinarily grow millet as a spring crop, and this has almost entirely failed; perhaps the year's harvest here may yield a one anna-crop. In the other half of the district, millet (bajra) is grown as an autumn crop, and the average yield will be a six-anna, or a little less than half an ordinary, crop.

Sholapur.—The whole district is severely affected. Part produces autumn and part spring millets. There has been no crop at all this season, save in small batches of irrigated land. On the whole the two harvests cannot yield more than a one-anna (one-sixteenth of a full) crop.

Satara.—One-third of the district is severely affected, and in this tract there has been a three-anna (less than a quarter) crop. In the rest of the district the harvests of the year will have yielded a six-anna (something less than half of a full) crop.

Kaládgi.—The failure of all the crops is complete and general, just as in Sholapur, and the yield of the year cannot exceed a one-anna (one-sixteenth of a full) crop.

Dharwar; Belgaum.—These two districts are in the same case: one-third of each is severely affected and will produce only a one-anna crop. Over the remainder of these two districts a six-anna (something less than half a full) crop will be secured all round.

3. For facility of reference I reproduce here the figures of the published summaries respecting the districts and areas affected, with the remark that the portions of Ahmednagar, Poona, Satara, Belgaum, and Dharwar, now said to be “severely affected,” are somewhat smaller than the areas shown in the published summaries, which are as follows:—

	Total Area in Square Miles.	Affected Area in Square Miles.	Total Population.	Population of Affected Area.
Ahmednagar	6,647	5,340	773,938	640,000
Poona	5,099	2,500	907,235	318,601
Sholapur	4,496	4,496	718,034	718,034
Satara	4,988	2,682	1,064,002	461,000
Kaládgi	5,695	5,695	816,037	816,037
Belgaum	4,591	2,660	938,750	501,000
Dharwar	4,564	3,000	988,037	630,000
Total -	36,080	26,373	6,206,033	4,084,672

4. Regarding the condition and character of the population of these districts, I am informed that in Dharwar, Belgaum, and Kaládgi the people are in general well off, the ryots are not much in debt, and they are believed to hold considerable stocks of grain. In Poona, Ahmednagar, and Sholapur, and to a somewhat less degree in Satara, a large proportion of the ryots are said to be in debt.

5. In all the seven districts the markets are well supplied with grain, which has been imported largely from other parts of India. The price of imported grain rules the market, though in most districts, except Sholapur, a certain amount of local grain is exposed for sale. Prices at the head-quarter towns and at large marts are near the same as were given* in the last printed summary. But prices are somewhat dearer in the interior away from the railway line. Generally speaking, I may say that prices are not, save in Kaládgi, dearer than 10 seers per rupee. Some weeks ago food was much dearer, and reached 10 lbs. per rupee in Kaládgi and 14 lbs. in Sholapur. The cheaper prices now ruling are due to the large importations which have taken place. If the present

* Prices for the last week, as given in the latest summary printed by the Government of Bombay:—

Ahmednagar	-	30	lbs. per rupee.
Poona	-	23	”
Sholapur	-	20	”
Satara	-	20 $\frac{1}{2}$	”
Kaládgi	-	17 $\frac{1}{2}$	”
Belgaum	-	20	”
Dharwar	-	19	”

rate of importations into the Deccan continue, and if the railway-borne grain can be distributed by local traders among the villages of the interior, there is ground for hoping that prices may not greatly rise over any large area of the country.

6. It is always difficult for local officers to give a confident opinion regarding the grain stocks. The people generally complain that the stocks are low. Mr. Robertson, the Commissioner, who has served for many years in these parts, tells me that, as a rule, the produce of the spring millet crops in the Deccan does not generally come into consumption until six months after the end of the harvest. Under this view there would even now be stocks in the Deccan equal to the demand of the country for some few months. Mr. Grant, the Collector of Sholapur, thinks that in some parts of his district where the crops of 1875-76 were short, the stocks must be very small. Mr. Norman, Collector of Poona, fears that the stocks cannot be large, for but little local grain has come out into the Poona market, which is mainly supplied with imported grain. Even these two officers, however, consider that there must be at least two or three months' supply of local grain in the country; and they expect that sufficient seed-grain, as well as a considerable quantity of local food-grain, will be forthcoming as soon as favourable rains fall. My own impression is that in the Deccan, as in other parts of India, there are still considerable local stocks in the possession of the people, while probably there are larger stocks than elsewhere in the comparatively rich districts of Dharwar and Kaládgi. Still these stocks cannot be expected to become largely available for general use, until there is some assured hope for next season's harvest.

7. The character of the previous year's harvests has on occasions like the present an important bearing on the capacity of the people to withstand a total failure of their crops. I find that the harvests of the year 1875-76 are said to have been as follows:—

Ahmednagar.—Good on the whole.

Poona.—Good in two-thirds of the district, but poor in one-third.

Sholapur.—Good in one-half, but bad in about one-half.

Satara.—Fair on the whole.

Kaládgi.—Good on the whole, and in parts very good.

Belgaum.—In parts poor.

Dharwar.—Good, except in the one-third now affected, where it was poor.

It would therefore seem that, except in Sholapur and a part of Poona, Belgaum, and Dharwar, the previous year left the people in a fair condition to meet the present failure.

8. The numbers of persons employed in relief works, according to the last published summary, are given in the margin. These figures agree very nearly with the totals now given me by the local officers. I was able to gain particulars regarding the Poona and Sholapur works only, and respecting them I note the following points:—

Number of persons on the relief works in the beginning of January:—			
Ahmednagar	-	-	30,087
Poona	-	-	47,000
Sholapur	-	-	93,120
Satara	-	-	21,108
Kaládgi	-	-	27,239
Belgaum	-	-	25,000
Dharwar	-	-	22,353
Total	-	-	265,907

9. *Poona Works.*—About 23,000 persons are on works under the irrigation officers and the Executive Engineer; all the rest (about 25,000) are on petty tank and road works under the civil officers. Taskwork or piecework is not exacted from relief labourers

under the civil officers; there is some supervision over the works, but not of the kind or strength requisite to enforce taskwork. The Collector would wish to enforce taskwork, and thereby to keep away people not actually driven by necessity. One-half the people are women and children; all of them are in good physical condition as in ordinary years, and the Collector, Mr. Norman, doubts if as many as one-half of his labourers are working from the fear of immediate want.

10. *Sholapur Works.*—About 25,000 people are employed under the engineers of the Irrigation and Public Works Departments, principally on three or four large works. Taskwork is enforced by Major Mathews, the Executive Engineer, on about one-half the labourers; the supervising staff is not sufficient to exact proper taskwork from the remainder. Recently 10,000 labourers left the Executive Engineer's works and went on the petty works under civil officers. All the departmental subordinates think, and Major Mathews agrees in their view, that a great number (perhaps half) of the workpeople are not driven to the works by the direct pressure of want. On the irrigation works Mr. Burke enforces taskwork, and his works are done at the ordinary rates. Recently, when relief wages were reduced proportionately to the cheapening of the price of grain, several hundreds left Mr. Burke's works and went to the petty works under civil officers. He, too, thinks that a great number of the labourers are not driven on the works by want. On all the works under engineering supervision the physical condition of the people is very good.

About 75,000 persons are employed upon a large number of petty works under the Sholapur civil officers. Of these more than half are women and children. No taskwork is exacted. There is some supervision, but until recently the Collector had no professional assistance. The workpeople are said to be in good physical condition. I was able myself to visit one considerable relief work a few miles outside Sholapur, where all the labourers appear to be stout and thriving. I ascertained also that a good number of the workpeople belonged to the classes who own a beneficial interest in the lands. Mr. Grant says that the state of some of the people was quite pitiable when they first came on the works two or three months ago. He believes that most of them are working to keep off starvation, for they have nothing but relief wages to depend upon; some few perhaps could get or borrow means of subsistence. He points out that in one tract (the Barsi Taluk), where the crops were good, he has only 800 labourers, whereas in the adjoining tract (Sangola Taluk), where the crops failed, some 18,000 are on the works. He says that some of the people on the works belong to the higher castes, who certainly would not come unless they were driven by want.

11. Mr. Robertson, the Commissioner, believes that a great number of the people are on the relief works who are not driven there by the pressure of actual present want. He considers that measures could be taken to reduce the number of labourers by making the labour irksome. But he points out that more professional engineering supervision and additional trustworthy subordinates are required to do this properly. He urges, and in this view the Collectors of Poona and Sholapur fully agree, that the bulk of the labourers should be concentrated on larger works, if competent professional supervision is to be adequately utilised. Mr. Grant gave me a list of 13 moderate-sized irrigation works which he recommends for the different sub-divisions (taluks) of his district; for some of these, plans and estimates already exist or are under preparation.

12. Dr. Hewlett, the Sanitary Commissioner, tells me that on all the relief works he visited, the workpeople were found to be strong and in good condition.

13. The rate of relief wages is the same which has been laid down by the Government of Bombay, namely, one anna in cash plus one lb. of grain or its equivalent in cash. This is the universal relief wage for able-bodied men, and the rate is proportionately lower. Mr. Burke, the Irrigation Engineer, showed that this sliding scale worked well in one instance, for on the price of grain cheapening, he recently reduced his relief wage to 7 anna in cash, and thereupon some hundreds of able-bodied men left the work. I am not able, after so hurried a visit to the Deccan, to say that this rate of relief wages is too high, but its working should be carefully watched on the spot, and if it proves too attractive in drawing to the works large numbers of people who are apparently well off, the rate might be reconsidered. When arrangements for exacting taskwork are complete, all persons who will not do a full day's work should get less than the present rate. In a country where the women and children of a family work, and where the helpless poor are to receive charitable aid, the relief wages should not at the outset exceed a bare subsistence. The local officers will be best able to say whether in the Deccan one lb. of flour and one anna per diem is or is not more than a bare subsistence for a single man. I am aware that it may seem hard measure to dole out bare subsistence to a hungry man who has to work all day, and I should be very glad if we could help the poor creatures more liberally; but it appears to me that the public purse and the general taxpayer cannot afford to relieve more than the barest necessities of the really distressed.

14. The Bombay Government has assigned to each district and to each sub-division (taluk, corresponding to a tahsil in Northern India) a sum of money to meet the cost of relieving the aged and helpless poor. The village officers (the patel and kulkarni) have prepared for each village a list of the blind, lame, lepers, and other absolutely helpless persons who are likely to require charitable relief, and the village officers have orders to relieve such people, and also to help starving travellers who may be found in their villages, all such disbursements being reported to the sub-divisional officer (mamlutdar). But as yet very little money has been spent out of the Government allotments. In the Poona district between 1,000 and 2,000 persons are being relieved from the Government grant; in Sholapur about 3,000 persons, and in Ahmednagar about 1,500, are being relieved by private charity. I had the pleasure of visiting three places in Sholapur where private committees distribute food daily to some thousands of applicants. All honour is due to the public who find the means for, and to the ladies and gentlemen who administer, such charity. But except the lame, the blind, the lepers, and the very aged, I did not see any applicants who would, under a strict view of the case, be fit recipients for State charity outside the relief works. I saw not a single one of those emaciated adults or of the unmistakeably famine-stricken children whom many of us saw with sorrow in the worst times of the Behar famine. Among the 1,700 children to whom the daily dole was being distributed, my eye did not detect one who was not plump and comparatively well clad.

15. The local officers pointed out that if village to village inspection be needed to save life, when the great pressure comes during the hot season, sub-circles will have to be formed under the sub-divisional officers, and the village staff will have to be strengthened in larger villages and in smaller towns. Mr. Robertson, the Commissioner, considered that in the most affected tracts a European relief officer would be required for each sub-division (taluk).

16. It was mentioned that suspension or remission of land revenue were being proposed in each district as follows:—

In the Ahmednagar district	6 lakhs	out of a total land revenue of	-	-	11 lakhs.
„ Poona	6	„ „ „ „	-	-	13 „
Sholapur	10	„ „ „ „	-	-	10 $\frac{3}{4}$ „
Satara	5	„ „ „ „	-	-	15 „
Kaládgi	6	„ „ „ „	-	-	12 „
Belgaum	5	„ „ „ „	-	-	14 „
Dharwar	4 $\frac{1}{2}$	„ „ „ „	-	-	22 „
Total	42	„ „ „ „	-	-	97 $\frac{3}{4}$ „

The Commissioner and the Collectors agree that if a bumper crop comes next year then much or most of the land revenue suspended this year could be collected. If two good years were to come, then all the suspended Government demands could be recovered. Four years ago in Poona the Collector succeeded in collecting all the land revenue suspended during the previous year.

17. The local officers laid stress on the difficulty and loss of cattle occasioned by the utter absence of green or any other fodder. The Bombay Government has done all that can be done by opening the forest reserves and helping to carry cattle thither. The Collector of Poona reported that in the affected part of his district no cattle are left, save a few pairs which ply in grain carts; all the rest have gone away to the grazing grounds in the hills. Some died on the journey. The cattle from Ahmednagar are said to have been driven off the hills, while some are

being fed at home on the produce of irrigated lands. In Sholapur the case is worse, for many of the cattle have been sold in the Nizam's territory, or died on the road to the hill forests beyond Poona.

Mr. Robertson and Mr. Norman say that the ryots themselves do not as yet feel afraid that their plough cattle will die before the rainy season begins. These officers believe that the deaths have been as yet mainly among the old cows and other worn-out beasts.

18. Relief labour is being employed to secure and improve the water supply. Already difficulty is being felt in some places; the great tank under the Sholapur Fort, which ought to have 10 feet of water all the year round, is now absolutely dry, and the city has been saved from a water famine by digging a channel from a neighbouring irrigation canal. The general drought all over the country, and the fact that less excessive failures of the water supply are of frequent occurrence, are strong reasons for preferring irrigation schemes to any other relief works in the Sholapur district.

19. *General Impressions.*—From my conference with the local officers, I have received the following general impressions, which, however, are open to future correction:—

- (1.) The civil officers know where and what degree of distress is to be expected and are ready to meet it with a full sense of their duty to the people and to the Government. So far as distress has come they have successfully met it.
- (2.) There has been extreme failure of crops, and there will probably be keen, far-extending, and prolonged distress in Sholapur and parts of Kaládgi, Ahmednagar, Poona, Satara, Belgaum, and Dharwar; but the people are, save in Sholapur, in fair condition to meet distress. As some measure of the degree of distress I subjoin the best estimate I have been able to procure from local officers of the largest number of persons who will be on the hands of Government at the worst time, that is, in the month of May.

	NUMBER OF PERSONS.		
	On Relief Works.	On Charitable Relief.	TOTAL.
Ahmednagar - - - -	100,000	10,000	110,000, or $\frac{1}{7}$ th of the population.
Poona - - - - -	100,000	10,000	110,000, or $\frac{1}{8}$ th ditto.
Sholapur - - - - -	250,000	25,000	275,000, or more than $\frac{1}{3}$ rd ditto.
Satara - - - - -	75,000	7,500	82,500, or $\frac{1}{12}$ th ditto.
Kaládgi - - - - -	100,000	10,000	110,000, or more than $\frac{1}{8}$ th ditto.
Belgaum - - - - -	75,000	7,500	82,500, or $\frac{1}{4}$ th ditto.
Dharwar - - - - -	75,000	7,500	82,500, or $\frac{1}{12}$ th ditto.

- (3.) There is some risk lest some of the civil officers in their anxiety to save the people from all distress should admit to relief works persons who could subsist for a time at any rate without State aid.
- (4.) It is necessary to exact taskwork rigorously from relief labourers, and for the accomplishment of this end, workpeople must be concentrated; additional professional assistance is needed.
- (5.) Additional assistance is required to enable district officers to inspect and watch the people of the severely affected tracts village by village.

20. In this minute I have stated the information as I received it from the local officers quite unreservedly. But I cannot conclude without offering my tribute of commendation to the zeal and ability with which the threatened famine is being combated by the local officers. And though I certainly think that some economy in expense may be introduced, I believe that the Local Government may be congratulated on the manner in which the substantial safety of some five millions of people is being secured under circumstances of much danger.

RICHARD TEMPLE.

III.—MINUTE BY SIR RICHARD TEMPLE, dated Hyderabad, the 12th January 1877.

Having passed through the Bombay Presidency, and having had the advantage of conferring with some of the officers engaged on relief operations, I have to present the accompanying estimate of probable relief expenditure, together with the following remarks, premising always that the necessity of proceeding onwards has caused my time to be very short, and that consequently my facts and comments are subject to correction.

2. The three striking features in the scarcity of the Bombay Presidency are—

- (1.) The utter and entire failure of crop in the worst affected tracts, hardly admitting of even one-anna yield out of the sixteen annas (assumed good crop) being expected.
- (2.) The extraordinary activity of private trade, supplying fully with grain the markets in large districts which had suffered total loss of a whole year's harvest.
- (3.) The comparative cheapness of prices in these districts, averaging from 20 to 24 lbs. the rupee for common food grains.

3. The sum total of the estimated expenditure may be stated at one and a half million sterling (1,500,000L.), as compared with 1,300,000L., the original

* Major-General Kennedy's letter of 30th November. estimate as furnished* by the Government of Bombay. It is possible that this estimate may be exceeded in one or two respects, namely, the total number on the 1st May may be

greater, and the distress may be prolonged somewhat beyond the time contemplated, that is, the end of July. Even if, however, these points should turn out unfavourably, still it would appear that the total would not exceed one million and three quarters, and would be kept within two millions. The present estimate seems to vary from the previous estimate, in that the number of relief labourers is rather more than the anticipation at the beginning of the scarcity, and rather less at the worst period. There seems to be no doubt that whatever distress threatened to break out in the beginning has been stopped by the action of the authorities, and that the threatened famine is being kept well under hand. The only question now claiming consideration is whether circumstances do not admit of severe economy of expenditure being introduced in several respects.

4. If the expenditure shall be kept within the limit of 1,500,000 ₹ , or even of 1,750,000 ₹ , the result may be regarded as satisfactory, seeing that the scarcity in its severest form has settled down upon

POPULATION of the distressed areas in each district affected by the scarcity in the Bombay Presidency.

Khandesh	-	-	-	646,944 persons.
Nasik	-	-	-	250,000 "
Ahmednagar	-	-	-	640,000 "
Poona	-	-	-	318,601 "
Sholapur	-	-	-	718,034 "
Sattara	-	-	-	461,000 "
Kaladgi	-	-	-	816,037 "
Belgaum	-	-	-	501,000 "
Dharwar	-	-	-	630,000 "

Total - 4,981,616 persons,
or say five millions.

the whole of the districts of Sholapur and Kaladgi, upon half of the districts of Ahmednagar and Poona, and about one-third of the districts of Sattara, Dharwar, and Belgaum, besides scarcity to some degree in the districts of Khandesh, Nasik, and Ratnagiri. The numbers of the persons thus affected amount to five millions, this being the total in the printed returns, to which I find the local authorities still adhere. For facility of reference the number for each district is given in the margin. Out of this total it is now estimated that at least 950,000 will be receiving relief in some shape or other during the month of May,

the number at the beginning of the current month, January, being about 300,000 persons.

5. But if the expenditure is to be kept within this limit, certain points seem to me to deserve special attention, namely:—

- (1.) The exaction of taskwork upon all the lesser works under the district officers, upon most of which works I fear that it is not at present exacted in the same manner as it is upon the works under engineering authorities. The present work is thought to be not hard enough.
- (2.) The withholding of admission to the relief works in the case of those persons who do not appear to be in a depressed condition. Most of the officers whom I consulted seem to think that a certain proportion of those now on the works are not in absolute want.
- (3.) The concentration, until at least the 1st April, of relief labourers, under the civil as well as under the engineering authorities, upon works of those larger descriptions which admit of professional supervision.
- (4.) Special caution in the admission to the relief works of ryots and others whose names are registered as possessing tenures or under-tenures in land, as it is to be presumed that, for the present at least, such persons would either have some little store of grain or some means of raising money wherewith to buy food. I am informed that a certain, perhaps a considerable, number of these persons are already being employed on the works, and the necessity of this appears to me doubtful.
- (5.) Great care in admitting to charitable relief from State funds those who may be unable to work. I saw at Sholapur some thousands in receipt of organized and most praiseworthy private charity, among whom were great numbers that were not in such extremity as to render them absolutely eligible for charitable relief at the public expense.

6. I fear that unless economy be carefully and persistently exercised in the respects I have mentioned, it may not be possible to keep the total relief expenditure within the totals of the estimate which I now offer.

7. If severe economy be exercised in the above respects, as apparently it ought to be exercised in the financial interests of the State, then it will be necessary to organize an effective system of inspection village to village, and as the season advances from house to house. If the labour tests and such-like precautions be rigid, then it is always possible that individuals who, from one cause or other, are unable to answer those tests, may drop into dangerous distress. If then there be no village inspection, such persons might perish; but if there be village inspection they cannot perish, for their condition will be discovered, and they will be immediately brought up before the nearest relief authority.

8. I understand that the local authorities already have some such system of inspection, though it is far from being complete, and that the Local Government is engaged in prescribing some such organization. All that I can add, therefore, is that the time is fast approaching when this organization must for the safety of life be set on foot throughout the most affected districts. For this purpose assistance in officers and in officials may be needed from elsewhere. When famine was combated in other provinces, Bombay furnished many excellent men; now when Bombay is herself distressed, she is entitled to similar assistance from her neighbours.

9. Such establishment will of itself involve some expense. But such expense will be slight as compared with the general expenses of the scarcity, and will really tend to a large economy, because it will enable the district authorities to insist upon severe and rigid labour tests (to a great saving of expense), which they could not otherwise venture upon.

10. Again, if the relief labourers are to be concentrated much more than at present upon works of larger description, the engineering establishment, both superior and subordinate, ought to be greatly and immediately strengthened. For instance, there are many small irrigation projects strongly recommended by the local authorities of the Deccan, upon the carrying out of which relief labour might be employed, but which cannot be properly prosecuted for want of professional assistance.

11. All the officers whom I met appeared to be animated by a zealous desire to do their work during this crisis to the satisfaction of Government.

12. It is impossible to conclude this brief review of the prospects of the scarcity without noticing the probable suspension and the possible remission eventually of considerable portions of the land revenue. So far as I can learn from the local authorities, the amount of land revenue recommended to be suspended in each of the affected districts is as follows:—

Khandesh	-	-	-	-	5 lakhs of rupees.
Nasik	-	-	-	-	3 ditto.
Ahmednagar	-	-	-	-	6 ditto.
Poona	-	-	-	-	6 ditto.
Sholapur	-	-	-	-	10 ditto.
Sattara	-	-	-	-	5 ditto.
Kaladgi	-	-	-	-	6 ditto.
Belgaum	-	-	-	-	5 ditto.
Dharwar	-	-	-	-	4 ditto.
Total					50 lakhs, or half a million sterling.

Looking to the utter failure of a whole year's crops, I much fear that a suspension of land revenue to a large amount (though we hope not so large an amount as that above stated) will be necessary. But further, I understand that proposals are also being made to the effect that the revenue suspended be remitted, and this too within the current year. If this shall be done, then a virtual addition of full half a million sterling to expenditure on the famine will be involved, which is of course a very serious consideration. On the other hand, I understand from some of the local officers (though this is a point upon which opinions differ) that, if the rainy season should be propitious during the next and also the ensuing year, it might be possible to collect much if not all of the revenue suspended during the present year. I am aware that some high authorities in the Deccan have deprecated the subsequent collection of land revenue once suspended. But I would suggest that in regard to the important financial interests concerned, this matter receive further consideration, and that in the meanwhile suspension only of land revenue be allowed, and that no remission whatever be now promised to the people.

RICHARD TEMPLE.

ESTIMATE OF PROBABLE RELIEF EXPENDITURE (irrespective of Suspension or Remission of Land Revenue) in the Bombay Presidency, founded on the data supplied by some of the local officers to Sir Richard Temple, at Sholapur, on the 11th January 1877.

The materials for the tabular Statement A., on which the present estimate is based, were obtained for each district as follows:—

Khandesh and Nasik.—From local officers who met Sir Richard Temple on the 8th and 9th of January.

Ahmednagar.—From the Commissioner, Mr. Robertson, who met Sir Richard at Sholapur, and who had just come from Ahmednagar, and had received nearly all the taluk reports, framed in obedience to the requisition made by the Honourable T. C. Hope's letter of the 30th November.

Poona.—From Mr. Norman, the Collector, who has received all the taluk reports for his district, and whose estimates are accepted by the Commissioner, Mr. Robertson.

Sholapur.—From the Collector, Mr. Grant, who has received, but does not fully agree in, the taluk reports of his subordinates, but whose estimate is generally accepted by the Commissioner, Mr. Robertson.

Sattara.—From Mr. Robertson, the Commissioner, who has not yet received the taluk reports, and therefore speaks from general knowledge and previous reports only, subject to future correction.

Kaladgi.—From such information as Mr. Robertson could give from his acquaintance with the neighbouring district of Dharwar. As the Kaladgi district is now under the additional Commissioner, Mr. Grey, the estimates framed by Mr. Robertson are open to correction.

Belgaum.—From the same source and subject to correction as in the case of Kaladgi.

Dharwar.—From Mr. Robertson, who has recently been transferred from Dharwar, and whose eight years' experience of the Dharwar district makes him most competent to form a correct estimate of Dharwar prospects.

2. Private trade has hitherto brought into the distressed districts as much grain as the railway and coast boats could carry; and there is every prospect that private trade will be actively maintained to the end of the present crisis. There is therefore no need to estimate, for the present at any rate, any Government expenditure on account of the purchase or transport of foreign grain.

3. The chief item of public expenditure will therefore be the payment of labourers on relief works. The present and estimated future number of relief labourers in each district is shown below for the first four dates of 1st January, 1st March, 1st May, and 1st July.

STATEMENT A.—ESTIMATED NUMBER of PERSONS expected to be on RELIEF WORKS on specified dates.

Name of District.	Number of Persons on Relief Works in the beginning of January 1877.	Estimated Number of Persons who will be on Relief Works		
		On the 1st March.	On the 1st May.	On the 1st July.
Khandesh - - - - -	4,000	8,000	15,000	5,000
Nasik - - - - -	18,000	20,000	30,000	10,000
Ahmednagar - - - - -	30,000	64,000	100,000	43,000
Poona - - - - -	47,000	68,000	100,000	55,000
Sholapur - - - - -	93,000	150,000	250,000	100,000
Sattara - - - - -	21,000	45,000	75,000	30,000
Kaladgi - - - - -	27,000	70,000	100,000	40,000
Belgaum - - - - -	25,000	50,000	75,000	25,000
Dharwar - - - - -	22,000	50,000	75,000	20,000
Add for Ratnagiri and Colaba, where some relief may be required.	5,000	15,000	50,000	12,000
Total - - - - -	292,000	540,000	870,000	340,000

For explanation of some of the figures in the foregoing table it may be noted—

(a.) The estimated total of labourers in Khandesh and Nasik is somewhat higher than the figure taken in Sir Richard Temple's minute of the 9th January, because the information given by Mr. Robertson, the Commissioner of the Southern Division, shows the failure of crops in the districts south of Khandesh and Nasik to have been extreme.

(b.) As the failure of crops in Kaladgi is said to have been as complete and as general as in Sholapur, it may seem extraordinary that a maximum of 100,000 labourers is expected in Kaladgi, when the expected maximum for Sholapur is 250,000. But Mr. Robertson, the Commissioner, explains that in Kaladgi the people are generally well-to-do, they are thrifty and possess stocks, whereas the ryots of Sholapur are much in debt, and possess but very small stocks. Furthermore, Kaladgi had an excellent harvest in 1875-76, whereas in Sholapur there was a poor crop in that year.

(c.) The figure given for Ratnagiri and Colaba is based upon Mr. Robertson's estimate.

Distress has but very recently been reported from these districts, and the failure of crops occurred in the hill tracts only. The rice crops of the Konkan lowlands were very good. Under these circumstances, Mr. Robertson does not anticipate that any large section of the people will require relief in these two districts.

4. Taking the estimated number of relief labourers on the several dates at the figures given in the foregoing table, the local officers now at Sholapur consider that—

- (1.) For the months January, February, March, the average number of relief labourers may be about the mean between the totals on the 1st January and on the 1st March.
- (2.) For the months April, May, and June, the average number of relief labourers may be about the mean between the totals on the 1st March and the 1st May.
- (3.) That the numbers requiring relief after the end of July will, if the rainy season opens favourably, be extremely small, and that an estimate of 340,000 labourers for the whole of July will suffice to cover the few labourers who may remain during August.

5. The local officers consider that one-tenth of the estimated expenditure on relief labourers will suffice to cover all charges on account of charitable relief from State funds, inclusive of the charge for additional dispensaries and hospitals. Up to the present time the expenditure on charitable relief is being defrayed mainly from private charity; but later in the season some considerable outlay may have to be incurred on relieving the destitute and incapable poor near their homes.

6. It is necessary to estimate for some considerable expenditure on extra establishment, inclusive of the additional engineering staff, that must be borrowed from other provinces for the efficient supervision of the relief works. 12 per cent. on the relief works' estimate may perhaps suffice to cover all expenditure on extra establishments and on contingencies, such as the transport of cattle and storage of grass.

7. The summary published by the Bombay Government on the 5th January showed the total expenditure on relief works up to the latest known date to have been 12 lakhs. But this total does not include all outlay on works and establishment up to the end of December, and therefore a sum of 14 lakhs has been taken as the total expenditure incurred up to the 1st January 1877.

8. According to the above views, the total estimated expenditure, provided that the country is blessed with a favourable rainy season in 1877, will be

January to March, 416,000 persons per month, for three months, at Rs. 3 per month-	Rs.
April to June, 705,000 persons, for three months, at Rs. 3 per month -	37,44,000
July, 340,000 persons, for one month, at Rs. 3 per month -	63,45,000
	10,20,000
Total -	1,11,09,000
Add for charitable relief at 10 per cent. on the relief expenditure -	11,00,000
Estimate on account of extra establishments and contingencies at 12 per cent. on relief works outlay, say -	13,00,000
Add estimated total of expenditure up to the end of December 1876 -	14,00,000
Total -	1,49,09,000

Or - £1,490,900

Or say 1½ millions sterling.

9. This estimate will be exceeded if economy should fail to be practised; if Government should unfortunately have to undertake any operations for the purchase or transport of grain (which is not likely); if the anticipations of local officers regarding the extent and severity of the scarcity be anywhere largely exceeded; or if relief should have to be carried on for a longer period than is now expected. Even if rain were to fall this month, there could not, the local officers fear, be any considerable present relief to the people, although much benefit would accrue to the cattle of the affected tracts. If, however, the local officers should have over-estimated the difficulty (which is not probable), then the estimate now presented may turn out to be excessive.

C. E. BERNARD,
On special duty.

Hyderabad, 12th January 1877.

IV.—MINUTE by SIR RICHARD TEMPLE, dated Hyderabad, 12th January 1877.

There is one matter connected with the supply of grain to the districts of Southern India, where the crop has failed, to which I wish to draw immediate attention, in order that a remedy may be, if possible, applied.

2. The affected districts are traversed by guaranteed railway lines, and private trade has been so active in sending grain into the country, that there has not been, and I hope there may never be, any question of Government buying grain and carrying it into the affected tracts of the Bombay Presidency. But there seems to be a serious block in the railway traffic, and I fear that the block may act very injuriously upon the active private trade which has hitherto flourished. I am aware that this great grain traffic has come suddenly on the railways, and that the railway agents and traffic managers have, especially on the Great Indian Peninsula Railway, made great and not unsuccessful efforts to meet the sudden demand. But I hope the difficulties in the way of still greater success in this respect may be overcome.

3. I have as yet visited the Bombay Presidency only, but I have ascertained that in its districts there has been a failure of the food crops over areas inhabited by five millions of people. The markets from which these people draw their daily food are now supplied almost entirely with grain imported by the Great Indian Peninsula Railway. Again, it is well known that the food crops of a still larger population in the Madras Presidency have failed, and that some millions of people in Madras would consume railway-borne grain if only they could get it.

4. Thus we have at the south a very large and a very urgent demand. And we have also in the north a very large, practically an unlimited, supply. In the Berars, in the Central Provinces, in the Punjab, in the North-western Provinces, and in Behar, there has been a good autumn harvest, and there is every prospect of a good spring harvest. All these provinces moreover produce in good years more than they can consume. They have therefore a large surplus. The importance of rapidly conveying this surplus food to the scarcity stricken districts is too manifest to need exposition. But, while much is being conveyed, there is a portion unfortunately lagging behind. Now, I learn that at the beginning of this month 12,000 tons of grain were said to be waiting for waggons at Cawnpore, 5,000 tons were waiting at Nagpore, and large quantities (as I saw myself) at several of other stations on the East Indian Railway, on the Jubbulpore extension on the Nerbudda Valley line, and at the Berar stations. Even to-day, at a station in the Nizam's country east of Goolburga, I saw several hundreds of bags of grain ready for transport to Bellary, one of the Madras distressed districts. In all these cases the dealers complained to me of delays; in some cases the delays were said to be excessive.

5. During my journey upon the Great Indian Peninsula Railway, I found that not only was grain waiting at many stations to be put into waggons, but below the Bhore Ghât I found 900 loaded grain waggons, stretching over four miles of line, which had been turned into a siding below the Kurjut station. I was told to-day that 400 more loaded grain waggons, consigned to the Madras districts, are standing on the Great Indian Peninsula Railway line between Goolburga and Raichore. I have been informed that general instructions have been issued to all the Great Indian Peninsula Railway stations not to consign any grain, until further orders, for stations above the Thull Ghât, that is to say, for stations in the famine country. And it has been explained that the cause of the block at Kurjut and at Raichore is, that the Madras Railway is unable to take any more grain at present, although nearly all the grain now standing on the line (that is to say, about 1,300 waggons, or 9,100 tons, at Kurjut and Raichore) is consigned to stations on the Madras line.

6. The evil effects of this block and of the stoppage of consignments to the distressed tracts are manifold. The price of food in the distressed tracts is kept higher than it ought to be.

Up-country dealers, who, if they could get their grain into the Madras districts moderately quickly, would certainly continue to send more and more, are becoming wearied by delays and consequent losses, and they may give up the business. I am informed that dealers at Nagpore have actually sold their grain at the Nagpore station, and given up their venture, because they could not get their bags away. And further, there is always a doubt whether, now that fodder is so very scarce, grain carts will ply in sufficient numbers from the railway stations into the interior of the affected districts. If a good and continual supply arrives at the stations, the cartmen will get constant work and good prices, and so a sufficient quantity of carriage may be maintained. If the supply of grain falls off, the cattle will be driven away to the hills, and there will be a dearth of carts in the spring and summer months to distribute grain from the stations into the interior.

7. All I can do at this moment is to report the actual block without undertaking to specify the causes or the remedies required. It may be that additional engine power is required; that more crossing stations or sidings are necessary; that rolling stock ought to be borrowed; that some change in the working of trains is required; or that the working staff should be strengthened. I cannot at present say what the causes of the block may be. But I think immediate steps should be taken to ascertain what (if anything) is wrong, and to apply such remedies as may be possible. I suggest that a very active officer of the Government of India Railway Department be at once deputed to visit the Great Indian Peninsula

* NOTE.—I believe reserved stocks of unconstructed portions of engines may be in store at Jamalpore on the East Indian Railway, at Byculla on the Great Indian Peninsula Railway, and perhaps at other places.

and Madras Railways, and to confer with the traffic authorities upon the matter. The officer selected should have authority to sanction on behalf of Government such outlay on temporary sidings, on borrowing engines and rolling stock, on setting up at once such new engines as may be in stock* on the different guaranteed railways. And the officer deputed should be directed to stay on the Madras (or other blocked, Railway, until all that he recommends shall have been done, and until the grain traffic is working as well as circumstances permit. With such officer there should, I think, be associated a selected civil officer of special experience in traffic matters.

RICHARD TEMPLE.

Revenue, No. 24.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 15th March 1877.

Para. 1. The Despatch of your Excellency in Council, dated 19th January, No. 4 of 1877, forwarding a copy of the instructions to Sir Richard Temple with reference to his mission to the Bombay and Madras Presidencies, has been considered by me in Council.

2. I approve of the policy which you have laid down for the guidance of Sir R. Temple. The object of saving life is undoubtedly paramount to all other considerations. But it is essential that in pursuing this end your officers should sedulously guard against the danger of inducing the population to rely upon Government aid rather than upon their own industry and thrift. In the interest of the distressed population itself, as well as of the taxpayers generally, you are bound to adopt precautions against indolence or imposition, similar, so far as the circumstances of India will permit, to those with which, in this country, it has always been found necessary to protect the distribution of public relief from abuse.

3. I observe with much satisfaction that your Government is taking into serious consideration the question of the incidence of famine charges, to which your attention was called in my Despatch of the 25th November 1875, and I can assure you that in carrying out the principles laid down in that Despatch your Excellency may count on my cordial support. The practical application of them is not free from difficulty; and I shall await with great interest the communication of the measures by which you propose to carry them into effect.

4. Four minutes on the condition of the affected districts in Bombay, submitted by Sir R. Temple to your Government, accompany the Despatch under reply. These show that the prospect is very serious, especially in Sholapur, but I perceive with satisfaction that Sir R. Temple bears testimony to the zeal and energy of the authorities in the distressed Collectorates. If the first conditions stated in the fifth paragraph of the third minute, dated 12th January, are kept carefully in view and vigilantly acted on, I trust the expenditure in relief operations in the Bombay Presidency may be kept within the limit indicated by Sir R. Temple of 1,500,000*l.*, or perhaps 1,750,000*l.*

5. The requisitions by Sir R. Temple for an increase in the supervising, and especially in the engineering, staff, will, I am confident, have received the best attention of your Excellency in Council.

6. I approve of the instructions to the Government of Bombay to abstain at present from making or positively promising remissions of land revenue.

7. Your telegrams have informed me of the arrival of Sir R. Temple at Madras; I may, therefore, expect at an early date the remarks of that officer on the condition and prospects of the districts in that Presidency which have been so severely affected by the present calamity.

I have the honour to be, &c.

(Signed) SALISBURY.

No. 5 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Calcutta, the 26th January 1877.

In continuation of our Despatch of the 19th instant, on the subject of the

Memoranda by Mr. Bernard, Nos. V. and VI., dated 16th Jan. 1877.

Minute by Sir R. Temple, No. VII., dated 19th Jan. 1877.

Memorandum by Mr. Bernard, No. VIII., dated 19th Jan. 1877.

Minute by Sir R. Temple, No. IX., dated 20th Jan. 1877.

Telegram from Sir R. Temple, dated 22nd Jan. 1877.

Ditto ditto 20th "

Letter from ditto ditto No. , dated 18th Jan. 1877.

" to ditto ditto No. 57, dated 16th "

" from ditto ditto No. 260C.-W., dated 9th Dec. 1876

" to ditto ditto No. 1T., " 20th "

" from ditto ditto No. 22C.-W., " 8th Jan. 1877.

" to ditto ditto No. 90, " 23rd "

Telegram from Sir R. Temple, dated 23rd January 1877.

war. There have been showers in Násik, Ahmednagar, and Sholapur, and a heavy storm in Khandesh, which has injured the rabi crops and washed away those in the beds of rivers.

3. In the Madras Presidency slight rain has fallen in parts of the Kistna, Nellore, Chingleput, and North Arcot districts, but without practically improving the position of affairs. In Bellary there has been a large reduction in persons on the works, but this is nearly counterbalanced by increases in some of the southern districts, the condition of which is undoubtedly serious. The total number on the relief works is 1,015,835, independently of persons receiving gratuitous support.

4. Sir Richard Temple has visited all the central and southern districts of the Madras Presidency, and is to reach Madras to-day, for the purpose of conferring with the Local Government. We have received, and enclose herewith, three memoranda from his secretary, Mr. Bernard, on the condition and prospects of the Kurnool and Bellary districts, and the organization of relief in the former, as also two minutes from Sir Richard himself, suggesting means of reducing and controlling relief expenditure in the districts of Bellary, Kurnool, and Cuddapah, and commenting on their condition. Regarding these districts, he makes very important suggestions, the result of which he estimates, in a separate telegram, will be a reduction in expenditure of 10 lakhs of rupees per mensem. You will observe, from other telegrams from him which we enclose, that Sir Richard Temple considers that relief operations in North Arcot are cheaply and efficiently conducted as compared with those in Cuddapah; that there has been some mitigation of the block of grain on the railways, but that the Madras line is still unequal to the demand for carriage; and that he has submitted to the Bombay Government suggestions analogous to those sent to Madras, whereby he hopes that 25 lakhs of rupees may be saved.

5. With reference to the subject of suspending instead of remitting arrears of land revenue, we have commended to the consideration of the Madras Government a suggestion from Sir Richard Temple in favour of suspension only for the present. On the other hand, we are led by a telegram from the Bombay Government, of which a copy is enclosed, to anticipate objections from that Government to the instructions which we issued, as reported in our last Despatch; but the promised communication has not actually reached us.

6. In connexion with your Lordship's telegram of the 16th instant, and our replies of the 17th and 23rd instant, we have to report we have authorised the Madras Government to begin the Chingleput Extension Railway if, after consultation with Sir Richard Temple on the condition of the Chingleput district, they consider the measure to be necessary.

7. The inconvenience and irregularities arising from delegating to Collectors in the Bombay Presidency the important power of commencing relief works without the previous sanction of the Revenue Commissioner having come prominently before us, we have requested his Excellency the Governor in Council to take steps for its withdrawal, and enclose a copy of our letter on the subject.

8. In continuation of paragraph 6 of our Despatch of the 12th instant, in which mention was made of slight distress in the Colaba and Ratnagiri districts of the Bombay Presidency, we enclose copies of correspondence connected with those districts and the opening of relief works in Kanara, from which your Lordship will see that we have found it necessary to lay down, as a general principle, that the British Government is not under any obligation to provide extensive relief for the subjects of Foreign States.

9. In conclusion, we would invite your attention to a telegram from Sir Richard Temple in which he shows the application of certain paragraphs of our instructions to the condition of affairs in Madras and Bombay.

We have the honour to be, &c.

(Signed) LYTTON, &c.

No. V.—MEMORANDUM regarding the condition and prospects of RELIEF AFFAIRS in the KURNOOL DISTRICT, as ascertained at Sir Richard Temple's Conference with the Local Officers on the 14th and 15th January 1877.

The officers who met Sir Richard Temple at Kurnool were Mr. Davidson, who had joined the district as Collector about a fortnight previously, and Messrs. Clogstown and Gibson, civil servants of 12 years' standing, who had been deputed to Kurnool for relief duty about six weeks ago; Mr. Latham, Chief Engineer of the Irrigation Company, was also good enough to furnish valuable information. Rajasatna Modeliar, Deputy Collector, deputed on relief duty to the south of the district, met Sir Richard at Peapally; and at Kurnool a conference of some 25 of the chief local traders was held, from whom information regarding the grain trade was obtained. As Mr. Davidson's heavy current duties had prevented him from fully acquainting himself with all that had happened before his arrival, he introduced to Sir Richard Gopaul Krishwama Chetty, Deputy Collector, and also the Dewan (Native Superintendent) of the Collectorate Office, both of whom had served long in the Kurnool district, and had been much trusted by successive Collectors.

2. All the ordinary crops of the year 1876-77 have failed over the whole of the district; and the only areas from which any appreciable yield has been, or will (by March 1877) be, secured are the lands watered from wells or by the Irrigation Company's canal. The ordinary acreage of Kurnool food crops and the estimated yield of the current year is as follows:—

	Area sown in the last ordinary year.	Estimated yield of the current year's crop.
Cholum (or jowari or big millet)	904,000	Two annas, or $\frac{1}{8}$ of ordinary good crop.
Korra (a lesser millet)	322,000	Half-anna, or hardly any appreciable yield.
Arkalu, small poor grain	142,000	Ditto ditto ditto.
Cumboo (a lesser millet)	83,000	Ditto ditto ditto.
Rice (both early and late crops)	74,000	Two annas, or $\frac{1}{8}$ of an ordinary yield.
Ragi (lesser millet)	17,000	Ditto ditto ditto.

The cotton crop, which covered during the previous year 202,000 acres, also failed utterly.

It is noteworthy that though the canal is in full working order, and can water from 20 to 300,000 acres, yet in 1875-6 only 9,000 acres took canal water. Even in the present famine year nine-tenths of the canal water ran to waste until November, and about two thirds is going off unused; though Government has engaged to pay the water rent this year on lands which may take water, and yet fail to produce a good crop.

The only crops which have given any appreciable yield are cholum and rice, and this yield has been secured on the irrigated lands only. About 16,000 acres are irrigated from tanks and wells, and 72,000 acres have this year taken canal water. The present utter failure was due to the short rainfall; the average yearly rainfall of the district for the last three years being $32\frac{1}{2}$ inches,

while the average rainfall of 1876-77, from June up to the end of December, was $5\frac{1}{4}$ inches for the whole district, ranging from $2\frac{1}{2}$ inches in the Markapore to $8\frac{1}{4}$ inches in the Nadial taluk.

3. The harvests of the preceding year 1875-76 were fairly good all round; in the year 1874-75 there was too much rain, and the yield was below the average. After the irrigated crops now in the ground shall have been reaped, the first food crop will be the cholum (millet). If the rainy season is favourable, about two-thirds of the whole cholum crop of the district will be ripe in September. The rest (about one-third) of the cholum is a winter crop, and is reaped about

January. Some, but only a small proportion, of the lesser millets will also ripen in September. The district ordinarily produces quite enough food for the support of its people. The staple food of the ryots and poorer classes is millet (cholum, korra, arkalu, and cumboo); the richer classes eat rice. A good deal of rice is ordinarily imported into the district from the Nizam's territory, while other food grains are exported to Bellary and Cuddapah.

4. The total population of the Kurnool district is 912,000. Kurnool is the only large town with a population of 35,000. The people mostly live by the land; the weaver, pariah, and other labouring classes being roughly estimated at about one-third of the whole. There are 85,000 ryots holding land directly from Government, besides some 10,000 to 12,000 privilege holders (inamdars) of different kinds. About 35,000 of the ryots have substantial holdings, and out of these 4,000 hold really considerable farms, but 50,000 ryots possess small holdings of about six acres and under. The trading classes are numerous and prosperous, but it is said that more than three-quarters of the ryots are heavily in debt, and have mortgaged their land or their bullocks. To the eye of a man from Behar the Kurnool peasantry look well clad and prosperous, but the local officers say that the great bulk of the people have neither stocks nor credit to fall back upon, and that as there is no work to be done in the fields they have no means of earning their living off the relief works. It is urged also that the immense increase of thefts and dacoities in the autumn evinced the straits to which the people were driven, especially as violent crimes of this kind almost ceased when relief works had been everywhere opened. There is an abundance of roomy bullock carts (of the Madras bandy type) in the district, and these ply freely over the roads of the plain country, but the district is intersected by rocky hills, on the passes of which the large carts ply with difficulty.

5. The grain markets are at present fairly well supplied with rice and cholum. Part of the supply comes from home stocks, and part is imported from the Nizam's country, or from stations on the railway, to which it comes from Madras and from Central India. On only a very few of the more remote relief works have the labourers been on occasions unable to buy food locally. Importations of grain have slackened somewhat lately; the traders explain that prices are cheaper since Government grain began to come, and so the profit on importations from a distance is smaller and less certain.

6. The present prices of grain in Kurnool are—

Cholum	-	-	-	-	-	8½ seers per rupee.
Common rice	-	-	-	-	-	6½ " "

The average price of cholum at Kurnool during the last three years has been 28 seers per rupee. Some weeks ago prices were dearer than they are now, having touched 6½ seers for cholum, and 5 seers for rice. The prices quoted for Kurnool apply to most of the chief markets in the district, for they, too, draw supplies direct from railway stations.

7. For some weeks past Government has been importing rice from Madras (believed to be Cocanada rice) into Kurnool by railway. It is understood that the Government propose to import 2,000 tons (about 54,400 maunds) of rice into Kurnool per month for four months. The price at which this grain is being put down at Kurnool is not precisely known to the local officers. The Collector has also bought grain in the local markets, and is making contracts with Kurnool traders for the supply of some 3,000 tons for his relief works. About 33,000 maunds (1,200 tons) of Government grain have already been expended, and out of this total 13,200 maunds consisted of grain purchased locally.

8. Relief is being given to the people mainly in the shape of wages for labour on relief works. Employment is given mainly on some 250 miles of roads and cross-roads, and the people are engaged in throwing up embankments, making cuttings, and in collecting, stacking, spreading, and consolidating road metal. On one large tank 10,000 people are said to be employed, but on the whole a comparatively small number only are on tanks and petty village works. As the

* Interest on its capital is guaranteed by Government, and the whole charge for interest has hitherto fallen on the public treasury. Irrigation Company's canal is a private* concern, no relief labourers are employed on canal extensions, although the canal engineers are understood to have on hand schemes for such extensions.

9. The total number of persons returned as employed on relief works in Kurnool on the 6th January is 320,338. Up to that date everybody who applied was taken upon the works, and received a daily relief wage which at one time was 3 annas a day. During the last three weeks the rate has been 2½ annas a day, and this week it is being reduced to 2 annas a day. For some few days a corn wage of ¾ of a seer (1½ lbs.) of rice was given. These rates are for adult males, the wages for women and children being proportionately lower. A full day's wage is paid, but no labour is exacted for Sunday. It is not possible to say precisely how many of these persons on the returns are women, and how many children, for biggish boys are rated as women. But among the workpeople (some thousands) whom Sir Richard Temple saw on works round Kurnool the great majority seemed to be women and children. None of the workpeople whom he saw bore on their persons signs of present or past want; and their clothing was certainly better than the raiment of ordinary day labourers in other parts of India.

10. Thirteen lakhs of rupees have already been spent on Kurnool relief works, and the present expenditure is at the rate of about Rs. 30,000 a day. The engineering staff of the district is small† for the work now doing; and hitherto no taskwork or piecework has been exacted from the labourers, who spend a certain number of

hours on or near the works, and go back to their homes in the evenings. In only a very few instances did Sir Richard observe that labourers had put up temporary shelter for them close to works, though it was said that some of them come from villages 7 or 8 miles away. The workpeople are mostly paid under the supervision of civil officers of different grades, though the services of the engineering officials are fully utilised as far as they go. A revenue inspector, on a salary of Rs. 20 a month, who was employed near the Gooty road, said that he had 10,000

† 1 engineer.

3 assistants or other range officers.

8 overseers, one for each taluk.

4 extra overseers ordered from other districts, and now arriving.

relief labourers under him, whom he managed and paid through gomashtas (clerks) and maistries (gangmen). Mr. Clogstown, the Kurnool relief officer, stated that the coolies whom he had employed in the grain store at 4 annas a day complained that the work was too hard, and went off to the relief works on $2\frac{1}{2}$ or 2 annas a day.

11. Mr. Davidson, the new Collector, was not satisfied with the state of affairs he found at Kurnool, and he has drawn up rules for enforcing taskwork, and for paying labourers according to the task they may perform. These rules seem to be in the main good, and should be worked upon as quickly as possible; but a largely increased number of trustworthy engineering subordinates is required. Meanwhile the maximum daily relief wage should be brought down to the bare subsistence point, and the Sunday present of one day's wages might cease. Mr. Davidson considers that a rigorous exaction of taskwork will drive away from the relief works all people who could support themselves otherwise; and he anticipates that he will be able very materially to reduce the numbers of relief labourers, and also to keep them from increasing hereafter to the high maximum named by the local Native officials. The Native Deputy Collector in charge of relief work at Peapally expressed an opinion that 20 per cent. of the relief labourers could thus be reduced. The Collector's assistants, Mr. Clogstown and Mr. Gibson, fear that only 10 per cent. could thus be reduced. The Native officials of Kurnool and of the several taluks (sub-divisions) have estimated, and appear still to believe, that 500,000 people (more than half the population of the district) will eventually, at the worst time of the year, come upon the relief works. But the Collector, Mr. Davidson, does not accept this estimate; he hopes to get the number of relief labourers down to 250,000, and to keep the number from very greatly exceeding 300,000, provided he can obtain adequate engineering assistance.

12. Gratuitous relief is being given from private charity to some 2,000 indigent persons in Kurnool city. Sir Richard Temple visited the Kurnool poorhouse at the time cooked food was being distributed. Most of the recipients were infirm, blind, lame, or otherwise unfit to labour; and a considerable proportion were small children. The numbers who are obtaining gratuitous relief at the public expense in the interior of the district are said to amount to 4,000; but there seems some doubt about the number for the Cumbum taluk, where charitable relief is sometimes given in the shape of cash, 2 annas a day for adults. The administration of charitable relief is under the direction of civil officers, but it is not clear that such relief (at present not large compared to the relief wages) is administered on a uniform system.

13. The condition of the cattle is said to be bad. But there is a good deal of fodder along the canal and on the marshes which it creates. The cattle have not been driven away to distant

* On the Gooty road were passed this morning (16th January) 127 carts, with an average load of over eight bags (16 maunds) each, so the bullocks were doing good duty, as the gradients on part of the road are steep.

pastures outside the Kurnool district, and they suffice for the grain carts, though they are said to be in bad condition and unable to draw heavy loads. It is believed that more cattle than usual are dying; and this belief is borne out by the fact (to which the owner of one of the chief tanneries testified) that four or five times the usual number of hides are now being brought daily to the Kurnool tanneries.

14. The Collector has not yet reported how much of the land revenue will have to be suspended or remitted in Kurnool. Notices of demand for the instalment of land revenue now due are being issued, but the collection has not regularly begun. From some of the taluks (sub-divisions) suggestions have come in which point to the suspension of more than half the current year's land revenue, and the possible eventual remission of nearly one quarter. The total land revenue of the district is between 12 and 13 lakhs. As yet no remissions whatever have been granted or promised.

C. BERNARD,

On special duty.

Gooty, 16th January 1877.

NO. VI.—MEMORANDUM regarding the STAFF required for RELIEF OPERATIONS in the KURNOOL DISTRICT.

Mr. Davidson, the Collector of Kurnool, asked for suggestions regarding the staff he ought to organize and the manner of its employment for effectually combating distress in his district. This memorandum has therefore been drawn up under Sir Richard Temple's orders, and contains suggestions dictated by experience in previous famines.

2. The Kurnool district contains an area of 7,037 square miles and a population of 912,000 souls.

It is divided into eight taluks (or tahsil sub-divisions), thus:—

	Total Population.	Percentage of Population now on Relief Works.	Some Characteristics of the Taluk.
Ramalkotha (head quarters) -	146,000	49 per cent.	Mostly open plain; is traversed by the canal.
Pathkonda - - -	171,000	21 "	Large area; much of it hilly.
Koilkantla - - -	98,000	45 "	Mainly open plain; traversed by the canal in one corner only.
Nandi Kotkar - - -	101,000	27 "	Plain parts traversed by the canal; east part hilly and sparsely peopled.
Nandial - - -	107,000	46 "	Valley part traversed by the canal; remainder hilly and sparsely peopled.

	Total Population.	Percentage of Population now on Relief Works.	Some Characteristics of the Taluk.
Sirwell - - -	71,000	36 per cent.	Traversed by the canal; mostly open country.
Cumbum - - -	123,000	44 "	Hilly in parts; remote from head quarters.
Markapur - - -	92,000	19 "	Hilly, sparsely peopled; large area; difficult of access for carts.

3. At present the Collector's civil staff consists, besides the police officers of—

3 covenanted assistants of several years' experience.

1 covenanted assistant of one year's work.

3 uncovenanted European officers, who are said to be active and efficient.

2 Native Deputy Collectors, besides the Treasury officer.

2 additional Deputy Collectors, under orders for Kurnool, but not yet arrived.

8 tahsildars with their staff of revenue inspectors and clerks, &c.

And the engineering staff of the district consists of—

1 executive engineer.

3 range officers, either sub-engineers or supervisors.

8 overseers, one for each taluk.

4 additional overseers recently deputed for relief duty.

The district and its relief work of all kinds are at present divided into three sections thus—

Kurnool section	- { Under Mr. Clogstown, C.S., with head-quarters at Kurnool - - - - -	{ Ramalkotha Taluk. Pathkonda " Koilkantla " Nandial " Nandi Kotkar " Sirwell " Cumbum " Markapur "
Nandial section	- { Under Mr. Gibson, C.S., with head quarters at Nandial - - - - -	{
Cumbum section	- { Under Mr. Farmer, C.S., with head quarters at Cumbum - - - - -	{

4. Probably this arrangement cannot be improved* upon. But steps should be taken to

* Major Hicks, who is not now serving in Kurnool, has suggested that Koilkantla would come better into the Nandial, and Nandi Kotkar into the Kurnool section.

accelerate the postal service to Cumbum, which is at present three days' post from the Collector. I am not sure that the other officers are at present employed to the best advantage. For instance, the Deputy Collector at Peapally has under him, so far as relief work is concerned, the tahsildars of Pathkonda and Koilkantla. Mr. Mayer has under him the Markapur Taluk and the Markapur Tahsildar. So again the Nandial Deputy Collector has under him the Sirwell Taluk and the Sirwell Tahsildar. I think that in this way there are too many links in the official chain, and that the area in charge of each primary executive officer (a whole taluk) is too large.

5. I would divide the whole district into relief circles, and would place a responsible officer in full relief charge of each circle; the circle officer would be subordinate only to the section officer and to the Collector. I suggest that each taluk be divided into two circles, with

† Major Hicks suggests that Pathkonda should also be divided into three sections.

perhaps three circles in the Cumbum Taluk. The town of Kurnool would be kept under separate management outside the head-quarter Ramalkota circle. This would give 17 circles in all, besides the town of Kurnool. Each taluk head-quarters would naturally be the site for one circle officer, and suitable central stations would have to be chosen for the other circle officers.

6. I suggest that each tahsildar, provided he be personally active and efficient, be at once

‡ Mr. Thornhill says that in Bellary the tahsildars have been thus relieved already.

made circle officer for his own head-quarter circle. He would have to be relieved entirely of all his ordinary tahsil and magisterial duties, probably the deputy (or some other local official) could be appointed to officiate in his tahsildar's room. In a famine time like this all ordinary current work diminishes, and a considerable number of the tahsil staff (gomashtas and peons) could be told off for relief duty. Then the other nine circles could be officered perhaps by Mr. Brett and the three European uncovenanted officers, and by five other Native officials whom the Collector would have to

§ Mr. Thornhill fears it would be difficult to spare many inspectors, but he thinks that men might perhaps be drawn from the Settlement and Survey Departments.

select from the police inspectors of his district, or from the class of men who furnish suitable candidates for tahsildarship and inspectorships.

7. Each circle officer will have to be a disbursing officer, so it would be well that he should be a permanent official borrowed from some other duty, whose integrity could be thoroughly trusted. Any revenue subordinates, such as revenue inspectors, within a circle should be placed under the circle officer's orders, so that he may have full command of the village officials (reddis and karnams). Sufficient shelter for him and his office would have to be hired or built, and a strong box provided for cash. Each circle officer would require at least two clerks, one of whom would be in charge of the accounts. To each circle officer would be allotted a police guard for his cash and a sufficient number of police (or other) orderlies. An allowance of Rs. 40 a month might be made to police inspectors or other officials below the rank of tahsildar who may be selected for each circle officership. I do not think any other extra allowances should be given.

8. A Deputy Collector out of the staff* now in the district should be attached to each

* At paragraph 3 above, I have shown that the district has, or soon will have, four available Deputy Collectors, besides the treasury officer.

treasury work, accounts, and current correspondence.

9. In order that the Collector, Mr. Davidson, may have time to travel in the interior, to supervise and to organize, he should have the assistance of another covenanted† officer with full powers, to whom he could delegate (during his absence from Kurnool or otherwise) the current judicial and executive work and ordinary correspondence. If this be not done,

Mr. Davidson will not be able to visit or make himself felt in the interior of the district. The officer who comes as personal assistant to the Collector would be able to direct relief operations in Kurnool town.

10. Each circle officer should have under him (or associated with him) an engineering subordinate to direct and control the work, overseers and gangmen described in the Collector's new rules (page 4). One of the range officers should be attached to each relief section of the district, so that they may direct and supervise the relief works, under the orders of the section officer, while the executive engineer should occupy a similar position under the Collector.

11. Now that such an enormous expenditure is going on, I think it would be well that the

† Mr. Thornhill says that a deputation from the Revenue Board recently came up on similar duty.

Accountant-General at Madras should depute‡ a selected official from his staff to organize and direct the punctual preparation of accounts. If this is not done now, there will be great trouble hereafter. It is believed that the Account Department will be satisfied without excessively elaborate accounts; all they require is that daily sheets of receipts and disbursements should be sent into Kurnool for compilation with detailed vouchers prepared at the time.

12. Hereafter, if village to village inspection and relief should be required, it may be necessary to form sub-circles (under the circle officer) of 10 or 15 villages each, and to place over every such circle a selected village official (reddi or karnam) or a competent clerk (gomashtha) from the tahsil or police department. But I do not think that such a measure can be at present needed, while such an immense proportion of people is receiving relief wages.

13. If these suggestions are accepted, with such modifications as local knowledge may suggest, then the steps which must be at once taken are—

- (a.) To get from Government a competent civil servant to be personal assistant to the Collector.
- (b.) To mark out circles on the map, with a central head-quarters and sufficient shelter for each.
- (c.) To nominate and send out circle officers, fill the places of officials taken from tahsil or other departments, and to provide each circle officer with a small establishment of clerks, &c., with a house, and with a map of his circle showing works in progress.
- (d.) To get from Government additional overseers, and to allot an overseer to each circle.

C. BERNARD,

Gooty, 16th January 1877.

On Special duty.

No. VII.—MINUTE by SIR RICHARD TEMPLE, dated 19th January 1877.

Having visited the Ceded Districts, comprising Bellary and Cuddapah, and also the district of Kurnool,—all of which are much affected with loss of harvests and are threatened with danger unless some interposition by Government shall be maintained,—I have to submit for the consideration of the Government of Madras certain proposals, which have reference mainly to considerations of expense, as bearing on the condition of the people. In separate memoranda I have caused an epitome to be made of all that was learnt during my visit to these districts. This minute, therefore, will be confined to suggestions.

2. There is no doubt that in these districts the threatened famine has been met and is being kept down; danger being averted from the people, distress being alleviated, and the exertions of the local officers being most praiseworthy. But in rapidly accomplishing this great amount of good, three risks are incurred; namely, 1stly, that the numbers of relief recipients should grow beyond the powers of the local officers to control; 2ndly, that the people may entertain an exaggerated idea of the extent to which the State charity can be properly dispensed; and 3rdly, that the Government may be involved in expenditure beyond its means of defraying. To obviate these two risks, two main objects might be aimed at, viz., 1st, to reduce the existing numbers; and 2ndly, to prevent the numbers from rising too rapidly.

3. When distress suddenly develops itself over an extensive area, the local authorities are generally obliged to take all comers, until the first crisis is passed, time not admitting of individual scrutiny. But afterwards, when the authorities get a little leisure to examine the position, they are often able to eliminate persons who had at the first outbreak been temporarily admitted. It is therefore not unreasonable to suppose that now, when these districts have been placed for the present beyond the reach of danger, the local authorities might be able to re-examine every person in all relief gangs and to eliminate everyone who did not seem to be in absolute need, or in such a condition as could not be endured without Government support. It may be conceded that many of those in the gangs are in absolute need. But I am sure the condition of many falls short of such extremity at present: whether their condition will hereafter approach such extremity is a question which may be reconsidered a few weeks hence; all I say is that they are not yet in absolute need; they are at present in good condition; if hereafter

it be found that physical depression is commencing, then, and not till then, will it be necessary for Government to interpose.

4. Again, such large numbers (equal to one-fourth of the total population) having been admitted to relief, the first shock of the calamity must have been fully, perhaps more than fully, resisted; therefore, it cannot be necessary to admit any more at present, save in exceptional cases of destitution, which might be certified by some competent and responsible officer.

5. Further, although the relief organization in these districts may not yet be complete, yet it is to be remembered that the ordinary civil organization is strong,—stronger indeed than in most parts of India. Each district is divided into talooks; in each talook there is a tahsildar and a deputy tahsildar, both responsible Native officials; under them there are two or three revenue inspectors, Native officials of lesser rank: all these are available for supervision of relief. Every three or four talooks are formed into a sub-district under either an assistant or a deputy collector. There is already a considerable engineering establishment of officers and overseers; besides these, several European military officers are immediately expected. In every village there is a headman (reddi) and an accountant (kurnam). These village officials are all available for supervision of relief. I recapitulate all this because, when extensive measures are adopted with many and large gangs, it is not safe to proceed unless a tolerably effective agency exists on the spot, which can immediately pick up and remedy any bad cases which may occur, and which may prevent any accident happening. It seems to me that there actually is such an agency in these districts. If all these establishments from top to bottom be thoroughly on the alert, as they doubtless are, it is almost impossible for any man, woman, or child to drift into danger of starvation without the case being found out and remedied.

6. Another mode of reducing or keeping down numbers is the well-known plan of enforcing taskwork: but with such large numbers of both sexes and of all sorts and conditions such enforcement is always difficult, and in a large proportion of the total number of cases is almost impossible. It must often happen that our officers try to enforce the task and hope to succeed; while in reality they fall short of success. We may be sure that although taskwork may be enforced upon many works, yet that in many other cases it never will, despite all our efforts, be really enforced; and that in all this category of cases, the labour will at the best be but very light.

7. Now the present rate of wages is fixed at two annas per diem for an adult, and proportionately lower for women and children. This rate is fixed upon the supposition that it will purchase one and a half pound of grain per diem,—a quantity which is deemed essential for a man while at work. There might indeed be a question whether life cannot be sustained with one pound of grain per diem, and whether Government is bound to do more than sustain life. This is a matter of opinion; and I myself think that one pound per diem might be sufficient to sustain life, and that the experiment ought to be tried. Possibly the gangs might not perceptibly fall off in condition. After a week or fortnight of experience it would be seen whether they so fall off, or not: if they were to seriously fall off, then the point could be considered. It is to be remembered that, when these poor people first came on relief, their condition was low, and they needed very full rations. Such rations have been allowed for some time, and the people are in very good case. A reduction might now be demanded in the interests of financial economy, and might be attempted for a time at least without danger; at all events the trial might be made for people at taskwork, and especially with those who are not really at taskwork, and who, though nominally at some sort of taskwork, are doing very light or nominal work. One pound of grain ought to be made to suffice. At the present prices, a rate of one anna and a half would purchase a pound of grain and would leave a small margin for condiments, vegetables and the like. It may be that Government would be willing to allow more than a pound a day of grain if its financial means permitted; but the demands of economy seem to require that at all events a trial should be made as to whether a pound a day might not be made to suffice for the one purpose which is admitted, namely, the staving off of danger by starvation.

8. I do not include in these suggestions the ordering of the enforcement of taskwork, because this has been already ordered, and will doubtless be carried out as far as possible; but looking to all the circumstances and to the scattered character of the work, I should fear that in a considerable proportion of the cases it never can be really carried out: that in many, perhaps more, cases it is not as yet exacted I feel sure.

9. The summary of my suggestions thus would be as follows:—

- (I.) To stop all fresh admissions to relief works in the Ceded Districts save under a certificate from an official of a grade not lower than a deputy tahsildar.
- (II.) To re-examine, as soon as possible, every gang, person by person, with a view to eliminating and discharging for the present everyone not in absolute need of State relief. By absolute need is meant danger of starvation if not supported by Government.
- (III.) To reduce the adult wage from two annas to one and a half anna per diem, and the rates for women and children proportionately. The grain wherever issued to be adjusted exactly according to this standard.
- (IV.) To impress upon the reddi and kurnam of every village the responsibility of bringing before the nearest revenue inspector every case of dangerous distress.
- (V.) These measures, if adopted, to be quite tentative, subject to reconsideration after one month subsequent to their introduction.

10. I am aware that the successful carrying out of such measures with such large numbers of persons is a difficult task, demanding the exercise of caution, patience, and resolution, combined with a humane sense of what is necessary for safety of life. If judiciously carried out, they will produce financial economy without endangering safety. If injudicious proceedings,

however, were to be taken, then some accident might occur to life. I believe that the authorities in these three districts, if well instructed, would be able to carry out these measures successfully. At all events, I think that an effort ought to be made and a trial ought to be had.

11. Seeing that the grain trade, which was slack at first, has set in with activity both on the railway and inland from the railway stations into the interior, there can be no need to pay the relief labourers in grain, their wages will enable them to buy grain. The grain wage only becomes necessary when there is reason to fear that the grain is so deficient that it cannot be got for money. I would therefore deprecate any payments in grain, and any further purchases of grain by Government. Any operations of this nature by Government would be likely to discourage private trade. Rather than send grain to workpeople, I would prefer, if possible, to bring workpeople to the grain and employ them on large and fully supervised works near to well supplied markets. It may be advisable to despatch a limited quantity of the grain already purchased by Government to certain places distant 60 miles and upwards from the railway, for the supply of which private trade may not prove sufficient. This seems the best way of disposing of the grain which has been purchased. The remainder of the grain already purchased might be kept in reserve at Madras. But within such a radius of 60 miles, I think it would be better to avoid storing Government grain.

No. VIII.—MEMORANDUM on the Condition and Prospects of RELIEF AFFAIRS in the BELLARY DISTRICT, as ascertained at Sir Richard Temple's Conferences with the Local Officers on the 17th and 18th January 1877.

Among the officers and gentlemen who met Sir Richard Temple at Bellary were—

Mr. G. Thornhill, first member of the Revenue Board, who kindly accompanied Sir Richard from Gooty.

Mr. G. H. Master, Collector of Bellary for the last seven years.

Mr. Cox, C.S., who joined the district for relief work a few days previous only.

Major Hicks, who for some years has been District Superintendent of Police in Bellary, and who is now managing the transport of Government grain from the railway to the interior.

Mr. Legatt, the Executive Engineer, and several assistants and subordinates, whom Sir Richard met on the different relief works which he visited.

Messrs. Harvey and Sabapathy, a Bellary firm which deals in country produce.

V. Venkata Chulum, Deputy Collector of Hospett, who has charge of the three western talooks of Hospett, Haveinhudgally, and Harpinhally.

Moorgeshum Modeliar, Deputy Collector, now living at Bellary, but in charge of relief work in the south-western talooks of Rayadroog and Kudligi.

Mr. Agar, in relief charge of the head-quarter talook.

The Deputy Collector at head-quarter and other head-quarter officials all furnished information. But Mr. Ross, C.S., the assistant in charge of the remote southern talooks of Pennakonda, Indapur, and Madkasira, was at his post in Pennakonda, and therefore some of the facts regarding the condition of that part of the district remain to be cleared up.

2. The district of Bellary has an area of 11,007 square miles, and a population of 1,668,006 persons. It is divided into 15 talooks (revenue sub-divisions). The food-crop area of Bellary as returned for the last ordinary year (1875) was 2,660,000 acres. The proportion ordinarily sown with each of the great food staples and the estimated yield of the present may be thus shown:—

	Area of Crop Acres sown in the Year 1875.	Estimated Yield of the current Year's Crop, on an average for the whole District.
Cholum (jowaree millet) - - -	1,240,000	Varies from nothing to three annas in different talooks, but cannot exceed half an anna on an average for the whole district; that is to say, is not more than $\frac{1}{2}$ of an ordinary yield.
Ragi (small millet) - - -	101,100	
Cumboo (small millet) - - -	230,000	
Other small millets, such as korra, &c. -	560,000	
Rice - - -	185,000	2 annas, or $\frac{1}{8}$ of an ordinary yield.
Total - - -	say under a one-anna crop for the whole district.	

The yield, such as it is, has been secured only on the lands watered from wells and tanks, or by the channels led from the Tungabadra River. In the Hospett Talook, for instance, some 25 villages along this river have got very fair rice and cholum (millet) crops. But the area returned as "under wet crop" for the whole district was only 115,000 acres in an ordinary year, so the irrigated area bears only a very small proportion to the whole food crop land of the district. The district tanks are said to be mostly dry, as the rainfall of this year did not suffice to fill them. Of the dry (unirrigated) crop, not one quarter of the usual area was even sown, and on the area sown only about one-eighth of the ordinary yield was secured. The cotton crop, covering about 340,000 acres in ordinary years, has failed entirely. The plants ought at this season to be green, as the fibre is picked in March and April; but at present there is, it is said, no cotton to be seen in any part of the district. From Gooty to Bellary, and for several miles round Bellary itself, Sir Richard saw that the country was absolutely bare of all crop or stubble, and that there was no sign of any fodder or grass. The local officers say that the condition of the country is the same all over the black soil talooks (*i.e.*, more than one-third the district); over the red soil

talooks some fodder has been produced, but there has been no appreciable food-crop except on the areas within the influence of the Tungabadra River, or on small patches of land near wells. The loss of harvest, subject to exceptions above noted, has been utter all over the district.

3. The rainfall of the Bellary district is never large, and the rain of an ordinary year ranges from 22 inches in the western and south-western, to 15 inches in the central and eastern talooks. The district lies on the edge of the area of each of the two south-west (or August) and north-east (or October) monsoons, and it often gets a short rainfall under one of them. The rainfall of the past six months has ranged from $2\frac{1}{2}$ to 5 inches in different parts of the district. Bellary has suffered from more or less severe famines in the years 1751, 1793, 1803, 1833, 1854, and 1866.

4. The harvests of the preceding year (1875) were poor, not exceeding eight annas, or half an ordinary good yield for the whole district. The rainfall of that year was short. In the year 1874 there was a very heavy downpour, which greatly injured the cholom crop, so that the total yield of the district for that year also is not estimated at above 10 annas, or $\frac{5}{8}$ ths of a good yield. In good years the Bellary district is said to produce sufficient food for the support of its population; though a certain quantity of rice, wheat, and other food grains is usually imported from the Nizam's territory and elsewhere for the consumption of the richer classes and the urban population. If seasonable rain falls in June next, the first food crop of next season (yellow cholom) will come into the market by the end of July.

5. The condition of the Bellary peasantry and labouring classes is said to be tolerably good in ordinary years; they amassed a good deal of wealth during the days of dear cotton. Many of the ryots are of course in debt, but on the whole the Collector does not consider the people of Bellary to be in an exceptionally poor or distressed condition. The number of ryots who pay revenue direct to Government is 143,000, of whom about 80,000 have holdings of 10 acres and under. The ryots and petty privileged holders (inamdars) with their families must amount to over 900,000 persons. The classes who live by daily labour are estimated to amount to one-fourth of the district population.

6. The grain markets of Bellary town and most of the markets of the interior are now fairly well supplied with cholom and rice. At some of the petty towns and villages of the interior the local supply has on occasions been insufficient for the wants of the relief labourers. Nearly all the grain exposed for sale in the bazars is said to be railway-borne grain, from Central India and from Madras. A small quantity of grain from the Malabar coast finds its way by carts into the western talooks of the Bellary district.

7. The present prices of grain at Bellary as compared with ordinary prices are—

	Prices in January 1877.		Average price for previous six years in the month of December.
	First week.	Second week.	
Cholom - - - -	8 seers per rupee.	8 seers per rupee.	23 seers per rupee.
Rice - - - -	$6\frac{1}{2}$ "	$6\frac{1}{2}$ "	12 "
Ragi - - - -	$8\frac{1}{2}$ "	$8\frac{1}{2}$ "	34 "
Cumboo - - - -	Not now obtainable at all.		{ 25 "
Korra - - - -			{ 35 "

In the interior of the district, where markets are mostly supplied with grain imported through Bellary, prices range from $\frac{1}{2}$ to one seer per rupee dearer. Some weeks ago prices at Bellary were from one to two seers per rupee dearer than they now are. Grain became cheaper partly in consequence of private importations and partly (so the native officials and traders say) because Government imported grain itself, and no one knew how much Government grain was coming, or how it was to be used. There are abundance of good carts in the district, and sufficient grain can certainly be carried from the railway into the interior, if only the cattle do not die or migrate. But unless a constant stream of traffic be maintained, and the cartmen are enabled to buy food for their bullocks, there is risk that the supply of carts and draught cattle may fail.

8. The local officers have not yet received final orders as to the quantity of grain Government is going to buy and send into the distressed districts. So far as can be ascertained on the spot matters stand thus. Government have, it is believed, arranged for the purchase of 30,000 tons of coast (and Calcutta) rice through a Madras firm (Messrs. Arbuthnot and Company) as brokers. The Collectors also have authority (so it is said) to lay in supplies through the local traders. No limit has as yet been put on Collectors' action in this respect, save that they are to consult the local agent of the Government broker. It is not known precisely what amounts of grain Collectors have thus purchased or arranged for, but the total probably does not exceed some few thousand tons altogether. The Government grain bought at Madras is being stored by Messrs. Arbuthnot and Company at railway stations up-country, and is there handed over to Major Hicks (Government grain officer) for transport into the interior. Major Hicks has already concluded contracts at comparatively moderate rates (five annas and six annas per ton per mile) for carrying 8,700 tons of Government grain per month for four months to the depôts marginally noted. He has received from local officers indents for the despatch of a further quantity of about 9,000 tons

Bellary	- Pennakonda	- 1,000 tons a month.
Kurnool	- Kurnool	- 2,000 " "
	Koilkantla	- 800 " "

	Door	- 200 " "
	Pulivendla	- 300 " "
Total	-	8,705

per month. He anticipates that Government grain will be also required for remote tracts round the dépôts noted in the margin; and he estimates that the indents of the local officers will not be fully satisfied under a total of about 20,000 tons a month. This quantity, it may be observed, would cost about 22 lakhs (220,000*l.*) a month, and would furnish food one pound per diem) to one and a half millions for one month; so that this supply, if sanctioned, would feed $\frac{3}{4}$ ths of the total population of the three famine districts of Bellary, Cuddapah, and Kurnool, and it would feed nearly two-thirds of the total population of the tracts remote from the railway, which these dépôts are intended to serve.

9. Some of the local traders of Bellary represent that the interposition of Government in the grain trade has had the effect of deterring local traders from importing as they would otherwise have done, and as they at first were doing. Government having entered as a buyer into the markets of the coast, prices there have grown much dearer. At the same time, while there is so much doubt how much Government will import and how it will use its importations, prices have fluctuated very greatly in the local markets; and the grain trade has become a risky business. They cite, as an instance of the effect of these fluctuations, that a few weeks ago prices went down at Bellary and up at Madras; so much so that private grain (previously imported from the east coast and from Central India) was being despatched from Bellary to Cuddapah at the rate of 20 waggons a day. Prices at Bellary have now stiffened somewhat, and this strange export has ceased. The traders urge that if Government wants grain for its relief labourers, local dealers are ready to put it down at Bellary, and they suggest that cholum (jowari) be ordered from the north instead of rice from the south, for cholum is 15 per cent. cheaper than rice, and is moreover the ordinary food of the people. They point out that in the autumn this plan of supplying the Government need answered well both directly and indirectly. The traders vied with each other, and supplied Government with rice (about 14 or 15 transactions aggregating 1,50,000 maunds) at rates which began at Rs. 10½ per bag of 164 lbs. and came down, by dint of competition, to Rs. 8½ per bag. At the same time the local trade was kept brisk and was free from the fear of competition from the Government.

10. The facts and arguments urged by certain of the local traders on Sir Richard Temple are abstracted as above. At the same time it should be stated that the petty native dealers did not seem to deprecate or to complain of Government action. And the larger Bellary traders expressed a fear that private trade might fail to carry sufficient supplies into the remoter talooks of the south and west. It was not, however, clear why the lesser traders in the interior should abstain from the grain trade, provided the fear of Government competition did not deter them.

11. It is said that, generally speaking, stocks are small in consequence of the shortness of the harvests of 1875. Still it is believed that small stocks do exist in the possession of many of the

* So the Bellary people say. Sir Richard Temple has not yet been able to verify the facts of the Mysore case on the spot, though he hopes to do so. Recently, when he passed through the south of the Nizam's territory, in two directions, he found that the failure of crops there was not by any means so general or so severe as the civil authorities of the Bombay Deccan had been led to fear.

ryots; and that stocks are larger in the eastern than in the southern talooks. The latter are accustomed to draw supplies of "ragi" millet from Mysore, which country can at present barely* support itself. Some of the native traders said that the local stocks now in hand would barely suffice for seed grain which after previous famines had been obtained from the Nizam's

country, whence supplies this year would be short.

12. The population of the affected tracts of Bellary are being mainly relieved by wages paid for presence on relief works. Hitherto no one who offered himself or herself for employment has been refused. The relief works consist mainly of roads on which the people are engaged in making embankments and cuttings, in breaking, stacking, and spreading road metal. Some few thousands are employed on excavating or clearing tanks, in deepening wells, and in other petty village works.

13. The number of people returned as employed on the works is enormous, and has been rising at the rate of about 30,000 a week. The numbers of people now on the works is as follows:—

Name of Talook.	Total Number on the Works on the 15th January 1877.	Proportion of Relief Labourers to the Total Population.
Bellary - - - - -	55,219	31 per cent.
Hospett - - - - -	16,669	18 "
Kudligi - - - - -	22,405	24 "
Havanhudgully - - - - -	17,854	20 "
Hurpanhully - - - - -	7,912	9 "
Alur - - - - -	31,186	32 "
Adoni - - - - -	63,931	31 "
Gooty - - - - -	23,997	16 "
Tadpatri - - - - -	11,999	10 "
Rayadrug - - - - -	8,071	9 "
Anantapur - - - - -	22,588	21 "
Dhurmavaram - - - - -	24,548	20 "
Pennakonda - - - - -	10,551	11 "
Makaksira - - - - -	23,375	30 "
Hindapore - - - - -	42,080	46 "
Total - - - - -	382,385	or 23 per cent.

These are the figures as given by the Bellary Collectorate Office, talook by talook. But the total number on relief works in Bellary, according to a statement published in the Madras newspapers of the 18th current, is 446,100, or equal to 26 per cent. on the total population of the district. These large figures did not reach Sir Richard Temple till he had left Bellary, so the discrepancy was not explained. On the face of the talook figures no explanation can be offered of the great variations in the percentage of the population admitted to relief wages in the different talooks. It is said the emigrants from the distressed tracts of Mysore swell the numbers

* See paragraph 21 below.

in the Madaksira and Hindapore talooks. Other* facts would seem to show that the local authorities in the south of the district do not exercise sufficient discrimination in admitting claimants to relief. It may be noted that the highest number of labourers in receipt of relief wages during the Bellary famine of 1866 never exceeded 22,000.

14. The civil authorities consider that a large proportion of the relief labourers are ryots who hold land from Government. They think also that a proportion of these people could for a time, at any rate, support themselves without relief wages. The physical condition of the labourers (men, women, and children) is said to be at present good. Sir Richard Temple saw several thousands of them on works round Bellary, and he inspected them closely. It seemed to him that these relief labourers, as a rule, looked a comfortable well-clad body of peasantry. The clothes of nearly all, men and women, looked to be considerably better than one is accustomed to see on the backs of labouring men and women in other parts of India. Many of the labourers were provided with excellent new blankets of Bellary make. It was said that in the Bellary and Adoni talooks a good many people, who did not need Government relief, have been turned off the works. In this way the numbers, which at one time were 62,000 in Bellary Talook, have been brought down to 55,000.

15. Some of the subordinate officials estimated that the total number on the relief works in Bellary might eventually reach 900,000. Mr. Master, the Collector, however, on a review of the past history of the scarcity, hopes that there will be no great increase in the number of relief labourers after the month of January. He anticipates that by strictly enforcing taskwork, and by turning off the workpeople who apparently could live without relief wages, he may be able to reduce the present great numbers. He would be prepared to stop all new admissions to the relief works, for a fortnight at any rate, as an experiment.

16. On the works in the Bellary Talook taskwork is to some extent exacted from the relief labourers; and it has been found possible to make the taskwork on stone-breaking rigorous in this talook. But in outlying talooks taskwork is not exacted; and the staff of engineering subordinates is insufficient to control the enormous number of labourers. The works are under the supervision of the local civil officers. Rules have been issued by the Collector for enforcing discipline among and paying the labourers. The names of all the labourers are entered on registers by subordinate officials.

17. The rate of relief wages in the early days of the works† was one and a half anna a day for adult males. But they were afterwards raised to two annas a day when the prices rose. At present in the Bellary Talook relief wages are paid in grain, at the rate of a little over two pounds of rice per diem. Outside the Bellary Talook relief wages are still paid in cash. These are the rates for adult males, and the relief wages for women and children are proportionately lower.

† Relief works began in the western taluks as far back as July.

18. The total expenditure on relief works in Bellary, from the commencement of operations to the beginning of January, was 22 lakhs (220,000%), and the present expenditure on relief wages only is at the rate of 14 lakhs (140,000%) per mensem.

19. Relief labourers are not at present employed on irrigation works. Proposals were made for constructing a new canal (for which plans and estimates were prepared some time ago) from the Tungabudra with relief labour, but the relief labourers could perform only a portion of the work; the canal probably would not be remunerative, and so it has not been considered suitable to undertake this canal as a relief work. The local officer of Hospett suggests that some of the relief labour be employed to reconstruct the Tungabudra anicuts and channels which are out of repair, but the professional agency is not strong enough to prepare schemes of this kind, and relief labourers are put upon works on which some labour can be done without professional preparation.

20. The numbers of people in receipt of gratuitous relief at the public expense is already 45,365, of whom 18,686 are in the single talook of Hindapore. It is said that some of these people have come across from the Mysore country in family parties and in a depressed condition. But it also appears that seven-ninths of the Hindapore paupers are children of people who are in receipt of relief wages on the works. The Collector considers that all such children should be supported by their parents, and no doubt these large numbers at Hindapore will be shortly reduced. Some 5,000 persons receive cooked food daily at the Bellary relief house, which is administered at the cost of private funds. Persons are admissible to charitable relief on the certificate of the tahsildar at the head-quarters of each talook; but practically discretion in the matter is delegated to the tahsildar's subordinates, and at outlying relief houses to relief superintendents on Rs. 20 a month. Village headmen (reddis) are authorised to relieve casual sufferers, and then to forward them to the nearest constituted relief house; and the "reddi" sends in his bill periodically to the tahsildar. At the relief houses the allowance is one pound of cooked food for adults, and half a pound for children; the recipients come to the relief house in the afternoon, get their food, and go home.

21. The condition of the cattle in Bellary is critical. Over a great part of the district there is no fodder at all. The Native officials and Native traders estimate that from one-fifth to one-

fourth of the cattle have died already; and they anticipate that more than one-half must die before June, unless heavy January showers fall. It was estimated that four-fifths of the cattle in the district died during the famine of 1833. European and Native officials substantiate the statements (previously published in the newspapers), that ryots formerly well-to-do have sold bullocks in the Bellary market at one rupee a head, or for eight seers of cholum. Some of the cattle from the eastern talooks have been driven to the Kurnool hills; from Western Bellary some of the cattle have been taken to the Western Ghât pastures; while the hills of the Soondoor chiefship (in Bellary) afford some pasture. Attempts are being made to employ relief labourers in convesting prickly pear (cactus), of which there is abundance in Central Bellary, cutting into fodder by separating off the thorns. In Bellary town these attempts are succeeding on a small scale, but they have yet to be extended into the interior of the district.

22. The supply of drinking water has not run short as yet, though many of the tanks are quite dry. Wells are being deepened by relief labour in the villages. Still it is feared that, later in the year, there will be scarcity of water in some villages. It is not clear that anything else can be done to remedy the difficulty.

23. It is expected that from one-half to three-quarters of the land revenue (that is 16 out of 23 lakhs) will have to be suspended. And it is feared that after two years of short crops and one year of absolute failure, the Government may be compelled eventually to remit a large proportion of the suspended land revenue demand. It is urged that if a large number of the cattle die, the power of the people to pay up the suspended land revenue demanded will be greatly crippled. Besides the suspension of land revenue, one-half of the abkaree (liquor excise) revenue demand from the contractors has been suspended in Bellary.

Cuddapah, the 19th January 1877.

C. BERNARD,
On special duty.

NO. IX.—MINUTE by SIR RICHARD TEMPLE, dated 20th January 1877.

In forwarding the three memoranda of facts ascertained on the spot regarding the famine in the districts of Kurnool, Bellary, and Cuddapah, I have to record the following observations:

KURNOOL DISTRICT.

2. There is, unhappily, no doubt as to the danger which threatens the district of Kurnool, and which would have broken ere this had relief operations not been commenced. There is also no doubt that these operations are sustaining the people in good condition. Consequently, as regards mortality from starvation or any dangerous degree of distress, there is no apprehension whatever. The local officers are extremely anxious to do their work well, according to the instructions they have received, and to save the people from danger. So far well.

3. On the other hand, the relief operations must have passed out of hand, and have got beyond contról locally, previous to the arrival of the present Collector, Mr. Davidson, about a fortnight ago, he having been urgently despatched thither by the Government of Madras. Within this brief period he is doing all he can to bring affairs into order, but they have arrived at such a stage as to demand further consideration and further instructions from superior authority. It seems to me that, on arriving here, he must have found the operations being conducted in a manner calculated to cause a heavy drain upon the Treasury and to render the people too dependent upon the State.

4. The gravity of the case is in this wise: out of a population of 917,000 souls, there are reported to be 330,000 on relief works in the first fortnight of January, having gradually risen to the great number during December. There are some thousands on charitable relief from the State. Thus at this very early period, namely, the beginning of January, more than one-third of the total population have been allowed to be fed by the State. That such a proportion should come upon the State during the worst season, namely, the hot weather, might, under the circumstances of the district, have been anticipated, though this proportion even at that season would be full. But that such a proportion should at this early period come upon the Government is a circumstance not heretofore known and transcending the experience of former famines in India. Looking to that experience, and allowing also for the poverty and depression of the people, admitting further that some considerable relief is even now called for, yet I cannot believe that the extreme degree of relief is absolutely necessary at this early period. Even now there is a tendency to increase, and at this rate of progress, if it be unchecked, ere long half the population will be in receipt of State support. And if additional precautions be not taken, the process might go on until nearly the whole population were involved in State charity. Although the State may be called upon to save life from starvation, it surely need not be called upon to undertake such a task as that above described. At present the population consists of a peasantry with very small holdings of land. Of these already a large number are upon relief works. There seems to be no reason why larger and larger numbers from the same class should not apply for employment; and if they do, they will get it under existing orders. There is no preliminary check whatever for testing whether they are in absolute need or not. The fact of such men applying at all does indeed indicate that they are in some need; the question, however, is otherwise: Are they in such extreme need as to require State support?

5. The following table of percentages shows that in some talooks, or component parts of the district, the numbers on relief are excessive, while in other talooks they are comparatively moderate. There are not, so far as I can learn, local circumstances to account for these differences, which must be in part attributed to variations in administration; either the people have got the

idea that they are to be fully fed at any cost, or the local authorities are too lenient. The object should be to reduce the proportions in some talooks to the level of the proportions in other talooks :—

Talooks.

Ramalkota	has 49 per cent.	Nandial	has 46 per cent.	} of its total population on relief works.
Pattikonda	„ 21 „	Sirwell	„ 36 „	
Koilkantla	„ 45 „	Cumbum	„ 44 „	
Nundikothkoor	„ 27 „	Markapore	„ 19 „	

6. As a *prima facie* proof that these extreme measures in Kurnool can hardly be necessary, I would adduce the case of the Deccan districts of the Bombay Presidency which I have just visited. In the districts of Sholapur and Kaladgi, and half the districts of Ahmednagar and Poona, the loss of crops is as great as in Kurnool. Yet, in these several tracts, with a total population exceeding $2\frac{1}{2}$ millions, there were in the beginning of January about 200,000 relief labourers, as compared with 330,000 in Kurnool out of a population of 917,000. Thus proportionately the number of relief labourers, as compared with the population, is in Kurnool more than four times as great as in the Deccan. Perhaps in some respects the position of Kurnool may be more unfavourable than that of the Deccan; but I am unable to learn any such local variations between the one and the other as would justify Kurnool having four times as many relief labourers as the Deccan. Certainly it cannot be said that the relief labourers in the Deccan are too few under the circumstances. On the contrary, the people in the Deccan are being well sustained under their misfortunes, and the only question is whether the number of relief labourers even there might not be somewhat reduced. Thus I fail to perceive any escape from the argument which is brought to bear upon Kurnool from the analogy of the Deccan. Therefore it seems necessary that the new Collector of Kurnool should be instructed to immediately reconsider the situation in his district, with a view to reducing the present number of relief labourers and to prevent its being augmented.

7. Another question relates to the importation and issue of Government grain. Although it is impossible to know the amount of grain in stock, there is no reason to suppose that stocks are exceptionally low, or that there is any deviation from the custom, whereby in other places several months' supply of food is kept in hand. Private trade is tolerably active; there are plenty of unemployed carts in the district, which can be and are used for the conveyance of grain from the several railway stations into the interior. There is a fair prospect of large quantities of grain coming from the north as well as from the south. The grain merchants of Kurnool are importing 3,000 maunds daily into the city; they say, however, that their importations are diminishing, which diminution they seem to attribute to the importations of grain by the Government. They do not seem, indeed, to particularly object to such importations of grain by Government; they only assign it as a reason for themselves taking a less active part in the trade. Under the circumstances, the policy of importing grain on account of Government seems to require considerations. I mention this because it is understood that 5,000 tons of grain a month are ordered to be imported by Government from without for this district. Even if the maintenance of some reserve is necessary, still the policy of importing into the district at this early period may be open to question, because it may discourage trade, and might cause railway waggons and country carts to be taken up for Government, which might otherwise have been at the disposal of traders.

8. At all events, I would recommend that Government grain be not under any circumstances issued to relief labourers at present. It may, indeed, be necessary hereafter at some places to pay relief labourers in grain only, especially when the worst season approaches. But at present it is far better to pay in cash, because this causes a local demand for grain, which again induces the holders of stock to bring forward their supplies, and encourages traders to bring in grain from without. Experience in relief operations has conclusively proved this. So long as the labourers can purchase food with their cash wages, let them be paid in cash. They certainly can at present obtain grain for cash. When the cash wages shall no longer enable them to purchase grain (and that time is apparently still distant), then, and not till then, let them be paid in grain.

9. It may be necessary to store a certain amount of grain at Kurnool itself, for use in event of emergency arising in the eastern parts of the districts Kumbum, Nundial, Markapore. But I would explain this carefully to the traders, and assure them that not a bag of this store would be used so long as any grain were otherwise forthcoming. But I would not store any grain at any place between the railway and Kurnool, as these places are easily accessible to traders.

BELLARY DISTRICT.

10. As another proof that the numbers on relief in the Kurnool district must be too high, I would advert briefly to the Bellary district. There the failure of this year's harvest has been as utter as in Kurnool, with this difference, however, that in Kurnool last year's harvest was fairly good, whereas in Bellary it was bad last year and indifferent the year before that. In Bellary, therefore, there has been a gradually deepening scarcity. Now in Bellary the total number of those on relief amounts to 450,000, representing more than one-fourth of the total population of 1,600,000. By that analogy there ought to be less than one-fourth of the population on relief in Kurnool, instead of more than one-third, as there actually is.

11. In Bellary, however, as in Kurnool, I have carefully inspected the gangs of relief labourers, person by person, and have seen many who do not appear to be in absolute need. It is manifest, also, that not only have all the labouring classes been admitted to relief, but also a portion of the ryot classes, that is, peasant proprietors and men having a beneficiary interest in the land. One relief gang near Bellary, drawn up in line for inspection, consisted of peasant proprietors in one

line and their wives in another line. I cannot think that State charity need be dispensed to such people at this early period.

12. When the proportion of persons on relief to the whole population is compared in each talook, there are striking differences which cannot, I think, be fully accounted for, save by the supposition that in some talooks the relief is being too liberally administered. Thus—

<i>Talooks.</i>			
Bellary	has 31 per cent.	Tadpatri	has 10 per cent.
Hospett	" 18 "	Raydrug	" 9 "
Kudligi	" 24 "	Anantapore	" 21 "
Havunhugully	" 20 "	Dharmavaram	" 20 "
Harpunhully	" 9 "	Pennakonda	" 11 "
Alur	" 20 "	Madukasira	" 30 "
Adoni	" 31 "	Hindapore	" 46 "
Gooty	" 16 "		

} of its total population on relief works.

13. The number of those on charitable relief, about 45,000, seems extraordinarily high in Bellary; it requires immediate revision. It is partly, however, to be accounted for by the fact that here the children of persons earning relief wages on the works are admitted to gratuitous relief. This is not necessary, and should, I think, be stopped.

14. Those works which are under the supervision of the Public Works Department, employing above 150,000 persons on trunk roads and large tanks, are well supervised. I fear that over the rest of the 400,000 on relief works, say 250,000 who are on petty village works, the supervision is not yet complete.

15. The benefit to the Bellary district of the railway is striking during such a crisis as this. After successive failures of harvests the local stocks must be abnormally low (though, if all accounts be true, there are still more stocks remaining), but the local grain markets are all well supplied through importations by rail through private trade. The mart of Bellary itself receives the supplies from the distant districts, and then distributes them among the bazars in the interior. There may ultimately be some difficulty in supplying by trade the markets in the western and south-western parts of the district near the frontiers of Mysore and of the South Mahratta country, namely, the talooks of Hospett, Havindhugully, Harpunhully, and Pennakonda, and to these grain may have to be sent by Government. I am far from being sure of this, however, as opinions seem to differ on the point. But in all other parts of the district I would deprecate the storing of Government grain, as interfering with private trade.

16. And I would deprecate the issue of grain wages to relief labourers as not being called for by any existing deficiency of grain in the markets.

17. The prospect of preserving the cattle is more gloomy in Bellary than in any other district. Fortunately, however, the prickly pear is abundant, and many trials have proved that it answers as fodder. The ryots, indeed, have a prejudice on the point, which is known to be erroneous and ought to be overcome. The most earnest attention of the Collector might be drawn to the subject, as vitally affecting the preservation of the plough cattle; and relief labourers might be employed in preparing the plant for fodder, which is done by extracting the prickles.

18. The future increase of relief labourers in this district is a question on which opinions differ. The Collector, Mr. Master, hopes that it will not largely increase beyond the present total, but some of his subordinates think it will. Seeing that the increase has been so rapid of late, at a rate of 30,000 persons a week, I very much fear that the total will largely increase unless a check be applied.

CUDDAPAH DISTRICT.

19. This district is much more favourably situated than either Kurnool or Bellary. Though it has lost three-fourths of the crops of the year, still it has saved nearly one-fourth. There is some irrigation going on. There is something of a crop in the ground, which will be reaped in the spring. Out of a population of 1,350,000, there are 200,000 persons on relief, or one-eighth. Here, also, are some of those differences between the talooks, or component parts of the districts, in respect to the proportion of relief labourers to the population which indicate variations in the administration. In the south-western talooks (locally called the "plateau" talooks), the administration is apparently too liberal, the proportion of relief labourers to the population being too high to be satisfactorily accounted for. Thus—

<i>Talooks.</i>			
Cuddapah	has 6 per cent.	Muddanpally	has 16 per cent.
Roychoti	" 13 "	Kadiri	" 28 "
Pulumpett	" 5 "	Voilpard	" 19 "
Prodore	" 9 "	Siddhout	" 8 "
Janamadigu	" 13 "	Pulivendla	" 20 "
Boodrail	" 6 "		

} of its total population on relief works.

The management is stricter around the head-quarters of the district, under the eye of Mr. Price, the Collector. But even here I saw many persons receiving relief who seem to be as yet far from being in extremity. But I am under the impression that in the Muddanpally division of the district there is an excessive expenditure going on, and that reconsideration is urgently called for there. The best part of the cattle are said to be safe. The grain markets are well supplied. I would deprecate any payments being made in grain, and the storing of any grain save at a few distant localities beyond the reach of private trade.

20. In a separate minute I will offer such practical suggestions as occur to me in reference to all these considerations respecting the three districts.

RICHARD TEMPLE.

Telegram, dated 22nd January 1877.

From SIR R. TEMPLE, Madura, to SIR A. ARBUTHNOT, Calcutta.

Taskwork already ordered everywhere, but not fully enforced for want of staff. Relief moderate in most districts, except three, viz., Bellary, Kurnool, and Cuddapah, in which relief excessive and getting beyond control. For these I have recommended to Government of Madras that fresh admissions to works be stopped at present; that recipients of relief wages not in absolute need be discharged; that daily wages be reduced from two annas to one anna and half. These measures, if adopted, will save ten lakhs monthly by my estimate. I hope for support. The control of relief operations deficient in unity and concentration, and authority* are wanting in firmness. I must deal with multitudes of relief labourers. I have recommended to Government of Madras that special officer be appointed with full power to direct and control in Bellary, Kurnool, and Cuddapah.

Telegram, dated 20th January 1877.

From SIR R. TEMPLE, Vellore, to SIR A. ARBUTHNOT, Calcutta.

For North Arcot relief of distress is careful and cheap. Contrast remarkable with Cuddapah.

Telegram, dated 23rd January 1877.

From SIR R. TEMPLE, Tuticorin, to HONOURABLE T. C. HOPE, Calcutta.

Bisset reports block on Bombay line already being relieved. Much grain from the north now coming to Madras Presidency, but Madras line seems not able to take it all. I am pressing this on Madras authorities.

Telegram, dated 23rd January 1877.

From SIR R. TEMPLE, Madura, to SIR A. ARBUTHNOT, Calcutta.

Have submitted to Government of Bombay proposals like those sent to Madras, whereby 25 lakhs may be saved in Bombay expenditure.

Telegram, dated 23rd January 1877.

From SIR R. TEMPLE, Madura, to SIR A. ARBUTHNOT, Calcutta.

Large suspensions, land revenue, Madras, important to prevent any remissions being promised to people.

Telegram, dated 26th January 1877.

From REVENUE ADDITIONAL SECRETARY, Calcutta, to SECRETARY, Madras.

Sir Richard Temple represents importance of not promising to the people remissions of land revenue, but only suspending the demand. We commend question to your notice in consultation with him.

Telegram, dated 18th January 1877.

From CHIEF SECRETARY, Bombay, to ADDITIONAL SECRETARY, Commerce, Calcutta.

Your telegram of the 16th instant. Instructions have been issued to the Collectors to make no further announcements as to the course Government will pursue respecting remissions of land revenue pending further orders. Government have to observe that considerable remissions have been granted on the principles laid down in their Resolution No. 6007 of the 21st October 1876, which was discussed in your letters No. 806 of the 3rd November, and No. 458 of the 30th November 1876, in which no objection was taken to the absolute remissions promised, which were in accordance with the established practice of the revenue system of this Presidency. Government propose replying to your telegram by post.

No. 338, dated Bombay Castle, 18th January 1877.

From the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

With reference to my telegram of to-day's date, I am directed to state, for the information of the Government of India, that the several Collectors concerned in this Presidency have been directed to abstain, until further orders, from making any public announcement as to the course which Government will pursue in respect to granting remissions of land revenue, and to take no steps to enforce payment of any land revenue which may become due pending further instructions from Government.

2. I am directed to add that the Government will take an early opportunity of addressing the Government of India on the subject of their telegram of the 16th to the Public Works Department.

* Unintelligible.

No. 337, dated Bombay Castle, 18th January 1877.

RESOLUTION by the Government of Bombay.

The several Collectors should be instructed to abstain, until further orders, from making any public announcement as to the course which the Government will pursue in respect to granting remissions of land-revenue. No steps should be taken to enforce payment of any land revenue which may become due, pending further instructions from Government.

No. 57, dated 16th January 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

The Government of Bombay, in their resolution in the Public Works Department, dated the 4th November last, authorised the Collectors of distressed districts to commence certain of the relief works comprised in the programme sanctioned by Government Resolution No. 6152, of the 27th October, by requisition to the executive engineer, certifying that the works were absolutely necessary to afford relief.

2. The objections to this important delegation of power came under the observation of the Government of India in the case of certain works which were commenced by the Collectors, notwithstanding that they came within the suspensory orders which had been issued; and it was in consequence of this, suggested in paragraph 13 of my letter No. 421 of the 15th instant, that the Revenue Commissioners should be invested with the power of sanctioning or transferring grants within suitable limits.

3. Further illustrations of the irregularities which may arise, and the unnecessary expenditure which may be caused by the continuance of these powers in the hands of Collectors, are afforded by the resolutions of the Bombay Government of the 8th and 9th January.

4. His Excellency the Governor-General in Council is of opinion that, whatever good grounds may have existed for this delegation of power in November last, when the scope of the famine was uncertain, and small works were alone authorised for relief, the objections to it at the present stage are considerable, and I am therefore to request that his Excellency the Governor in Council will take steps for its withdrawal.

No. 1T., dated Delhi Camp, 20th December 1876.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF BOMBAY.

I have had the honour to receive your letter No. 260 C.W.—1013, dated 9th instant, and am directed to express the regret of the President in Council that symptoms of distress should have made their appearance in four talukas of the Colaba and Rutnagherry districts.

2. As these districts are throughout contiguous to the sea, and are provided with numerous creeks and landing places, it may be expected that an ample supply of the cheaper kinds of grain will ere long be attracted in the ordinary course of trade, and tend to reduce prices to a less abnormal level. As, moreover, the supply of grain, which, it is stated, has for some weeks past been leaving for the Deccan, will have yielded to its owners a money return at extraordinarily high rates, the resources of certain classes of the population will be better able to meet the strain of higher prices, and to continue to afford to the lowest sections any employment and means of earning their bread which the latter may have derived from them in ordinary years.

3. There are therefore some grounds for hope that the anticipations of famine entertained by the Collectors of these two districts may not be altogether realised.

4. At the same time some limited extent of relief works appear to be necessary, and the President in Council approves of the road works which his Excellency in Council has sanctioned. Should any further relief be necessary, it should be given exclusively in the form of road clearances or other small works distributed over the talukas affected, and avoiding projects which are large or unsuited for relief purposes, such as the Mahad waterworks or the Gandhari bridge, which the Government of Bombay have already very properly disallowed.

5. With reference to the expected immigration of 8,000 distressed persons from the Habshee's territory, I am directed to state that the President in Council cannot recognise in this, or any other instance, an obligation to provide extensive relief to the subjects of a Foreign State, and that all political officers should receive instructions, where such states are under British management, to organize, and where they are not, to urge the durbars to organize measures of relief sufficient to meet the wants of whatever distressed population they contain.

6. Regarding the district of Kanara, it is observed that no failure of crops is believed to have taken place, and that relief works are started solely for the benefit of refugees from other districts. A few works with that object were probably indispensable, but as they are very likely to be taken advantage of by inhabitants of Kanara not really in distress, the President in Council trusts that the utmost vigilance will be used to confine them to foreigners, and that every encouragement will be afforded to the latter to return to their homes whenever in a condition to do so. Instructions should also be issued to all Collectors in distressed districts to check emigration of all persons not taking their cattle to known better pastures, by all means in their power, the most effective of which, it is scarcely necessary to say, is the provision of adequate relief works for them near home.

Local. No. 22 C. W.—31 of 1877.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY to the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce.

II.—Civil Works.

Public Works Department, Bombay, 8th January 1877.

I am directed to acknowledge the receipt of your letter No. 1 T., of the 20th December last, relative to the relief of distress in the Colaba, Ratnagiri, and Kanara districts, and to state that, as regards the two former, his Excellency the Governor in Council will carefully act on the instructions to give relief in the form of small works, so long as the extent of the demand for it can be met by such means.

2. His Excellency in Council feels himself somewhat embarrassed by the announcement contained in the fifth paragraph of your letter, that the President in Council cannot recognise an obligation in any instance to provide extensive relief to the subjects of a foreign state. That it is the duty of such states to afford relief to their subjects to the extent of their means cannot be denied, it is also clearly the duty of their political officers to urge them to do so; and the political officers employed under this Government are using their best endeavours to this end under the orders conveyed to them in paragraphs 11 and 12 of Government resolution by this Government, No. 267 C. W.—1032, of the 13th December 1876, a copy of which is attached. But if this Government is to act on the belief that they will be held responsible if any person be permitted to die from starvation, where the death could be prevented by action on the part of this Government, after the very prominent assertion of the paramount authority of the British Government which has recently taken place, this Government apprehend that their conduct would be seriously called in question if they were to refuse relief to people of a so-called foreign state who had been driven by the shortcomings of their ruler to take refuge in British territory.

3. Moreover, it would be almost impracticable, on a sudden emergency, to ascertain exactly who were our own subjects and who were foreigners. Our own villages and those of foreign states are, in some cases, considerably intermingled; and it should not be forgotten that when the pressure of distress began to be felt the people of Sholapur crowded into the Nizam's territory, and very probably, if the people of Khandesh are subjected to pressure in the course of one or two months, many will pass into Holkar's territory.

4. His Excellency in Council, therefore, takes the liberty of inviting a reconsideration of these orders.

5. The Collector of Kanara will be instructed to use his best endeavours to restrict employment on relief works to those who are absolutely in need of it. In so doing he will be conforming to the efforts already made by this Government to prevent the relief works from becoming too attractive.

No. 90, dated 22nd January 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF BOMBAY, P. W. Dept.

In reply to your letter, No. 22 C. W.—31, of 8th instant, I am directed to state that his Excellency the Governor-General in Council sees no ground for modifying the general rule laid down in paragraph 5 of the letter from this Department, No. 1 T., of 20th December, that the Government of India is under no obligation to provide extensive relief to the subjects of a foreign state, and that measures should be taken through the political officers to ensure adequate relief works being organized by the Government of any Native state affected by scarcity.

2. This rule was elicited by the fact that the Collectors of Colaba and Rutnagherry, in paragraph 5 of their joint report, dated November 19th, included in their calculations of relief required the maintenance of 8,000 subjects of the Habshee State from early in January till the end of June, and that no objection was taken to this item by the Bombay Government.

3. As the rule expressly refers to *extensive* relief, it would not preclude the grant of temporary relief in isolated cases, whether of individuals whose nationality was not at first recognised, or of bodies of foreigners suddenly at our works in a state of destitution needing immediate relief. But his Excellency the Governor-General in Council considers that it would be the duty of the officers in charge of the works, whether in the one case or the other, to communicate with the political officer of the Native state whose subjects the immigrants were, with the view to their transfer to relief works in their own country at the earliest practicable date.

4. The rule would not, it seems scarcely necessary to add, preclude the making of any special arrangements for mutual accommodation which might be deemed in the Political Department to be advisable between the British Government and Native states, such as the granting permission, either free or on payment of fees, for the grazing of cattle of such states in our reserves, or *vice versa*.

5. As regards the particular case of Jinjeera, his Excellency the Governor-General in Council is glad to learn from the accompaniment to your letter, No. 20 E.—85, of the 17th instant, that the Collectors have apparently been mistaken, as the political agent reports that there will be no scarcity of grain, and consequently no emigration.

Telegram, dated 23rd January 1877.

From SIR RICHARD TEMPLE, Tinnevely, to HONOURABLE T. C. HOPE, Calcutta.

Gazette with general instructions received by me yesterday and carefully perused. I think that at least in three districts—namely, Bellary, Kurnool, and Cuddapah—the relief operations are

in a considerable degree liable to all the objections described in paragraphs second and third of your letter to my address; also that with reference to paragraphs eighth, ninth, and tenth, the grain operations of the Local Government in Bellary, Kurnool, and Cuddapah have impeded and are still impeding private trade. These opinions have been already represented in previous minutes, but I am recording them again in a minute which will be immediately submitted to the Governments of India and of Madras. I have already proposed the several remedies which seem to me necessary. I have now added further proposal about concentrating labour on large works and closing petty works. I will urge all these views verbally on the Government of Madras when I reach Madras on Friday 26th. I further think that the objections in paragraphs second and third of your letter applicable, though in a much less degree, to the relief operations in the districts of Poona and Sholapur. This opinion is verbally embodied in my previous minute, but I am explicitly stating it again in a minute which will be submitted immediately to Governments of India and of Bombay.

Revenue, No. 21.

From SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 28th February 1877.

Para. 1. The Despatch of your Excellency in Council, dated 26th January, No. 5 of 1877, relative to the scarcity in Western and Southern India, has been considered by me in Council.

2. In Bombay, the prospect is, on the whole, somewhat more gloomy than in the preceding week, the number of persons on the relief works having increased and the prices of grain having risen in five districts.

3. In Madras there is no substantial improvement, but through the exertions of Sir R. Temple, the number of persons on the relief works has been diminished, and there is a prospect of a large monthly saving by the more careful control of famine expenditure.

4. The instructions to the Bombay Government not to delegate the important power of commencing relief works without the previous sanction of the Revenue Commissioner have my approval.

5. I also concur in the general principle with respect to the relief of the subjects of foreign states laid down by your Excellency.

6. It is clearly an obligation that devolves on Native states to provide, as far as possible, for those of their own population who are affected by the scarcity.

I have the honour to be, &c.

(Signed) SALISBURY.

No. 6 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY OF STATE FOR INDIA.

Calcutta, the 2nd February 1877.

In continuation of our Despatch No. 5, of the 26th ultimo, on the subject of Minutes by Sir R. Temple, numbered XI., XIII., XIV., XVII. the scarcity in Western and Memoranda by Mr. C. Bernard, numbered X., XII., XV., XVI. Southern India, we beg leave Telegram from Sir R. Temple, dated 28th January 1877. to forward for your Lordship's information copies of the communications specified in the margin.

2. The memoranda summarise the information as to the condition of the districts of Cuddapah, North Arcot, Coimbatore, and Trichinopoly given to Sir R. Temple by the local officers, traders, and others with whom he was able to communicate. The minutes contain his own conclusions and suggestions; in minute No. XI. he recommends the appointment of one controlling officer on the spot for the three districts of Bellary, Kurnool, and Cuddapah. In No. XII. he contrasts the condition of affairs and extent of relief in Cuddapah with that of North Arcot, and suggests that the arrangements in the former should be reconsidered with a view to economy. In minute No. XIV. he combats the objections which he anticipates may be raised to the reduction in relief wages which was proposed in his minute No. VII. Finally, in minute No. XVII. he applies to the case of Bombay the suggestions for reduction in rate of wages

made for Madras, and computes that there may be a saving thereby of 23 lakhs of rupees on his previous estimate of 149 lakhs of relief expenditure for that Presidency. As regards this recommendation, it would appear from the Bombay progress statement No. X. of the 19th ultimo, that it has already been anticipated by the Local Government.

3. We have received with much satisfaction from Sir R. Temple a telegram dated Madras, the 28th ultimo, informing us that the Local Government accede substantially to all his proposals for economy, and that orders will, he believes, be issued at once. We have also received from the Madras Government an application for the services of 10 Bengal civil servants under various Governments and Administrations who have been specially selected by Sir R. Temple, and are taking steps to comply with it as far as may be practicable.

4. Regarding the condition of the distressed districts, we have no very material changes to report. In Madras, the number on the relief works has been reduced by about 50,000, and cholera prevails to a very great extent. In Bombay, there has been a very slight fall in prices in some districts, but the numbers on the relief works have again increased.

5. We are now beginning to receive the review and forecast reports by talukas Bombay, 47 out of 91 (excluding the which were due on the 15th ultimo. The number which have already reached us is shown in the margin.
Konkan and political agencies).
Madras, 6 out of 124.
Mysore, 49 out of 81.

We have the honour to be, &c.

(Signed) LYTTON, &c.

X.—MEMORANDUM ON the Condition and Prospects of Relief Affairs in the Cuddapah District, as ascertained at Sir Richard Temple's Conference with the Local Officers on the 19th January 1877.

At Cuddapah Sir Richard Temple had the advantage of the presence of—

Mr. G. Thornhill, First Member of the Revenue Board; and he conferred with—

Mr. Price, the Collector, who had joined the Cuddapah district a few days previously, after serving for several weeks as Relief Officer at the Bellary head-quarters;

Mr. Benson, Head Assistant Collector, who has been some few months in the district, and is in charge of three eastern taluks;

Mr. Maccartie, Assistant Collector, in charge of the head-quarter taluk;

Mr. Travers, Government grain agent at Cuddapah;

Ramasamy, Deputy Collector, who has been employed for five years at Cuddapah; besides the representative traders of Cuddapah, and a gentleman who has for the last six weeks been doing business at Cuddapah on behalf of a Madras firm.

2. The Cuddapah district comprises an area of 8,367 square miles, with a population of 1,351,194 persons, and it is divided into 11 taluks. It is traversed by the North-western Railway, of which a branch goes to Bellary. In physical characteristic the four taluks on the Mysore plateau, forming the sub-division of Maddanpally, differ considerably from the other seven taluks around Cuddapah itself. The rainfall of the year 1876 has ranged from 6 to 11 inches in the different taluks; and on the average has not exceeded 8 inches. The average rainfall of the district for the last eight years has been 31 inches, ranging from 21 to 36 inches in the different taluks. Both the June and the October rainfalls (S.E. and N.W. monsoons) were deficient. There has been excessive failure of both the autumn and winter crops all over the district, except in the taluks of Cuddapah, Prodatore, Boodrail, Sidhout, and Pullampet. In all of these taluks there has been a good deal of irrigation from the Toongabhadra Canal,* by channels from the Papagni, Pennair, and Cheyair rivers,

* The Irrigation Company's officers state that 22,000 acres in Cuddapah have taken canal water this year.

and from wells. Nearly all the tanks in the district are wholly dry, so that little crop has been saved by tank irrigation.

3. The chief food crops are—

				Area under crop in last ordinary year.
				Acres.
Cholam (jowari)	-	-	-	420,000
Cumboo (bajra)	-	-	-	348,000
Rice	-	-	-	126,000
Ragi†	-	-	-	94,000

The yield of the food crops of the present year is estimated at six annas (or nearly half an ordinary good crop) in the head-quarter taluk, four annas in four other taluks, and at only two or three annas in the bad taluks; and for the whole district the local officers estimate a yield of three annas, or about one-fifth of an ordinary crop all round. On the irrigated lands in the comparatively good taluks a considerable quantity of rice and ragi will be reaped within the next few weeks; and the prospect of this outturn has had some effect on Cuddapah prices. After the

† This staple is grown chiefly in the plateau taluks.

crops now in the ground shall have been reaped, the earliest harvest of next season will consist of the August rice and of the September cumbu (bajra). The harvest in the plateau taluks will be somewhat earlier than in taluks around Cuddapah.

4. Grain markets in the northern taluks are well supplied, chiefly with imported grain. Ragi is being brought in from Nellore and even from Calicut, as well as rice in great abundance from Madras. In a few marts of the plateau taluks there has been occasional shortness of supply; local stocks there are believed to be short, and it is said that the ryots there, when they saw their millet fields coming on well early in the season, sold off their stocks to the distressed population of Mysore. Large importations come every day into Cuddapah, and petty dealers from outlying marts fetch out supplies thence. Mr. St. Martin, who is now doing business at Cuddapah for a Madras firm, considers that the importations have now fully supplied all local demands. He could sell every bag of rice he imported at remunerative prices four weeks ago, whereas his rice now goes off but slowly, at prices 12 or 15 per cent. cheaper. Native dealers say that grain is not now coming in quite as briskly as before, because Government is sending up its own grain. There are plenty of carts in the district, and as yet draught cattle do full duty. The roads are good and easy, save towards Boodrail and Cumbum (in Kurnool), in which direction the routes are hilly and are heavy for cart traffic.

5. The Collectorate officials give the current (18th January) prices at—

	Present price.	Average price during month of December in ordinary years.
Rice - - - - -	7 seers	13 seers per rupee.
Cholam - - - - -	9½ "	24 " "
Ragi - - - - -	9½ "	25 " "

Prices were at one time quite 15 per cent. dearer, but they have now been falling for the last two or three weeks, partly because large importations have come in, and partly because there is hope of a considerable spring-crop yield off the irrigated lands. In the Produttore Taluk, through which the railway runs, prices are even cheaper than the above quotations. But in the remoter, and especially in the plateau, taluks, prices are from 10 to 20 per cent. dearer than Cuddapah rates. The native traders who waited upon Sir Richard Temple gave somewhat lower quotations for cholam, saying that some jowaree, which came into Cuddapah four days ago, was selling to-day at 10 seers per rupee for Jubbulpore grain and 9½ seers for Sholapore grain.

6. Government rice from Madras is being sent into Cuddapah by both the Northern and the South-western Railways. Mr. Travers, the Government grain agent at Cuddapah, has received from Messrs. Arbuthnot & Co., Government brokers, and sent off into the interior of the Cuddapah district, about 20,000 maunds, besides 60,000 maunds for the Cumbum Taluk of Kurnool. The plateau taluks are being supplied from the station of Goriatam on South-western Railway, and the Collector of North Arcot states that he has for weeks passed forwarded considerable quantities of Government grain to the depôts under the sub-divisional officer of Maddanpally, who has also made advances of Government money to local traders in order to induce them to bring up from the railway supplies for the local markets; but information is not obtainable at Cuddapah regarding the amount or the result of these advances.

7. Regarding the stocks in the hands of the people, accurate information does not exist. But it is known that the yield of food crops in the next preceding (1875-76) season was short, being estimated at an eight-anna, or half an ordinary crop; three lakhs were that year remitted out of a total demand of fourteen lakhs. The crop of 1874-75 in Cuddapah was on the whole good, notwithstanding the excessive rain at the end of the season. The general condition of the Cuddapah people in ordinary years is good; the Cuddapah manual calls the ryots a well-to-do set of men; and the local officers, European and Native, agree that the Cuddapah ryot, both on the plateau and below it, is ordinarily a man of some substance and lives in tolerable comfort. The local traders estimated that barely one-half of the ryots were much in debt. The labouring classes are said to be about one-fourth of the total population. Very many ryots are believed to hold some grain stocks in the inland taluks; but in the plateau taluks much of the local stores were exported before the recent failure of harvest declared itself, and so the stocks there are perhaps unusually low.

8. All persons who apply for Government assistance are employed upon relief works, which consist mainly of roads. Some few thousands are employed on tank-work, but roads are the main relief works, especially in the plateau taluks. The Collector has directed that no new road-work be undertaken, and that relief labourers be put upon the repairs of irrigation channels and of tanks, works which can be done without professional preliminaries. A large embankment is being thrown up along the Pennair River to protect the railway. The local officers cannot indicate any large work on which a considerable number of labourers could be concentrated. Some of the Cuddapah people are migrating for work to the East Coast Canal in the Nellore district, and such emigration is being encouraged.

9. The rate of relief wages is everywhere 2 annas a day for adult males. For some weeks the rate in the southern (plateau) sub-division was 2½ annas a day. On Saturday double wages are paid, a Sunday wage at full rates being presented to the workpeople. The Collector, Mr. Price, has found difficulty in preventing large extra numbers from coming to work on Saturday with a view to secure the free Sunday wage. In Bellary, Mr. Price was able to stop the issue of the weekly Sunday present. Relief wages in Boodrail are paid in grain. Wages for women and children are proportionately lower than those quoted above. Attempts are made to enforce taskwork, and a scale of work has been laid down. But practically the task is not rigorously enforced, as the supervising establishment is insufficient. About six lakhs of rupees have been spent on relief works up to the present time.

10. The number of people returned as present on relief works in each taluk, according to the latest (11th January) figures, is :—

	Total number on works.					
Roychoti -	-	-	17,068,	equal to 13	per cent. of the population of the taluk.

Total - - 195,476, or
According to the latest
total furnished by the
Collector - - 204,000, equal to 15 per cent. of the population.

11. Relief works began in the plateau taluks towards the end of September, and at Cuddapah on the 18th October. When the people came on the works at first some of them were in a physically depressed condition, especially in Boodrail. But the relief labourers are well and strong. From one-fourth to one-third of the labourers are ryots or their families, but the majority are pariahs (labouring people of low caste). The great increase in the number of relief labourers occurred in the latter half of December; the numbers are now nearly stationary. The tahsildar of Cuddapah considers that perhaps one-eighth of the workpeople in his taluk could subsist, for a time at any rate, without relief wages. Sir Richard Temple visited gangs in two or three directions round Cuddapah, and he found the relief labourers for the most part stout and well clad. In one village, where a considerable breadth of irrigated crop was coming forward, he found a number of ryots with their wives in receipt of wages on a relief work close to their homes. The variation in the percentage of the population on relief works in the northern and southern taluks was attributed partly to the circumstance that the failure of crops was worst in the southern (or plateau) taluks, and partly to the comparatively less strict administration of relief under the Sub-Collector of Muddanpally.

12. No gratuitous relief is being given from State funds, save in the sub-division of Maddanpally, where 915 persons are receiving charitable relief, the cost of which is defrayed half from Government and half from private funds. About 1,500 persons (infirm, children, sick, and beggars) are being relieved daily in Cuddapah town from private subscriptions.

13. The cattle of the district have hitherto been kept alive with fodder from the canal banks, or with grass from the hills. Some are driven away to the pastures of the hills* within the district. On the whole, the cattle are much better off than in the Bellary district. The local officers expect that most of the valuable cattle, both plough and draught, will be kept alive one way or another.

14. There is apparently no present cause for fearing a failure of the water supply. But water may hereafter run short in the black soil taluks, but as yet no difficulty is experienced.

15. The collection of the land revenue is stayed for the present. Probably about $\frac{2}{3}$ of the district demand (14 lakhs) will have to be suspended, and eventually some portion of this may have to be remitted. One quarter of the abkari (liquor excise) revenue has been suspended in Cuddapah, as compared with one half in Bellary and Kurnool.

C. BERNARD,

Secretary to Sir R. Temple.

Vellore, the 20th January 1877.

XI.—MINUTE by SIR R. TEMPLE, dated 22nd January 1877.

In continuation of my minute of the 19th and the 20th January, describing the relief operations in the districts of Bellary, Kurnool, and Cuddapah, and suggesting certain measures of economy, I desire to submit, for the consideration of the Government of Madras, a suggestion respecting administrative control.

2. If measures of additional control are to be adopted, it is to be apprehended that local difficulties of various kinds will be adduced, and questions will be raised, which can only be settled by some officer with plenary power on the spot, if they are to be settled with the necessary promptitude and vigour. Further, with such very extensive operations of relief, spreading over so large an area, and affecting so many classes, it is difficult to secure that degree of uniformity of system which is necessary to be maintained, even after allowing for all local peculiarities, unless there is some authority immediately at hand to whom all the local officers must defer.

3. I would therefore suggest that some officer be thus appointed by Government to reside within these three districts for the present, and be vested with full power, subject immediately to the Government of Madras, to direct and control all the relief operations. I believe that this measure will be conducive to economy as well as efficiency.

RICHARD TEMPLE.

XII.—MEMORANDUM on the Condition and Prospects of Relief Affairs in the district of North Arcot, as ascertained by Sir Richard Temple at Conferences with the Local Officers on the 20th January.

Sir Richard Temple met in the North Arcot district—

Mr. Whiteside, the Collector.

Mr. Irvine, the Sub-Collector at Vellore, who has charge of the Vellore, Arcot, and Gudiatam taluks, and also of the Kangundy zemindari.

Mr. Austin, Head Assistant in charge of the Wallajah Taluk, and also of the great zemindaris of Karietnuggur and Kalastri.

Krishnaswamy Ayah, late Sheristadar, and at present Special Deputy Collector of North Arcot.

The North Arcot district comprises an area of 7,139 square miles, and a population of 2,015,278. It contains two considerable towns, Vellore and Wallajahpet, and it is traversed by a railway which passes across the whole district. It is divided into nine taluks, and it comprises, besides these taluks, 13 zemindari estates, some of which are very large. Two of its taluks, Punganur and Chendragiri, are situate upon the uplands of the Mysore plateau. The zemindari estates contain nearly one third of the whole population of the district.

2. The rainfall of the district was short last year, but this year it has failed; thus—

Average rainfall
of the Arcot district
for the year.

1874-75 -	-	-	-	-	50
1875-76 -	-	-	-	-	23
1876-77 -	-	-	-	-	16

While 16 inches is the average for the whole district, in some taluks the rainfall has been much smaller still. The yield of the harvests of 1874-75 was excellent; that of the year 1875-76 was short, being estimated at little more than eight annas, or one-half an ordinary good crop. The yield of the current year may be estimated to be a four-anna (or about quarter of an ordinary good) crop for the whole district. The outturn has varied greatly in the different taluks. The wet crops under tanks have failed altogether, as the tanks, great and small, were empty. The dry crops in the Gudiatam, Wandewash, and Poloor taluks were fairly good; there is a great deal of irrigation from wells in those taluks, and in the two great zemindaris of Karvetnagar and Kalastri,

* Muddenpilly, Voilpard. where the land is rich; in the two taluks on the Mysore plateau, near to and of the same character with the plateau taluks* of Cuddapah.

3. If distress should unhappily become general, the zemindars and their establishment will assist greatly in the administration of relief, excepting the few who are heavily in debt. The zemindar of Punganoor has already been of much help to the Collector, and has displayed much liberality. The ryots and landholders in the zemindaris are, generally speaking, well off. The total rental of the zemindaris is 14 lakhs, and they pay $4\frac{1}{4}$ lakhs revenue to Government. In their estates Government has no revenue establishments.

4. The markets of North Arcot, both in town and villages, are well supplied with food; private trade is remarkably active; carts and draught cattle are abundant; and the district roads are remarkably good. Up to about three weeks ago rice and ragi were being largely exported from the district; but then prices stiffened, the tide turned, and importations of rice began from Madras. During the last three or four days prices have fallen again somewhat in consequence of the large importations which took place, and the appearance of which drew forth the local stocks.

5. Current prices in markets near the railway are quoted at—

Ragi (small millet), $9\frac{1}{2}$ seers per rupee.

Rice, $7\frac{3}{4}$.

There is but little cholum to be had in the bazaars, and ragi is the ordinary food of the common people. In markets remote from the railway prices run about 5 to 8 per cent. dearer than the above quotations. The Collector has no doubt whatever that private trade will suffice to meet the wants of this district. He was asked how much Government grain his district would require, and he answered as above. Certain wealthy and trustworthy dealers of the district have engaged to import grain and put it down at depôts near the relief works in case supplies should ever be required for relief labourers.

6. In ordinary years the ryots and peasantry of North Arcot are prosperous people. They have comfortable houses and fine cattle. In the taluks on the plateau the villagers are poorer, still even then they are not in a depressed condition. Even this year the people were fairly well off, and the Collector for long abstained from opening relief works, because he thought they were not absolutely necessary. Prices no doubt were high, and there were signs of distress or uneasiness in the shape of dacoities and robberies. The police officials, high or low, much urged the Collector to interfere, saying that the people were starving, but the Native revenue officials confirmed the Collector in his opinion that the time for administering Government relief had not come. One or two deaths were reported by the police as caused by starvation, but the Collector after inquiry satisfied himself that the deaths in question were due to ordinary natural causes.

7. In December relief works were opened, and the highest number yet on the relief works was about 40,000. The latest published return shows a smaller total, but the temporary decrease was due to accident. Some few of the people on the works near Vellore were in a depressed physical condition when they first came, but the rest were, and still are, in good condition. Sir Richard Temple saw about 3,000 relief labourers at work on a tank in the Vellore cantonment, and they seemed to him to be, as a body, more in need of relief, and poorer altogether, than any relief gangs he has seen in the Madras Presidency. Taskwork is not exacted from the work-

* 1 Executive engineer.

3 Range officers (assistant engineer).

1 Overseer for each taluk.

people, and all the works have hitherto been under the supervision of the local revenue officials. The officials† of the engineering department are now going to direct the

works. Hitherto the relief labourers have been employed on roads, but orders have recently been received to work them on clearing tanks and irrigation channels.

8. Wages are paid to relief labourers in cash; once a week seven days' wages are paid in full, though no work is done on the Sunday. Originally the rate began at $2\frac{1}{2}$ annas for an adult male per diem, but this was, by Mr. Thornhill's order, reduced to two annas a day, at which it has since stood.

9. The Collector says that, instead of 40,000 persons, 80,000 are ready to come upon the works if only he would admit them. And he estimated that at the worst season as many as 150,000 persons might be upon the works in Arcot. After reading Sir Richard Temple's suggestions for economy, which have been laid before the Government of Madras, the Collector said that, provided he had competent agency to carry out those suggestions, he might keep the total numbers of relief labourers considerably below 150,000 without endangering the safety of the people.

* Now the estimate was—
80,000 average of February.
100,000 " March.
130,000 " April.
150,000 " May.

This estimate for May may be fulfilled if no rain falls in May. But if rain comes then the numbers ought to fall at once to 80,000 during May.

10. Until a few days ago nobody in the district was receiving gratuitous relief from the State, though some few hundreds were getting a daily meal at the Vellore municipal house. On the occasion of Sir Richard's visit the pauper recipients of relief at Vellore were inspected, and many of them were in a really emaciated condition. The medical officer, however, reported that the applicants for relief were greatly increasing, and that some of these applicants appeared to be in real need. The Sub-Collector accordingly, on the 31st December, sanctioned the opening of a relief house, and at present some 4,000 are receiving a daily dole of rice (1 lb. for adults). When appliances are ready cooked food will be given, but it is expected that the rate and costs of relief will be kept at about one-half of the cost per head of relieving paupers at the Red Hills camp near Madras. Mr. Irvine explains that Vellore town contains a considerable pauper population; he adds, however, that when relief began to be given a good many applicants came into Vellore from the neighbouring villages. As yet, however, no applicant has been granted a ticket for daily relief until the medical officer (or one of his subordinates) had certified him or her as a suitable recipient of charity.

11. The Collector is satisfied that in the interior the village officials will, after all the admonitions they have received, watch and bring up for relief people who are really in danger of starving. Some few paupers are receiving gratuitous relief at the cost of private charity at Gudiatam.

12. Hereafter there may be cause for apprehension in regard to the cattle or in regard to the water supply. Water is falling short in Vellore itself, but the district generally is full of wells, which are being deepened. In the taluks on the plateau the level of the sub-soil waters is sinking rapidly. Up to the present time the cattle have managed to pick up a living.

13. The Collector apprehends that one half of the land revenue demand (8 lakhs out of 16) will have to be suspended this year. There will be considerable loss, also, on the abkari (liquor excise) revenue.

C. BERNARD.

XIII.—MINUTE by SIR RICHARD TEMPLE, dated 20th January 1877.

In forwarding the accompanying memorandum of the facts learned during my visit to the North Arcot district I desire to record the following observations:—

2. The district has suffered a severe loss of harvest from drought; not more than four annas of the total harvest have been saved. It has a population of two millions of souls, scattered over an area of 7,139 square miles. It is almost entirely surrounded by distressed districts; it has several large towns inhabited by a poor population. There are many signs of coming distress upon a large scale. Nevertheless, the Collector, Mr. Whiteside, has managed so far to hold his hand as to give relief to only a limited number. It is true that great pressure has been, and is being, put upon him by the people to extend relief operations, and he may very shortly have to do so. But the fact remains, that on the 20th January there are not more than 40,000 persons receiving relief from Government, and that the total expenditure by Government on relief is considerably less than one lakh of rupees, viz., Rs. 66,000.

3. These circumstances are somewhat remarkable when contrasted with the facts shown in the memorandum regarding the Cuddapah district, which adjoins North Arcot. In Cuddapah the crop saved amounts to nearly three annas. Out of a population of 1,300,000 souls, 200,000 are on Government relief on the 20th January, the expenditure on relief up to that date amounting to six lakhs of rupees.

4. There may be local variations of circumstances between Cuddapah and North Arcot, a detailed comparison of which is not perhaps necessary here. But as affecting the scarcity, the numbers on relief works, and the expenditure, I can discover no essential difference between the two districts, save this, that in Cuddapah there is a three-anna crop, and in North Arcot a four-anna crop; that is to say, Cuddapah is 25 per cent. worse than North Arcot.

5. The questions then arise: Can the difference in result between the two districts be satisfactorily accounted for? Are they not mainly attributable to difference of management? The financial effect of such difference may be seen thus. Supposing that a precise calculation were made on the data above stated. If Cuddapah, with its three-anna crop and its 1,300,000 persons, had been managed in the same manner as the North Arcot district, the numbers on relief on the 20th January would have been 26,000 and the expenditure Rs. 40,000, instead of 200,000 persons and six lakhs of rupees respectively, as they actually were. On the other hand, if North Arcot, with its four-anna crop and its two millions of people, had been managed in the same manner as Cuddapah, then on the 20th January the numbers on relief would have been 225,000 persons and the expenditure would have been $6\frac{1}{4}$ lakhs, instead of 40,000 persons and Rs. 66,000

respectively, as they actually were. All this is arithmetically demonstrable even after allowing for the loss of harvest in Cuddapah being 25 per cent. greater than in North Arcot. And if the inference were to be fully drawn to its logical length, it would show the difference, viz., 6 lakhs, has been lost, whereas in North Arcot the difference, viz., 6 lakhs, has been saved, to the Treasury, mainly through the variations in the policy carried out. Inasmuch as there has been no loss of life proved* to result from starvation in North Arcot, it would seem to follow that the Collector there has done enough. If that be so, it would then seem, *primâ facie*, to follow that the authorities in Cuddapah had been, and are, doing too much.

6. Without unduly pressing the logical conclusions to be drawn from these calculations, I would still represent that, *primâ facie*, a strong case arises for reconsidering the arrangements in Cuddapah with reference to financial economy, so far as that may consist with the safety of the people.

RICHARD TEMPLE.

XIV.—MINUTE by SIR RICHARD TEMPLE, dated 22nd January 1877.

In my minute of the 19th January, I recommended that relief wages in the Madras Presidency should be experimentally reduced from 2 annas to $1\frac{1}{2}$ annas a day for a male adult, that is, a diminution of 25 per cent. The financial effect may be approximately estimated thus:—The present number of labourers may be taken at 1,200,000; the average wage may be taken at $1\frac{1}{2}$ annas (including men, women, and children, receiving 2 annas for a man, $1\frac{1}{4}$ annas for a woman, and 1 anna for a child per diem), or Rs. $2\frac{1}{2}$ per mensem per head all round. This will give a total of 30 lakhs of rupees per mensem on the whole. A reduction of one-fourth of 30 lakhs, if it can be maintained, would at once cause a saving of $7\frac{1}{2}$ lakhs per mensem. This saving will accrue even if the present total of relief labourers shall fortunately not increase. If it were, however, to increase, the saving would be proportionately greater. If a saving of $7\frac{1}{2}$ lakhs a month were to be carried out for four months, which is the shortest time computable, then the total saved on this heading alone would be 30 lakhs of rupees. In all probability this saving will really be much more. Under some circumstances, which are unfortunately but too probable (that is, increase in the number of relief labourers), it might amount to 50 lakhs or half a million sterling. This is, I submit, an important consideration financially, which cannot be lightly set aside.

2. I mention this because I apprehend that objections will be raised to this particular proposal, which objections may in effect be thus stated; namely,—

- (1.) That $1\frac{1}{4}$ annas per diem will not at present prices purchase sufficient food.
- (2.) That it will not sustain the people in robust health.
- (3.) That it will not enable a man to perform taskwork with all his strength.
- (4.) That a reduction will make the relief labourers discontented, and tempt them to rioting.

3. In my judgment these objections are not valid as against making an experiment upon which such large financial results depend.

4. As regards the first objection, at a price of 8 seers a rupee for common food grains, $1\frac{1}{2}$ annas will purchase one pound avoirdupois of grain, and will leave a margin for vegetables and condiments. Experience has shown that, though this may not be a large ration, still it will sustain life. In prosperous times the peasantry perhaps eat more, but even in ordinary times it is probable that the poorest classes in many parts of India do not really get more. So much is this the case, that in many parts of India half a seer a day, meaning one pound, has passed into a proverb for bare subsistence. I submit that, in such an emergency as this, to give more than such subsistence is beyond the power of the Government. Nor can it be said that a man ought to receive more than $1\frac{1}{2}$ annas per diem, bare subsistence, because he has to feed those dependent on him; for, as a matter of fact, under the relief system, not only the man, but the wife and children, also receive wages.

5. Next, as to the objection that $1\frac{1}{2}$ annas per diem will not sustain the people in robust health, I should rejoin that this question would be solved in the course of a very few weeks by an examination as to whether any signs of physical depression begin to manifest themselves among the recipients of relief. That these poor people might wish for more is probable. But then the principle to be remembered that Government cannot undertake to avert distress nor mitigate the pressure which arises from a somewhat short ration; it has not the means of doing more than save life.

6. Then as to the third objection, that $1\frac{1}{2}$ annas per diem will not enable a man to perform taskwork with all his strength, it is sufficient to reply that the task will be regulated according to the strength of the people. It will be out of the question to give high relief wages merely to get a high degree of taskwork. The relief roads and other works are undertaken, not so much for their own sake, but for the purpose of affording relief. It is, of course, an object to get as much of good work as can be got. Still it is to be remembered that these operations are undertaken, not because they are absolutely required in themselves, but because they afford relief. Therefore considerations relating merely to public works must be subordinated, as I submit, to the financial consideration of disbursing the smallest sum of money consistent with the preservation of human life.

7. Lastly, as to the objection that a reduction from 2 annas to $1\frac{1}{2}$ annas would make the relief labourers discontented, and tempt them to rioting, it is sufficient to reply that there is no chance whatever of this, if only those are admitted to the works who are absolutely in need of

* I understand that some very few casualties have been reported by subordinate officials, but have not been admitted by the district authorities as real cases of starvation.

assistance. Persons who are thus situated are necessarily thankful for what they can get, and are the last people in the world who would resort to violence in order to obtain more. If, indeed, they were to attempt anything of the sort, that would *per se* be a proof that they were not really in need. And any such attempt would be put down with the necessary firmness and promptitude. It is probable, indeed, that the headman of gangs and other petty officials, who might have some sinister interest in keeping up a higher rate of wage, might instigate the people to be clamorous, and even riotous. But these misguided efforts would soon be stopped.

8. I therefore submit that, on the one hand, there are no adequate objections to deter the Government from making a trial to reduce the rate of relief wage for adult male labourers from 2 annas to $1\frac{1}{2}$ annas per diem; while on the other hand, there are important financial considerations to render the trial worth making.

RICHARD TEMPLE.

XV.—MEMORANDUM on the Condition and Prospects of the Coimbatore District, as ascertained by Sir Richard Temple from the Collector, on 21st January 1877.

Sir Richard Temple had not time to visit Coimbatore, where distress was believed to be as yet inconsiderable. But the Collector, Mr. Wedderburn, was good enough to meet Sir Richard Temple at Erode, and to travel with him through the Coimbatore district.

2. This district comprises 7,432 square miles, with a population of 1,763,274. It is divided into 10 taluks, of which two, and part of a third in the north, consist of hilly and forest country, where the population is extremely sparse. The Madras and Beypore Railway passes right across the more distressed part of the district, while the railway to Trichinopoly passes down the south-eastern taluks.

3. The south-west (or early) monsoon does not in ordinary years reach any part of the Coimbatore district, save the forest tracts to the north and the southernmost taluks. The main population of the district depends upon the crops watered by the north-east (or late) monsoon, and upon the crops raised by means of irrigation from wells and river channels. The staple dry crops are cholam and cumboo (big and lesser millets). Ragi and rice are grown on lands irrigated by wells. In ordinary seasons they get two or three crops off the irrigated lands within the year. The area under irrigation from river channels is about 116,000 acres; under well irrigation, 300,000 acres.

4. This season the north-east monsoon failed. The district average rainfall during the October rains is 12 inches; this year (1876) the average fall was only two inches. Consequently the greater part of the dry crop land was unsown. Even in the lands under river channels and wells the yield is small, and the ryots will be unable to raise a second or third crop by reason of the smallness of the supply in the rivers, and by reason of the failure of water in the wells. As Sir Richard Temple passed by railway over the best irrigated part of the district, where a channel from the Bhowani passes near the Cauvery River, the Collector pointed out fields of rice which, though sown and come up, were yet withering, because the Bhowani water had failed them. Along the railway line, however, Sir Richard saw a considerable breadth of capital irrigated rice land. Giving credit for the probable yield of the irrigated lands, the Collector puts the estimated yield of this whole district at four annas, or about one quarter of a good crop. He mentions, however, that Coimbatore, with its uncertain rainfall, rarely secures a full or even a good crop all round.

5. The parts of Coimbatore most affected by the failure are the central thickly-peopled taluks of Palladam, Darapuram, and Perundoray (or Erode), containing a population of 700,000 people. Caroor, with a population of 170,000, also had a very short rainfall; but the Bhowani channels water the eastern side of the taluk. The people of Coimbatore are fairly well off in good years; their staple food is cholam and ragi. They grow enough food for their own consumption, and in ordinary years the district neither exports nor imports food. The people are thrifty; and on account of the uncertainty of their climate, they habitually store up the surplus produce of good years. They have been living this year on those stocks. Last year's (1875-76) harvests were good everywhere except in the taluks of Palladam and Caroor, where the north-east monsoon (or latter rains) failed; the harvests of 1874-75 were up to the average of the district, but a bumper crop is seldom seen in Coimbatore.

6. There is ample supply of food-grain in all markets; private trade is active; there is an abundance of carts and plough cattle, and the district roads are decidedly good. Only during the last few days have importations of food to any appreciable extent come into the district, and they are mainly from the district of Malabar, whence rice comes to Coimbatore cheaper than from the east coast. The price of food at present at Coimbatore is—

Cholam	-	-	-	-	-	9 seers per rupee.
Ragi	-	-	-	-	-	9 ditto.
Rice	-	-	-	-	-	6 ditto.

Prices in the interior of the district are about the same. The Collector does not anticipate that the supply of food in this district can fall short; private importations by rail can always supply any deficiency. He was asked whether any Government grain should be sent to his district, and he replied that there was no need of any such help in Coimbatore.

7. A few weeks ago the paupers of the district, and other people who found difficulty in getting subsistence, came flocking into the towns. There were no deaths from starvation, but there was some pressure, and the Collector opened a few relief works. At present, there are about 24,000 persons receiving relief wages for work on roads and tanks. The irrigation channels of the district are all in good order, so the Collector cannot employ relief labourers thereon. The work is done under the supervision of the revenue officials. The workpeople, even when they first came, were in good condition, and they give a fair tale of work. Wages are two annas a day for adult males, and proportionately for women and children. The Collector estimated

that he may have to provide work and wages for 150,000 relief labourers at the worst time; that number at any rate is the highest he expects ever to have, and he may be able to keep the number from ever reaching that maximum.

8. No gratuitous relief is being distributed at the public expense; but in two or three towns charitable people are distributing cooked food to paupers.

9. The Collector fears that he may have to suspend 5 lakhs of land revenue out of a total of 19 lakhs. The abkaree (liquor excise revenue) yield will be very far short of the yield of the previous year.

10. There is no present need for anxiety about the supply of drinking water or the state of the cattle in the Coimbatore district.

Madura, 22nd January 1877.

C. BERNARD,
Secretary to Sir. R. Temple.

XVI.—BRIEF MEMORANDUM concerning the Condition of the Trichinopoly District.

As the Trichinopoly district is but little affected by the recent failure of crops, Sir Richard Temple could not spare time to stop therein. But as some small relief works are going on there, and the district finds a place in the published returns of affected districts in the Madras Presidency, he desires that a short record should be made of such general facts as he was able to ascertain. Mr. Sewell, the Collector, was away in camp, but Mr. Whyne, the Assistant Collector, was good enough to wait upon Sir Richard for an hour at the Trichinopoly railway station.

2. The district comprises 3,515 square miles, with a population of 1,200,408. It is watered by the Cauvery River and its affluents; and the Southern Madras Railway (narrow gauge) passes through the district. A great part of the cultivated land, roughly estimated at about one-third of the crop area of the district, is irrigated. The present season is the third year of indifferent harvests. The rainfall was deficient, not equal to half the average of previous years. Good rain, however, fell in the last week of December, whereby the rice and pasturage were greatly benefited; and, while the irrigated area has probably given a fair average yield, the dry-crop area has not given more than a four-annas (or quarter an ordinary good) harvest. The total yield of the district might be put down at seven annas, or less than half of an ordinary good harvest.

3. There is plenty of food in the district, and markets are well supplied. If need arise, private trade will bring in food. The habit of the district is to export largely the finer kinds of rice and cotton, and to import the coarser grains for the food of the poor.

4. The ordinary food of the common people is coarse rice; and this is quoted in the Trichinopoly bazar at $8\frac{1}{2}$ to $8\frac{3}{4}$ seers per rupee. Prices in the interior of the district are much the same as at head-quarters. The shortness of two harvests before the present season must have reduced the stocks; and thus these prices (extremely high for Trichinopoly) are explained.

5. There are about 600* people employed on relief works, which were only recently opened for some of the poorer classes, especially strangers from other districts, who, in time of dear prices, could not manage to buy food. The people were not in a very reduced condition. About 1,000 people are being relieved by private charity. The district officers (so far as Mr. Whyne represented their views) do not consider the Trichinopoly district to be distressed at present, though distress and need for relief on a considerable scale may hereafter arise.

6. It is expected that 3 lakhs out of a total land revenue of 15 lakhs may have to be suspended or remitted. The first instalments have, however, been, and the second are now being, collected. Still, the local officers anticipate that some suspensions or remissions will be necessary, especially on the wet-crop lands, which have failed to produce anything by reason of the failure of water in the tanks.

7. There is plenty of water and pasture; and, so far as Sir Richard Temple could judge from the appearance of the taluks through which the railway passes, there is plenty of water, and there is also pasture everywhere. The people look well and comfortable, and some of the ryots have doubtless reaped advantage from the high prices.

Madura, 22nd January 1877.

C. BERNARD, Secretary.

XVII.—MINUTE by SIR RICHARD TEMPLE, dated Madura, 22nd January 1877.

With my minute of the 12th January was submitted an estimate, compiled on the data then available, and subject to correction, of the probable relief expenditure in the Bombay Presidency. Since that minute was written I have visited the three most distressed districts of the Madras Presidency, and have anxiously considered what steps could be taken to reduce relief outlay in the present and to prevent its excessive increase in the future.

2. I have now offered for the consideration of the Government of Madras suggestions for securing economy, which may be summarised thus:—

- (1.) To stop all fresh admissions to the relief works in the three worst districts, save under a certificate from an official not under the grade of a deputy tahsildar.
- (2.) To re-examine as soon as possible every gang, person by person, with a view to eliminating and discharging for the present everyone not in absolute need of State relief. By "absolute need" is meant danger of starvation if not supported by Government.
- (3.) To reduce the adult wage from two annas to one and a half annas per diem, and the rates for women and children proportionately; the grain wage, where given, to be adjusted exactly according to this standard.
- (4.) To impress upon the reddy and karnum (patel and kulkarni) of every village the responsibility of bringing before the nearest revenue inspector (revenue or relief officer) every case of dangerous distress.

(5.) These measures, if adopted, to be quite tentative and subject to reconsideration after one month subsequent to their introduction.

3. My minutes of the 19th and 22nd January set forth my reasons for making these suggestions, and they also advert to certain objections which may possibly be urged against the suggestion for reducing the wage rate to one and a half annas. I need not, therefore, again go into those points.

4. I think that it may be possible to apply these suggestions, in part at any rate, to the distressed districts of Bombay; and I would ask his Excellency the Governor in Council to consider whether this cannot be done. My impression was that Mr. Norman, Collector of Poona, and Mr. Robertson, the Commissioner of the Southern Division, considered that it would be possible by careful examination to eliminate and discharge from the works a considerable number of the labourers in the relief gangs.

5. As I hope that it may be possible to adopt on the Deccan relief works my suggestion for reducing the wage rate, I proceed to revise my estimate of relief expenditure in Bombay, which was framed on the supposition that the present wage of two annas for an adult male labourer would be maintained. If the reduction of wage can be carried out and can be maintained, then the estimate previously offered of the Bombay relief expenditure can be modified thus :—

Relief Works Expenditure.	Previous Estimate.	Present Revised Estimate.
	Rs.	Rs.
January to March, 416,000 persons for three months - -	37,44,000	32,76,000
April to June, 705,000 persons for three months - -	63,45,000	47,59,000
July, 340,000 persons for one month - - - -	10,20,000	7,65,000
Total of relief works expenditure - -	1,11,09,000	88,00,000
Add for charitable relief at 10 per cent. on the relief works expenditure - - - -	11,00,000	11,00,000
Estimate for extra establishments - - - -	13,00,000	13,00,000
Add for estimated expenditure to the end of December 1876 -	14,00,000	14,00,000
Grand total - - - -	1,49,00,000 or £1,490,000	1,26,00,000 or £1,260,000

To this minute is appended a short memorandum explaining how each of the figures of my reduced estimate has been computed.

6. It will be seen that the reduction of the rate of relief wages will, if maintained, secure a saving of 23 lakhs. I have not reckoned upon any direct saving accruing from the adoption of the first and second of my suggestions, because in some of the Bombay districts discretion has already been exercised in opening relief works. Still it is possible that under those two suggestions some additional economy may be secured which may be set against possible excess of relief labourers, or other unforeseen relief expenditure of other kinds.

RICHARD TEMPLE.

MEMORANDUM explanatory of the Reductions made by Sir Richard Temple's Minute of the 22nd January, on his previous (dated 12th January) Estimate of Relief Expenditure in Bombay.

ITEM I.

	Previous Estimate.	Present Estimate.
	Rs.	Rs.
Relief works expenditure from January to March -	37,44,000	32,76,000

It is supposed that the suggested reduction in the wage rate cannot be carried fully into effect before the middle of February; therefore, the previous full rate of expenditure has been estimated up to the 14th February, and the reduced (25 per cent. less) rate has been estimated from the 15th February onward to the end of July.

ITEM II.

	Previous Estimate.	Present Estimate.
	Rs.	Rs.
April to June relief works expenditure - - -	63,45,000	47,59,000

The estimate under this head has been reduced one-fourth, as above explained.

ITEM III.

	Previous Estimate.	Present Estimate.
	Rs.	Rs.
July relief works expenditure - - - -	10,20,000	7,65,000

The estimate under this head has been reduced one-fourth, as above described.

Other Items.

No reduction has been made in the estimate for "establishment," because these will have to be maintained at full strength notwithstanding the reduction of wages.

The numbers on charitable relief may somewhat increase when the relief gangs are scrutinized and new admissions are less readily permitted. On the other hand, Rs. 3 per mensem was perhaps an outside estimate for the cost of relieving each pauper. On a review of all the circumstances, therefore, this item in the previous estimate has been left unreduced.

C. BERNARD, Secretary.

Revenue, No. 26.

From the SECRETARY OF STATE FOR INDIA IN COUNCIL to the GOVERNOR-GENERAL OF INDIA IN COUNCIL.

India Office, London, 22nd March 1877.

Para. 1. The Despatch of your Excellency in Council, dated 2nd February, No. 6 of 1877, relative to the scarcity in Western and Southern India, has been considered by me in Council.

2. I have read with great interest the reports of Sir R. Temple, which give a clear and vigorous sketch of the condition of the affected districts in the Madras Presidency. I note with satisfaction that the Madras Government has been able to accede substantially to all the proposals made by Sir R. Temple, and that orders on the subject will at once be issued.

3. There appears to be no material change in the condition of the distressed districts in either Presidency. The worst feature is the prevalence of cholera in the Madras districts.

4. I shall hope soon to receive the reports alluded to in the last paragraph of the Despatch of your Lordship in Council.

I have the honour to be, &c.

(Signed) SALISBURY.

NOTE.— *The following correspondence may be classed under three heads, namely :—*

1. *Letters from the Government of India to the Secretary of State.*
2. *Enclosures in the same.*
3. *Despatches from the Secretary of State.*

The correspondence is arranged simply in order of date, the connexion of subjects being secured by marginal numbers and by an index.

The marginal numbers in a line with the heading of the document refer to the accompanying enclosure next in order of date, and to the covering letter of the Government of India. Where there is a single number the latter only is indicated. In the same way, in the case of letters from the Government of India, reference is made to the answering Despatches of the Secretary of State.

The numbers in the margin of the body of the document refer to enclosures belonging to the document or to previous correspondence.

CORRESPONDENCE.

No. 1.

LETTER from Mr. H. T. Ross, Acting Head Assistant Collector, to the COLLECTOR OF Nos. 6. 221.
BELLARY, No. 332, dated Pennakonda, 10th December 1876.

Ever since I opened relief works in my three taluks, they have been resorted to by Mysore subjects in distress. For some time the number of these was inconsiderable, and I directed my tahsildars personally not to exclude any persons who came for relief to our works, no matter what their villages were. Now, however, the number of Mysore coolies on our works is considerable and believed to be on the increase, and it becomes a matter for serious consideration whether large sums of our Government money should be expended in supporting Mysore subjects who have their own Government to look after them. I have not liked to turn them off my works, because they have represented to me earnestly that they have no means of living as no work has been provided for them in their own taluks, and there could be no mistake about their distress and their gratitude for the relief given them. I have the honour to request early instructions whether I am to continue admitting an unlimited number of Mysore subjects to my relief works or not.

Difficulty caused by Mysore subjects resorting to relief works in British territory.

No. 2.

No. 713, dated Kolhapur, 14th December 1876.

From the STATE KHARBHARI,* Kolhapur, to the POLITICAL AGENT, Kolhapur and Southern Nos. 147.
Mahratta Country.

With reference to Government letter No. 6,975, dated 25th November 1876, calling for further particulars regarding the state of Kolhapur District and of its finances, I have the honour to report as follows:—

Kolhapur State.

A closer inquiry into the state of the crops has revealed a much better state of things than was at first anticipated. It now appears that the Kolhapur State proper may fairly realise on the whole two or three annas more than the first calculation, that is, about six lakhs out of nine, which is the average amount of land revenue collections. The crops have, no doubt, partially failed here and there, but the cultivator has been able to make up his loss to a great extent by the enhanced prices which the surplus produce of his fields fetches in the market. The sale of the karbi and grass grown upon his lands has also given him material help.

2. There is thus no immediate danger of distress occurring among cultivators, who form a large portion of the population, excepting those of the easterly districts of Shirol, Raibág, and Katkol, where it has already prevailed, and where relief works have been, and are being, started to counteract its effects. Except the population inhabiting these famished villages, the rest have yet been able to shift for themselves, and things will probably continue to move in the same course till the end of March. In the months of April, May, and June larger number of labourers will apply for employment, and it will be necessary to make provision for them by opening more relief works at appropriate places in the district. During the rainy season they will again return to their agricultural pursuits, and the demand for employment at the relief works will be considerably lessened. But if prices again rise, which is likely to be the case, special measures will have to be adopted for bringing the supplies of corn within the reach of the afflicted people.

3. The population in the whole district is a little more than eight lakhs. Of these, about one tenth (*i.e.*, 80,000) may be supposed to live from hand to mouth. Half of these will manage to shift for themselves by serving their brothers in well-to-do circumstances, and the State should be prepared to make provision for the remaining half, that is, about 40,000 people, in the shape of charity or relief works, the relief being paid either in cash or in kind.

Kolhapur
State.

4. Corn has been imported from Bombay and other places in large quantities by private dealers. The policy of strict non-interference has had a very healthy effect upon the Kolhapur market, there being in it at present a far larger quantity of cereals than it ever could command before. The State has also made very large purchases from districts where the season has been more favourable, and this example was followed by the local traders. Hitherto they never ordered out supplies from out-stations, being generally satisfied with the small quantities brought in by itinerant cartmen and occasional wanjaris. But the present distress has given a new impetus as it were to the commercial activity of the people of Kolhapur. The example set by the State in ordering stores of cereals was not lost upon the traders; importations have been made by them, and the market is well supplied with corn. Prices have gone down a little in consequence of these large importations, but this state of things is not to be relied upon. The district of Kolhapur is not favourably situated with respect to its intercourse with Bombay and other places, where the importation of cereals is facilitated by the proximity of the railway line. In the rainy season the coast communication is all closed, and the few local traders are always in a condition to monopolise the grain traffic. Up to the end of May the present rates will probably continue with slight variations, unless the new crops in Guzerat and other exporting districts suddenly change the scale either one way or the other. With the setting in of the rainy season, the traders will again be in a condition to combine and to sell such grain as they hold at famine prices, when it will be necessary for the State to supplement the supplies in the country from the stocks which it has laid in. Under ordinary circumstances the State always requires a large quantity of cereals to feed its large number of dependants, but this year it will have to support an unusually large number of labourers, who will have to be partly paid in kind, and I very much doubt if even the large purchases already made will suffice to meet the extraordinary requirements of these exceptional times.

5. The financial condition of the Kolhapur State and of the States subordinate to it is, as will appear from the annexed statement, on the whole satisfactory. There are surplus funds enough to meet the extraordinary expenditure necessitated by the scarcity.

6. Cattle are still pouring in from the eastern districts, and full freedom of forage is given to the owners in places available for the purpose. People it appears have been making provisions of fodder for the dry season, and I believe no special remedial measures are necessary as far as the wants of the people of Kolhapur in respect to fodder are concerned.

7. The water supply will become more and more scanty as the season advances in the eastern talukas of Alta and Shirol. The distress has already begun to manifest itself, but the great rivers Krishna, Warna, and Panchganga are generally within a distance of five or six miles from almost every village in this part, and the villagers are generally accustomed in the hot season to fetch water from such distances when wells and tanks fail. It does not appear, therefore, that people will leave their villages on account of the water scarcity, though no doubt their resources will be tested to the utmost in procuring this most important element of life. In the western parts of the district, which abounds in small rivulets, it will be necessary to construct temporary dams at the intervals of a few miles, and the water thus stored will serve the wants of the villagers as well as of the numerous cattle that have been draughted from the more famished districts in the east.

A.

F. SCHNEIDER, Political Agent,
Kolhapur and Southern Mahratta Country.

No. 3.

No. 505, dated Kolhapur, 15th December 1876.

From the POLITICAL AGENT, Kolhapur and Southern Mahratta Country, to the SECRETARY No. 147.
TO THE GOVERNMENT OF BOMBAY.

I have the honour to acknowledge receipt of your letter, No. 6,975, of the 25th November, calling for more specific information than previously given as to the ability of Kolhapur and Southern Mahratta States to cope financially with the necessities of the present time.

2. The States under direct control are—

1. Kolhapur and its four feudatories, all minors.
2. Miraj (Senior branch).
3. Mudhol.
4. Mhysal.

3. Sangli, which is the chief of the Patwardhan Jaghirs, is managed by the Chief and Major West as Joint Administrator.

4. The following States are wholly under their own Chiefs:—

1. Miraj (Junior).
2. Jamkundi.
3. Ramdurg.
4. Kurundwad (Senior).
5. Kurundwad (Junior).

5. The statement A. shows the financial condition of Kolhapur and its feudatories, and it will be observed that, with the exception of Bawra, which State had only recently begun to show a surplus, the late Chief having died in debt, all are in a position to meet the present crisis. Should Bawra be in the end driven to straits, Kolhapur can provide whatever may be required.

6. Appended is a report from the State Kharbari, which shows that on a closer investigation the revenue receipts will be considerably in excess of what was at first expected, the addition being partly from a more favourable outturn of the crops in some districts, and again from the high prices of grain and khurbah enabling the ryots to realise more money on lesser crops.

7. Though the present state of things is fair, still there is in many parts of the State considerable distress, particularly among that portion of the population which depends on labour for subsistence; and relief works have been opened wherever it seemed necessary, and other projects have been prepared to be opened as they may be needed, consisting of local roads, tanks, &c. It is thought that in the course of two months there will be a large accession to the number of persons requiring work both in the Ghât districts and to the eastward. At present the ryots are busy getting in their early crops. After that shall have been finished, they will have nothing to do, and will begin to clamour for work. It is impossible now to give any estimate of the numbers who may hereafter have to be employed, but it would hardly exceed 30,000 to 40,000 at the outside, and for that number works have to be held in readiness.

8. What the requirements of the country may be in the next four months it is difficult to say, but as grain is becoming cheaper, the fear that prevailed for the last two months, that people with money would starve for want of grain, no longer exists, that is, so long as the fair weather lasts.

9. On what will happen when once the coast is closed for trade and the whole of this part of the country, as far to the eastward as Mudhol or even Bijapoor, becomes dependent on local stocks either original or imported, no one can tell. It is not believed that the supply will be equal to the demand, and the nearest centre of trade will be Poona, distant from here above 150 miles.

10. I have been unable to ascertain what stock of grain there is in the country, but it is impossible to suppose that it is large. The owners would never have lost such a market as the past two months afforded, and I believe that those who have grain have little more than for their own wants till the next harvest. Large importations by dealers are in progress, but they disappear into the interior as fast as they arrive, and are for the most part purchased in the towns and villages for present consumption. When recently in the districts, I made particular inquiries on this subject, and found that in the small towns and large villages where bazaars are held the importations were limited to the week's supply, and this is what will probably continue to be the rate of importations into such places from the coast or large marts nearest to it during the fair season. Directly the rain begins to fall, however, things will change and assume a very serious aspect. The coast and the roads from it will be closed, and all the country beyond the Krishna will become very difficult of access. Carriage, too, will not be obtainable in the same quantity, as, apart from the custom of housing carts in the rains, all having bullocks will be able to make fortunes by them in the fields. With such a prospect in view it is well to be prepared, and Kolhapur is laying in a stock for itself and feudatories that it may be prepared for the hard times which people look to, and which to me appear inevitable.

11. The statement B. shows the financial condition of the Southern Mahratta Country States under direct management. The first is Miraj (Senior). I was there for some weeks after the scarcity began. It is likely to be a great sufferer by the drought, but fortunately it has a large balance, and is in a position to meet its extraordinary expenditure. There are at the present moment numerous relief works in progress as the weekly returns show, and the number of applicants for work is constantly on the increase. The cause is the utter failure of the kharif all round the Miraj mhal, that is, the head-quarter petah; not even any khurbah has been got in many villages, only a little by the river side. The importations of grain into the town are large, but it is an extensive place with a large population and a larger one in mhal villages all depending on its weekly bazaar.

12. Mudhol is a compact little State, and has a sufficient balance for all required of it. This State also is a great sufferer. The Kharbhari reckons on only two annas in the rupee; and when there recently, I should say from what I saw that it would be hard to expect much more. There are several relief works in progress which will last for a time; others are ready whenever needed. Grain is brought in small quantities not more than enough for immediate consumption. The rates are much the same as those at Kaladgi.

13. Mhysal is but a single village sub-jaghir. It is at present managed by the Assistant Political Agent, though properly it belongs to Sangli. It is believed that it will just meet its expenditure this year, but advances can be made by Miraj to it if ever considered necessary. It is situated near Miraj, and the state of its crops is much the same as in that State.

14. Sangli is next in order to be mentioned, and I regret not to be able to speak more favourably of it. It is most unfortunately placed with heavy previous debts, a loss of half its land revenue for the year, no balances, cash or invested; the position is awkward. It is calculated that there will be a deficit of nearly four lakhs. Several relief works are in progress and others will be prepared. Major West estimated that his extraordinary expenditure for this season would be nearly three lakhs, for he has some very bad outlying districts, and will need to employ large numbers of men there, in fact, is doing so now. Like Miraj, the town of Sangli has a large bazaar, and much grain is being imported, sufficient for the wants of the inhabitants of it and the neighbourhood for about 10 or 15 days.

15. The condition of the finances of this State has been before brought to notice, and Government sanctioned some pecuniary assistance being given by Kolhapur. But what has been done is only a temporary measure pending the decision of Government as to

the future management. The following is a rough estimate of the position of the State:—

Kolhapur
and Southern
Mahratta
States.

	Rs.	Rs.
Total receipts	-	4,00,000
Deduct { Ordinary expenditure	5,00,000	
Extraordinary expenditure	3,00,000	
	-----	8,00,000
Deficit	-	4,00,000

16. I now come to the States wholly under their own Chiefs, and I regret that I cannot supply any figures to show their condition; but I can speak generally about them, having recently visited each and discussed its prospects with its Chief.

17. Miraj (Junior) has means, though it is impossible to judge the amount. He is very careful, and will not lay out more than he can help. He has some small works in progress. The crops in his State have suffered a good deal, much the same as in Senior Miraj and Sangli. I do not doubt the Chief will manage his affairs without assistance.

18. Jamkhundi is in much the same state as Mudhol; no kharif crop except by the riverside; most of the villages have been deserted by a large proportion of its inhabitants, who have gone towards the ghâts with their cattle. There will be considerable loss of revenue, and some money is being spent on relief works. I ascertained from the Kharbhari that there was a sufficiency of money to go on with. He believed that the Chief would not require to ask assistance. The Chief has himself imported and stored a large quantity of grain.

19. Karundwad (Senior) has no money, but he is not so much a sufferer as his neighbours. All round Karundwad itself the land is flourishing, being watered and flooded by two rivers. There will, however, be some loss on his outlying villages, and as assistance, either in money or grain, will have to be given, the Chief said he should ask to be permitted to put off till next year paying his contribution in lieu of sowar service, which amounts to Rs. 9,612-8, but has not yet done so. He has carried out one small relief work near Kurundwar. I do not think any more in that quarter are needed, certainly not for the present. The Chief has imported and advanced some grain on his ryots asking for it.

20. The Karundwad Join, or Chiefs, do not appear to have any cause for anxiety. They expressed none to me beyond general regret for the condition of things. I am not aware that they have any works in progress, but they have imported some grain. I believe they have quite enough means for anything required of them in their *Elaka*.

21. Ramdurg is not in affluent circumstances. He has no cash balance, but he has hitherto managed to raise sufficient to meet the extraordinary charges * in connexion with the scarcity. He said it was his intention to apply for permission to postpone paying certain dues amounting to Rs. 5,000 into the Dharwar Treasury.

22. An emergent call has been made for more detailed information from all the States, and as soon as it reaches me I shall submit it.

No. 4.

Local.—No. 280 C. W.—1,062 of 1876.

No. 65.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce.

II.—Civil Works.

Bombay, December 18, 1876.

I am directed to transmit, for the consideration of the Honourable the President in Council, a note which it is considered advisable by his Excellency the Governor in Council to place on record at this juncture, with the object of describing the main course of events during the last few months in the Deccan and the Southern Mahratta Country, and the principles by which this Government have been guided in their efforts to relieve the existing distress.

NOTE on the GENERAL POLICY of the GOVERNMENT OF BOMBAY in respect to Scarcity now prevailing in a part of the Bombay Presidency.

The general progress of the scarcity in the Deccan and Southern Mahratta Country has been recorded fully, but concisely, in the weekly statements which have been published by the Government, and which commenced from the week ending the 31st of October last.

2. These statements exhibit facts of great value as regards the state of the season and crops, the condition of the people, the comparative prices of grain, the progress of imports, and the measures adopted for the relief of distress; but the information is given in a concentrated form, and the time may now have arrived for reviewing the position of Government in regard to the scarcity somewhat more at length.

Commence-
ment and
progress of
the scarcity.

3. The previous season, that of 1875, had been an average one. The monsoon of 1876 opened at about the usual time, but the fall of rain up to the middle of August, though not wanting, was scanty. About that time uneasiness began to be felt as to the prospect of the season in parts of the Deccan and the Southern Mahratta Country, but it was not until September that this ripened into serious apprehensions that great distress was impending, and that it would be necessary for Government to undertake the relief of a large number of the population, who, owing to the failure of the monsoon crops and the absence of agricultural operations in preparation for the rabi crops, would be without food and without the means to purchase it.

4. The danger first began to manifest itself in the Khandesh Collectorate, and the first work of relief was authorised there on the 28th August, but rain fell in the eastern part of the Collectorate early in September, and the difficulty that was anticipated in a great measure passed away. In Sholapur relief work was first authorised on the 4th of September, and from that time up to the present there has been no relaxation of the stringency of the situation, either in that Collectorate or in any of the Deccan and Southern Mahratta Country Districts, though distress, which at one time promised to be very severe in Satara, Kaladgi, Belgaum, and Dharwar, was somewhat mitigated by a slight fall of rain which occurred in some parts of those districts in October.

5. As soon as it became apparent that there was a serious failure of the monsoon crops, and that there would probably be an almost entire absence of cold weather crops, the price of food grains at once rose, and on the 15th of November the staple grains, jowari and bajri, were selling in some parts of the Southern Mahratta Country at 12 and 14 pounds per rupee respectively. In some localities, especially in Belgaum, Dharwar, and Kaladgi not only were the nominal prices high, but grain could hardly be procured at all, and much of that which was offered was old and of bad quality. The holders of local stocks refused to dispose of them, except in very small quantities, either waiting for higher prices, or in view to husbanding their stores in anticipation of still greater scarcity, and, possibly, another year's drought. At the present time of writing, prices have fallen, the markets throughout the country are fairly well stocked, some of them over stocked, and although the fall in price has been slight, the quality of the grain has greatly improved, and it has been brought closer to the homes of the people. The average price of jowari is now $21\frac{1}{2}$ lbs. per rupee, and of bajri $20\frac{1}{2}$. Jowari is dearest in Kaladgi, where its price is $15\frac{1}{4}$ lbs. per rupee, and cheapest in Nasik, where it is selling for 32 lbs. per rupee.

6. Owing to the long-continued drought and absence of crops, there is a general want of forage throughout the eastern part of the Deccan and Southern Mahratta Country, which presses very hardly upon the cattle and their owners, and many of the owners have left their villages, and have driven their cattle away to distant pastures. The drought has also occasioned a considerable difficulty in respect to water supply in some localities. The absence of forage and of water upon some of the lines of road, especially in the eastern districts, has greatly complicated the question of transport, and has rendered it on a very large scale almost, if not quite, impracticable in some parts of the country.

Area and
population.

7. The area of the districts which are more or less affected is 54,355 square miles, and the population is 7,963,927.

8. The area of the most affected parts of these districts is 33,873 square miles, and the population is 4,981,616. The population is almost entirely agricultural, there are few large towns and no extensive manufactures; the land tenure is ryotwari, and there are no large landlords or persons corresponding to the Zemindars of Bengal.

9. The above are briefly the main conditions of the problem that has arisen, and it now remains to note—

THE GENERAL POLICY OF THE GOVERNMENT OF BOMBAY.

Grain Supplies.

10. As soon as it became apparent that, owing to the rise of the price of food-grains, and to the action of the local holders and dealers, large importation would be necessary to prevent great distress, the Government had to consider and decide what course they should take; whether they should follow the precedent of the Bengal Famine of 1874, and themselves undertake to import grain, or whether that necessary work should be left to the operations of private traders. The matter was most carefully and anxiously considered, and it was at length determined that Government might safely leave it to the trade to do all that was needed; and although the Government have been strongly urged to depart from this policy, they have firmly and consistently adhered to it with entirely satisfactory results up to the present moment.

Policy of non-interference with grain trade decided on.

11. In weighing the matter the Government considered that any decided movement on their part would be likely to act prejudicially on the trade; that if the merchants were led to expect that they would be subjected to the competition of the Government, they would withdraw; and as it was clear that, no matter how powerful the Government might be, and that on however extended a scale their efforts might be made, they could not hope to effect all that the trade, if it exerted itself, could do, it was held that it would be better for Government not to enter into the market at all; for, though the Government might be able to do more than many merchants could do, they could not hope to effect so much as could be done by all of them. It was, therefore, publicly made known that Government would not in any way interfere with the grain trade or with the movements of grain, unless actually forced to do so by failure of supply or by excessive extortion on the part of dealers; that they would buy nothing on their own account for importation into the affected districts, though they were ready to enter into contracts for the delivery on their own works of food-supplies to their own labourers; that, in fact, they were not prepared to do more than to act through the trade on behalf of those who come upon their relief works, and that they would not in any way themselves assume the position of traders or importers, so long as they could ensure the people on the works being supplied with food.

Reasons which led to decision.

Decision made publicly known.

12. The expectations that the natural demand for food would produce the usual effect on the supply have been justified so far by the result, and the relief works the Government have commenced have acted as powerful auxiliaries in heightening this effect, and have been not only directly useful in supporting persons employed upon them, but have been indirectly useful to the rest of the population by causing money to circulate, and, by thus providing purchasers, have encouraged and stimulated the supply.

Justified by result.

13. In October the Great Indian Peninsula Railway began to deliver large supplies of grain at their stations in the affected districts, and up to the present time have conveyed 58,585 tons to these stations; the grain movement has been most extraordinary, the railway company could not provide engines and rolling stock for its conveyance, and their stations and sidings did not contain room for its accommodation, the station and traffic staff had to be largely increased, and along parts of the line the accumulations, that could not be at once disposed of, became very large. At this moment there is little, if any, diminution of the grain traffic, and it is a fact that all the towns in the affected districts along the railway are overstocked; from these towns, as fast as carriage can be obtained, the grain is passing into the interior, and most of the local markets are now reported to be well supplied. In one district only has it been necessary for Government to take any active or decided steps as regards grain imports. For this district, Kaladgi, from its remoteness, and from the fact that it contains few Marwaries, or Bunyas, the grain stocks being chiefly held and sold by the Patels and Kulkarnis of the villages, and by the more wealthy ryots, who manifested great reluctance to sell on any terms, it became necessary for Government to take exceptional steps; this was done by sending grain gradually, but not in large quantities, from Belgaum, and also from Sholapur, and the result, according to late accounts, has been to induce the dealers to do the same, and to cause the local holders to open their stores, and there is now no great difficulty as regards food supply in this district, though it is not yet so well provided for as the more westerly parts of the affected area; this defect, however, is in process of rectification.

Great activity of grain traffic.

14. At the ports of the Southern Mahratta Country the grain imports have also been very large, and have already amounted to 36,812 tons. The roads leading from the ports to the interior, all of which cross the great barrier of the Western Ghats, are crowded with grain carts, and apparently the only limit to the movement is the amount of carriage that can be obtained, and the supply of available forage. Up to the present

Large imports by sea to Southern Mahratta Country.

General
policy of
Bombay Go-
vernment.

time there has, however, been no failure in this respect, and Government are now turning their attention to measures which are calculated to help and facilitate the traffic later on in the season, without directly interfering with the arrangements of the dealers. From inquiries that were made of the grain merchants, it was ascertained that any interference by Government with the transport arrangements, or, indeed, any direct attempt to aid the merchants in obtaining carriage, would only have the effect of increasing the price of cart-hire, and the Government were requested to let matters take their own course. Acting on the general principle which guided them in respect to grain importation, Government therefore decided that it was better to leave the trade to itself; but, as above remarked, they now have under consideration questions connected with the transport (such as the cutting and storage of forage), which, if satisfactorily settled, will materially aid the transport without interfering with it.

15. It may be added that police arrangements have been made for ensuring the safety of the grain while in transit through the country, and Government have also permitted the traders to deposit in the Kutcherries the sums received for the grain sold.

16. Such has been the general policy of the Government as regards grain supplies, and, as above remarked, it has been completely successful up to the present time; and the Government have the gratification of knowing that this policy has received the approval of the Government of India, as expressed in the 12th paragraph of their letter, No. 365, of the 25th of October. This approval was accorded, it may be remarked, at a time when its generally successful result was not so apparent as it has since become.

MEASURES TAKEN TO RELIEVE DISTRESS.

These were—1st, The Organisation of Relief Works; 2nd, The Distribution of Charitable Relief.

Relief Works.

October esti-
mate of dis-
tress to be
anticipated.

17. It was calculated about the middle of October, that the number of persons who might have to be relieved in the three Deccan Districts, Poona, Ahmednagar, and Sholapur, would amount to about 220,000, and that continued relief, or employment, would have to be found for them for eight months; adding the probable number that would require relief in the other six affected districts, it was not safe to reckon that a less average number than between 400,000 and 500,000 persons would require support in some shape during the period up to the next monsoon, perhaps until the next harvest.

18. Assuming that the failure of crops had not been less serious in the Deccan and Southern Mahratta Country than it had been in Bengal in 1874 (it has probably been more serious), and taking, as a basis, the proportions adopted on that occasion, it was afterwards calculated that relief might have to be given at the worst season to about one million of people, *i.e.*, to 20 per cent. of the population of the affected districts, and a rough approximate estimate was made of the outlay that would devolve on the Government, amounting to 1,400,000*l.* At first, *i.e.*, in September and part of October, the Government endeavoured to meet the case by the application of the resources within their own command by using the provincial and local funds, and by anticipating, to some extent, the local resources of the ensuing year, but it soon became apparent that these efforts would only to a very small extent meet the exigency of the case.

19. Many small and scattered works had been undertaken in the period, but about the middle of October it became clear that, if the difficulty was to be met at all, far more serious and extensive operations must be set on foot.

Measures
taken by
Bombay Go-
vernment.

20. It was the opinion of the Government that properly to deal with the crisis in a manner that would ensure the object in view, *i.e.*, the profitable employment of the people, and the avoidance, as far as practicable, of waste of public funds, it was necessary to set on foot works on which large bodies of men could be concentrated, supplied with food, and properly organised and controlled. This view was in accordance with the ruling of the Government of India, laid down in the 12th para. of the Resolution No. 1—59—71, dated 18th February 1875, where it is expressly enjoined that at an early stage of distress "large works should be opened at once, small local works subsequently, as the necessity for them arises."

21. Acting on this principle the Government proposed to the Government of India the commencement of the earth-works of the contemplated railway between Dhond and Manmar—a work which, from its circumstances and surroundings, was recommended to the Government by their officers as especially adapted for affording relief. The proposal was not approved by the Government of India on grounds of general policy,

and this Government at once accepted the decision that was communicated to them. With this work fell also a similar work which this Government had intended to commence for the relief of the Southern Mahratta Country, *i.e.*, that portion of the Karwar and Bellary Railway which lies within the Dharwar Collectorate.

General
policy of
Bombay Go-
vernment.

22. The Government had been informed by the Government of India, in their letter No. 365, of the 25th October, that they had "no desire to impose upon the Bombay Government any restrictions beyond those which are afforded by the experience of the past, as authoritatively recorded by the Government of India," and that they had "the fullest confidence that His Excellency the Governor in Council will exercise the discretion vested in him so as to prevent any loss of the lives of Her Majesty's subjects, without incurring any expenditure of public money in excess of the necessities of the case."

23. Believing that a discretionary power had been thus granted to them, the Government proceeded, under the advice of their responsible officers, to draw out a programme, on a fixed and intelligible principle, of other large operations, both road and irrigation works, the works being so disposed as to provide for each affected district; but when this programme was submitted to the Government of India, objections were taken in detail by the President in Council to several of the proposed works; it was ordered that no work should be commenced in the Irrigation Department likely to cost more than Rs. 30,000 without the previous sanction of the Government of India, and the Government were given to understand, by the tenor of the orders passed, that before any large work could be undertaken, it would be necessary to establish sometimes the necessity for it as a relief work, sometimes its general merits as a necessary improvement.

24. A correspondence then commenced, which is not yet terminated, but Government were compelled, by the necessity of the case, to commence several of the works which were prohibited by the Government of India, feeling sure that, when the subject had been more fully considered by that authority, their action in this respect would be approved, and that it would be seen, and admitted, that they could not have acted otherwise without incurring very grave responsibility, or without possibly endangering the lives of Her Majesty's subjects.

25. This prohibition by the President in Council of the commencement of large works on the principle enjoined in para. 12th of the Resolution of the 18th February 1875 above alluded to, has undoubtedly embarrassed this Government, and has necessitated the prosecution of small local works in large numbers, over which very little supervision can be exercised, and on which there must be much waste of public funds.

26. People who would otherwise starve must be employed, and instead of employing them on large public works, where they could be properly looked after, they are now in many cases provided with work nearly at their own doors, and the result is not only that they do, it is believed, as much or as little work as pleases them, but, what is still worse, many more resort to the relief works than would come if to reach these works they had to travel some distance, and if when they arrived there they were made to work properly. Efforts are being made to get these scattered works into better order, the scale of relief wages has been adjusted more in accordance with the lower and prevailing cost of food, and it is hoped that the Government of India will shortly accord their approval to the commencement of more large works, and will see that the situation is not one which will admit of any delay consequent on nice inquiry into the relative merits of such works, and that as a certain number of persons must be supported, it is a secondary consideration what particular work is undertaken, provided it is a useful one, that it will entail as little after liability as possible, that it has the approval of the local officers, and is suited for relief purposes. One class of works, it may be mentioned, that has been entirely objected to by the President in Council is that of tanks other than those of small dimensions; yet, it is almost self-evident that there is no description of work so well suited for the immediate purpose in view as the excavation of tanks and the construction of bunds, or so well calculated to prevent in their neighbourhood a recurrence of a calamity similar to that which their present construction is intended to mitigate. At this time there are about 250,000 persons on relief works, and they are daily increasing in number, and it must not be forgotten that as the operations advance, and as works are completed, it will become more and more difficult, not only to devise means of employment perfectly unobjectionable, but even to find those which will be moderately beneficial.

Charitable Relief.

27. There have been very few applications for relief of this nature. In October an allowance of Rs. 25,000 was made to the Collectors of the districts marginally noted, of

General
policy of
Bombay Go-
vernment.

Poona, Ahmednagar, Sholapur,
Satara, Kaladgi, Belgaum, and
Dharwar.

Rs. 10,000 and Rs. 5,000 respectively to the Collectors of Nasik and Khandesh, to enable them to provide for the feeble and infirm poor, and for indigent people incapable of performing work ; but up to present time, out of the whole sum so allotted of Rs. 1,90,000, only about Rs. 5,000 has been expended for the purpose for which the grant was made. Later on it will be necessary, probably, to establish poor or relief-houses, and to organise relief committees in communication with a central committee and with Government. Measures are in preparation, but the time has not yet arrived for carrying them out.

Remissions.

28. The subject is under consideration with the Local Revenue Officers of this Government, and it is believed that remissions to the extent of over half a million sterling in the affected districts will be necessary.

Condition of the People, and anticipated Distress.

29. The condition of the people, considering the circumstances, is not unsatisfactory, and their behaviour, with very few exceptions, has been very praiseworthy. It may be hoped that this will continue so as long as employment is found for them, and they can earn money with which to purchase food. As has been stated above, there is no actual scarcity of food in the country, and none is anticipated at present, but there is no employment for the people, and it is this that it is the task of Government to provide. As above stated, 20 per cent. of the population of the affected districts may come on the hands of the Government at the worst period of the year, and of that number probably 10 per cent. will require gratuitous relief or relief in poor-houses in return for light labour. It is probable too that when relief works are of such a character that they can be properly organised and superintended, and can therefore be carried on systematically, when wages are restricted to what will provide a bare subsistence, when labour is exacted from all who can work, and when cooked food is distributed in poor-houses to those who cannot, the numbers that will remain on the hands of Government will be very much reduced.

Government
importation
of grain
unnecessary
at present.

30. The Government do not at present think that it will be necessary to undertake grain importation or transport on any large scale, and they will certainly endeavour to avoid either measure if it be possible to do so. Hitherto, as has been shown above, any interference on their part was not only uncalled for, but would have been mischievous. The Government will, however, carefully watch the state of the trade and of the market, and act accordingly.

Failure of
forage for
cattle.

31. One serious feature of the present distress is the state of the cattle. Owing to the almost entire failure of the crops in some of the districts there has been a corresponding failure of forage, and the owners of cattle have found it very difficult, if not impossible, to find food for their animals.

32. The preservation of sufficient cattle for agricultural purposes is of course a subject of very grave importance, and although the Government could not undertake to import or provide forage for the animals, they have done all in their power to meet the emergency by opening their forest reserves for grazing, by granting free passages for cattle by rail from Sholapur to Poona, and by instructing the Collectors of the Western districts to receive and pass on to lands where there may be grain and water all cattle that may be sent to them from the Eastern districts ; at the same time the Collectors of the Eastern districts have been instructed not to send the weak and useless animals, of which numbers are to be found in every village ; such animals must take their chance ; they are of no use or value, and would only consume the grazing, already too limited, which would otherwise preserve more serviceable cattle.

The water
supply.

33. The long-continued drought has affected the ordinary supply of water, and though no calamity from this cause is anticipated in a country which, like the Deccan and the Southern Mahratta country, is intersected by rivers and streams which all contain water in their beds, yet it is no doubt the case that in many villages the difficulty as regards water supply, which in ordinary years occurs at a later period, will now be sooner and more severely felt. This cause will probably in some villages necessitate migration of the people, irrespective of the migration that has already taken place in connexion with the movement of cattle to distant grazing lands, and with the movements of the people to more or less distant relief works.

(Signed) M. K. KENNEDY, Major-General R.E.,
Secretary to Government.

No. 6.

EXTRACT from LETTER from ACTING HEAD ASSISTANT COLLECTOR to COLLECTOR OF Nos. 14, 221.
BELLARY, No. 16, dated Camp Hindupur, 11th January 1877.

Moreover the influx of a large number of Mysore subjects migrating into our territory Influx of
in families has swelled, and threatens to swell still more the numbers both on our relief Mysore sub-
works and in our relief houses. From the tahsildar's return for the week ending 6th jects.
instant it will be seen that the number has increased to 10,867.

No. 7.

Local. No. 21 E.—86 of 1877. Nos. 41, 65.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to
the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture,
and Commerce.

V.—Establishments.

18th January 1877.

I have the honour to acknowledge the receipt, on the 11th instant, of your letter No. 521, of the 15th ultimo.

General
policy of
Bombay
Government.

2. In reply, I am directed to state that his Excellency the Governor in Council receives with great gratification the assurance given in your 2nd paragraph, that nothing was further from the intention of the Government of India than the withdrawal of the confidence which was formerly expressed as regards the measures adopted by the Government of Bombay to cope with the distress which is now afflicting a large portion of the Bombay Presidency.

3. I am also to convey the acknowledgments of his Excellency the Governor in Council for the recognition of the President in Council, as expressed in your 4th paragraph, of the efforts made by this Government to utilise the provincial and local resources at their command on the first appearance of distress, of the avoidance of interference with the grain trade, and of the success by which these efforts have hitherto been attended.

4. This Government does not forget that on the 20th December, five days after your letter was written, his Excellency the Viceroy, then staying in Bombay, in replying to an address from the Chamber of Commerce, and alluding to the famine, was pleased to observe, "I gladly take this opportunity to express the satisfaction of the Government of India with the manner in which the Government of Bombay is grappling with the difficult task imposed upon it. The principles avowed by that Government as those which will guide its action appear to me to be generally sound and excellent."

5. His Excellency in Council would therefore have been very glad if, after this very flattering expression of his Lordship's opinion, this Government could have abstained from prolonging the correspondence, but there are certain passages in your letter of the 15th ultimo which render it imperative on them to remove all doubt as to the principles they have maintained and the measures they have recommended for dealing with the famine.

6. The 3rd paragraph of your letter summarises the principles which, up to the end of October, had been laid down by the Government of India. One chief principle was, that minor local works should be undertaken in preference to the commencement of large projects.

7. The revenue resolution of this Government No. 5,890, of the 16th October, stated, that the Government had, for the previous six weeks, been ordering minor works, and set forth fully the reasons for considering such works to be totally inadequate to meet the distress which had then evidently become inevitable. This Government, in the 9th paragraph of the same resolution, recorded their opinion, "that in all cases in which, with due regard to sanitation and other local circumstances, it may be found practicable, it will be far more convenient, and in the end far more economical, to select for relief works those of considerable magnitude, which have been well examined and approved, though unavoidably postponed, on which the labour of large bodies of men can be advantageously concentrated. There may be cases in which it may be necessary to have recourse to isolated works of a trifling nature, but these should, as far as possible, form the exceptions."

8. You observe in your 5th paragraph that it would have been desirable to direct the Collectors to commence with minor local works, and to submit programmes of further works of a like nature, and it is on this latter point that the chief difference has unfor-

tunately arisen between the President in Council and the Government of Bombay. Both agree that at the commencement, and while the extent of the evil was uncertain, minor works should be preferred. But as that uncertainty was passing away, this Government were constrained to turn to works of a large character, on which the labour could be more concentrated, and subjected to more efficient superintendence. Moreover, they did not, nor do they now, attach importance to the works on which the able-bodied were to be employed, being close to their own homes; but on the contrary, regard this proximity as a temptation to people who are not greatly in want, to seek relief under circumstances where it may be found without much trouble or inconvenience to themselves.

9. The President in Council was pleased to accept several of the larger undertakings submitted to him by this Government, but his rejection of many of the proposals made for similar works necessarily threw this Government back on minor operations, some of which have been difficult to properly organise and supervise, and are likely to be of little value when completed. Some of the public money which has been expended in relieving distress has not therefore, his Excellency in Council believes, been so well applied as it might otherwise have been, and the last paragraph of your present letter announces that this Government will only be left free to carry out such operations as may be deemed most suitable and necessary after it has furnished returns of the most detailed nature, requiring much time for their preparation. His Excellency in Council considers it necessary to place on record that for this practically unprofitable result his Excellency's Government cannot, in any degree, hold itself responsible.

10. His Excellency in Council will only point out further that on large works the labour and wages tests can be applied with good effect, while on the small works, although the tests can, to some extent, be made available, it is almost impracticable, for many reasons, which need not here be detailed, to secure their full beneficial effect. I am to add that this fact has been fully recognised by the local district officers, and more especially by the Collectors of Poona and Sholapur, who are referred to in your 5th paragraph as having proved the feasibility of finding such minor works.

11. Another principle described as laid down by the Government of India by their letter of the 25th October, was, "that the Government should abstain from making purchases of grain in the general market on its own behalf, except in the last resort." On this point it is only necessary to observe that the Government of Bombay had already, on the 16th October, publicly announced its intention to adopt that course.

12. The instructions contained in your 10th paragraph, have, it seems almost needless to state, been anticipated. Both the Revenue Commissioners are now engaged in visiting the distressed districts, and are in the exercise of such powers as this Government deem it necessary and advisable to delegate to them. These powers do not extend to authorising any outlay of public money without previous reference to this Government, with whom communication is always easy and rapid.

13. I am also directed to state, in conclusion, that this Government fully recognise the paramount importance, on every ground, of exercising the utmost economy in dealing with the distress in this Presidency. His Excellency in Council has never lost sight of

"His Excellency in Council, I am desired to say, is awaiting the receipt of a letter from the Department of Agriculture and Commerce, dated 29th September, of the despatch of which he has been advised in the telegram last quoted above, in which, he understands, he is to receive instructions as regards the provision of funds for famine relief works, and in respect to the incidence of the charge for such works. Some considerable outlay of Imperial money will, no doubt, be necessary, but his Excellency in Council, I am desired to say, believes that, if confidence be placed on this Government, all that is needed may be done without extravagant or lavish expenditure of public money, and without any great ultimate loss or waste."

this necessity; and has, from the first, acknowledged it, *vide* my letter No. 142 C.W.—718, of 9th October last, 5th paragraph, quoted in the margin. This was followed by the Resolution No. 268 C.W.—1,038, of the 13th December 1876, clearly indicating the wish of Government to obtain a reasonable return for the money spent, and making the rate of wages dependent on the price of food for the time being. On the 5th January another resolution was issued, disallowing pay for Sundays; and the Government are at this moment devising measures which they hope will still further diminish the expenditure. No measures have yet been proposed, of the necessity of which for saving life, or preventing excessive or dangerous suffering, his Excellency in Council has not been fully satisfied; and his Excellency in Council, in the future measures he may be compelled to take or to advise, will not fail to bear in mind that he shares, with the Government of India, the responsibility for properly utilising the public funds, and for avoiding all

needless or wasteful expenditure.

No. 401, dated Bombay Castle, 22nd January 1877.

Nos. 23. 66.

From the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY to the ADDITIONAL
SECRETARY TO THE GOVERNMENT OF INDIA.

You will have learnt from my telegram of the 18th instant that, in obedience to the instructions conveyed by your telegram of the 16th instant, the several Collectors have been instructed to make no more promises of remissions of land revenue to the ryots, and I am to state that his Excellency in Council will now await the further instructions of the Government of India on the subject.

Land re-
venue re-
missions.

2. This Government, however, think it their duty to point out that the principle of making remissions final, instead of holding the claims over for settlement in subsequent years, has been consistently acted upon under the revenue survey system of this presidency. His Excellency in Council therefore deemed it desirable in the present case to follow the usual practice; and I am to observe that the resolutions passed by this Government with that intent were discussed in your letters No. 806 and No. 458 of the 3rd and 30th November last, without any indication of a desire on the part of the Government of India that suspension of claim should be substituted for positive promise of remission. The promises have consequently been made in several instances, and must, it is presumed, be carried out; and it will be for the Government of India to consider how far it will be expedient or practicable to have the two systems brought concurrently into operation.

3. Steps will immediately be taken for ascertaining to what extent promises of remission have already been made.

Nos. 10. 181.

From the TRAFFIC MANAGER, JUBBULPORE, to the AGENT, CALCUTTA.

BLOCK OF GOODS AT JUBBULPORE.

On the 20th instant there were 400 of our waggons laden with goods for and *via* G. I. P. standing at Jubbulpore for want of engine-power; the yard was blocked, and we had to stop waggons on the Jubbulpore line.

Railway
grain traffic.
Block at
Jubbulpore.

On hearing this, I at once (17-0 on 20th) wired the Deputy Traffic Manager and District Traffic Superintendent, Toondla, to stop booking through, and also advised the traffic manager, G. I. Peninsula and his superintendent at Jubbulpore that our waggons detained at Jubbulpore must be unloaded and contents made over to that company, if they could not be cleared.

Mr. Conder replies 21st, 9-0 A.M.

"There are 330 of your waggons only under load for G. I. P. at Jubbulpore; these will be worked out by Monday; if you will delay sending more until then, stoppage of through booking from your line *via* Jubbulpore and unloaded there not necessary; please withdraw early."

I need hardly point out that this is very vague indeed.

Mr. Conder promises to clear our waggons out if we send no more, and at the same time asks me to withdraw all restrictions on through booking.

At 18-30, on the 21st, there were still 272 waggons on hand, and I see no prospect of the G. I. P. being able to push our waggons *on to destination* and return them in due time unless we give them breathing time, so I have left the restriction in force.

I wired the District Traffic Superintendent, Howrah, and Burn & Co. to day to be prepared for a heavy rush into Howrah, and included your name that you might have early advice.

If the G. I. P. Railway clear off to-day the waggons we tendered them on Saturday, they will have from 1,200 to 1,300 of our waggons on their line.

No. 441, dated 22nd January 1877.

From the TRAFFIC MANAGER, JUBBULPORE, to the AGENT, CALCUTTA.

WAGGONS SENT TO G. I. P.

Railway grain traffic. In reference to my No. 438 of date as to block of waggons at Jubbulpore, and the steps taken in consequence, it may be as well to give you a sample of what we have been doing for the traffic in that direction of late.

I take Cawnpore exports for a fortnight (*i.e.*, the 15 days from 6th to 20th of this month), and find that of 1,359 waggons despatched from that station under load, no less than 635 were sent to and *via* Great Indian Peninsula Railway, and that the daily average stood thus,—

To Great Indian Peninsula	-	-	-	-	42
To East Indian Railway	-	-	-	-	38
To all other stations	-	-	-	-	9
Total	-	-	-	-	89

This is exclusive of through traffic from Oudh and Rohilkhund in their waggons, and it will serve as an illustration, and will show that we have not lost sight of the importance of the traffic to Western India at this crisis, even though the diversion of so many waggons has been a serious detriment to our own local traffic, delay to which is, and has been, causing most serious and well-grounded complaint, as you are aware.

Traffic Statement, Jubbulpore.

Date.	1. East Indian Railway Waggons (Main and Jubbulpore Lines) on Great Indian Peninsula Railway.	2. Waggons on hand at 6 p.m. Daily waiting despatch.	3. Through Waggons loaded for Great Indian Peninsula Railway cut off and detained at Sutna, owing to block of Waggons at Jubbulpore.	4. East Indian Railway Waggons sent to Great Indian Peninsula Railway.	5. Great Indian Peninsula Railway Waggons received by East Indian Railway.		6. Waggons received at Jubbulpore for loading in the direction of Great Indian Peninsula Railway.	7. Goods on hand each Day at 6 p.m.

* Of this number, 226 were for goods transhipped, leaving 494 for the grains and seeds traffic; and of the 494, 174 were coaching vehicles carrying 3 tons of goods only apiece.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce.

V.—Establishments.

23rd January 1877.

I have the honour to acknowledge the receipt of your letter, No. 1, of the 5th instant, conveying the instructions of the Government of India, that the restriction which had previously been placed on the organisation and commencement of large works to afford relief during the present distress in this Presidency has, under certain conditions, been removed.

Necessity for commencement of large relief works.

2. One of these conditions is, that no works shall be undertaken unless, in each case, this Government is satisfied by evidence which it considers sufficient, that delay in commencing work will involve serious danger to the lives of the people. On this point all that can be said is, that the autumn and spring crops over a large area in this Presidency have almost if not entirely failed, while in other parts they have been extremely scanty; that the prices of food-grains have consequently risen to an abnormal height; that the mass of the people are very poor; and that those who usually depend on the product of their own small holdings, or on agricultural or other labour for subsistence, are now deprived of their means of livelihood, and would probably fall into very great straits, and starve, if aid were not given to them in some shape.

3. In the early part of the season, before there had been time to organise any relief works, the uneasy movements of the people indicated, if not great distress, at least anticipations of it. In some districts signs of disorder manifested themselves, and had the people been of a less patient and docile temperament, they would probably have broken out into serious rioting. When relief works were opened, numbers flocked to them, notwithstanding that the wages offered were more than 30 per cent. lower than the wages of ordinary years, and that the price of food-grain was over 100 per cent. higher. Under these conditions, there are now upwards of 300,000 persons seeking employment on relief works, the mass of whom, this Government believe, would suffer the most serious privation, and many of whom would probably perish, if employment were not given to them; while it is quite certain that, but for the relief offered them, agrarian disorders, dacoities, and crime of every description would prevail, and the country would be greatly disorganised.

4. If these main facts be considered by the Government of India as supplying the evidence required by them, his Excellency in Council will, I am desired to say, consider that he is free to act under the authority which has been conditionally given to him; if these facts are not held to be sufficient to establish the case, his Excellency in Council begs that it may be so intimated to him, in order that he may pause until he is in a position to offer more conclusive testimony.

5. His Excellency in Council, I am desired to add, has repeatedly expressed his sense of the necessity for the most rigid economy, and has endeavoured to practice it, to the extent he considered permissible under the instructions given him in paragraph 19 of your letter, No. 365, of the 25th October last, viz., that he should "exercise the discretion vested in him so as to prevent any loss of the lives of Her Majesty's subjects without incurring an expenditure of public money in excess of the necessities of the case." His Excellency in Council feels strongly that the obligation which rests on him of properly and economically administering the public funds is not less in degree, though it may be less in extent, than the obligation which rests on the Government of India itself; that in fact, in common with all other public officers administering the resources of the State, it is his duty to enforce such careful and prudent economy as may be compatible with good and efficient government. It is, therefore, no small cause of satisfaction to his Excellency to find that not only this principle, but also all the others which he has endeavoured to enforce from the commencement for dealing with this Famine, is adopted by the Government of India, and embodied in their letter of instructions to Sir Richard Temple. There is, however, undoubtedly one exception of the utmost importance. This Government has been acting on the assumption that no person was to be allowed to die of starvation if the Government could prevent it. But the letter to Sir Richard Temple says, "even for an object of such paramount importance as the preservation of life, it is obvious that there are limits which are imposed upon us by the facts with which we have to deal." The Government of India cannot fail to appreciate the extent to which this limitation, however sound in

List of relief
works pro-
posed to be
set on foot.

itself, must increase the responsibility of the local Government in controlling relief operations.

6. I am now to state that, subject to the stipulation made in my 4th paragraph, his Excellency in Council proposes to proceed with the following works as soon as he is satisfied that the time has arrived for providing the means of relief which these works are calculated to afford:—

(a.) *The Malsej Ghaut.*

(b.) *The Nira Canal.*—On the subject of this work I am to refer you to page 5 of the statement which accompanied my No. 309, C.W. 1,110, of the 23rd ultimo. The complete project is ready, and will be submitted, together with a proposal for the modification of the entire scheme to secure a canal for monsoon irrigation as a distinct project to afford relief. This modified scheme is calculated to cost Rs. 19,52,000 to provide water for the irrigation of 56,849 acres, and to yield a net revenue of 4·4 per cent. This work will provide employment for about 30,000 people for six months. The line of canal traverses the Purandhur, Bhimthari, and Indapur Talukas of the Poona Collectorate, one of the driest parts of the Deccan. There are already over 30,000 persons employed on small scattered works under the Collector, for whom it is most difficult to find profitable employment.

(c.) *Dhond and Ahmednagar Road.*—This work is already in progress, and cannot be stopped; on the contrary, it will be necessary to grant further funds for it when the amount already allotted—from which a sum of Rs. 20,000 was temporarily transferred to the continuation of the same road north of Ahmednagar—has been expended. There are now employed upon it 4,378 people.

(d.) *Metalling the Mail Line between Poona and Hurryhur.*—This road traverses the Collectorates of Poona, Belgaum, and Dharwar, and the State of Kolhapur. The work will probably be required for extensive relief later in the season. It has the advantage of being placed in a part of the Presidency where the local distress is not great, where the water-supply is ample, and where communication, and consequently food transport, is easy. It is a work also that can be stopped at any moment without involving any after liability, and, on these grounds, it is one peculiarly fitted for relief purposes. This Government have always reckoned on this work as affording a large reserve for relief purposes; and, under the authority now granted in your letter under reply, will hold themselves at liberty to proceed with it, when occasion arises, to any extent that may be needed.

(e.) *Dholkheir and Bellary Road.*—Under the authority granted in your letter, this work will be proceeded with to the extent of the original grant, or to a greater extent should it be necessary to do so. It is not known to this Government that there are many cross-roads in the Kaladgi Collectorate requiring improvement. Certainly there are no such cross-roads which would be more useful than the completion of this through line, or which would afford better means of relieving the distressed persons of the district. It is not at this stage (and it is believed that the Government of India will admit this to be the case) desirable to provide work for the people at their very doors. The vast number of persons—some of whom are not thought to be in great distress—which the prosecution of small scattered works have brought on the hands of this Government, are the cause of great anxiety, and his Excellency in Council has adopted every means that have suggested themselves to him to put a stop to this evil, short of organising the relief works on a more efficient and concentrated scale, and this, in consequence of the orders he has received, he has hitherto been unable to do to the extent that he considered desirable and necessary.

7. Small cross-roads are, for the reasons just stated, objectionable, and, for the same reason, minor tank-clearances are not advisable. Good enough at an early stage of distress, when the numbers of applicants for relief are not large, these small roads and clearances are unprofitable at an after period, when strict and complete organisation becomes imperative to save great waste of public funds. The small tanks have also this inherent disadvantage, that they are useless as regards prospective droughts unless they can be cleared (as is very seldom the case) to hold two or more years' supply. A tank containing only one year's supply is useless in season of drought, when it does not fill, and it is not very greatly needed in good seasons. Large irrigation works, especially tanks and storage reservoirs which contain two or more years' supply, are, perhaps the most suitable works to undertake for famine relief, not only because they usually involve

heavy earthworks, but because they tend in their immediate neighbourhood to prevent a recurrence of drought; such works usually cost more than Rs. 30,000, and his Excellency in Council now acknowledges gratefully the removal of the restriction that had previously been placed upon this class of works. Were it in his power, his Excellency in Council would gladly undertake works of this character in preference to any others, but it is difficult to find suitable locations, for it is only a concurrence of favourable circumstances as regards rain-fall, configuration of ground, and the like, that renders works of this class possible. It is a fortunate circumstance that the investigations of former years have placed within reach a few of such works on the present occasion.

Proposed
irrigation
relief works.

8. In addition to the tank works which have already been undertaken, his Excellency in Council will, as occasion arises, proceed under the authority now given with the following :—

The Shersoful, Mullet, and Patus tanks in the Poona Collectorate.

The Ojhar Canal extension in the Ahmednagar Collectorate.

The Doni tank in the Dharwar Collectorate.

The Banknari tank in the Kaladgi Collectorate.

The Krishna Canal extension in the Satara Collectorate.

The Chunkapur tank in the Nasik Collectorate.

The Bhokur and Dymel tanks in the Khandesh Collectorate.

9. Information as regards these works is given in the statement which accompanied my No. 309, C.W. 1,110, of the 23rd December, and I am to add that, as regards the Bhokur tank, the work now contemplated is not the large project which was before the Government of India in 1872, and deferred from want of funds—*vide* the Government of India's letter, Public Works Department, No. 917 I., of 22nd November 1872—but a smaller scheme, involving the restoration of an old irrigation work, calculated to cost about Rs. 84,000, nearly the whole of which is for earthworks, and to secure a probable net revenue of 5 per cent. In addition to this work, it may also become necessary to undertake the Gokak Canal in the Belgaum Collectorate, which was not included in the original programme of works by this Government. This canal, for which there are complete plans and estimate, is calculated to cost Rs. 9,62,307, and it will carry water sufficient for the irrigation of 38,200 acres.

10. I am now to observe that, should the distress in this Presidency continue to increase, and should the measures which have been adopted by this Government, as regards the labour and wages tests, and the careful examination of applicants for relief, not have the effect of checking the rapid accumulation of persons on relief works, it will become necessary to undertake still more extensive operations than any of those adverted to above, and the only effectual measures which suggest themselves to this Government are the commencement of the Dhond and Munmar Chord line, connecting the two branches of the Great Indian Peninsula Rail above the Ghauts, and the Karwar and Bellary Railway. A proposition has already been before the Government of India as regards the first-named work, and has been rejected by them; but it is understood from paragraph 8, sub-head a., of your letter, No. 521, of the 15th December, and also from the general tenor of your letter, now under reply, that the Government of India are not unwilling to re-open the subject should occasion arise for doing so.

Again urging
importance
of Dhond-
Munmar, and
Karwar-Bel-
lary lines.

11. Not to encumber the text of this letter, I am directed to attach a memorandum respecting each of these railways, containing information as regards its cost and conditions of execution, as well as the extent of relief it is calculated to afford, and I am to add the following observations :—

12. The Dhond and Munmar Railway will afford ready means of relief in three districts, Nasik, Ahmednagar, and Poona, in which there are already 99,273 persons employed on relief works, many of which are small and overcrowded. It will also afford relief to the people of Sholapur, where there are already 1,18,700 labourers on the relief rolls.

13. On the earth-works of this railway, relief labourers can be properly organised, supervised, and tasked, and the line is admirably situated as regards food and water-supply. If even it be considered unadvisable for the present to carry out the line to completion, it would still, in the opinion of this Government, be better to undertake the earth-works, which, at some period will be worth the full amount of money that may now be spent upon them, rather than to fritter away an equal sum on useless works, such as cross-roads and tank clearances, which are not needed; on the earth-works of this railway a fair proportionate return for the money spent can be secured, which cannot be done on scattered village works.

Dhond and
Munmar
railway.

14. Of course his Excellency in Council would greatly prefer to see the Chord line commenced and completed without check or stoppage, but if this cannot be at present done it would still be a measure preferable in every respect, and economical as regards the further prosecution of a work, which some day or other must be done, to employ the persons for whom Government must find occupation in making the cuttings, which will remain for years without deterioration, and throwing up the embankments, which will also stand without material loss or damage, if stopped short of the influence of flood-water at the river crossings and if protected at such points.

15. Apart from the great and obvious political and military advantage of connecting the two great branches of the Great Indian Peninsula Railway above the Ghats, and thus connecting the whole northern and southern system of railway communication of India, there is this further consideration, that, in the event of famine or scarcity prevailing in any part of India at a future period, such as now prevails in the southern part of the continent, this Chord line would be of very great value.

16. The experiences of the present season are sufficient to establish this point. The Great Indian Peninsula Railway, chiefly from having been compelled to work an enormous traffic over both its weak points, the Ghat inclines, has been unable to deal effectually with the grain that has come upon it. Engine and waggon stock have run short, there has not been enough station and siding accommodation, and the staff has proved insufficient, especially as regards engine-drivers. The railway has carried 857 tons of grain per diem on an average for 82 days, nearly the whole of which has been forced down the Thull and up the Bhore Ghats; it is still carrying at the same rate, and it may be safely said that if the Chord Line from Dhond to Munmar had been in existence the railway would have been able to convey double the quantity it has done to the affected districts, and would also have enabled the traders to deliver at cheaper rates. Much too of the valuable food-grain, stated to have been recently damaged and destroyed by rain in the North-west Provinces, would have been preserved to its owners and for the use of the people suffering from distress. This grain, as the Government of India is aware, had accumulated at stations where there was insufficient shelter for it, having been offered in such quantities that the railway could not carry it away.

17. What has proved to be the case as regards the grain traffic may some day operate as regards military movements; and should any such occasion arise, the necessity of dealing with two such obstructions as the Ghaut inclines may be found to exert a very detrimental, possibly a fatal, influence on movements that may be of the utmost importance.

18. The line from Dhond to about 10 miles north of Ahmednagar has been finally located and is approved by this Government; the further portion has been surveyed, but not yet finally located; this can, however, be done while the first portion is under construction.

Karwar and
Bellary rail-
way.

19. The Karwar and Bellary Railway has already formed the subject of a correspondence, which ended with the Government of India, No. 2,133 R., dated 5th September 1874, estimates have been framed, and the line has been surveyed. On the subject of this railway, I am to refer you to my letter, No. 367 (railway), dated 16th March 1874. All necessary details regarding that portion of the line which is suitable for meeting the present emergency in the way of relief are comprised in the accompanying memorandum.

20. It is believed that the Madras Government are desirous of undertaking the earth-works of this line, as a means of providing employment for distressed persons in the Bellary and the adjoining districts. The work has, therefore, the merit that it would materially aid two or more districts in two presidencies, and when completed, it would not only, as has been shown in the previous discussions in respect to it, be a valuable commercial line of communication likely to return fair interest on any money borrowed for its construction, but in future season of scarcity or famine in the Southern Maharatta country, it would greatly add to the power of the Government and of the people to deal with, and meet failure of crops.

21. In Dharwar there are already 30,000 people on relief works, in Belgaum 27,000, and in Kaladgi 41,000, and these numbers are increasing and probably will continue to increase.

22. His Excellency in Council does not, I am desired to say, propose the immediate commencement of this work, though there is reason to apprehend that, if not commenced shortly, many small scattered works must be undertaken, on which it is probable that much money may be wasted.

23. It is probable, however, that the Government of India will be inclined to deal with this question on a general review of the measures to be adopted in both this Presidency

and in Madras; and I am, therefore, desired to say that this Government will be prepared to carry out their portion of the line on learning from the Government of India that they have permission to do so, and they are of opinion that it would be a wise and prudent measure to commence it at an early date.

Dhond-Munmar, and Karwar-Bellary railways.

24. Should the Dhond and Manmar and the Karwar and Bellary Railways, either or both, be undertaken, it will be necessary for this Government to indent on the Government of India for officers to form the engineering staff that will be required to properly supervise and carry out the works.

25. As regards the 5th paragraph of your letter, I am to state that his Excellency in Council understands that the stipulation it contains would not apply to works of Imperial character, such as the Dhond and Munmar Chord Rail line, and the Karwar and Bellary Railway; and as regards the rest, I am to observe that, in applying to them any principle which the Government of India may deem equitable in respect to provincial responsibility for meeting the charges for extraordinary public works, it will not be forgotten that these works are not voluntarily undertaken by this Presidency, but have been forced upon it under circumstances which have left its Government no choice but to undertake an outlay, which, on other similar unhappy occasions, has been met, and provided for mainly as a charge against the general Imperial revenue of the Empire.

26. In conclusion, I am to add that it is of the utmost importance that this Government should be informed, at the earliest possible date, whether or not the Government of India are prepared to permit the commencement, when needed, of either or both of the two railways. As, in the event of refusal, this Government will be immediately obliged to apply itself to the very difficult task of seeking for the means of other suitable employment for very large bodies.

DHOND AND MANMÁR RAILWAY.

Standard Gauge.

	Distance.	Miles.
Dhond to Nagar - - - - -	-	47½
Nagar to Manmár - - - - -	-	84½
Total - - - - -	-	132

Probable cost, 90 lakhs.

Receipts, Rs. 8,32,920.

Working expenses at 60 per cent., Rs. 4,99,752.

Net profits, Rs. 3,33,168, or about 3·7 per cent.

Number of people it will employ for five months, from Dhond to Nagar, 37,500 persons; for three months, from Nagar to Manmár, 110,000 persons.

HUBLI AND BELLARY RAILWAY.—METRE GAUGE.

Summary.

	Distance.	Miles.
Kirwatti to Hubli - - - - -	-	29
Hubli to Gudduk - - - - -	-	35
Guduk to Tungabuddra - - - - -	-	49
		113
Tungabuddra to Bellary - - - - -	-	42
Total miles - - - - -	-	155

Probable cost, 93 lakhs.

Probable receipts, Rs. 9,30,000.

Working expenses at 55 per cent., Rs. 5,11,500.

Net return, Rs. 4,18,500, or 4·5 per cent.

Number of people it will employ for five months, from Kirwatti to Tungabuddra, 35,000.

Tungabuddra to Bellary, 12,000 persons.

No. 12.

Nos. 15. 66. XX.—MEMORANDUM by Mr. BERNARD, Secretary to Sir R. Temple, on the CONDITION and PROSPECTS of the MADURA DISTRICT as ascertained by SIR RICHARD TEMPLE at his CONFERENCES with LOCAL OFFICERS during the 22nd and 24th January.

Tinnevely, 23rd January 1877.

Madura District.

At Madura Sir Richard Temple had the advantage of meeting—

Mr. McQuhae who has been Collector of the district for several years, but who only returned from furlough a month ago and had not yet inspected the more distressed parts of the district.

Mr. Turner, C.S., who has been for some time in charge of the Ramnath semindari, under the Court of Wards, and who is now Relief Officer of the district; two Deputy Collectors and the Sub-judge, who had served long in the district, and also the Tahsildars of the Dindigul and Madura taluks.

2. The district of Madura has an area of 9,502 square miles, and a population of 2,266,615 persons; it is traversed by the Southern Madras Railway. Somewhat less than one-half the district belongs to Zemindars, with the administration of whose estates the Collector has but little concern. The ryotwari portion of the district, managed by the Collector on behalf of Government, is divided into six taluks and contains a population of about 1,300,000. In the north-west of the district are the Pulni and other hill ranges which are sparsely peopled; from Madura town southwards and eastwards to the sea coast the country of the great zemindaris is open and flat.

3. The average rainfall of the cultivated part of the district is 34 inches; during the past season the rainfall has been in some places as little as 5 inches, and nowhere has it been half the average. In ordinary seasons Madura gets a fall of from 4 to 6 inches in April and May, a fall of 6 to 10 inches in July and August, and a fall of about 13 inches in the October or latter rains. During the past season the district got the April rainfall only. The rain fell unequally over the district; thus, while Ramnath, as a whole, fared very badly, a belt of land 10 miles broad along the coast was favoured with good October rain. The parts where the rainfall was shortest are the whole of the Palni taluk, the north (about one third) of Dindigul taluk, and the southern half of the Ternmangalam taluk, and nearly one third of the great Ramnath zemindari. In these tracts no rain fell after August, and no crop at all has been secured save under wells and river channels. The tanks in these tracks are all rain-fed (as distinguished from river-fed), and they are dry; so no crops have been saved by tank-water. In the rest of the district the failure of rain was not so utter; still the dry crop was extremely poor, where it did not wholly fail. Fair crops have been secured under wells and river channels.

4. The area under different kinds of cultivation and under the main food crops is, in ordinary seasons, as follows:—

	Acres.
Under well irrigation	22,150
Irrigated from river channels	20,183
Sown with rice	137,511
Sown with cumboo (bajra millet)	98,849
Sown with cholum (jowari millet)	162,794
Other food grains	300,000

As there are such great variations in the circumstances of the different taluks, the Collector has difficulty in offering a general estimate of the out-turn for the whole district. He would put—

The dry crop yield at perhaps	1 anna all round.
Wet crop	2 annas under tanks.
Ditto	10 annas under irrigation channels.
Crop-irrigated from wells	12 annas;

and he would put the average yield of the district at a 3-annas crop, or something less than one quarter of an ordinary good yield.

5. The ryots and the people of the Madura District are in ordinary times prosperous, save in part of the Shevagunga zemindari in the south-west corner of Ramnad, where the crops often fail. Even this year the ryots are keeping on and supporting their regular farm servants (pádials) everywhere except in a part of the Palni taluk; still there are a good many ryots, 94,000 out of 129,000, who hold less than seven acres a piece. The population living by daily labour and the prædial serfs (pádials) constitute about one

fourth of the whole population. Pressure on the lowest classes has been considerably relieved by an unusually large emigration of labourers to the coffee lands of Ceylon. Madura District.

6. The ordinary food of the people is cumboo (bajra), ragi (small millet), and cholum (jowari); in parts, the poorer classes consume a very coarse millet known as *black cholum*. At present all the larger markets are well supplied with grain, principally foreign rice from Bengal; in parts of the south there is black cholum to be had, but the quantity of this grain in the district is not large. Several cases have already come to the Collector's notice in which the supply of grain was not equal to the local demand; still there is food in the district for those who have money to buy, and the Collector believes that private trade will sufficiently supply local needs, though occasionally petty dealers may not be quick enough in supplying the wants of remote localities. Roads are good, and there are plenty of carts. Madura dealers are men of capital and enterprise, and they are already importing grain direct to the petty district ports, such as Kilakari, and bringing it up to Madura.

7. The food crops of the two previous years (1874-75 and 1875-76) in Madura were fairly good all round. Last summer there was at one time promise of a good ragi crop, and much of the old ragi stocks was exported to Mysore, where the need was then great. Stocks of common local grains are believed not to be large, but there is already a good deal of foreign rice in the district. Prices at Madura are now quoted at—

	Number of Seers per Rupee.	
	13th January 1877.	Average of the Season in ordinary Years.
2nd sort rice -	7 $\frac{3}{4}$	16
Cholum (jowari) -	8 $\frac{1}{2}$	29
Ragi (small millet) -	10 $\frac{3}{4}$	35

In the interior prices are much the same, except in the Dindigul taluk, where they are a little dearer. Black cholum is still for sale in the south of the district at 16 seers per rupee; it is eaten by the poor only, and the supply will not last long.

8. At present there are but few labourers on relief works. Local fund undertakings have been pushed forward, such as the clearing of tanks and other such works debitable to the "village improvement fund." On these works people are made to give full tale of labour. In the south of the district and in the Palni taluks some few relief roads were opened; and other works, such as tanks and roads, are ready marked out. The total number of real relief labourers is only 5,531; the numbers decreased a fortnight ago, but are now increasing again. The Collector expects a rush of labourers on the works in the south, where the people are very badly off, and for two months past some of them have prayed to have relief works opened. If it had not been for the outlet by emigration to Ceylon, there would have been danger of starvation down there before now. The Ramnath zemindari is under the Court of Wards, and it can afford to find work for its own people, provided Government will sanction the Collector's proposal to suspend (not to remit) a portion of the Ramnath tribute (peshkush). If these arrangements be sanctioned, then the Collector would hope that the total number of relief labourers chargeable to the State will not exceed 20,000* during the worst times of the Madura district. If seasonable rain falls in April (and Mr. Nelson's Madura manual shows that in average years 5 or 6 inches fall between April and May), then the people will leave the works and go off to their fields. If no April rains fall, then there may be disaster, and as many as 100,000 people might possibly come upon the relief works. But if the coming season be ordinarily prosperous, Mr. McQuhae hopes that the number of relief labourers will not exceed 20,000.

9. The rate of wages on the relief works is two annas a day for an adult male, and a fair tale of work is exacted from the labourers. In Madura town in ordinary times no man will accept a day's work under four or five annas a day; and though wage rates in the interior may be a little cheaper, still the Collector thinks that a man of the Madura district must be feeling some pressure before he goes on relief works at two annas a day. People who have, as yet, come on the relief works were not in a specially depressed physical condition.

Madura Dis-
trict.

10. In the town of Madura the distribution of gratuitous relief from private charity has begun. In the Palni taluk gratuitous relief, in the shape of cooked food, is being given to some 900 persons at Government expense. The Collector is inquiring into the necessity for continuing this relief. The tahsildar stated that some of the people,—infirm and aged persons from the surrounding villages,—who came for this relief were in a very destitute state.

11. Up to the present time there has been no very great difficulty in maintaining the cattle. There is still some pasture in the tank beds, and in the withered rice and cumboo fields. But difficulty will certainly be felt in Ramnath, and in the Madura, Meloor, and Terumangalam taluks, and in parts of the Shevaganga Zemindari, if showers do not come. Slight showers, such as usually come in Madura at this time of year, will produce enough pasture to keep the cattle alive.

12. In parts of Ramnath the people will have difficulty in getting water to drink. They may sometimes have to go four or five miles for it. Still water will not absolutely fail.

13. The Collector expects to have to suspend 15 lakhs of land revenue out of a total demand of 24 lakhs. The whole of the zemindari tribute (peshkush) will eventually be collected. But according to the revenue custom of the Presidency, the Government is

* NOTE.—So the Collector of Ma-
dura says.

more or less bound,* though not absolutely pledged, to remit land revenue due on "wet" lands, which have failed to get any crop by reason of failure of the tank water.

The Collector cannot as yet precisely say how much this may be. According to the revenue customs of the Presidency, a good deal of the suspended revenue, due from dry crop lands, would also be eventually remitted.

No. 13.

Nos. 19. 92. PROCEEDINGS of the GOVERNMENT of BOMBAY in the PUBLIC WORKS DEPARTMENT, dated Bombay Castle, 23rd January 1877, No. 92.

Extra en-
gines for
grain traffic.

READ.—The following telegram from the Director for State Railways, to the Consulting Engineer for Railways, Bombay, dated 22nd January 1877.

"Please arrange with Peninsula Company to have the 12 engines, purchased for State Railways, erected immediately, and kept available in Bombay for the present in running order."

RESOLUTION.—To be communicated to the Consulting Engineer for Railways, and Agent, Great Indian Peninsula Railway Company, for information and guidance. The Agent should be requested to submit an estimate for erecting the engines, and, if possible, to put the work in hand immediately. If the Locomotive Superintendent, Great Indian Peninsula Railway Company, cannot undertake the work, the Baroda Railway Company should be asked to do so.

No. 14.

Nos. 35. 221. EXTRACT from LETTER from ACTING HEAD ASSISTANT COLLECTOR, to the COLLECTOR OF BELLARY, No. 34, dated Pennakonda, 23rd January 1877.

Migration
from Mysore.

With reference to your letter No. 1,978, dated 16th December last, I have the honour to enclose a statement exhibiting the numbers and distribution of Mysore Coolies who have been resorting to my relief works. This shows a total of 17,618 in my three taluks, but from what I have personally seen of them I am inclined to think their number is understated.

* * * * *

There are considerable numbers of Mysore paupers now being fed at my relief houses. These I have not liked to turn away in common humanity, and I am getting a return of the numbers fed at each of my relief houses, which I will submit shortly for your information and orders. I think I informed you demi-officially that I had, on the 10th instant, counted 1,321 of them at the Hindupur relief house alone. I regret to report that three cases of death from starvation, two in Hindupur and one in Madaksira, have within the last few days come under my notice. These three persons were Mysore paupers who had dragged themselves to these relief houses in the last stage, and though they were cared for immediately, I am satisfied they were beyond saving.

No. 15.

XXI.—MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, on the CON- Nos. 16. 66.
DITION and PROSPECTS of the TINNEVELLY DISTRICT, as ascertained by SIR RICHARD
TEMPLE during his visit of the 24th January.

Tinnevelly, 24th January 1877.

At Tinnevelly Sir Richard met Mr. Stewart, the Collector, who has had five years' Tinnevelly
experience of the district, and at Tuticorin he met Mr. Davies, the head assistant in district.
charge of the southern taluk of the Tinnevelly district.

2. The Tinnevelly district contains an area of 5,176 square miles, with a population
of 1,693,979 persons. It is traversed from end to end by the Madras Railway. The
(ryotwari) tracts administered directly by the Collector are divided into nine taluks;
while the 22 zemindaris constitute one quarter of the district. The zemindaris are
mostly situate in the distressed tracts. Some of the zemindars are poor and unable to
do much for the support of their people in the present year; others, and especially
Ethiapoorum, which is now under the Court of Wards, can afford to find works for the
relief of their tenantry. The zemindari tribute (peshkush) is said to be about two thirds
of the gross rental, so that Tinnevelly zemindars have not so large a margin of profit
as in North Arcot and other districts.

3. The district is divisible into two distinct sections,—

- (1) the valley taluks of Tenkarai, Tinnevelly, Tenkasi, Ambasamudram, where the
lands are for the most part irrigated, and where crop after crop is taken off the
ground, which is bare for only about two months of the year. These irrigated
taluks are the most thickly peopled;
- (2) the black soil taluks, where there is comparatively little irrigated land, and where
in ordinary years dry crops of cholum (jowari) and cotton are grown.

The average rainfall of the lowlands of the Tinnevelly district is about 20 inches; at
Tuticorin on the Coromandel coast it is as low as 10 inches. During the last season
the rainfall was in some places as low as 5 inches, and did not anywhere exceed half the
average fall of ordinary years. The area of failure of crops is nearly identical with the
unirrigated section of the district. The yield is estimated at—

In the irrigated taluks—wet crop, 14 annas, full crop; dry crop, 4 annas, quarter
crop.

In the dry taluk—wet crop, 1 anna, no appreciable crop; dry crop, 3 annas, nearly
a quarter crop.

The Collector is unable to offer a correct estimate of the yield for the whole of the
district because the variations are so great in different parts, but perhaps the yield of the
whole district might be put down at about 6 annas, or $\frac{2}{3}$ of a good harvest.

4. The yield of the previous (1875–76) harvest was fairly good all round, while the yield
of 1874–75 was good. Stocks are supposed not to be large; but the rice now ripening in
the irrigated taluks will, the Collector estimates, give food enough for the whole district
for at least four months. The ordinary food of the people is rice over a great part of
the district, but in the dry crop taluks cholum and cumboo are the staple food. The
breadth put down with the main food crops in the last ordinary year in 1875 was—

Rice	-	-	-	-	212,000 acres.
Cholum (jowari)	-	-	-	-	66,000 „
Cumboo (bajra)	-	-	-	-	195,000 „
Samary (small millet)	-	-	-	-	169,000 „
Ragi	-	-	-	-	49,000 „

The area sown with cotton was 150,000 acres; during the present year the cotton
yield will be very small indeed.

* The imports of grain into Tuticorin have been—

—	During December.	During first 20 days of January.
	Tons.	Tons.
Rice - - - -	984	1,532
Paddy (rice with the husk on)	—	132
Cumboo (bajra) - -	32	276
Cholum (jowari) - -	—	9
Total - - - -	1,016	1,949

5. All the district marts are well supplied
with grain. The district possesses plenty
of carts for inland traffic; and ample ship-
ping comes to Tuticorin for the maritime
trade. At one time the supply was short
in places; but during the last few weeks
foreign rice has been coming largely into
the district* by the port of Tuticorin from
beyond the sea. The Collector believes
the food supply will be maintained every-
where by private trade. The earliest crop
of next season will not come in until

Tinnevely
District.

September; no harvest will be reaped in August. The present and the ordinary prices of some of the cheap food grains in Tinnevely town are quoted thus :—

	Present Price.	Ordinary Price.
Rice	7½	11 seers per rupee.
Cumboo (bajra) -	11½	23½ "
Cholum (jowari) -	7½	24 "
Ragi -	12	27 "

At marts in the interior of some of the distressed tracts prices are 20 to 30 per cent. dearer; and four weeks ago, before the trade from across the sea set in, prices were quite 20 per cent. dearer than they are now.

6. In ordinary years the people of Tinnevely are well off; the ryots have a high "standard of comfort;" and in the irrigated taluks they are sometimes quite wealthy. A large proportion of the ryots, however, have small holdings of three to seven acres each. The Collector estimates that about half the population of the taluks affected by failure (say 400,000 out 900,000) are daily labourers and farm servants. One great outlet for the poorer classes of Tinnevely is the labour-field of Ceylon, whither tens of thousands go to work on coffee estates and other farms. The day Sir Richard Temple was at Tuticorin, he saw some hundreds of Ceylon Coolies returning after their six months' working season. This year emigration to Ceylon is greater than ever.

7. As yet the condition of the people even in the distressed taluks is by no means depressed. But some weeks ago it became clear that in the distressed taluks were a certain number of people who had not emigrated, had no food and no means of earning any. Accordingly works were opened, and about 2,500 labourers are employed on roads and irrigation channels under the civil officers. The engineer officers help in supervising, and task-work is rigorously exacted from the labourers. Works have been sketched out costing—

8½ lakhs for road work.

2 " " irrigation channels.

¾ lakh for miscellaneous improvements.

7. There is no very large work in the district on which a great number of labourers could be usefully employed. But Tinnevely relief labourers could be taken to the Periyar scheme in Madura, if it were not for the extreme unhealthiness of those valleys in the hot season. The Collector estimates that at the worst time he may have as many as 100,000 persons on relief works; that time will be in May and June, for he considers that the people will not leave to begin ploughing until late in the month of June. The Collector will keep down the numbers on the works as much as he, with safety to the people, can. But there are in the distressed tracts very large numbers of families who can have no means of earning a living off the works.

8. The rate of wages on the works is two annas a day to male adults, and to women and children proportionately lower, as ordered by the Government. The Sub-Collector at Tuticorin appeared to contemplate purchasing a certain quantity of rice for Government and paying the relief labourers in grain. But if the markets are sufficiently supplied, these arrangements will, under present orders, not be required.

9. No relief houses for distributing gratuitous relief at the State cost have yet been opened. About Rs. 500, however, have been spent on such relief by village officials,* who are directed to relieve temporarily casual cases of clear distress and to send in the bill to the tahsildar. The precise number of persons so relieved up to date cannot be stated. If matters get worse, relief houses will have to be opened; but no estimate can be furnished at present of the probable total numbers who may hereafter want relief. There is a private relief house at Vendipattam, and the recipients are mostly the infirm and feeble and the beggars of the neighbourhood. No cases of starvation have been reported up to the present date.

10. There has not been much loss yet among the cattle. But no doubt the supply of fodder is very short. Some cattle from the western taluks can go to the ghât pastures. But in the south there will be loss of cattle, for, unless plentiful showers come (which is not probable) there will soon be no pasture at all in the black soil taluks.

* Called village moonsifs in the Tamil districts.

11. Failure of water-supply has not yet been felt to any severe degree. But during the hot months there will be difficulty about water in the unirrigated taluks. Still the Collector anticipates that people will generally be able to get water for themselves and cattle if they go three or four miles at most for it. There may thus be often dearth of water and difficulty in getting it, but still it will be obtainable.

12. The Collector estimates that he may have to suspend 12 lakhs of land revenue out of a total demand of 27. Probably out of this, 3 lakhs, the estimated (roughly) assessment on wet lands, which got no crop, may have to be remitted. Remissions of the abkaree (liquor excise revenue) will not be absolutely necessary, as the revenue is leased for a term of years, and a bad year might be set off against good ones. The Collector, however, may find it expedient to recommend some remission. The salt revenue as yet is coming in satisfactorily.

Tinnevely District.

No. 16.

XXII.—MINUTE by SIR RICHARD TEMPLE, dated 24th January 1877.

No. 66.

In presenting the* accompanying memoranda of facts ascertained in the districts of Madura and Tinnevely, I desire to offer the following observations:—

Madura and Tinnevely Districts.

*Nos. 12. 15.

2. In both these districts, which in ordinary years have such unfailing harvests, there has been an extraordinary drought, which has destroyed nearly all the crops throughout this large area, save in a few parts which are irrigated by watercourses from certain rivers. It is probable that in both districts the stocks of grain are considerable, being the stores reserved after previous harvests. Both districts are permeated from end to end by railways; in both districts the grain trade is very active, and the markets are well supplied; the agricultural peasantry are fairly well off; the prices of grain range at about eight Government seers the rupee. In both districts distress is thought likely to occur as the season advances; already here and there are signs of trouble.

3. Now, in these two districts, so much alike in general features, there is a remarkable difference in the anticipation formed by the two Collectors regarding the amount of relief which may become necessary. In Madura, the late Collector Mr. Horsfall thought that relief might have to be given to 100,000 persons during the worst season; but the present Collector Mr. McQuhae now thinks that the number need hardly exceed 20,000. Even if this comparatively small number shall be exceeded, he hopes that the total will not rise considerably, provided always that the usual showers fall in April. If these early rains shall not come, then, of course, the case may be worse. On the other hand, the Collector of Tinnevely thinks that it may be very desirable to afford relief to as many as 150,000 persons during the worst season; but when considerations of economy are urged upon him, he seems to think that relief might possibly be restricted to 100,000 persons. Now, how can this difference in the opinions of the two Collectors be accounted for? certainly not by any essential difference between the condition of the two districts. If any thing, the Tinnevely estimate might have been expected to be lower than the Madura estimate: *firstly*, because the Tinnevely population is less than that of Madura, being 1,700,000 as compared with 2,300,000 persons; and *secondly*, because the position of Tinnevely is slightly better than that of Madura, the Tinnevely district having the advantage of a seaport—Tuticorin—which Madura has not, and having irrigation from the Tambrapúrni river—somewhat superior to the irrigation from the Vaigai, the river of Madura.

4. I believe that the difference between the two estimates partly arises in this wise. In Madura, it is now understood that relief is to be afforded only for the purpose of averting danger of starvation, whereas in Tinnevely it seems to have been thought that distress also must be prevented. I should consider that the Madura estimate is a far more reasonable one, and more nearly in accordance with the views of Government, as set forth in the Despatch of the Government of India of the 16th January, than the Tinnevely estimate. I believe, however, that the Collector of Tinnevely, Mr. Stewart, is quite able and willing to restrict relief operations to any extent that may be compatible with the safety of the people, if he be clearly instructed as to whether his responsibility is confined to the preservation of life from starvation, or whether it extends to the prevention of mere distress. I have drawn his attention to the published Despatch of the Government of India of 16th January, which has just been received, a consideration of which will doubtless cause the Tinnevely estimate to be largely modified. It appears

to me that there ought to be much stronger evidence than anything we now have regarding imminent distress before any extensive relief operations ought to be allowed in this district.

No. 17.

No. 66.

XVIII.—MINUTE by SIR RICHARD TEMPLE, dated Madura, 24th January 1877, on the Subject of the Relief Administration of Districts of the Bombay Deccan.

Want of
strictness in
relief ad-
ministration
in the Deccan
Districts.

In continuation of my minute of the 22nd instant, urging certain measures of economy which would lead to reductions of expenditure on relief, I would beg the consideration of the Government of Bombay to the conditions set forth in paragraphs 2 and 3 of the Despatch of the Government of India, dated 16th January 1877. It seems to me that they apply in some degree, not a very great degree perhaps, but still in some degree, to the relief operations which we have conducted in the Deccan districts. While admitting the need of extensive relief in those districts, and acknowledging the large amount of good which has been and is being done there by the exertions of the local authorities, I still think that, in the words of paragraph 3, some "persons are employed to whom relief is not absolutely essential, and who without it would have been able to maintain themselves at all events for some time to come."

2. Although there is good supervision on the larger works, yet in many of the petty village works I fear that "the people can obtain almost for the asking, and in return for next to no work at all, wages in money or in grain."

3. I apprehend also that in some places the authorities, in the words of paragraph 2, are "attempting the task of preventing all suffering and of giving general relief to the poorer classes of the community," a task which the Government of India has in this Despatch declared itself unable to undertake. These instructions from the Government of India seem to me to render some reconsideration necessary in detail to see especially whether many persons on all the works, larger or smaller, could not be selected to be discharged, and whether some stricter check could not be imposed on admission to the works. In other words, I would say, let every person now on the works be discharged who apparently can get on for a time without such employment, and let no person in future be admitted unless there be reason to suppose that he or she is absolutely in need and would be in danger of starvation if employment were to be refused.

4. In respect to paragraphs 4 and 5 of the Despatch of the Government of India, urging that relief labourers be employed on large works of a permanently useful character, I have represented what occurred to me in my minute of the 12th January.

5. In paragraph 7 of the Despatch of the Government of India it is stated that "when distress becomes extreme, and a state of absolute famine has been reached, the Government may be driven to set up relief works near the homes of the people on a scale inconsistent with careful supervision or searching tests."

Although numerous works of this character have been set up in the Deccan districts, I doubt whether the stage contemplated by the above passage has been yet reached, though it may be reached hereafter. And with this view I would recommend that many of these petty works be reconsidered with a view to their being discontinued, wherever possible, for the present at least.

6. I should anticipate that, if the measures recommended in this minute and in my minute of the 22nd January can be at all adopted, a considerable reduction can be effected below the estimate of expenditure, one million and a half, submitted with the minute of the 12th current.

No. 18.

NARRATIVE of INSPECTIONS made by CAPTAIN BISSET, R.E., who was deputed to investigate and suggest Remedies for the Block in Grain Traffic between Northern India and the Famine Districts of the South. Nos. 26. 66.

Raichore, 24th January 1877.

Khandwa, 19th January.—About 200 tons of grain are waiting for despatch; some for Madras line (Adoni) has been detained for some weeks.

Block in railway grain traffic.

About 100 tons a week have been forwarded from Holkar Railway, but none now accepted by Madras.

On the 1st January there were about 13,000 tons of grain lying at the stations in this district, which extends from Nagpore to Nandgaum, and in addition to this there were 1,000 waggons standing loaded for the South-eastern district, *i.e.*, Lanowlee to Raichore and Madras Railway.

District Traffic Superintendent's Office, Bhoasawal, 19 January.

The accumulations at the stations increased up to a maximum of over 17,000 tons on the 13th, and are on this date 15,500 tons, of which 8,500 tons are at Nagpore itself.

Detail of Accumulations of 19th January.

Nagpore	-	-	8,500 Tons.
Small stations to Khamgaum	2,000	"	
Mortizapore	-	-	1,500 "
Badnera	-	-	700 "
Akola	-	-	1,700 "
Nandora and Shegaum	-	-	800 "
Bhoasawal to Nandgaum	-	-	300 "
Total	-	-	15,500 Tons.

It appears to me that open preference is given to cotton and linseed over grain and other seeds.

The allotment of waggons during a recent period of six days was—

525 for cotton.
136 for linseed.
153 for grain.

Total 814 for waggons from Nagpore district.

The preference given to cotton and linseed over grain which has been for weeks at the stations is intelligible only on the supposition that the whole of the grain in question is intended for the Madras Railway, for which supplies up to the full working power of the Madras line were already on the road.

I do not think the above supposition is in accordance with the facts, but as the question does not affect the supply to the Madras districts, I do not consider it of immediate importance to dwell on it further.

During the same period 714 empties were given to the Jubbulpore side, and returned chiefly loaded with grain. The estimated maximum capacity of the line here is 18 goods trains or 450 goods waggons.

This may probably be increased if the Thull Ghât can pass more.

20th January.

The greatest day's work I could find in the recent books* was 451 loaded waggons worked towards Bombay on the 20th December.

* Egutpura,—Thull Ghât.

The highest average of six days was on 4th to 9th December, when 336 daily were worked towards Bombay.

The average of nine days, 8th to 16th January, was 263 loaded waggons towards Bombay and 362 waggons (including empties) from Bombay.

The estimated capacity is, however, over 500 waggons, and the present working cannot be taken as a fair average, as the numerous special trains running have not only taken train room, but have upset the regularity of working of all the goods trains.

The working maximum of the Thull Ghât is not likely to exceed 450 waggons a day, but if this is done the Ghât is equal to the same work as the line above it.

22nd January.

With the cotton season coming on, a large portion of the 450 waggons will be for Bombay itself, and as the powers of the Bhore Ghât are about equal to those of the Thull Ghât, there is no difficulty to be feared on the former, even allowing for grain traffic and ordinary traffic from Bombay itself.

Block in
railway grain
traffic.

Between Lanowlee and Poona there were difficulties felt early in December, and crossing stations were at once put in at two points between Lanowlee and Poona.

Single line above the Bhore Ghât,
Lanowlee to Poona.

Poona to Sholapur.

When the Sholapur demand increased, the long distance stations between Poona and Sholapur were also divided by crossing stations, four of which have been already opened.

Sholapur to Shahabad.

Similarly, between Sholapur and Shahabad, a crossing station has been put in to divide Gulburga and Shahabad. There are still some long runs between Sholapur and Gulburga, and also between Shahabad and Raichore, but the powers of the worst part of the line are equal to about seven goods trains a day,

or much in excess of the working of the Madras Railway.

The promises made by Mr. Conder and the Agent, Great Indian Peninsula Railway, and by the Government officers, that from 150 to 200 waggons a day shall be delivered at Raichore (if required) is apparently practicable without more crossing stations, and the further addition to the carrying powers of this section of the line is considered practicable if the powers of the Madras line are increased so as to make this necessary.

There is ample material for sidings in store, and both the Government and the railway officers are ready to put them in as soon as there are any signs of their being wanted.

Madras Railway, Raichore to
Goody or to Bellary.

The powers of the railways have now been traced from the sources of supply to Raichore, and the powers of the Madras Railway have now to be considered.

If no other circumstance had to be considered than the interval between stations, the line should be able, notwithstanding two or three long runs, to pass about nine trains a day.

But the long runs of 18, 12, and 14 miles which follow each other from Kosgee to Adoni, Adoni to Auspree, and Auspree to Nemcherla, should in my opinion be divided by crossing stations.

Whether the long run of 18 miles between Goondacul and Vurapoor on the Bellary branch should be divided or not, depends upon the number of trains required for Bellary.

With two passenger trains and with engines of the same power as those now here, these nine trains would not carry the 200 waggons with which the Bombay Railway can undertake to deliver.

The first difficulty, however, is the want of engines, and whether or not this section has its proper share of the engines on the line, there is evidently work for more.

Want of engines.

Having found in Bombay that there were too few engines here, and that two trains of engine gear for 12 engines were just being despatched to the State railways, I asked the Director by telegram to suspend despatch, and I received a reply that the Consulting Engineer had been asked to erect and keep in Bombay the 12 engines referred to.

Colonel Hancock was in communication with the railway officers about the erection, and I hope the work is now in hand. Unfortunately they are all passenger engines.

Want of sidings at Raichore.

Discussions have apparently been going on about this for some time past between the Traffic Managers of the railways. Although they did not agree on the subject, neither appears to have referred the question for settlement till within a fortnight.

The reference made by the Consulting Engineer, Madras, was at once replied to by the Consulting Engineer, Bombay, who stated that while he was informed that more might be done with the existing siding accommodation by night working and extra staff, he was directed to consent at once to anything which the Madras Government desired in this matter.

Raichore, 23rd January.

On arrival here, I found that the Assistant Traffic Manager attached the greatest importance to a very easily constructed siding, and after looking at the work being done in the yard, and the difficulties which will be noted on hereafter, I sent the following telegram to the Consulting Engineer, Madras:—

“Bombay Government consent to additional sidings here; 12 engines, promised by Director, State railways, will increase work, and early execution by district engineer requested.”

Telegram asking for execution of
additional siding.

I met the District Engineer in the afternoon, and found that materials were available, and that the work could be done within a week of receipt of orders.

Mr. Conder and others say—

Complaints by the Great Indian Peninsula railway officers.

- 1st, that the engine power should be at once increased.
- 2nd, that the line should be worked night and day.
- 3rd, that there should be night staff for transferring goods.

Block in railway grain traffic.

If it is possible to give more engines from the other parts of the line, there is no doubt that their services on this short run would result in the delivery of three tons of grain at Bellary for one which they could bring from Madras to the same market.

I propose to discuss this subject at Madras.

Complaints of Madras Railway officers.

The night staff was put on from the 22nd January.

1. The want of proper marshalling of the trains brought in from the Bombay line gives a great deal of trouble at Raichore.

2. The use of the Great Indian Peninsula Railway cotton waggons for through traffic involves transshipment of a good many waggons at Raichore. (I talked to Mr. Conder in Bombay about this, and I ascertained that he had issued orders against the use of such waggons when it could be avoided.)

Telegram to Mr. Conder, despatched 23rd January.

On both of these subjects I telegraphed to Mr. Conder yesterday asking him to give the desired assistance.

3. Earlier notice of trains ordered for Raichore was also asked for.

Interruption to through booking. This is a grave calamity. It not only harasses traders, but it adds to the cost of transport, and to the time occupied in transport.

It thus diminishes the powers of the railways.

I have deferred my remarks on this subject till now, because it is at Raichore that its evil effects are most prominent. The yard is now filled with grain, which has been brought to Raichore and stopped there, chiefly because of the interruption to through booking.

I saw a number of the merchants and brokers here to day. All were anxious to turn a penny by moving on their grain to Bellary and Adoni.

They have a good deal of grain on the road now booked from Cawnpore and elsewhere to this place, and they all want to pass it on to the more distressed districts.

The grain blocks the yard, occupies valuable space, and demands infinitely more work and attention than if it was booked through in suitable waggons.

Some of the grain certainly belongs to Raichore merchants, but much wanted to go on to Adoni, and all of it now wants to go on, as the prices here have fallen to 10 seers and 10½ seers per rupee.

As there is no obstacle now

Raichore, 24th January.

Telegram asking for re-opening of through booking up to 90 waggons a day.

your side, but intended to go on. This is a serious evil. Stop this and re-open through booking as far as Gooty and Bellary, distributing the 90 waggons which Madras can probably take daily in such a way as to keep private trade moving, at the same time avoiding rushes."

The Honourable Mr. Gibbs, whom I met in Bombay, mentioned that he had trustworthy information that the Berars could supply over 200,000 tons of grain without difficulty.

Some doubts may exist as to the good quality of all the grain thus taken up, as it must be from pits.

I have sent a letter in continuation, inviting attention to the Nagpur district, and although I do not think it is possible to clear any district without neglecting another equally important one, I trust that the equitable distribution of the waggons according to the register of consignments, and the re-opening of through booking on the limited scale now possible, will restore confidence to the private traders.

After visiting Madras I shall be able to report how soon the limit of 90 waggons can be enlarged; and I trust that the powers of the Madras line may soon be equal to a larger number.

The actual despatches of waggons from Raichore station during the 19 days just ended

Actual despatches from Raichore southwards, 4th to 22nd January.

have amounted in all to 1,367 waggons, or an average of 72 per day. Much remains to be done before the office of the Great Indian Peninsula Railway can be worked up to,

but there are hopes that by marshalling of trains, and more care in selecting waggons for through traffic, the present engine stock will be able to carry more than the 90 waggons referred to in my telegram.

Block in
railway grain
traffic.

On my journey here I found everywhere, from Poona onwards, that carriage was wanted for grain to the Madras line, and I learnt from Mr. Hamilton Maxwell of Bombay, whom I met at Shahabad on his return from Hyderabad, that the same demand existed there and especially at Dharur, where the merchants were particularly anxious to get their grain on to Bellary.

Nos. 21. 92.

Telegram, dated 24th January 1877.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF MADRAS, Public Works Department.

Through booking between Great Indian Peninsula and Madras Railways, temporarily suspended as per telegram to your Consulting Engineer for Railways, dated 8th instant, resumed to day. At present no Great Indian Peninsula waggons under load for Madras stations; but unless Madras Railway Company arrange to clear away all through waggons as they arrive at Raichore, say 150 daily, a block will recur and through booking will have to be again suspended. Madras Company are understood to be prepared to take 90 waggons only per day at Raichore, but they did not employ night staff at Raichore station till the 21st and do not work night trains. If Madras Railway Company cannot at present clear off through waggons with due despatch, they should establish a dépôt for temporary storage of grain brought to Raichore by Great Indian Peninsula until they are in a position to deal with it, as such a block and detention of rolling stock as occurred lately deranges entire railway system. Reference particularly requested to letter from Colonel Hancock to Colonel Shaw-Stewart, No. 130, dated 12th instant.

Nos. 42. 43.

EXTRACT FROM THE PROCEEDINGS OF THE GOVERNMENT OF BOMBAY in the Public Works Department, No. 50 E.—158, dated 25th January 1877.

Mode of
dealing with
persons re-
fusing to ac-
cept terms of
relief.

RESOLUTION.—By Resolution No. 26 E.—93 of the 18th instant, his Excellency the Governor in Council approved of certain orders issued by the Revenue Commissioner, Southern Division, prescribing the mode of dealing with labourers employed on relief works, who might think fit to leave them from dissatisfaction with the rules laid down by Government for regulating the rates of wages.

2. By those orders, the village officers were directed to “take care that no person is allowed through obstinacy to die of starvation.” This injunction was quite in conformity with the principle on which the Government was then acting, viz., that no person was to be allowed to die of starvation, if it was in the power of the Government to prevent it. But his Excellency in Council now observes that, in the instructions issued by the Government of India to Sir R. Temple on the 16th instant, the following very important qualification is introduced: “Even for an object of such paramount importance as the preservation of life, it is obvious that there are limits which are imposed upon us by the facts with which we have to deal.”

3. The letter in question does not lay down any general principles by which the district officers should be guided in refusing the aid needed to preserve life; and his Excellency in Council would view with satisfaction the issue of supplementary instructions on that point. In the meantime, however, he feels convinced that in no case could assistance be more properly refused than in that of a man who wilfully and deliberately refuses to render the reasonable equivalent demanded by the Government for the means of subsistence which it is ready to afford him.

4. It is therefore ordered, in modification of the instructions issued by the Revenue Commissioner, that in the case of an individual refusing to perform work which he is capable of doing on the terms fixed by Government, no relief shall be afforded him at the public expense during the continuance of such refusal.

No. 98, dated Bombay Castle, 25th January 1877.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department (Railway), to the SECRETARY TO THE GOVERNMENT OF MADRAS, Public Works Department (Railway). Nos. 37. 92.

With reference to my telegram, dated 24th instant, copy of which accompanies letter, I am directed to state that through booking between the Great Indian Peninsula and Madras Railways having been resumed after being suspended for a fortnight, it is expected that large consignments will be immediately made to stations on the Madras line from the North-western Provinces, the Nerbudda Valley, and the Berars as well as from Bombay and certain stations on the south-eastern branch of the Great Indian Peninsula Railway, Poona, Sholapur, and Hyderabad, where supplies have accumulated. Block in railway grain traffic.

2. The General Traffic Manager, Great Indian Peninsula Railway, reports that provided the Madras Railway Company can arrange for the prompt despatch and return of waggons at the junction of the two railways at Raichore, he could, if necessary, carry grain into Raichore at the rate of from 150 to 200 waggons a day; and he anticipates that the traffic will immediately reach the former figure.

3. It is, however, understood that the Madras Railway Company now consider themselves in a position to take not more than 90 through waggons a day at Raichore, and it is obvious that unless arrangements are immediately made for more rapid clearance or for unloading and returning the balance of Great Indian Peninsula waggons at Raichore as fast as they arrive, a block, such as that which compelled the Great Indian Peninsula Railway Company to suspend through booking from the 7th to the 22nd instant, will soon recur.

4. It has been suggested that the Great Indian Peninsula Railway Company should now restrict through booking to Raichore to the number of waggons that the Madras Company are prepared to pass through, but the General Traffic Manager has represented that this is impracticable, and that through booking must either be allowed in full or not at all. Moreover, it does not appear expedient to check the flow of grain towards the famine districts of the Madras Presidency, even if for the present a temporary check at Raichore is inevitable, and rather than there should be another complete stoppage of through booking, it would seem preferable for the Madras Railway Company in their own interests to establish a depôt at Raichore at which the Great Indian Peninsula waggons could be unloaded, and the grain stored until the Madras Company are in a position to forward it. It is true that they will thus incur some risk and expense, but they will eventually obtain traffic which might be lost to them altogether if they refused to take the traffic at all, and so long as the difficulty arises with them it is unfair to throw the onus and loss entailed by refusing traffic on the Great Indian Peninsula Railway Company.

5. As stated in my telegram, the Bombay Government are given to understand that no night staff was employed at Raichore till the 21st, though on an urgent representation made by the Great Indian Peninsula Railway Company the employment of night staff was ordered on the 12th, and that even now the Madras Company do not run night trains, and are not therefore making full use of their engines. On the Great Indian Peninsula Railway the engines have for some time past been worked night and day with reliefs of drivers.

6. As explained in Colonel Hancock's letter to Colonel Shaw-Stewart, No. 130, of the 12th instant, the Bombay Government are prepared fully to co-operate with the Government of Madras in carrying out any improvements in siding accommodation required at Raichore, and the Agent, Great Indian Peninsula Railway Company, has intimated that he will raise no difficulties on this score. As regards the State railway engines, which it is understood are to be offered to the Madras Railway Company, I am directed to forward a copy of Resolution of the Bombay Government, No. 92, dated 23rd January, and to state that the work of erection will be commenced and pushed forward as rapidly as possible.

EXTRACT from the PROCEEDINGS of the GOVERNMENT OF BOMBAY, dated the 26th January 1877.

Cause of the defects in Bombay system of relief alluded to by Sir Richard Temple.

RESOLUTION.—His Excellency the Governor in Council has had under consideration the minutes addressed to the Government of India by Sir Richard Temple on the 9th and 12th instant, conveying his impressions on the state of matters connected with the famine in this Presidency as formed on the information he was able to obtain from Bombay officers during his rapid journey from the North-west Provinces and during his stay at Sholapur.

2. The views expressed in these minutes agree, on almost all points, with those which this Government has throughout enunciated and endeavoured to carry out; and the Government feel it due to themselves to state clearly the principal cause of defects indicated as existing in the system of relief in this Presidency.

3. So far back as the 16th October 1876, they announced that they had for six weeks been spending money on minor works, which they were satisfied were entirely inadequate to meet the serious demands they must inevitably encounter. They added "His Excellency in Council is clearly of opinion that in all cases in which, with due regard to sanitation and other local circumstances, it may be found practicable, it will be far more convenient, and in the end far more economical, to select for relief works those of considerable magnitude, which have been well examined and approved, though unavoidably postponed, on which the labours of large bodies of men can be advantageously concentrated. There may be cases in which it may be necessary to have recourse to isolated works of a trifling nature; but these should, as far as possible, form the exceptions."

4. About this time, in consequence of the departure of his Excellency the Viceroy on tour, the administration of the Government of India fell into the hands of the President in Council; and in the reply addressed to the Government of Bombay by his direction on the 25th October 1876 is to be found the origin of the embarrassment with which this Government has had to contend, and of the defects of system which Sir Richard Temple is understood to notice.

5. In that letter, after reviewing what was believed to be the condition of the distressed districts, and pointing out how they should be dealt with, the President in Council intimated that the remarks of the Collector of Poona as to the inexpediency of collecting large gangs away from their homes on large works have the full concurrence of the Government of India. The Collector of Poona had observed "I am strongly of opinion that as many small works should be undertaken as possible. I much fear that the collection of large numbers of people in localities where they must live in great discomfort and without shelter may lead to the outbreak of disease, which it would be difficult to combat;" and he added, speaking of prickly pear clearance, "it would certainly be more popular, because it would not take people away from their homes." It is not too much to say that at the present time there is nothing which more obviously requires to be checked than the "popularity of" the relief works.

6. The position was still further complicated by the President in Council, in the same letter, inviting the attention of this Government to a resolution of the Government of India of the 18th February 1875, the 12th paragraph of which contained the following passage:—

"The experience of former famines with respect to the advantage of opening public works, especially at an early stage of the distress, has been fully confirmed. Large works should be opened at once, small local works subsequently, as the necessity for them arises."

7. This letter was followed by further communications setting forth the objections of the President in Council to several of the large works recommended by the Bombay Government, and, as a consequence, the Government was reduced to greater dependence on the small works, of which the effect is now evident.

8. About the middle of December his Excellency the Viceroy arrived in Bombay, and on the 20th December, in replying to an address from the Chamber of Commerce, he observed—"I gladly take this opportunity to express the satisfaction of the Government of India with the manner in which the Government of Bombay is grappling with the difficult task imposed upon it. The principles avowed by that Government as those which will guide its action appears to me to be generally sound and excellent."

9. On the same day on which these words were uttered, the Government of Bombay received a letter dated the 15th December, communicating the dissatisfaction of the President in Council with their measures on several points, and again urging the prosecution of minor works.

10. This letter was subsequently much modified, and in that form, though still dated the 15th December, was not received in Bombay until the 11th instant.

11. Sir Richard Temple has since been formally deputed to examine and criticise the proceedings in the Presidencies of Madras and Bombay. The instructions to him in his reports, and the Despatches with which the latter have been transmitted to the Secretary of State, have been immediately published. With the tone and spirit in which those reports have thus far been framed, his Excellency in Council is quite satisfied. But he claims the right in cases in which this Government is concerned to supplement them with the information necessary to the full understanding of the bearings of the case; and having thus, in the present instance, explained the chief cause of the defects to which Sir Richard Temple has alluded, his Excellency sees with pleasure that, by the publication of the instructions to him, as well as of his minutes, all points of difference with regard to the mode of relief have been removed, and that, subject to certain conditions, the Government of Bombay may, with confidence, use its best endeavours to carry out the policy which it from the first advocated, and which is now accepted by all.

missions.

No. 24.

XXIII.—MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, on the CON-
DITION and PROSPECTS of the SALEM DISTRICT, as ascertained by SIR RICHARD TEMPLE
at his meeting with the Collector, Mr. Longley, on the 25th January.

No. 66.

Madras, 26th January 1877.

The Salem district comprises 7,483 square miles, with a population of 1,966,995 persons. It is divided into nine taluks, and about one quarter of its area consists of permanently settled estates. The Madras Railway passes through it from one end to the other.

Salem Dis-
trict.

2. The Salem district consists of two distinct sections, the upland section on the Mysore plateau, containing four taluks, and the lowland section containing five taluks. The rain-fall of the year was 18 inches as against an average of 30 inches, but the latter rains (October monsoon) have been short all over the district, averaging 2 inches only as against the usual fall of 10 inches. The failure has been greatest in the northern or upland taluks, namely, Dharumpuri, Oosoor, Kristnagiri, Trichengode. One taluk only, Ahtoor, which lies just under the hills, enjoyed a fair October rain-fall, and its crops are comparatively good. Salem differs from some of the other coast districts, in so far that almost all its "wet" or irrigated land gets water from rain-fed tanks, which this year had failed entirely. Its only river channels come from the Cauvery River and irrigate 12,000 acres. The acreage under "wet" crop is about 8 per cent. of the total cultivated area of the district. And the Collector estimates the out-turn of the year at 6 annas, or less than half an ordinary yield for dry crops, 4 annas, or about one quarter of ordinary yield for wet crop. This would give something better than a 5 anna crop, or about one third of an ordinary good yield for the whole district. The harvest of last year (1875-76) was poor in the four northern taluks, where the failure this year is greatest. Over the rest of the district there was an 11-anna (about three fourths of an ordinary yield). The harvest of 1874-75 was a bumper harvest all over the district. In ordinary years the Salem district exports surplus food; the ordinary food of the common people is ragi and cholam. The ryots of Salem are well to do; the revenue rate for dry crop land is about Rs. 1 $\frac{1}{4}$ per acre, for the good soil of Salem is very light. There is a large population of weavers, very few of whom, however, have as yet come on the relief works.

3. The marts of the district, both large and small, are fully supplied with grain. Trade is very active; about 900 tons of food have come in by rail during the last two weeks from Beypore and Madras. The Salem demand will undoubtedly continue to be supplied by private trade. The district roads are very good. The cattle which do the cart traffic are quite distinct from the ordinary plough cattle, and they belong to a class

Salem District.

of people in the southern taluks who, in ordinary years, carry away the surplus grain, and now will distribute imported grain. Prices in Salem town are—

Present Prices.		Average of Ordinary Years at this time.	
Rice	- $7\frac{1}{2}$ seers per rupee	-	- 12 seers per rupee.
Cholum	- $9\frac{1}{4}$ „	-	- 24 „
Ragi	- 11 „	-	- 34 „
Kumboo	- 10 „	-	- 32 „

4. There have been no real cases of starvation; but in the northern taluks belonging to the subdivision there was distress among the poorer classes, and relief works were opened about two months ago. One month ago works were opened in the head-quarter taluks. The Collector does not consider the relief labourers to be generally in a depressed physical condition, though they are not so stout as in ordinary years. At first the relief labourers were paid daily wages, 2 annas a day for male adults. About three weeks ago task-work was introduced, and the numbers on the works fell from 21,000 to 10,000. The numbers have gone up again, and now about 23,000 labourers are on the works. The labourers are paid in cash at task-work rates, which are just twice as dear as the Public Works Department rates of ordinary years. At these rates adult males can earn about $2\frac{1}{2}$ annas a day if they work hard. Still, good work is being done, and the labourers are chiefly employed in repairing tanks which were breached in the cyclone of 1872. There is a larger and better organised staff for supervising the works than have been found in many districts. Besides the range officers, each taluk has two overseers; and the affected tracts are divided into circles, which are placed under officials on Rs. 25 a month, who are drawn from the tahsil staff or from pensioned Government servants. The Amíns of the Survey Department are also doing good work. The Collector wants more European supervisors for his works, such as pensioned sergeants who know Tamil. Bengal officers who do not know the language would not be so useful.

5. The Collector expects that he may have a maximum of from 70,000 to 80,000 persons on the works by the middle of April, if things turn out badly. If rain were to fall in February, then there would be a great reduction in the numbers on the works, for the beds of the tanks would be sown with cholum, which would ripen in May. Government have allowed these tank beds to be cultivated this year at the dry rate of assessment. If the rains which usually fall in April should be favourable, then the number on relief works will materially decrease in the month of May.

6. About 8,000 people are receiving gratuitous relief at the State cost; the numbers increased when task-work was introduced, and some hundreds have come over from the Coimbatore and North Arcot districts. The recipients are being collected into four camps, where they are kept breaking stones all day, and are not allowed to go home. Eventually the number of such camps may, if things get much worse, increase to 9 or 11. The Collector requires more dressers (Native doctors) to help in supervising these camps. The cost of this gratuitous relief will probably be kept down to one anna a head per diem, and there will be the value of what work the people do to set against this charge.

Gratuitous relief is also being given through the village officials (Moonsifs and Karnams), who temporarily relieve casual cases of distress and send in the bill to the tahsildar. The Collector is not quite satisfied that this money is being well spent; but he sees no alternative way of preventing casual cases of starvation in outlying villages. The village officials are now rather badly off themselves, for, as the land revenue is not coming in, they do not get their per-centage thereon. The Collector proposes to pay them out of the savings of the "village officials fund" of previous years, and so to secure their hearty co-operation.

7. The cattle of the Salem district are as yet fairly well off. Many have been driven to the Shervaroy hills and to the other hills with which the district is studded. They will probably get through the present crisis sufficiently well.

8. Water also is still near the surface in wells all over the district, except in the Dharampuri taluk, where there will be dearth, but not absolute want of water.

9. It has been proposed that $10\frac{1}{2}$ lakhs out of a total land revenue of $22\frac{1}{2}$ lakhs should be suspended or remitted. The Collector says that the revenue custom of the Madras Presidency is to remit and not to suspend land revenue due in respect of land whereon the crop has failed. But he also admits that in the case of dry crop lands, whereon the land revenue is very light, the ryots could certainly pay this year's balance out of the profits they may make on good crops during the next two years. He further says that, though the share of the "wet" assessment, which may be reckoned as rent for water, could not be collected on account of a year when tanks were dry, still the dry rate might be collected on "wet crop" lands.

In regard to the theory that remissions and not suspensions of land revenue are the custom of the Madras revenue system, I may note here that I learn to-day in Madras that the instructions to assessing officers direct that 20 per cent. be deducted from the full revenue rate in making assessments, so as to leave the ryots a margin for bad seasons; and it is stated in those instructions that remissions will not hereafter be granted on dry crop land. I cannot learn that any distinct provision of law, or any engagement with the ryots exists, whereby Government would be bound to grant remissions, instead of suspensions, of the land revenue which the ryots may this year be unable to pay.

Salem District.

No. 25.

XIX.—MEMORANDUM of the FACTS ascertained as to FAILURE of HARVESTS and DISTRESS in the NIZAM'S DOMINIONS, as ascertained by SIR RICHARD TEMPLE at Hyderabad on the 12th January. No. 66.

Madras, 27th January 1877.

At Hyderabad Sir Richard Temple met Major Euan Smith, C.S.I., First Assistant Resident; his Excellency the co-Regent, Nawab Shams-Ool-Oomrah, and his nephew, also Mukkurrun-Ood-Dowlah, nephew of Sir Salar Jung. The Resident, Sir Richard Meade, and his Excellency the Minister, Sir Salar Jung, had not returned to the capital. But Sir Richard Temple was able, by the courtesy of his Highness the Nizam's Government, to obtain full information as to the condition of the country. The secretary to Sir Salar Jung in the Revenue Department has charge of relief operations, and he supplied much information. This gentleman had borne a share in relief works during the famine of 1869, on which occasion he was a deputy Collector, so he was conversant with the relief procedure under British administration. A European gentleman, who holds the office of Superintending Engineer, and who is directing relief works, also gave Sir Richard Temple a memorandum on the subject of the scarcity.

Nizam's Dominions.

2. Out of the 17 districts which compose the dominion of his Highness the Nizam there has been bad failure of harvests in parts of six only, namely, in East Raichore, in part of West Raichore (known as Lingasoor), in the southern parts of Nalgonda abutting on the Kurnool district, in part of Shorapore, in part of Nuldroog near the Sholapore district, and in a small tract south of Pyton near the British district of Ahmednagar. The failure was most utter in the Alpur subdivision of East Raichore; there no crop whatever was saved this season. In the rest of the distressed tracts it is estimated that a yield of from 2 annas to 3 annas (one sixth of an ordinary crop) has been secured. In tracts adjoining the distressed districts the harvests have not been so good as usual, but over the rest of the country the harvests have been fair, while in the districts north of Hyderabad there have been decidedly good crops.

3. The Revenue Secretary was able to speak with confidence about the crops, for a Central Relief Committee had been formed at Hyderabad, and deputations from the Committee had visited the worst tracts, while the district officials had sent in full written reports from elsewhere.

4. The harvests of the two previous years (1874 and 1875) had been good throughout the country, save in one comparatively small tract of East Raichore, just where the present failure is worst. Stocks are probably considerable; the Revenue Secretary estimated that there must be quite a year's food in the country, for the Nizam's dominions always produce and export a considerable surplus of food (rice and jowari or cholom). Cholom (big millet) is the ordinary food of the common people, except in the south-east Telugu-speaking tracts, where rice and ragi are grown largely. The dealers of Hyderabad

* NOTE.—On the Nizam's State railway between Shahabad and Hyderabad, Sir R. Temple saw a considerable quantity of grain waiting at the stations for despatch to Bellary.

and other large marts are accustomed to do a large grain business. Even during the present year grain has gone and is still going* away largely to the Deccan and to the Madras ceded districts. Some of this grain comes from the country north of Hyderabad, where the crops have been good. The Nizam's country will not require grain from outside, though the southern districts may require and will get some of the surplus of the northern districts. An early but small crop of cholom and lesser millets will be reaped in September.

5. At Hyderabad the price of jowari (cholom) ranges from $8\frac{1}{2}$ to 10 seers per rupee. Rice is dearer. In the South cholom is 8 seers per rupee, and ragi is somewhat cheaper. To the north of Hyderabad prices are cheaper.

6. There have been no known cases of starvation or extreme distress. But some few hundreds of persons from the Alpur taluk in the extreme south went over to the Kurnool relief works. On representation being made relief works were begun on the Nizam's

Nizam's
Dominions.

side of the border in East Raichore, and also in a very few other places; and there are now (12th January) about 5,000 persons on the relief works. The condition of the labourers is as yet by no means depressed. A gang of about 1,500 labourers on a road in the Alpur taluk in the eastern extremity of the Raichore Doab was inspected as Sir Richard passed along; men, women, and children were all in good physical condition. The engineer in charge, Mr. Brandt, said that the people were much in want of work, but that he had not seen any cases of great distress. Some hundreds of people had come over to his work from Kurnool, because the authorities there had reduced their wage rate; he intended at once to reduce his rates also. Hitherto he had paid 3 annas a day to adult male labourers.

7. The Relief Committee at Hyderabad expect that at the worst season they may have to give relief wages to 25,000 people in all, and that gratuitous relief in the shape of cooked food may have to be distributed to destitute paupers at some 10 or 12 centres. Should necessity arise, the organisation for doing all this is ready. The Nizam's Government has no thought of laying in any store of grain, as the local trade will supply all needs of those who can buy.

8. There are plenty of pastures to which the cattle can be driven, though these are rather remote from Alpur and Eastern Raichore. There will be scarcity of water in parts of this tract, but no absolute water famine.

9. Reports have been received from the Nizam's taluks bordering on the Sholapore and Ahmednagar district of the Bombay Deccan to the effect that a large immigration of cattle and men had taken place from those districts into the Nizam's country. The Central Relief Committee did not accept as correct the reported numbers of these immigrants, and have ordered further inquiry. The Revenue Secretary did not think that this temporary immigration was more than the country under his Highness the Nizam could well bear.

10. The Nizam's Government expects to lose a good deal of its land revenue in the tracts affected by failure. Land revenue due for this year on fields of petty ryots, who have lost all their crop this season, will ordinarily be remitted at once and for good.

11. So far as Sir Richard Temple was able to judge, the arrangements made to meet distress and the diagnosis of the coming trouble, were creditable to the prudence and foresight of his Highness the Nizam's Government. The distress in the Nizam's country will be more limited and less serious than was at first feared, and will not, it may be hoped, aggravate the pressure and the trouble in the adjoining British district.

No. 26.

Nos. 27. 66. SKETCH by MR. BERNARD, Secretary to Sir Richard Temple, showing the AMOUNT of GRAIN required in the distressed Districts, and the ability of the Railways to carry it, as bearing upon the question of doubling the Line from Madras to Arconum Junction.

Madras, 27th January 1877.

Grain re-
quirements
and carrying
power of
railways.

The districts which must draw their food supplies from Madras and the North belong to two distinct sections of the peninsula, namely:—

A. Bellary, Cuddapah, and Kurnool, with perhaps half a million of people on the north-west districts of Mysore, or a total population of (say) $4\frac{1}{2}$ millions.

NOTE.—The district of Chingleput can best be supplied from Madras itself by cart, or by other means, without any help from the main line to Arconum.

B. Salem, North Arcot, and Coimbatore, with perhaps $1\frac{1}{2}$ millions of people in the south and south-eastern districts of Mysore, or a total population of (say) 7 millions.

2. Now the districts in Class A. have suffered the most grievous failure of harvests, and it may perhaps be reckoned that one third of the population can live on the old food stocks, while two thirds of the population will require imported grain; that is to say, these districts will require, at the rate of 400 tons a day per million of population, 1,200 tons a day of imported grain.

Now 150 waggons a day from the Great Indian Peninsula Railway will bring in 1,050 tons, or say 1,000 tons, and this leaves to be provided from Madras 200 tons a day.

3. The districts in Class B. are not quite so distressed; three previous harvests and present harvests were better; and it will be quite safe to estimate that one half of the population will be fed from old stocks of food. There remains one half, who will eat imported grain. Of this demand probably one-third will be met from the west coast and from Negapatam; and thus two thirds of the half, or one third of the whole seven millions,

i.e., $2\frac{1}{3}$ millions, must be fed from Madras. And they will require at the rate of 400 tons a day per million (say) 1,000 tons. Grain carrying power of railways.

4. Thus the total requirements from Madras will be—

	Tons daily.
For districts in Class A.	200
„ „ B.	1,000
Total	1,200

5. Now the section from Madras to Arconum can (so the railway authorities say) do at a pinch 9,000 tons a week, and they can do comfortably 7,200 tons a week. Thus, even if they worked quite smoothly, if there were no hitch, and if the supply of grain went on continuously, the Madras Railway from the sea to Arconum could first, by working full power, do the duty required of it. But practically things do not always work smoothly and continuously. Storms in May may prevent the landing of grain, and the quantity sent up during March and April ought to be more than the mere 1,200 tons per diem. It therefore seems that, to guard against possible disaster, the line to Arconum should be doubled, and the work should be done at once.

6. And further, to enable the proper supply of Northern* grains to come into the ceded districts, additional engines ought to be transferred from the Madras to the Raichore section of the Madras Railway. Within a month they can be set at liberty by the new engines borrowed from the State railways, and so they can be back in time for the increased work of the doubled line to Arconum.

* N.B.—These Northern grains are cheaper than rice; they are more sustaining, weight for weight, and they are the ordinary food of the people. In order to keep up the supply to the ceded districts, it is absolutely necessary to send up these three engines, for the Great Indian Peninsula Railway undertakes to deliver 150 waggons a day at Raichore, and these waggons cannot be carried down, worked off, and sent back without extra engines on that length. These engines will, working over the short lead from Raichore to Bellary, bring into that part of the famine country twice as much grain as they could do by working over the long lead from Madras to Bellary.

No. 27.

MEMORANDUM by Mr. BERNARD, Secretary to Sir Richard Temple, regarding the GRAIN Nos. 28. 66.
TRAFFIC by RAILWAY into the FAMINE-STRICKEN DISTRICTS of the BOMBAY and MADRAS DISTRICTS.

Madras; 27th January 1877.

Narrative of inspections and inquiries by Captain Bissett, R.E.

Note regarding the amount of grain to be carried by railway into the famine districts.

By Sir Richard Temple's order, the papers marginally noted are submitted with the following remarks which embody his views and recommendations.

Railway grain traffic. Means of removing block.

2. Captain Bisset has entered with energy and discretion upon the duty of remedying the block in railway-borne grain traffic into the famine-stricken districts. He has shown that, to a considerable extent, the want of power on the Madras Railway has re-acted upon the Great Indian Peninsula Railway, and has impeded the transport of surplus grain from Hindustan and Central India into the Southern districts. Without following Captain Bisset through the whole of his narrative, it will suffice to note briefly the several points to which he draws special attention, and to state Sir Richard Temple's remarks and suggestions upon each.

The points are :—

I.—The Great Indian Peninsula Railway should again begin to book grain through to stations on the Madras line at the rate of 90 waggons per diem, and should be ready to increase that rate up to 150 waggons a day, as soon as the Madras Railway is able to take and dispose of a larger number.

Major-General Kennedy, on receipt of a telegram from Sir Richard Temple, replied thus :—“ Booking through to Madras stations was re-opened on 23rd January. If it is considered advisable, only ninety suitable waggons will be worked into Raichore daily. But Agent and Traffic Manager state that booking cannot in practice be limited. Surplus beyond ninety waggons must be dealt with when possible by Madras Railway.”

Railway
grain traffic.

It therefore appears that the stream of through-booked grain has begun to come on the Madras Railway. If this stream is to be properly dealt with and to be kept up, then the Madras Railway must lose no time in strengthening its power of dealing with the grain traffic from the North. And the modes in which, according to Sir Richard Temple's judgment, the increase of power can be best attained are indicated at points III., IV., VI., VII., and VIII. below.

II.—*The booking of grain by the Great Indian Peninsula Railway to Raichore with a view to its being re-booked there for Bellary and other Madras stations should be discouraged.*

General Kennedy in the same telegram says, "Booking is not now limited to Raichore. "Great Indian Peninsula Railway is doing all in its power. Remedy must be found in "Madras, where it is suggested effective remedy must be applied." On this point Sir Richard Temple has only to express his hope that the Great Indian Peninsula Railway will as little as possible have recourse to the practice of booking to Raichore grain intended for stations further south, and thereby blocking the joint station. But then the Madras Railway must in its turn receive, work off, and return the Great Indian Peninsula Railway waggons promptly and regularly; or else there will be risk of the Great Indian Peninsula Railway Traffic Department again resorting to the practice of refusing to book-up country consignments beyond Raichore. At points III., IV., VI., VII., and VIII. below will be noticed some of the steps which must be promptly taken to enable the Madras Railway to fulfil the reasonable demands of the Great Indian Peninsula Railway.

III.—*Additional sidings should be put in at the Raichore station, so as to facilitate prompt disposal of trains.*

His Grace the Governor of Madras in Council has been pleased to order the immediate construction of these sidings.

IV.—*Crossing stations should be made, so as to divide the long runs and facilitate traffic between the stations of—*

Kosgee to Adoni.

Adoni to Auspree.

Auspree to Nancheerla.

Gondicul to Veerapore.

His Grace the Governor of Madras in Council has been pleased to order the immediate construction of these crossing stations.

V.—*The Great Indian Peninsula Railway should be requested to observe and fulfil the following requirements, namely:*

- (a.) *To deliver up to and not more than the Madras Railway can remove, and to load through grain in suitable waggons.*
- (b.) *To marshal their trains regularly and to marshal the covered cotton waggons (if any are sent) altogether.*
- (c.) *To give the Madras Railway earlier notice of the trains ordered to Raichore and of their load.*

Sir Richard Temple would suggest that the Government of Bombay may be pleased to impress these requirements upon the Agent and Traffic Manager of the Great Indian Peninsula Railway, and to take such steps as may to his Excellency the Governor in Council seem fit with the view of securing compliance.

VI.—*The Madras Railway should be requested to observe and fulfil the following requirements, namely:*

- (a.) *To keep the Great Indian Peninsula Railway informed how many through booked waggons they can take and promptly dispose of daily.*

Sir Richard Temple would suggest that the Madras Government may be pleased to impress this requirement upon the Agent and Traffic Manager of the Madras Railway, and to take such steps as may seem fitting to secure compliance.

VII.—*The despatch of additional engines from the coast section to the Raichore section of the Madras Railway, so as to enable the railway company to receive from the Great Indian Peninsula Railway and dispose of 150 waggons daily at the earliest possible date.*

On this point Sir Richard Temple would remark that he is aware how large a quantity of grain is waiting at Madras for despatch to the famine districts, and that all the engines

on the coast section have full work there. But he would explain that if three extra engines can be despatched to the Raichore section, they will, if the Great Indian Peninsula Railway deliver 150 waggons daily at Raichore, be able to carry into the famine districts of Bellary and Cuddapah nearly twice as much grain as they could deliver from the Madras terminus. Furthermore, much of the grain coming from the North is of a cheaper and more sustaining kind than the rice which is being sent up from the sea-coast. And moreover, these northern grains, cholam (jowari) and cumboo (bajra) are the natural ordinary food of the poorer classes in the ceded districts, whereas those people in ordinary years hardly eat rice at all.

Under all these circumstances Sir Richard Temple earnestly recommends to the Madras Government that additional engines should be detached from the coast section to work, for the next three or four weeks, on the Raichore section. At the end of that time the extra engines, for the construction of which at Bombay Captain Bisset has provided, will be ready. The new engines can work on the Raichore section, while the additional engines belonging to the coast section of the Madras Railway can return to that section and work on the Arconum section.

VIII.—*The improvement and strengthening of the telegraph staff on the Madras Railway so as to facilitate the expected heavy traffic and prevent avoidable accidents.*

Sir Richard Temple would invite the attention of the Madras Government to this requirement, and would suggest that the Madras Railway Agent be pressed to take immediate steps to strengthen and improve the telegraph arrangements and staff on his line.

IX.—*The early doubling of the 35 miles of railway from Ambatoor near Madras to the Arconum junction.*

Sir Richard Temple has had the honour of conferring with his Grace the Governor on this subject, and he has caused the appended sketch to be drawn up showing the weight of grain traffic, which probably should come upon this section of the line. The Arconum section, it may be remembered, has to feed the two lines which bifurcate northwards to the ceded districts and southwards towards North Arcot and Bangalore. Sir Richard Temple considers that if this line can now be doubled without impediment to the working of the grain traffic, and if the doubling could be completed within six weeks or two months, then it ought to be undertaken and to be begun at once.

No. 28.

No. 40-41, dated Madras, 27th January 1877.

No. 66.

From the SECRETARY TO SIR R. TEMPLE, on special duty, to the SECRETARIES TO THE GOVERNMENTS OF BOMBAY AND MADRAS.

By direction of Sir Richard Temple, I have the honour to forward copies of the papers marginally noted regarding the railway-borne grain traffic into the famine districts of the Madras Presidency.

Memorandum on the steps needed to improve the grain traffic into the famine districts by railway.
Narrative of Captain Bisset's inspections.
Sketch of the probable weight of grain traffic on the Arconum section of the Madras Railway.

2. I am to solicit the attention of the Government of Bombay Madras to points numbered ^{I, II, and V.} III, IV, VI, VII, and VIII, in the enclosed memorandum. Sir Richard Temple would be glad to learn whether ^{his Excellency the Governor} ^{his Grace the Governor} in Council is disposed to consider favourably the suggestions now submitted.

Forwarding to Madras and Bombay grain traffic correspondence.

No. 29.

EXTRACT from LETTER from AGENT, Great Indian Peninsula Railway, No. 1,100, dated 27th January 1877. No. 40. 92.

With reference to the telegrams from Captain Bisset (copies sent with your office No. 365 of 26th January), Mr. Conder is of opinion "that it is impossible to restrict through booking to any specific number of waggons. The only thing we can legally or in practice do, is to take all that is offered, and then when a block comes to stop altogether. If night trains are run from Raichore the block would probably be avoided."

Railway
grain traffic.

The above is Mr. Conder's note on my reference to him, and I must say that after full consideration and much previous discussion with Mr. Conder, I quite endorse his view. If we had only one or two forwarding stations to deal with, it would be a simple matter to control, but in practice it is not possible to direct, hour by hour, every station-master on the north-east and Nagpore lines, and also on much of the south-east line, how much grain he is to receive and despatch for Madras. Neither can we receive only at a certain few stations and bar the others; or receive at a certain number of stations to day and at certain other stations to-morrow. Any such system would be unequal and unfair, even if it was practicable.

The reason of the block at Raichore is not made clear. If the Madras line cannot move more than 90 waggons in 24 hours for want of engine power, then until such power can be provided, we must, I fear, receive and forward consignments in such a manner as to cause the least demurrage working up to a block or nearly so, and then stopping the booking. It will not do to unload the wagons and stack the grain outside of Raichore station limits, and leave it there for the Madras Company to re-load and remove at their convenience. Mr. Conder is strongly of opinion that by working 24 hours a day, the Madras Company could forward from Raichore all that we send.

Is the Madras Company now working night and day? If not, is it for want of engine power or staff, and what numbers of engines or men are needed?

No. 30.

No. 105, dated 29th January 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY TO THE GOVERNMENT OF BOMBAY.

Land re-
venue re-
missions.

I have had the honour to receive your letter, No. 601 of 22nd instant, and in reply am directed to inquire whether his Excellency the Governor in Council anticipates that any evils will arise from suspending instead of absolutely remitting land revenue, and if so to request that their exact nature may be explained.

No. 31.

Nos. 32. 92.

No. C. 1 A. & M.-2651, dated Madras, 29th January 1877.

From the TRAFFIC MANAGER, Madras Railway, to the AGENT and MANAGER of the MADRAS RAILWAY.

Grain Traffic at Raichore.

Consulting Engineer's letter, No. 90, dated 20th instant.

It would appear from the following telegram from Captain Bisset, R.E., dated 24th instant, that the accumulated through-booked traffic on the Great Indian Peninsula Railway has been worked off.

"Bombay Line now clear of *through*-booked grain, and Raichore crowded with *local*-booked grain. Have suggested Conder re-open through-booking up to 90 waggons daily at present, also to marshal trains and avoid still further loading of cotton waggons with through goods."

2. The local-booked grain herein referred to is consigned to Raichore, but may be reconsigned to stations on this line.

3. As already advised, our existing locomotive power will not move more than 100 waggons per diem in all from Raichore; but this seems to be more than sufficient at present, as, for want of loads, we do not run regularly all the trains booked to run out of Raichore.

4. The shelter for grain at the different stations is required, I presume, for *storing* purposes, if, as I suppose, we shall not be required to make an arrangement for grain different from that existing for other goods, and in practice it is found that the grain does not suffer by exposure during the present dry weather.

There will be no difficulty in erecting sheds for storing grain; but these, in my opinion, should be placed in such a position as not to interfere with the unloading of waggons. In other words, that the unloading should be, as at present, performed at the cost of the Company, and the storage at the cost of the Government, or of the merchants,

if they wish to incur the expense, for the handling of the traffic cannot be performed without considerable additional expense. Railway grain traffic.

No. 32.

No. 68, dated Madras, 30th January 1877.

Nos. 38. 92.

From the CONSULTING ENGINEER FOR RAILWAYS, Madras, to the SECRETARY TO THE GOVERNMENT OF MADRAS, Public Works Department.

Adverting to the proceedings of Government under date 20th instant, No. 191, also to the telegram from the Government of India, dated 27th instant, calling for information regarding the block of traffic on the Madras Railway, I have the honour to lay before Government a report* by the Traffic Manager of the Madras Railway.

* No. 31.

2. The accumulated through-booked traffic on the Great Indian Peninsula Railway was worked off some days ago.

3. The Great Indian Peninsula officials seem to anticipate a recurrence of the block unless the Madras Railway is able to carry forward from 150 to 200 waggons per diem.

4. At present the Madras Railway can carry forward 100 waggons daily from Raichore, and the Great Indian Peninsula Company has been asked to restrict their consignments to that figure.

5. The officials of that Company state that to restrict their through consignments is impossible, and that through-booking must either be allowed in full or not at all. They press that a depôt should be established at Raichore, at which the Great Indian Peninsula waggons could be unloaded, and the grain stored until the Madras Company are in a position to forward it.

6. The adoption of this measure would be a great misfortune, and should be averted if possible.

7. The Madras Company is most anxious to carry forward every waggon which comes from the north, and deficient engine power is the only cause which will interfere with their doing so.

8. At present, as will be seen from the enclosure, the 100 waggons which they are able to take forward daily are apparently more than sufficient; as the Traffic Manager states that, for want of loads they do not run regularly all the trains booked to leave Raichore.

9. A night staff has been entertained at Raichore and elsewhere where needed. The Raichore station is understood to have been worked by day and night since the 21st instant.

10. The reduction of passenger train mileage on other parts of their line, with a view to increase the number of engines available at Raichore, has been suggested, and some temporary assistance may be expected from this source. With this object it has been arranged to stop for the present the regular festival traffic to Trivellore.

11. The 12 locomotive engines which have been promised by the Director of State Railways for use in this presidency, and which are now under erection at Bombay, will enable the Madras Railway Company to work all portions of their line freely and fully; but some weeks must elapse before they can be looked for.

12. In anticipation of this increase to the engine stock, authority has been granted to the Agent of the Madras Railway to telegraph to his board for the immediate despatch of 10 drivers. Six was the number at first suggested by the Agent; but after discussion with the Locomotive Superintendent it was determined to apply for 10.

13. The provision of temporary shelter for grain at Adoni and elsewhere will at once be proceeded with; but information regarding the quantity for which shelter is to be provided at each place is necessary.

14. I have authorised the immediate construction of an additional siding in the Raichore station yard. This was strongly recommended by the Traffic Department, and by Captain Bissett, R.E., who has had an opportunity of watching the station arrangements.

15. I have also authorised the immediate construction of a through-siding at the Toongabudra station, and similar accommodation at a convenient site between Kosgee and Adoni. The necessity of providing additional crossing stations is being carefully considered.

XXV.—MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, on the CONDITION and PROSPECTS of the CHINGLEPUT DISTRICT as ascertained by SIR RICHARD TEMPLE on his visit of the 28th and 29th January 1877, with notes regarding the Relief Camps in and near Madras.

Chittoor, 30th January 1877.

Chingleput
district.

On the 28th January, Sir Richard Temple visited Chingleput, and on the 29th he rode from Chingleput to Conjeveram through a part of the district. With him was Mr. Barlow, the Collector. He met Mr. Macarthy, the Sub-Collector of Chingleput, and also native tahsildars at Chingleput and Conjeveram.

2. The Chingleput district is close to Madras; it comprises an area of 2,753 square miles, with a population of 938,184. It is traversed by three railways and by excellent roads. Chingleput is not a rich district from an agricultural point of view; but being near to Madras, its large labouring population finds ample employment, and its many weavers get a good market for their fabrics.

3. The past season is the third bad year in Chingleput; there was a poor harvest in 1874; the yield in 1875 was bad, and this season there has been extreme failure, the rain-fall ranging from eight to 16 inches against an average of 34. The failure of harvest was worst in the taluks of Chingleput, Conjeveram, and Ponnery, where crops have been saved only on the lands irrigated by channels from the Palar river. Sir Richard Temple saw that, in the parts of these taluks through which he passed, there were no crops save on small patches under wells or irrigated from springs. The Collector estimates the average out-turn of the whole district at $2\frac{1}{2}$ annas out of 12 annas, or nearly one fourth of an ordinary crop. In August last, the people knew that scarcity would come, and relief works were opened in the end of December.

4. Grain is plentiful in the local markets which draw their supplies from Madras. There is very little local grain for sale in the markets. Prices all over the district are much the same as in Madras, except in the Trivellore taluk, where prices are somewhat dearer. The stocks of local grain are said to be small, because of the two previous short harvests. Common rice, which is the food of the poor, is now quoted at 10 seers per rupee.

5. The relief works consist mainly of roads, but some tanks and irrigation channels have been opened for work. In some cases, the people were in a physically reduced state when they first came on the works. Altogether 14,000 persons are now on the relief works; and the Collector expects that eventually he may have 70,000 at the worst season during April. The wages paid are two annas a day for adult males, but a good deal of the Chingleput relief work has been done at piece-work rates; and the Collector considers he has on these works, done at 10 pie per cubic yard earth-work which, in ordinary years, costs 12 pie per cubic foot.

6. A good deal of gratuitous relief is already being given in Chingleput; 8,000 persons a day are receiving cooked food; and the people are being gathered into relief camps where they will be fed, housed, and put to such light work as they can do. Sir Richard Temple saw two of these camps, which appear to be on the same scheme as the relief camps at Madras, some of which Sir Richard Temple inspected closely.

7. There are three relief camps in Madras, besides the Red Hills camp, nine miles outside the town. At these camps are about 10,000 pauper inmates, 2,500 at each. The paupers are chiefly immigrants from Chingleput, North Arcot, Nellore, and Cuddapah, who came down to Madras to seek for work and food, either because relief works near their homes had not then been opened, or because they had heard rumours of charity to be had in Madras for the asking. Some of these immigrants were pariah families, who had been turned off with a little food by the ryots who could no longer support them. Many of them had walked far, had eaten prickly-pear fruit or other indigestible food, and had become very much reduced before they reached Madras. Perhaps for a few days they would pick up a daily meal from charitable people in the town; and eventually the police would find them sleeping in the streets at night, and would bring them into the nearest relief camp. As soon as the food and treatment there given restored the people to strength, they were draughted out upon the road works. In this way more than 25,000 persons have been relieved at these camps.

8. At each of the camps which Sir Richard Temple inspected were a considerable number of women and children in an emaciated and miserable condition. In the relief hospitals were being treated some hundreds who were suffering from diarrhœa, brought on or aggravated by want of food. The death-rate among these poor people was very high; and to some of them the relief came too late. There were some, but not many, cases of cholera; but the great majority of the fatal cases were caused by diarrhœa,

which was called by the medical officers "famine diarrhœa," and was identifiable as the same complaint that was so fatal in the Rajpootana famine hospitals during the year 1869. Chingleput district.

9. The cost of these relief camps is at present considerable. A liberal diet is allowed— $1\frac{1}{2}$ lbs. of rice and $\frac{1}{2}$ lb. of vegetable curry per diem for adults; but it is possible that this ration may be required so long as the inmates come in much reduced, and provided they are draughted out to the works when they recover strength. The administrative arrangements of these relief camps are good; they are all under the general supervision of the Commissioner of Police, Colonel Dreevor; a medical officer with sufficient staff of subordinates manages the sanitation and the hospitals of each camp.

10. The Collector of Chingleput expects that he will be unable this year to collect more than one half of the land revenue of his district, though he may be able to realise much of the balance due on "dry crop" lands next year if the seasons are favourable. The salt revenue, he says, has not yet been injuriously affected by the scarcity.

11. The Collector expects that, if showers do not come during the next six weeks, there will be very hard times for the cattle, and many of them must die. As yet, however, the cattle have been kept alive, and are still able to do a certain amount of draught work.

12. In some parts of the district, the villages already have difficulty about their water-supply. As long ago as last August, the Collector found that there was no water for his camp followers at a village where he had intended to encamp. Wells are being deepened by relief labour in a number of towns and villages; and though there will be scarcity of water, still the people will be able to find water of some kind for themselves and their cattle.

No. 34.

XXVII.—MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, regarding the No. 92.
PROPOSED RAILWAY from CHINGLEPUT to CONJEVERAM.

Chittoor, 30th January 1877.

The Government of India requested Sir Richard Temple's opinion on the desirability of immediately undertaking, as a relief work, the earthwork of the proposed railway from Chingleput to Conjeveram. After discussing the project with his Grace the Governor of Madras, Sir Richard Temple visited Chingleput and rode over the line of the proposed railway to Conjeveram. Mr. Barlow, the Collector of Chingleput, and Captain Bisset, the officer of the Government Railway Department attached to Sir Richard Temple's staff, accompanied him. Proposed railway, Chingleput to Conjeveram.

2. The proposed line is intended to connect with the South India narrow gauge system the short length of narrow gauge line between Arconum junction and Conjeveram. The sketch map in the margin gives an idea of the relation of the several railways to each other. The line from Madras to Arconum and onward, both towards Raichore and towards Coimbatore, is broad gauge; the line from Madras to Chingleput and onwards towards the south is narrow gauge; and so is the short branch, 19 miles long, from Arconum to Conjeveram. Chingleput is the head-quarters of some of the civil officers of the Chingleput district, and it contains a population of 7,000 persons. Conjeveram is a place of many temples and much pilgrimage; it contains 37,000 inhabitants. The proposed line is to connect Conjeveram and Chingleput; it will be about 22 miles long, and it will pass through parts of the talooks (administrative subdivisions) of Chingleput and Conjeveram with an average population of about 380 to the square mile.

3. If, as probably would be the case, the line were taken along or near the present road, which is metalled and bridged, then the earth-work of the whole line would, according to Captain Bisset's rough estimate, cost only Rs. 2,000 a mile, or Rs. 44,000 (4,400*l.*) in all out of a total estimated cost of perhaps 13 lakhs (130,000*l.*). The proportion of the cost that would be expended on relief wages is therefore so small that Sir Richard Temple is unable to recommend that this railway should be sanctioned as a relief work. Even if the line could be completed before the rainy season begins, it would be of no special service to relief operations, for the distress is not at present extreme in that part of the district; there are other railway lines, good metalled cross roads, and plenty of good carts by which the local markets are, and will continue to be, well supplied with grain.

4. So far as could be gathered from the marks of traffic on the road, from the number of carts and passengers, from the look of the country round, it did not seem that the prospects of local traffic on the proposed line were financially very good. For a part of the year, at any rate, traffic from the right bank of the Palar would not cross the broad river bed to the proposed line, but would naturally prefer the other railway lines to the north and south, on the same bank of the river. Conjeveram, as a place of pilgrimage,

Proposed
railway from
Chingleput
to Conje-
veram.

is already connected by railway with Arconum junction, and so with the standard gauge railways of the whole Madras Presidency.

No. 35.

Nos. 69. 221. EXTRACT from a LETTER from the DISTRICT ENGINEER, Malabar, to the SECRETARY TO THE REVENUE BOARD, Madras, No. 372, dated Calicut, 30th January 1877.

Mysore dis-
tress causing
difficulties in
Wynad.

I presume it is known that there is a season in the year when work on coffee plantations is almost entirely suspended, extending from the close of picking crop to about the end of May; picking is generally brought to an end about the middle or close of February; this year, however, owing to short crops, it was finished throughout almost all Wynad by the end of December, the result of which has already been explained by Mr. Logan in his letter to the Board. As a rule, the planters are not men of large means, and of late years, owing to bad seasons, they have been by no means doing well, so that to expect them to maintain large gangs of coolies when there is no necessary work is asking what is absolutely beyond their ability. At this moment I can vouch from personal knowledge that coolies who, in other seasons, would immediately after crop picking have gone back to Mysore and the other localities from whence they come, are hanging on at the estates and asking to be kept on, without wages, but for the mere food necessary to keep body and soul together. They all know that scarcity exists in Mysore, and that the price of food in Wynad is slightly lower than there, and it is not therefore difficult to account for their clinging to the former. A fortnight ago I was in Wynad and again observed what I saw on a previous tour, that men, women, and children are still flocking in, bringing cattle and all they have with them, by no means arguing the likelihood of those already in Wynad or on estates being about to return to their villages. It is said that in some parts of the Presidency where relief works are going on, the appearance of the people is not always such as to give the idea of want, but the same could not be said of the troops of men, women, and children seen by me lately, nor are deaths even already wanting.

No. 36.

REPORT by LIEUTENANT-COLONEL H. F. HANCOCK, R.E., Consulting Engineer for Nos. 46. 66.
Railways, dated Bombay, 31st January 1877.

The Consulting Engineer for Railways has the honour to report as follows on points Nos. I., II., and V. in Sir R. Temple's Memorandum, dated 27th January.

Railway
grain traffic.
Means taken
to remove
block.

I. The Great Indian Peninsula Railway Company recommenced booking grain through to stations on the Madras line on the 23rd January; orders have been given not to send more than 90 through waggons into Raichore daily for the present, and to keep back loaded waggons in excess of this number; but the Great Indian Peninsula Railway Company are prepared if necessary to increase the number to 150 waggons a day or more; and while they will do all in their power to regulate the despatch of waggons, they represent that they cannot control the daily consignments of grain for the Madras line, and should these consignments, which are being poured in from the East Indian Railway, as well as their own stations, be greatly in excess of 90 waggon-loads per day, or whatever the Madras Company can forward from Raichore, and should waggons consequently again accumulate on the Bombay side of Raichore to such an extent as again to necessitate a suspension of through booking, the responsibility will rest with the Madras Railway Company.

II. The booking of grain from Great Indian Peninsula Railway stations to Raichore has been discouraged, and for some days during the late block consignees of grain to Raichore were asked to delay booking, but the Company cannot avoid booking consignments to Raichore altogether, and if grain should be consigned again in large quantities to Raichore, consignees should be required to remove it as it arrives, and if necessary the wharfage charge should be raised in order to induce its speedy removal.

The suspension of through booking from the 8th to the 23rd January doubtless encouraged local booking, but was not the sole cause. Some merchants appear to have selected Raichore as a convenient station nearly in the centre of the districts affected by the famine.

V. (a.) The Great Indian Peninsula Railway will deliver waggons up to, and if possible not more than, what the Madras Railway Company can remove as above explained. They have also promised to book through as far as possible in waggons suitable for the Madras Railway, and the General Traffic Manager states that practically all will in future be suitable, *i.e.*, any exceptions will be accidental and very rare.

(b.) The marshalling of trains is being done. It was mentioned for the first time when Mr. Conder met Mr. Elwin on the 16th January, and was agreed to from the date of resumption of through booking. The Great Indian Peninsula Railway Company represent, however, that it is not properly speaking a duty that should devolve on them, or which is imposed according to the usual practice of railway companies.

(c.) The Traffic Manager, Madras Railway, telegraphed to Mr. Conder on the 29th instant (it had never been mentioned to him before) to inform him by wire daily how many waggons were loaded for Madras stations from each station on the Great Indian Peninsula and East Indian. It is not clear what use could be made of this information could it be supplied. What is wanted is, it is presumed, what Sir R. Temple has asked for, *viz.*, "earlier notice of the trains ordered to Raichore, and of their load," and Mr. Conder has given orders to have Mr. Church advised daily by telegraph how many waggons are under load for Madras stations at Shahbad, and also to telegraph to him what trains are ordered into Raichore, information hitherto supplied to the station-master there.

The Consulting Engineer will defer any general remarks on the papers until the receipt of certain reports about to be submitted by the Agent, Great Indian Peninsula Railway Company.

No. 37.

EXTRACTS from the PROCEEDINGS of the GOVERNMENT of MADRAS, in the Public Works Department, No. 304, dated 31st January 1877. Nos. 38. 92.

READ the following papers (Nos. 13. 19. 21.) :—

Order thereon by the Madras Government.

His Grace the Governor in Council considers that arrangements should be made on the Great Indian Peninsula Railway for receiving daily no more grain than can be taken

Railway
grain traffic.

through by the Madras Railway. Instructions should be issued to receiving stations on that line to restrict the number of waggons for the Madras Railway accordingly, and junction stations should be similarly warned not to forward to Raichore any waggons in excess of the number which the Madras Railway are in a position to work off each day. Any excess by a particular train should be counterbalanced by reduction of the succeeding load.

2. There seems no reason why the Great Indian Peninsula Railway should not limit through booking to 90 waggons a day.

3. Omission to attend to these orders should, if more than once repeated, subject the station-masters in fault to charges for demurrage arising therefrom.

4. Unloading at Raichore will be useless and costly. Additional sidings may perhaps be usefully laid down at Adoni, where it is proposed to put up temporary shelter for grain.

5. The Government of Bombay will be addressed in accordance with these observations.

No. 38.

Nos. 39. 92. EXTRACT from PROCEEDINGS of the GOVERNMENT of MADRAS, Public Works Department, No. 302, 31st January 1877.

READ the following letters (Nos. 31. 32.) :—

Order thereon by the Madras Government.

His Grace the Governor in Council is glad to find that the accumulation of grain traffic which recently occurred in the Great Indian Peninsula Railway has now been worked off. A repetition of similar state of affairs is to be deprecated, and the Government of Bombay have accordingly been requested to restrict through-booking on the Great Indian Peninsula Railway to the number of waggons which the Madras Railway may be in a position to take on daily from Raichore.

2. The unloading of grain waggons at Raichore has already been objected to, and Adoni and other convenient stations suggested instead.

3. The sanction given by the Consulting Engineer to the Agent to telegraph to his Board for 10 additional drivers for the engine stock expected from the Director of State Railways is approved; as well as the authority granted for the construction of additional sidings at Raichore, Toongabudra, and between Kosgee and Adoni.

4. Shelter for 2,500 tons of grain should be provided at Adoni, and arrangements made for storing 500 tons at other selected stations.

No. 39.

Nos. 55. 92.

No. 306, dated Fort St. George, 31st January 1877.

From the SECRETARY TO THE GOVERNMENT OF MADRAS to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

I am directed, in reply to your telegram of the 24th, and your letter of the 25th instant, regarding the recent block at Raichore, to forward copy of the orders passed by the Madras Government thereon; and to request that, if the Bombay Government concur in the suggestions made by his Grace in Council for preventing a recurrence of the block, and for facilitating the free passage of grain to Madras, the authorities of the Great Indian Peninsula Railway may be moved to issue the necessary directions.

No. 40.

Nos. 55. 92. EXTRACT of LETTER from GENERAL TRAFFIC MANAGER to the AGENT, GREAT INDIAN PENINSULA RAILWAY COMPANY.—No. 346, dated 31st January 1877.

* * * * *

3. You are aware generally of the condition of things with regard to the through traffic on the Madras Railway. As there has been much discussion about it, and I

believe that Sir Richard Temple is writing a minute on the whole subject, it may be well for me to give you, as shortly as possible, the leading facts of the matter. Railway grain traffic.

4. About the month of August last, the Madras Company wrote, saying that they considered that additional sidings were required at Raichore. The sidings at present there will accommodate more than the ordinary busy season traffic in and out of the station, and I was therefore obliged to say to Mr. Church that I was not able to concur in recommending any additional expenditure upon siding accommodation there. He did nothing more than I know of. I consider the sidings that are there already are more than sufficient for the work that usually has to be done throughout the year.

I find that during April and May of last year we had an average of 77 waggons a day in and out of the station, which is not very much less than the December traffic, to which I will refer later on in this report. But it has been arranged within the last ten days for an additional siding to be laid in, and the work is in hand.

5. Everybody knows that for some years past the question of the different gauges adopted on the different railways has been under consideration.

Some of the erections on the Madras Railway are so constructed that some of our waggons will not pass safely; which of the two may be wrong, namely, whether our waggons are too wide, or their erections encroach on what should have been left clear for the passage of vehicles, need not now be discussed. I merely state the fact.

And this fact made it, of course, necessary to stop such of our waggons at Raichore as could not pass with safety. The question has given rise to a good deal of discussion and correspondence, and recently, namely, on the 5th of the present month, I gave instructions for what are called our new waggons to pass on to the Madras Railway. These, with the open waggons, will therefore be used in future, as far as it is possible to do so, for through traffic; but in cases where the larger waggons which cannot pass are loaded with through traffic, the loads will still have to be transhipped at Raichore. The number of these will, however, be very small.

6. In the early part of December last, it was found that we were booking traffic to Raichore and on to the Madras Railway to a greater extent than it was being cleared away from Raichore. The consequence was that gradually there came to be a block on our line of waggons under load for Raichore and the Madras Railway. Perhaps the letter of the 26th December to the Madras Railway gives us, shortly as I can, the position of the matter as it then stood. Up to that time the Madras Company's answers to all our communications on the subject were, that it was want of siding accommodation that had caused the block, and the reply to the letter of the 26th December was to the same effect. That reply came to me by telegram, and by letter from Mr. Church and also from Mr. Elwin.

The block increased, however, and, as is known, we stopped for a few days the booking of traffic beyond Raichore. At the same time we discouraged the booking of traffic for Raichore itself without actually refusing it. The result was that very little, if any, was booked to Raichore, and all that was lying on hand there was what had been booked before the stoppage. I believe that some of that has not even yet been cleared away from Raichore. None of that which was booked through was unloaded and stacked on the ground at Raichore. When the through booking was stopped, we had nearly a thousand waggons under load for Raichore and for stations on the Madras Railway, and they were receiving at Raichore for that place and through at the rate of an average of less than a hundred a day.

7. In the letter of the 26th December, and also when I met the Madras Railway representatives on the 16th, I pointed out that so long as they closed the station for 12 hours out of every 24, and did not run trains during the night, but practically closed the line also for 12 out of every 24 hours, it would be difficult to convince anybody that they were doing as much as might be done. It is evident that, if more trains had been run and if the unloading had been carried on by night as well as by day, as it had to be at some of our stations, much more work could have been done, and I think that there would never have been any block at all. I pressed upon Mr. Elwin the desirability of making more use of the line by working trains day and night, and by putting on a night staff at Raichore to do such unloading and transhipping as was necessary.

8. This latter Mr. Elwin, by telegram dated the 10th, had advised me he had given orders to have done, but when we met there on the 16th it had not been carried out, and the night staff did not actually commence work until the evening of Monday the 22nd, that being after a telegram that I had sent on the 20th to Mr. Elwin and Mr. Church.

9. Much has been made of the transhipping and unloading at Raichore. But the number of waggons that have had to be so dealt with was not much larger than it usually

Railway
grain traffic.

is during the busy season, although it has not formerly caused any block. For the whole month of December the average booked through to stations of the Madras Railway was 46 a day, and of that number the daily average of those that had to be transhipped was only 16. And that is a number which should not have caused any difficulty. There were also in addition to these 46 waggons, an average of about 50 a day, under load with consignments for Raichore itself, which had, of course, to be unloaded there, making a total to tranship and to unload of 66 a day.

The work of loading and unloading at Raichore is done by a contractor, who stated to us that he was prepared to do more if more supervising staff were provided by the Madras Company, and that means, as we ascertained, that two more foremen and eight hand-lamps were required, and nothing else, to enable the work to be continued night and day. I offered, before the 10th instant, if it would be any convenience to the Madras Railway, to provide these foremen and lamps ourselves, but the offer was not accepted.

10. That which was consigned to Raichore should not have caused any block there, because the owners should have been required to remove it from the station without delay, and if they did not do that the wharfage charges should have been increased so as to compel them to remove. This is what we have had to do at some places in order to keep the stations clear, and there is no reason to doubt that it would have answered that purpose at Raichore.

11. Mr. Elwin stated, in regard to the engine power for the day and night trains, that they were so much pressed upon other parts of the line, that they could not put more engines there than the four employed to work on that district. I could, of course, make no answer to that except that they knew better what could be done than others; again pointing out, however, that it seemed likely that if night staff were employed more could be got out of the engine power that was available; and I reminded Mr. Elwin that this practical closing of the line and the station for half the time had ended in the serious detention of our waggons at a time when they could not be passed. So far as the complaint respecting the through booking having been stopped is concerned, it will therefore probably be admitted that the explanation I have given is not a bad reason for the step that was taken.

12. With regard to the future I pointed out to Mr. Elwin that we were ready to recommence the through booking directly we found there was reasonable ground for thinking that the block would not recur. We were about clear of waggons under load for the Madras Railway and for Raichore on 23rd, and therefore I gave instructions on that morning for traffic to be again booked through as freely as it presents itself.

13. When we were at Raichore on the 16th, I heard, for the first time, that it was thought that we should marshal the trains, that is, separate the through and local waggons. I do not think that this is a service which should be expected of us, and it is not usual as between companies, but I said at once when it was mentioned that we would do it as far as possible, and orders have been given accordingly.

14. I yesterday received a telegram from Mr. Church asking us to wire him each day the number of waggons loaded for Madras line stations at each station of this and the East Indian Railway every day. I telegraphed to Mr. Church in reply to the effect, first, that it would be impossible to do this (the wire is already overcrowded with messages), and, second, that if it were done, it would be of no practical use to the Madras Railway, for it cannot assist them to know that five waggons were loaded to-day, for example, at Nagpur, or six at Jabalpur, or ten at Cawnpur. What they want to know is the number that may be expected daily at Raichore. I therefore said to Mr. Church that I would advise him by wire each morning the number on hand under load for his stations at Shahabad. That is a convenient place for the purpose, because it will include any that may be booked from Hyderabad as well as from all parts of this and the East Indian and Baroda Railways.

15. I am arranging also to let the Madras Company's manager know the number of trains ordered for Raichore each day, as well as the number of waggons on each train. This information has been always supplied to the station-master at Raichore, who gets it in the same way as every one else does when the trains are ordered, but it will probably help Mr. Church if his name is also put upon the message, and I have therefore arranged accordingly.

16. I hope that the Madras Company will be requested to ensure the prompt return of our empty waggons, because our ability to keep up the regular supply, and to keep traffic moving, will depend upon that. At present no additional trains are running, and we are finding already that we have more under load for Madras stations than they can

clear away ; so that unless something more is done beyond Raichore at once, the block will soon be as bad as ever.

No. 41.

Nos. 54. 65.

MINUTE by the Honourable SIR ALEXANDER J. ARBUTHNOT, dated February 1st, 1877.

Within the last few days we have received from the Government of Bombay certain papers* regarding the famine in that Presidency, which appear to me to demand the serious attention of the Government of India, as being calculated to produce very erroneous impressions with reference to the course taken by this Government. One of these papers, that of January the 26th, which the Bombay Government have given to the local newspapers, contains a direct attack upon the manner in which the business connected with the famine was dealt with by the President in Council, and contrasts it unfavourably with the policy which has been pursued by the Government of India since his Excellency the Governor-General rejoined the Council. It implies, if it does not expressly state, that all that was done by the President in Council was done without the knowledge and without the concurrence of the Viceroy. It in fact pits the Governor-General in Council against the President in Council, the obvious object being to disparage the action taken by the latter and to hold it up to public contempt. The day before the issue of the resolution to which I allude, the gist of it was embodied in a leading article which appeared in one of the Bombay newspapers, in which Sir Henry Norman and I are mentioned by name as the authors of the obstructions against which it is alleged that the Bombay Government have had to contend, and which bears obvious marks of having been inspired, if not actually written, by some one immediately connected with the Government of Bombay.

Minute by Sir Alexander J. Arbuthnot on the action of the Bombay Government.

*Nos. 7. 22.

2. Before proceeding to comment on the observations made in these papers, I propose to recapitulate very briefly the salient points of the correspondence which has passed between the two Governments regarding those matters on which there has been difference of opinion.

3. At a very early stage in the scarcity the Government of India saw reason to believe that the Government of Bombay were disposed to incur an expenditure which might prove to be in excess of the requirements of the case, and that it was necessary that their proposals should be carefully scrutinised. The very first letter which was received from them on the subject, dated 13th September, contained a significant allusion to the enormous outlay lately incurred in Bengal, which, although it was coupled with an intimation that the demand to be made from Bombay would be comparatively trifling, still when considered in connexion with the disregard for financial considerations which has been so often exhibited by the Government of Bombay, was sufficient to indicate the necessity of caution in dealing with their requisitions. This letter was speedily followed by an application for permission to commence at once, as a relief work, the Dhond and Munmar Railway, the estimated cost of which was 90 lakhs, and which was pretty certain to entail an expenditure of a million sterling. This application was made on the 29th of September. At that time a fall of rain, which would have saved portions of the standing crops and would have enabled the winter crops to be grown, would have materially altered the aspect of affairs. I observe that, as late as the 10th of October, the late Mr. Havelock and Colonel Finch, in a joint report addressed by them to the Government of Bombay, adverted to the possibility of a good fall of rain "to give hope of the late or "rabi crops," although they did not regard it as a probability. On the same date the Acting Collector of Satara wrote—

"There is no prospect of rain at present, although it is anxiously expected. If rain falls prices will fall, and there will be hope for a rabi crop."

The Government of India, his Excellency the Governor-General being then with the Council, were unanimously of opinion that it was not expedient to sanction the immediate commencement of the Dhond and Munmar Railway as a relief work. The Government of Bombay on the 4th October were informed that "local relief works and other relief operations might be started, selecting such works as could be found near the homes of the people, in preference to committing Government to commencement of large projects."

4. In a subsequent telegram dated the 16th October, in reply to a further representation to the Government of Bombay, it was intimated to that Government that the Government of India did not think it right to authorise the commencement of so expensive a work as the railway in question, the expediency of constructing which, in preference

Minute by
Sir Alex. J.
Arbuthnot
on the action
of the Bom-
bay Govern-
ment.

to other important lines, has not yet been determined, merely to meet a temporary, though serious emergency. The telegram went on to say—"Local works of a character to give employment for some months should be organised, the Government providing the necessary funds, and leaving the final incidence of the charges to be settled hereafter. The district officers ought to have no great difficulty in organising such works. Your Government are authorised to incur such expenditure in providing work and relief in the distressed localities as you may consider necessary to meet the emergency; but it is not deemed advisable to embark on any large project which will involve the continuance of heavy expenditure after the emergency has ceased. The railway question must be decided on its merits from a political and financial point of view, and is not yet ripe for decision." This telegram was despatched the day before the Governor-General left Simla, and was approved by his Excellency.

5. The views of the Government of India were more fully stated in a letter addressed to the Government of Bombay on the 25th October. It was therein explained that "in the construction of railways in India, it is absolutely necessary that each project should be taken up in succession in the order of its necessity as compared with others; that no project should be undertaken under present financial circumstances which cannot be depended on eventually to return full interest on the outlay; and that only so many should be on hand at one time as the borrowing powers of the State permit. For works designed to afford relief during scarcity, it is now an established principle that those ought to be selected, as far as practicable, which can be completed, or far advanced towards completion, by the outlay which the scarcity demands. Testing the Dhond and Munmar Railway project by the above conditions, the information at present before the Government of India does not appear to justify the immediate commencement of the line, while the relief outlay which it would provide would bear a very small proportion to the entire expenditure which it would involve, and would be confined to a comparatively small area of the affected tracts."

6. The Government of Bombay were requested to, apply these principles, as far as they were applicable, to all projects which might be suggested to them at the present juncture; and the prominent position held by tank clearances, and the repair and improvement of existing roads in a memorandum of relief works which had been sanctioned by the Government of Bombay, as well as certain remarks made by the Collector of Poona as to the inexpediency of collecting large gangs away from their homes on large works, were referred to in terms of commendation. The attention of the Government of Bombay was at the same time drawn to the Resolution of the Government of India of the 18th February 1875, as indicating the general policy of the Government of India regarding measures of relief in times of scarcity.

7. In framing these instructions the Government of India were considerably influenced by what had recently occurred on the occasion of the apprehended scarcity in North Behar towards the end of 1875 and in the early part of 1876, when, had the recommendations of the local authorities for the commencement of large and expensive relief works been acted on, we should have been committed to an expenditure which events have shown would have been far in excess of the necessities of the case. It was not, however, at any time the intention of the Government of India to proscribe a resort to large works in the event of the famine assuming dimensions which would render the plan of local works difficult to carry out; and it will be seen, on reference to our Despatch to the Secretary of State under date the 15th December, that we fully recognised "the possibility, in the case of a scarcity so widespread as that which now afflicts the Presidencies of Madras and Bombay, of its being necessary before very long to fall back upon larger projects," and that we informed the Secretary of State that this question was engaging our serious attention. Before this Despatch was written we had requested the Public Works Department to furnish us with further information than that which we possessed in the Agricultural Department regarding the Dhond and Munmar Railway project, and also regarding the project of a railway from Bellary to Gudduk, which the Madras Government had proposed to commence as a relief work.

8. On the receipt of our telegram of the 16th October, the Government of Bombay sanctioned a programme of relief works involving an estimated cost of nearly 62 lakhs of rupees. This programme contained a very large proportion of small works, but also several large works, some of which were certain to involve an expenditure considerably in excess of the sums which were likely to be spent on them during the continuance of the famine. In regard to the latter the information which it contained was very scanty. It merely specified the amount sanctioned in each case, without any mention of the aggregate expenditure which the work was likely to entail. As an instance, I may observe that the amount to be assigned to the Maswad tank was put down at four lakhs,

whereas it now appears that the estimated cost of that work is over 18 lakhs. The programme also bore evidence of having been hastily prepared. While in the case of some districts provision was made for spreading the works over the distressed localities, in others the expenditure was concentrated on a few large works, some of which were immediately afterwards abandoned by the Bombay Government on the representation of the district officers that the works sanctioned would not meet the wants of their districts. This inconsistency in the programme appears to be attributable to the fact that it was settled in a single day at a conference at which the Collectors of some only of the affected districts were present, and that the Government were not in possession of definite suggestions from the Collectors of the remaining districts. The programme was carefully examined by the Government of India. A considerable number of the works specified in it were allowed to stand. Two works were disallowed, and the Government of Bombay were requested to suspend the commencement of others pending the submission of further information with reference to them. They were also requested to furnish full information regarding all irrigation works, and not to commence any irrigation works the estimated expenditure on which exceeded Rs. 30,000, without the sanction of the Government of India. At the same time they were informed that if other relief works were needed, pending the decision of the Government of India regarding the suspended works, minor works should be commenced in each distressed taluka, as had been done in Poona.

Minute by Sir Alex. J. Arbuthnot on the action of the Bombay Government.

9. The Government of Bombay replied to this letter on the 27th November. Their reply was in effect a protest against any interference on the part of the Government of India. It questioned the correctness of the remarks of the Government of India regarding particular works. With reference to local works it was somewhat contradictory. It drew attention to previous assurances given by the Bombay Government, to the effect that as regards minor and local works its resources had already been virtually exhausted; while in the same paragraph, it stated that the Local Government had not overlooked the question of minor works, and was from day to day authorising their commencement in different localities; but it was added that such works must not be regarded as in substitution of the larger operations which had been determined on, but in addition to them. The tone of parts of the letter was petulant, and on one point there was, as there has been in other letters from Bombay, a perversion of the purport of the orders of the Government of India.

10. The President in Council replied, on the 15th December, disclaiming any intention of interfering with the Government of Bombay more than was necessary to enable the Government of India to satisfy itself that the principles which had been laid down had been duly followed. These principles were recapitulated. The Bombay Government was commended for its efforts to utilise provincial resources and to avoid interference with the grain trade. The feasibility of organising minor local works was affirmed, as evidenced by the examples of the Poona and Sholapur Collectorates, and by recent applications from the Collectors of Satara, Belgaum, and Kaladgi, and the opinion was expressed that if more full information had been obtained from the district officers, the programme might have been framed more in accordance with the policy of the Government of India. The delay in giving effect to the orders of the Supreme Government, sanctioning an additional Revenue Commissioner for the distressed districts, was also adverted to. It should here be distinctly borne in mind:—

- (a.) That the Bombay Government, notwithstanding the lapse of above a month, and more than one call made upon them, had not, except in a few instances, furnished the information we deemed necessary, and in the case of many important works scarcely any information at all.
- (b.) That the Bombay Government had empowered all the Collectors to commence without further reference any work entered in the programme, and that the information as to the extent and localities of the famine, submitted to us in reply to our telegram of October 22nd, had proved to be so meagre that we had been obliged on the 30th November to call for a complete review and forecast to be sent in by January 15th.

11. Our letter of the 15th December reached Bombay shortly after the arrival of the Viceroy at that place. It appears that the Governor expressed himself much dissatisfied with its contents, and especially took exception to those passages in which undue haste and want of deliberation in the preparation of their programme of works, and undue delay in the appointment of the additional Revenue Commissioner, were attributed to the Government of Bombay. The Viceroy on his arrival at Delhi proposed that the letter should be withdrawn, and a similar suggestion was thrown out by Sir Philip Wodehouse at the conference which was held there on the 1st January, and at which

Minute by
Sir Alex. J.
Arbuthnot
on the action
of the Bom-
bay Govern-
ment.

the Governors of Madras and Bombay attended. I was myself, in the first instance, opposed to the withdrawal of the letter, of which a copy had already been sent to the Secretary of State, and which appeared to me to be expressed in terms in no way discourteous to the Local Government, and to contain no statement which was not fully justified by the actual facts. No decision was come to that evening, but the next day it was settled that a fresh letter, bearing the same date, should be substituted for the letter of the 15th December, the two passages to which Sir Philip Wodehouse had taken exception being omitted. Sir Philip Wodehouse was informed by the Viceroy before he left Delhi that this would be done, and on the 5th January the revised letter was despatched to Bombay. On the same date the Bombay Government were informed in a separate letter that the restrictions on the commencement of large works were withdrawn, subject to certain conditions, the nature of which had been explained to the Governor at Bombay and subsequently at the conference. When these steps were taken, it was assumed that our revised letter, with the letter removing the restrictions previously imposed, would terminate the correspondence, and that the controversy was practically closed. The Government of Bombay, however, in their letter of the 18th January, have addressed a letter to the Government of India which purports to be a reply to our revised letter, but which quotes a passage in the original letter of the 15th December omitted from the revised letter.

12. I must here pause in my narrative of the differences between the two Governments, for the purpose of adverting to discussions which have recently taken place in the Government of India, followed by what may be regarded as in some measure, at all events, a change in the policy which was favoured by the collective Government of India, from the time at which we received the first intimation of the Bombay scarcity up to the time of our meeting at Delhi, or, perhaps, I should say, up to the arrival of the Viceroy and Sir John Strachey at Bombay. During the whole of that period the Government of India were unanimous in the opinion that in the earlier stages of the scarcity, and until it became absolutely necessary in consequence of the numbers of persons in need of relief to provide large works, a preference should be given to local works within easy reach of the homes of the people. The main ground upon which this opinion was based, was the difficulty of devising any number of large works which would not involve an expenditure considerably in excess of the requirements of the famine, a consideration which, as it appeared to me, was of paramount importance, especially in the present position of the finances. Another consideration, which I confess has weighed with me very strongly, is the great danger, in a time of scarcity, when the physique of the people is usually somewhat reduced, of inducing outbreaks of epidemic disease by the collection of large gangs of people at a distance from their homes, often with unavoidably insufficient shelter, and under other circumstances unfavourable to health. But it was felt from the first that the time might come when these risks would have to be encountered, and as I have said, the question of resorting to such large works as the Dhond and Munmar Railway was already under consideration when our original letter of the 15th December was despatched to Bombay.

13. Our colleague, Sir John Strachey, holds opinions very much opposed to those to which I have referred. He admits to a very limited extent, if, indeed, he admits it at all, the propriety of commencing with local works; and he is clearly of opinion that when anything like extensive relief is needed, the right thing to do is to collect the applicants for relief, or such of them as are capable of working, upon large works, where the labour test can be efficiently applied under proper supervision, and he thinks it better, when this is practicable, that the people should be worked at a distance from their homes than in their immediate neighbourhood. I am bound to say that these views derive very cogent support from what has taken place in the Madras Presidency, though even here I cannot but think, that the system of local works might have been carried out in a less extravagant fashion, had the Local Government been more impressed with the necessity for economy. However this may be, Sir John Strachey's views have been practically accepted and acted on by the Government of India in our recent instructions to Sir Richard Temple. Their adoption has evidently led the Government of Bombay to form very erroneous impressions as to the real facts, and to regard the policy which was acted on up to the last few weeks as the policy of only that section of the Government, composed of four members, which remained at Simla after the departure of the Viceroy on his tour, and which subsequently carried on the administration at Calcutta. To these erroneous impressions is, I think, to be ascribed, although of course they do not in the slightest degree justify, a great deal that has been written in the recent letter and Resolutions of the Government of Bombay, including, perhaps, the extraordinary course which that Government has taken in pursuing a correspondence,

in regard to which there was an implied, if not an express, understanding that it should cease, and their still more extraordinary action in writing and publishing in the newspapers a Resolution in which they have contrasted the supposed views of the Viceroy with those of the President in Council, with the manifest object of disparaging the latter, and in which they have disclosed to the public the essentially private arrangement made between the Viceroy and the Governor of Bombay, that a certain letter should be withdrawn and another substituted for it.

14. The Bombay letter of the 18th January professes to contain a summary of the principles advocated and proposals made by the Government of Bombay, and of the mode in which they were dealt with by the President in Council. Like other communications from Bombay, it raises an entirely false issue and misrepresents what was actually done and written by the Government of India. Its object is to show that the Bombay Government were forced by the President in Council to waste money on useless works, in consequence of the refusal to sanction, without further explanation, many of the large works provided for in the Bombay programme. It refers to the *rejection* of many of the Bombay proposals, the fact being that only two were absolutely rejected. It gives no explanation of the omission of the Government of Bombay to furnish without delay the more full information which was called for with reference to the large works in their programme, which were not rejected but only suspended; and it entirely ignores the remark made both in the original and in the revised letter of the 15th December, though in different terms, to the effect that the Government of India recognised the necessity of resorting to large works in the case of a famine of prolonged duration. There can be no doubt that if the information called for had been promptly supplied, many of the works in the programme, which by our order of the 9th November were suspended, would have been sanctioned long before this. As I have already observed, the information afforded in the Bombay programme was of the most meagre, and, indeed, of a positively misleading description. To specify four lakhs as the projected expenditure on a work, the estimated cost of which exceeds 18 lakhs, without making any mention of the estimated cost, is, to use the mildest term, calculated to mislead, and is certainly not consistent with the system usually followed by a prudent Government in sanctioning the expenditure of public money. At the time at which this programme reached us, the finances of India were, as they still are, and it is to be feared are likely to remain for some time to come, in a position of very serious embarrassment. Even then it could not be affirmed with certainty that either in Bombay or in Madras the famine would be as bad as it has proved to be; but had it been otherwise, I cannot think that in calling for more satisfactory information, we in any way exceeded the duty and the responsibility which devolved upon us. Why this information was not at once supplied, the Bombay Government do not explain. Either they were in possession of it when they framed their programme, or they were not. If they were, their omission can only be attributed to impatience of interference and control. If they were not, then they are clearly chargeable with having performed an important duty in a hasty and perfunctory manner, such as, in my opinion, fully justified the remarks made in our original letter of the 15th December; and they are in no way warranted in asserting, as they do in paragraph 7 of their present letter, that the large works they wished to commence were such as "have been well examined and approved."

15. Since this minute was commenced the Government, at the meeting of Council yesterday, have resolved on the course which it is expedient to take with reference to the Resolution of the Bombay Government under date the 26th January, in which a direct and public attack is made upon the President in Council, and it has also been settled what notice shall be taken of the resolution of the 25th idem, laying down what are called "the general principles by which district officers should be guided in refusing "the aid needed to preserve life." These documents do not, therefore, call for any further remarks from me except with reference to one observation in the Resolution of the 26th January, I allude to the remark made in the 6th paragraph of that Resolution, that the position was still further complicated by our letter of the 28th October inviting the attention of the Government of Bombay to the Resolution of the Government of India of the 18th February 1875, which, in paragraph 12, favours the policy of commencing with large works. I think it is to be regretted that the reference made in our letter to the Resolution in question was not accompanied by some qualifying remarks, but I cannot perceive that it has caused any practical complication or difficulty in the position of the Bombay Government. It certainly did not lead them to abstain from sanctioning minor works, for both before and since the withdrawal of our restrictions on large works, the Government of Bombay have sanctioned numerous small works. If the Bombay Government entertained any doubt as to the meaning of the Government

ment.

of India, that doubt could at once been set at rest by a telegram. The only other paper to which I need advert, is the note framed by General Kennedy, the Secretary to the Government of Bombay in the Public Works Department, "on the general policy of the Government in connexion with the Bombay famine," which is open to criticisms very similar to those which I have applied to the letter of the 18th January, and the publication of which appears to me to have been extremely improper. Here, again, the action of the President in Council is grossly misrepresented. It is alleged that "one class of works that has been entirely objected to by the President in Council is that of tanks, other than those of small dimensions"; the fact being that no such objection has been taken, the only restriction imposed being that in the case of tanks or other irrigation works estimated to cost more than Rs. 30,000, the previous sanction of the Government of India should be obtained. The necessity for some restriction is, I think, sufficiently established by the case of the Maswad tank to which I have already alluded.

No. 42.

No. 43.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

Dated Calcutta, the 2nd February 1877.

Views of Go-
vernment of
India in
regard to
preservation
of life.

The attention of the Government of India has been drawn to the Resolution of the Government of Bombay, No. 50 E.—158, dated 25th January. This resolution begins by referring to previous orders of the Bombay Government, under which "the village officers were directed to take care that no person is allowed through obstinacy to die of starvation"; it says that "this injunction was quite in conformity with the principle on which the Government was then acting, viz., that no person was to be allowed to die of starvation if it was in the power of the Government to prevent it"; and the Government of Bombay then proceeds to modify its former instructions. The new orders are accompanied by observations which imply that there are circumstances in which relief is to be withheld, even though it may be necessary to save life, and the instructions lately issued to Sir Richard Temple by the Government of India are quoted as the reason for this change of policy.

2. The views of the Government of India appear to have been seriously misunderstood. The Government of Bombay seems to think that the Government of India has laid down the doctrine that there are certain circumstances in which the Government ought to allow people to die of starvation, although it may be in its power to prevent it. The Resolution to which reference has been made states that the instructions to Sir Richard Temple "do not lay down any general principles by which the district officers should be guided in refusing the aid needed to preserve life, and that his Excellency in Council would view with satisfaction the issue of supplementary instructions on that point." It cannot be stated too strongly that the Government of India has never had any such views as those which the Government of Bombay supposes it to have expressed, and it is now necessary further to explain the opinions which his Excellency in Council actually holds, and which he believes have been fully understood by Sir R. Temple, in whose instructions it was endeavoured to state them with clearness and precision.

3. The second paragraph of those instructions contains a general statement of the principles by which our policy ought to be guided. Those principles may be summarised and repeated as follows:—It is no more the duty of the Government to prevent all distress in time of famine than in other times, but it is the duty of the Government to spare no effort which may be possible to save the people from starvation and from an extremity of suffering dangerous to life. Paramount as this duty is, and fully as it is accepted by the Government of India, it is obvious that it could not be adequately performed if it involved the necessity of an expenditure beyond the power of the country to bear, and which might go far to render the future good government of India an impracticable task. This may seem to be a truism, but it was necessary to state it, because it has often been assumed that the Government was placed in this dilemma, viz., that in times of severe famine it must either allow people to die of starvation or incur expenditure which might ultimately bring ruin upon the country. The Government of India has denied that any such dilemma exists, and has confidently asserted that the history of past famines shows that the duty of preventing loss of life and extreme suffering can be efficiently discharged without incurring charges disastrously heavy. This opinion, however, will only be justified if every effort be made to prevent relief being given to

those who do not actually require it, and to exact the application of the strictest practicable tests and rules, so that no more relief shall be afforded than is absolutely necessary to ensure the fulfilment of the object in view.

Views of Government of India in regard to preservation of life.

4. In laying down instructions of a purely official character relative to the management of relief operations by the officers of Government, the Governor-General in Council thought it out of place and unnecessary to give assurances of his sympathy with suffering, or to dwell on his determination, which he thought had already been made sufficiently clear, that no one shall die of starvation if it be in the power of the Government to prevent it. In regard to the duties which humanity imposes upon the Government, there has not been, and will not be, any change of policy. We say that human life shall be saved at any cost and at any effort; no man, woman, or child shall die of starvation. Distress they must often suffer; we cannot save them from this. We wish we could do more, but we must be content with saving life and preventing extreme suffering, and it taxes all our efforts and all our resources to accomplish even this. In regard, therefore, to the inquiry which has been made by the Government of Bombay as to the "general principles by which the district officers should be guided in refusing the aid needed to "preserve life," the reply must be that there are no such principles, and that there are no circumstances in which such aid can be refused.

5. The Resolution of the Government of Bombay, No. 26 E.—93 of 1877, dated the 18th January, "approved of certain orders issued by the Revenue Commissioner, "Southern Division, prescribing the mode of dealing with labourers employed on relief "works, who might think fit to leave them from dissatisfaction with the rules laid down "by the Government for regulating the rate of wages." The Governor-General in Council agrees with the Government of Bombay in generally approving the Revenue Commissioner's orders; but this approval is subject to one exception. By those orders the village officers were required to watch all persons who had left the works, and to "take care that no person is allowed through obstinacy to die of starvation." The Governor-General in Council does not believe that any one ever died of starvation through obstinacy, and certainly no rules for dealing with such cases can be necessary. Under almost all circumstances which, if the Government of India is rightly informed, are likely to hold good in the distressed districts of the Bombay Presidency, where the population is almost wholly agricultural, and accustomed to field and other manual labour, the rule laid down by the Government of Bombay appears quite proper. That rule is, that "in the case of an individual refusing to perform work which he is capable "of doing on the terms fixed by Government, no relief shall be afforded him at the "public expense during the continuance of such refusal." The result of such refusal will certainly, in the case of agricultural labourers, not be death from starvation. The Bombay Government, however, will doubtless bear in mind the fact that, unless circumstances are very different in Bombay from those in the Bengal Presidency, there may be exceptional cases which will require exceptional treatment. There is, for example, the class of respectable women who cannot appear in public, and for whom the ordinary labour-tests are altogether inappropriate. There may also be men who, on account of caste or other prejudices or feelings, would rather die than take employment on relief works. Ordinary rules will evidently not be applicable to such cases, which must be dealt with as they arise. These views are, in regard to the main principle involved, identical with those stated in paragraph 7 of the instructions to Sir R. Temple, which distinctly contemplate the possible existence of circumstances under which it may be necessary to give relief without the application of the ordinary tests.

6. I am to state in conclusion that, while the Governor-General in Council regrets that his views in regard to the duty of sparing no efforts to save life should have been misunderstood, he feels sure that there is really no difference of opinion between the two Governments on this subject. He is satisfied that the Bombay Government and its officers are as anxious and as determined as he is himself that no loss of life shall occur which can be prevented by the Government. The Governor-General in Council notices at the same time with much satisfaction the efforts which are being made to prevent the relief works from becoming too attractive, and to prevent relief being given to those who do not really require it.

ment.

*No. 22.

We beg to invite your Lordship's attention to the accompanying Resolution* of the Government of Bombay, dated the 26th ultimo, which was published in the local newspapers on the date of issue, and which purports to supplement, with the information necessary to the full understanding of the bearings of the case, the reports of Sir Richard Temple on the famine in Bombay (Nos. I. to IV.), which we published in the "Gazette of India" of the 20th ultimo.

2. The Government of Bombay has, in this resolution, endeavoured to show that two distinct policies have been followed by the Government of India in dealing with the principles on which relief operations were to be conducted. It states that the first of these policies is wrong; that it was the cause of grave embarrassment to the Government of Bombay; that it has been the origin of the defects pointed out by Sir Richard Temple in the system of relief adopted in that Presidency; and that this policy was the policy of the President in Council, into whose hands, "in consequence of the departure of his Excellency the Viceroy on tour, the administration of the Government of India fell." The second policy, it is stated, was right; it was in accordance with the views which the Government of Bombay had always maintained; it has now been adopted by the Government of India in its instructions to Sir Richard Temple; and this policy was that of the Viceroy himself. Every effort is made to bring out strongly the supposed contradiction between the views of the Viceroy, which to the satisfaction of the Government of Bombay now prevail, and those of the Government of India, as expressed by the President in Council, during the absence of his Excellency.

3. If the Government of Bombay believed these facts to be true, and if it were acting for the public good under an impression that there had existed some conflict of opinion between the Viceroy and the President in Council, we find it difficult to understand, considering the terrible gravity of the circumstances, how the admitted reconciliation of this assumed difference, in a sense favourable to its own views and wishes, could have appeared to that Government a proper and legitimate occasion for the public attack thus made by it on the Government of India. The propriety of such a proceeding, under any circumstances, we leave with confidence to the appreciation of your Lordship. But in the presence of one of the greatest calamities recorded in the history of the Empire, it might, we think, have been presumed that a sense of common responsibility would have induced the Government of Bombay to abstain from aggravating any cause of conflict or irritation which could weaken the authority, or add to the difficulties of the Government of India. At such a moment it might have been expected that even if the Government of Bombay thought our views erroneous or our conduct mistaken, it would, at least, have given the Government of India credit for an honest desire to do what it believed to be right, and would not have chosen an opportunity so inappropriate to publish to the world

a Resolution in which it practically invites the public to share the contempt it feels for our assumed errors and divided counsels.

The action
of the Bom-
bay Govern-
ment.

4. As an illustration of the spirit by which the Government of Bombay seems to have been animated, we desire in particular to call your Lordship's attention to the 9th and 10th paragraphs of its resolution. The fact is there prominently noticed that a letter dated the 15th December, expressing the dissent of the President in Council from certain measures adopted by the Government of Bombay, was subsequently withdrawn, and that another letter, in a very modified form, was substituted for it. The conclusion which the public will certainly draw from these paragraphs is, that there has been a transaction of somewhat suspicious character, or questionable propriety, and that this is another and significant illustration of the divided counsels of the Supreme Government. The truth is, however, that the Viceroy, after personal communication with the Governor of Bombay, believed that if portions of a letter dated the 15th December, which during his Excellency's visit to that city was received by the Bombay Government from the Government of India, were modified, some of the differences of opinion which had arisen between the two Governments might be removed. The letter was modified accordingly with our unanimous concurrence, and with a hope and expectation which his Excellency the Governor of Bombay was understood by us to share and encourage, that this step could only tend to render more amicable and satisfactory the existing relations between the two Governments. But even this measure, prompted by conciliatory motives alone, has now been turned against the Government of India in a manner which not only involves a grave infraction of official propriety, but also constitutes a breach of that decorum and courtesy without which neither public nor private affairs can be satisfactorily conducted.

5. If, therefore, the facts in question had been correctly stated by the Government of Bombay, this would, we submit, have constituted no excuse for its present proceeding, but would have been, on the contrary, an aggravation of the breach of official propriety committed by that Government. The Viceroy, however, desires to place on record his emphatic repudiation of the position attributed to him by the Government of Bombay in reference to the views which it has misunderstood and the facts which it has mis-stated. Between the policy approved by the Viceroy and that which was carried out, during his Excellency's absence on the frontier, under the orders of the President in Council, there has been no contradiction. That policy, so far as it concerns the relations between the supreme and local Governments in reference to famine management, laid down two paramount conditions; 1st, that the local Governments should strictly abstain from all interference with private trade not previously sanctioned by the Government of India; 2nd, that no public works, involving heavy and permanent burdens on the Imperial treasury, should be undertaken for purely relief purposes, unless approved by the Government of India, on the ground that their completion would so permanently benefit the Empire as to entitle them to precedence over others of a similar character, or that the immediate commencement of them (should it hereafter be found necessary to suspend their construction) would not involve an absolute waste of money.

6. It must be remembered that, when these conditions were laid down for the guidance of our correspondence with the Governments of the affected Provinces, those Governments were no more able than ourselves to say whether the then incipient scarcity would prove temporary and local, or widespread and serious. Bearing this fact in mind, and in accordance with the above-mentioned principles, we deemed it expedient to urge upon the local Governments the propriety of confining their efforts to local relief works of a minor character, and, if possible, close to the homes of the suffering populations, in preference to the commencement of larger, more expensive, and more remote operations, so long as the character of the difficulty to be dealt with remained reasonably questionable. In so doing we were influenced by our experience of similar situations on a recent occasion, when, had we prematurely adopted certain urgent recommendations for the commencement of relief works on a large scale, the Government of India would have been burdened with a heavy expenditure, justified only by exaggerated anticipations of the progress of a scarcity, which afterwards proved to be brief and inconsiderable.

7. In the expediency of this advice the Government of Bombay fully concurred. The main reason why the sanction of the President in Council was provisionally withheld from some of the relief works subsequently advocated by the Government of Bombay was neither the size of those works nor the cost of them, but the fact that the proposal to commence them immediately was unaccompanied by any information enabling the Government of India to know, even approximately, the extent and duration of the expenditure it was asked to undertake on their account.

The action
of the Bom-
bay Govern-
ment.

8. A single instance will suffice to illustrate this fact. In proposing the immediate commencement of the Mhaswad Tank, the Government of Bombay requested sanction for an expenditure of four lakhs, without stating whether this expenditure represented the amount of a preliminary allotment or that of the total estimated cost of the work. The information received at a later period showed the total cost of this work as then estimated to be 14 lakhs; and the information furnished at a still later period raised the estimate to over 18 lakhs.

9. Whether, under such circumstances, the President in Council was, or was not, justified in calling for further information is a question which we must respectfully leave to your Lordship's decision. But we wish to explain that, in doing so, he was under the impression that the information asked for might have been promptly furnished; and he had no desire to hamper, irritate, or embarrass the Government of Bombay by unduly prolonging a vexatious inquiry. In so far as this may have been the practical, though certainly unintended and unanticipated, effect of the later correspondence between the two Governments, that result can be regretted by none more sincerely than by the Government of India. It is not, however, a result in anywise attributable to a conflict of opinion between the President in Council and the Viceroy, who were in close communication and accord with each other throughout every stage of the correspondence in question.

10. The visit of the Viceroy to Bombay, where he was met by Sir John Strachey, afforded opportunities for personal explanations, which fully satisfied both his Excellency and our Financial Colleague that some of the works in regard to which the President in Council had, up to that period, deemed it his duty to suspend the sanction of the Government of India, were proposed on sound principles and urgently needed. Both the Viceroy and Sir John Strachey, moreover, were led, by what they saw and heard upon the spot, to the conclusion that relief works on a scale, and in accordance with principles which we had always contemplated as necessary in the event of a scarcity ascertained to be really serious and widespread, had been too long delayed in Bombay, and ought to be immediately commenced.

Whether this delay was partially or even wholly attributable to the Government of India, under the circumstances we have endeavoured to explain, is a point on which we do not presume to be the judges of our own conduct. But, on receipt of the information furnished, first to the Viceroy, and immediately afterwards by him to his colleagues in Council, the Government of India unanimously concurred in the view taken of it by his Excellency; as also in the approval publicly expressed by the Viceroy of the general soundness of the principles, and efficiency of the measures adopted by his Excellency the Governor.

11. Although, therefore, a practical change of policy was coincident with the Viceroy's return to the head-quarters of the Government, that change was in accordance with the opinion of a unanimous Council, and the reasons of it, which are obvious, have already been indicated in the instructions to Sir Richard Temple. The Government of Bombay was necessarily in a better position than ourselves for determining whether the time had arrived for undertaking the larger class of works, the expediency of which, under certain circumstances, we had never doubted or denied; and looking back on the past, we fully acknowledge that in our anxiety to prevent needless expenditure of money, involving us in heavy future responsibilities, it is possible that we may have delayed too long in recognising and acting upon the fact that the time for undertaking public works on a scale of greater magnitude had arrived, both in the Bombay and Madras Presidencies. It is fortunate that no more serious questions are involved. The Government of Bombay thinks that the result of our action has been that too much, not too little, relief has been given.

12. In conducting difficult operations under circumstances so anxious as those with which we have unhappily now to deal, we do not claim for ourselves any immunity from error. We have done, and shall continue to do, our best to mitigate the terrible calamity which is afflicting the Empire; and we know, and cordially acknowledge, that the Governments of Madras and Bombay, and all their officers, are devoting themselves to the same task with an anxiety and zeal which cannot be exceeded. Mistakes will, doubtless, be committed by all concerned; but all have equally at heart one common object, the attainment of which can only be assured by mutual forbearance and cordiality, and a loyal subordination of every other consideration to that of the public weal.

13. We propose to submit to your Lordship by the next mail some further papers recently received from the Government of Bombay, accompanied by a memorandum in which we shall recapitulate, and more fully explain, the salient points of the correspondence

between the two Governments, in so far as it has reference to the questions raised in the Resolution forming the subject of our present Despatch, and in the other papers above alluded to.

We have the honour to be, &c.

Telegram, dated 2nd February 1877.

No. 49. 66.

From REVENUE SECRETARY, Madras, to REVENUE ADDITIONAL SECRETARY, Calcutta.

Yours, 26th, about remissions of land revenue. Principle of assessment is a share of crop; wet land, when crop is lost for want of water, receives remission by prescriptive custom; dry land, when crop is lost, receives remission under special order of Board of Revenue. To introduce now suspension where remission customary would tend to check attempts at cultivation, which it is desirable to stimulate. Letter follows.

Land revenue remissions.

No. 151, dated Bombay Castle, 2nd February 1877.

No. 66.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO SIR R. TEMPLE.

I am directed to acknowledge the receipt of your letter, No. 41, dated 27th January, and accompaniments, and, in forwarding copy of a report, dated 31st idem, from the Consulting Engineer for Railways, to observe that the Great Indian Peninsula Railway Company appears to be doing all that can be demanded of it, and even more. The failure to deal with the traffic at Raichore on the part of the Madras Railway Company is what at present prevents more grain being carried to the Madras famine districts, and the Great Indian Peninsula, as is quite manifest, could not afford more help by doing less, *i.e.*, by limiting the traffic. So long, however, as the Madras Railway fails to carry away from Raichore what the Great Indian Peninsula Railway brings, the grain must accumulate there; and if a block of waggons results, as was the case early in January, the work of the entire Great Indian Peninsula line, and of lines working into it, as well as the special grain traffic for Madras, is more or less impeded. The only plan to adopt under such circumstances is to stop further accumulation, clear the block, and release the stock as soon as possible by emptying the waggons. There is this to be said, that grain intended for the Madras Presidency accumulated at Raichore is so much nearer its destination than it would have been if the Great Indian Peninsula Railway had not brought it down at all, but the inconvenience is very serious, and every possible means should be taken to induce the Madras Railway Company to strengthen this weak link in the chain.

Railway grain traffic. Means of preventing block.

No. 47.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

I am directed to forward, for information, copy of a letter addressed to the Hon. Sir Richard Temple, Bart., K.C.S.I., on the subject of the grain traffic by railway into the famine districts of the Madras Presidency.

XXVI.—FURTHER MEMORANDUM by MR. BERNARD, Secretary to Sir R. Temple, regarding the NORTH ARCOT DISTRICT.

Muddanapally, 2nd February 1877.

North Arcot district.
*Part II.,
pp. 54-5.

Since the memorandum of the 20th January was prepared, regarding the North Arcot district,* Sir Richard Temple saw at the relief camps at Madras a large number of persons from the North Arcot district who had been reduced by want to a very deplorable condition before they came to the relief camps. He also had the opportunity of hearing the views of the Inspector-General of Police concerning the condition of the people in the great zemindaris to the north of the district, where Colonel Hearne had recently been on tour. Colonel Hearne's impression was that a great number of people in the worst parts of the North Arcot district were in very severe distress indeed, and that many of them must soon die of hunger. The Collector and the native officials whom Sir Richard Temple had met had not considered the situation to be quite so critical. Still he deemed it best again to see the North Arcot officers and to visit, if possible, some of the worst parts of the district.

2. First, Sir Richard Temple went to Raneepet, the residence of the Sub-Collector, Mr. Austin, close to the town of Arcot. Mr. Austin seemed to be sufficiently prepared to relieve people who might be in absolute need near Arcot. A large relief camp was nearly ready, and casual people in severe distress were being relieved at the hospital of the American Mission until the relief camp should be ready.

3. Of the taluks in that part of the district, Chandragiri appeared to be the worst off, but as yet relief works had not been opened there. Sir Richard Temple was of opinion that the condition of the people in Chandragiri required that relief works should at once be opened there. The Range Officer, Lieutenant Hamilton, R.E., appeared able and ready to do all that was necessary. But there seemed to be some departmental difficulty* connected with estimates or district rates, or the contract system, which prevented Lieutenant Hamilton from setting at once to work with relief labourers on sundry irrigation improvements which were much wanted in Chandragiri. Such difficulties could at once be removed by a superior officer, who might go to the spot with full power to direct all relief operations in all departments; for the local officers have manifestly every desire to do their best and to work together. But meanwhile

* NOTE. — It seemed to Sir Richard Temple that a somewhat similar difficulty prevented Mr. Gribble and Mr. Traill, the Civil Officer and the Range Officer, working together for relief. Each was anxious to help the other; and Mr. Traill's subordinates are all of them helping on Mr. Gribble's relief works. But for some reason the mutual help was not given in the way which by both officers was deemed the most convenient.

time is going on, and the people in some of these parts may be drifting into severe distress.

4. One of the Reverend American Missionaries, Mr. Wickoff, who had just returned from a tour in part of South Arcot, informed Sir Richard Temple that he saw much distress, and in some cases physical emaciation from want of food, in the Dinderanum taluk and in the north part of the Vellapooram taluk. He named villages where his mission had to help certain Christians who were wholly without food or means of earning it; and he expressed his belief that in the tracts he named were many villages who could not hold out much longer unless relief of some sort were made available. Relief works had, he said, been opened in the parts of Chingleput bordering on these tracts. But relief works were, he considered, required in that part of North and South Arcot.

5. From Arcot Sir Richard Temple went to Vellore, where he learned that there was some hitch about the establishment of a relief camp outside Vellore, for which the Sub-Collector, Mr. Irvine, had made full preparation. Meanwhile, 7,000 people were receiving daily a gratuitous dole of uncooked rice. There is risk that this open-handed outdoor relief will be abused; and it was understood that cases of such abuse had come to light. It is to be hoped that the relief camp at Vellore may soon be settled.

6. After discussion with the Collector, Mr. Whiteside, it seemed to Sir Richard Temple that two other relief camps were required on the routes leading from the North Arcot district to Arconum; so that the poor creatures who may have left their homes for Madras may be stopped and relieved at local relief camps.

7. From Vellore to Chittoor (the district head-quarters) the road lay through valleys that were, for such a season as this, very well watered, and had fairly good crops growing. At Chittoor itself there is at present little distress; and but few relief gangs were in the immediate neighbourhood. A relief camp is in progress there. The road

to Muddanpally from Chittoor led through rocky gorges and over hills, where there was scarcely any population. At the taluk head-quarters of Palmonier the town people seemed to be well off; ragi was selling there at 9 seers per rupee. But in the extreme northern corner of the district lies the zemindari (poligarship) of Punganoor with a population of 110,000. The Zemindar, though charitable, is yet unable to do much for his people, unless the Government should be pleased to suspend a part of his tribute (peshkash) for a year. About 5,000 relief labourers are employed under Mr. Clarke, of the Settlement Department, on road works near Punganoor. Sir Richard Temple inspected about 3,000 of these people; and, so far as he could judge, the great majority of them were poorly off and were in actual need of relief wages. It appeared that the relief now given suffices for the present. The opinion of the poligar (Raja), of Mr. Clarke, the relief officer, and of the native officials was, that if the relief works in this quarter had not been opened, there must already have been many deaths from starvation.

North Arcot district.

8. Sir Richard Temple's impressions are in brief—

- (1.) That the Collector and his most trusted European subordinates ought at once to visit the tracts of Chandragiri, Tripetty, and parts of the two north-western zemindaris, and immediately open relief works where they may be needed.
- (2.) That the completion and economical organisation of the Vellore and Rancepet relief camps, and of two additional camps towards Arconum, should be pressed on.
- (3.) That enough, though barely enough, is being done in the way of relief towards Punganoor, Vellore, and in part of Mr. Austin's subdivision, but that the Poligar of Punganoor should be moved to cause an examination to be made of every village in his zemindari.
- (4.) That although the Collector had justly held back as long as he could with safety, yet that in the eastern part of the district further holding back would be no longer compatible with safety, and that measures ought now to be undertaken for relief.

No. 49.

Telegram, dated 3rd February 1877.

From REVENUE SECRETARY, Bombay, to ADDITIONAL SECRETARY, Calcutta.

Please telegraph orders of Government of India on my No. 401 of 22nd ultimo.* This Government is of opinion there should be entire remission of land revenue to such extent as may be necessary.

Land revenue remissions.
*No. 8.

No. 50.

MINUTE by SIR RICHARD TEMPLE, dated Bangalore, 4th February 1877.

No. 66.

In reference to minutes and memoranda regarding districts of Kurnool, Bellary, Cudapah, North Arcot, Salem, Coimbatore, Madura, and Tinnevely, I desire to explain, in case these papers be published, that the Madras Government have ordered various measures of economy in relief and such restrictions of expense as are compatible with the safety of the people, which orders are actually being carried out in the interior of the districts. Though there may yet be important discussions on details, yet I trust that there is general accord in principle. I have to acknowledge, in the strongest terms, the kind way in which I have been met by the Madras Government and by all its officials, and the generous support I have received from them. I must also bear witness to the zeal, devotion, and humanity with which the relief operations have been undertaken in this Presidency.

Support received by Sir R. Temple from Madras Government and officials.

Estimated
relief expen-
diture in
Madras
Presidency.

2. As with the estimate of Bombay relief expenditure, so in the present case, the numbers expected to come upon the relief works form the main factor of any estimate of probable relief expenditure in the Madras Presidency. In the appended statement is offered an estimate of the number of relief labourers that will probably be in receipt of relief wages in each distressed district, month by month, up to the end of July next. On the reverse of the statement will be found notes, showing on what grounds, or on whose authority, the maximum number of relief labourers in each district is estimated. It is during the month of April that the number is expected to be highest; and the total of relief labourers in all districts during that month is estimated at 1,840,000 persons. This total is larger than the April total (1,405,000 labourers) taken in the Revenue Board's estimate. But since that estimate was framed the distress has declared itself further, and it has taken a much severer form in districts which even in December were sorely stricken.

4. Further, it will be seen that the present estimate reckons on the numbers decreasing in May, and on the relief labourers all disappearing to their homes by the end of July. The best authorities appear to expect that this will be the course of events, provided that the usual April showers come and that the south-west monsoon (the early rains) comes seasonably. In ordinary years rain falls in April and May in quantities varying from five inches to one inch in the different districts; and the monsoon breaks (that is, the rainy season begins) about the 2nd June. If, unhappily, the April showers should be withheld, or if the rainy season should begin unfavourably, then the present forecast would be exceeded.

Total number of labourers in February	-	-	-	1,228,000
„ „ March	-	-	-	1,480,000
„ „ April	-	-	-	1,840,000
„ „ May	-	-	-	1,530,000
„ „ June	-	-	-	795,000
„ „ July	-	-	-	310,000
Total	-	-	-	<u>7,183,000</u>

6. The cost of relief wages for the month of January must be taken at an average of Rs. 3 per labourer ; for the reduction of wages recently ordered cannot take effect until after the end of January. The relief wages for January, with an average of 1,039,000 persons on the works, will amount to Rs. 31,17,000.

7. The actual expenditure on relief works and extra establishments up to the end of December according to a return received from the Accountant-General of Madras has been Rs. 37,25,000, and the cost of purchasing grain for Government has been Rs. 30,24,000. Relief expenditure in Madras Presidency.

8. It will, perhaps, suffice if ten per cent. on the six months' relief wages be estimated for extra establishments, temporary buildings, and miscellaneous charges; for the Madras Government has been economical in the matter of establishments.

9. It is difficult to foresee how many persons may become recipients of gratuitous relief. At present the numbers are comparatively small, only about 60,000 in all. But in many districts gratuitous relief has not yet begun, and it is certain that the numbers on charitable relief will increase very greatly in the hot months, and at the beginning of the rainy season. An estimate of 10 per cent. on the relief wages for six months (Rs. 18,00,000) would suffice to give gratuitous relief at the cost of one anna per head per diem to—

50,000	persons	during	the	month	of	January.
100,000	"	"	"	"	"	February.
250,000	"	"	"	"	"	March.
500,000	"	"	"	"	"	April.
600,000	"	"	"	"	"	May.
700,000	"	"	"	"	"	June.
500,000	"	"	"	"	"	July.
160,000	"	"	"	"	"	August.

The cost of gratuitous relief at the Red Hills camp near Madras comes to $2\frac{1}{4}$ annas per head per diem. But the inmates there are, many of them, in a much reduced condition, and so they have been allowed somewhat better food than usual. At the Salem district relief camps the Collector expects to keep the cost of gratuitous relief down to one anna per head per diem. Perhaps it will suffice to estimate the cost of gratuitous relief at Rs. 18,00,000.

10. The grain purchased by Government will be used in payment of relief wages, or in issuing gratuitous relief, or in both. There will be some charges for transporting this grain to the interior and for storage, and there will be some loss by wastage. If allowance be made for these charges, perhaps 75 per cent. of the cost of the Government grain may be taken as a set-off against other famine charges.

11. The total of the estimate will then be—

	Rs.
Relief works and other expenditure according to the Accountant-General's statement up to end of December - - -	37,25,000
Estimated expenditure on relief works wages during January -	31,17,000
Estimated expenditure on relief works wages during the six months February to July - - - - -	1,79,00,000
Estimated cost of additional establishments and miscellaneous charges - - - - -	18,00,000
Estimated cost of gratuitous relief - - - - -	18,00,000
Cost of grain purchased by Government - - - - -	30,24,000
Total - - -	3,13,66,000
 Deduct as a set-off three-quarters of cost of Government grain, as that grain will be used to pay labourers or relief paupers -	 21,66,000
Total - - -	2,92,00,000
Or say - - -	£2,920,000

12. The totals of this forecast are liable to be exceeded if the next season should prove unfavourable, if the recent instructions for reducing relief wages and restricting relief expenditure cannot be maintained, or if distress in an aggravated shape should break out in the extreme south of the peninsula, on the Malabar coast, or in Ganjam and the Godavari districts.

Relief ex-
penditure in
Madras
Presidency.

STATEMENT appended to MEMORANDUM estimating the TOTAL RELIEF EXPENDITURE in MADRAS FAMINE DISTRICTS during the Years 1876 and 1877.

Name of District.	Total Population.	Total Numbers on the Works on the				Estimated Number of People on the Works during the Month of								Total of the Six Months, February to July.

REMARKS.

Nellore.—Sir Richard Temple has not yet visited Nellore. But it is known that in a part of the district there was a failure of crops; that relief works are attracting many thousands, both from the inland taluks of Nellore and from the east of Kurnool. Possibly the maximum of 120,000 may be exceeded, as a large and excellent work is in progress there. But distress is not expected to spread over the whole district.

Cuddapah.—On the occasion of Sir Richard Temple's visit, the Collector was not able to say decidedly what he expected to be the highest number on his relief works. But he hoped to carry out carefully such orders as might be issued for preventing people who could support themselves from coming upon the State for relief. In the south of his district there seemed to be room for some economies in relief administration, and already the Collector has succeeded in arresting the previously rapid rate of increase in the numbers on his works; 300,000, or 100,000 above the present totals, have therefore been taken as the probable maximum.

Kurnool.—The native officials estimated that eventually 500,000 people would come upon the relief works. Mr. Davidson, the new Collector, hoped to keep the number from very greatly exceeding the present total. The numbers have not increased during the last few weeks; they now stand at 298,000; and perhaps the maximum may never exceed 360,000, the number taken for April.

Bellary.—The native officials expected 900,000, or much more than half the population, to come upon the works. Mr. Master, the Collector, hoped that the maximum would never greatly exceed the then total, 405,000. It has since fallen to 356,000. And perhaps the maximum now taken, 450,000, will not be exceeded.

North Arcot.—The Collector's estimate of the expected numbers has been adopted; see paragraph 9 of the North Arcot memorandum. This allows for a very large increase in the number of recipients of relief wages.

Chingleput.—The estimated numbers here taken were seen and were accepted by the Collector as sufficiently liberal.

Salem.—The Collector's own estimate of the probable numbers has been here taken.

Trichinopoly.—The estimated numbers taken for this district are based on the Assistant Collector's oral statements, and they may be open to revision in case distress declares itself in parts of Trichinopoly.

Coimbatore.—The Collector considered that he might possibly have to provide works for 150,000 at the very worst period; but in the present estimate 100,000 has been taken as the probable maximum in April. As yet the numbers in Coimbatore are not high, and the rate of increase is not very rapid.

Madura.—The Collector's figures are taken, but it must be noted that his estimate will, as he pointed out, be exceeded if his proposals for the Court of Wards expenditure in permanently settled zemindaris are not accepted.

Tinnevely.—For this district the Collector's maximum has been taken; but in view of the good condition of a large part of the district and of the facilities for trade and temporary emigration, it may be hoped that the maximum will not be reached.

Kistna, South Arcot, and Godavari.—These districts are not distressed as a whole, and probably will not be. Still there has been failure of harvest in parts; and the officers who know those tracts anticipate that relief works may have to be provided on a considerable scale in parts of these districts before the next harvests come in.

Relief ex-
penditure in
Madras
Presidency.

No. 52.

XXVIII.—MINUTE by SIR RICHARD TEMPLE respecting the estimated Relief Expenditure No. 92. of the Madras Presidency during the Years 1876 and 1877.

Bangalore, 4th February 1877.

In reference to my minutes of the 19th ultimo and of the 22nd idem, recommending that in the Madras Presidency a stricter check than heretofore should be applied to the admission of persons to the relief works, that admission should be granted to those who appeared, or were known, to be in real need, and that the relief wage should be reduced to an amount necessary to sustain life, I have duly observed the orders recently issued by the Government of Madras, which are calculated, if effectively carried out, to meet the above objects sufficiently well, and with all reasonable regard to the safety of the people. These principles will now, I trust, be introduced practically into the districts above the Ghâts (Bellary, Kurnool, Cuddapah), where relief operations had been already begun on a very extensive scale. They will, doubtless, be followed from the outset in the districts below the Ghâts (Arcot, Chingleput, Salem, Coimbatore, Madura, Tinnevely), where relief operations have not as yet been extensively undertaken.

2. I therefore think that the time has come when a preliminary estimate may be framed of the probable expenditure by Government for the relief of this famine and scarcity. Such an estimate is accordingly submitted herewith, accompanied by such explanation as seems called for regarding each item in the statement. It will be seen that the total expenditure is estimated at 2,920,000*l.*, of which 674,900*l.* had been already spent up to 1st January. The total number of persons on the relief works was expected to be 1,228,000 on the 1st February, and is set down; but I am not able to say for certain that this is the actual number. Within the last few days reductions have been going on in reference to the principles already alluded to in this minute, and I should hope therefore that the number may be really less, and more nearly approaching to the figure at which it actually stood on the 1st January, namely, 1,039,000. The number of those on charitable relief was 60,000 on the 1st February. The highest number is expected to occur in April, namely, 1,840,000 on relief works and 700,000 on charitable relief; in all 2,540,000.

3. If the usual spring showers of April or even May shall be vouchsafed, and if the checks already recommended and now ordered shall be carefully carried out, it is quite possible that the actual expenditure may be kept well within this estimate, and might even be sensibly less. If, on the other hand, the spring showers do not come, or if the checks be not strictly adopted, then this estimate may be exceeded;—indeed there might be a very serious outlay of money during April and May.

4. I can testify to the extreme anxiety of all the authorities throughout the Presidency to save human life from death by starvation. The checks now ordered are quite compatible with the attainment of this paramount object, while on the other hand they are calculated to prevent excessive expenditure. Meanwhile, it is most important to maintain an effectively vigilant supervision in all the distressed districts, over every village, every highway, every place where people either congregate or move about; so that no person who may fall into danger for want of sustenance can possibly escape observation and succour, and so that every individual case of this nature may be surely and speedily relieved.

5. This estimate of expenditure is, of course, irrespective of loss (temporary from suspension, or permanent from remission) of revenue, to which I will advert in a separate minute.

No. 53.

No. 66. From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce, to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

Calcutta, the 5th February 1877.

No. 11. I am directed to acknowledge the receipt of your letter, No. 42 E.—126, of 23rd ultimo.

Commence-
ment of re-
lief works
left to dis-
cretion of
Bombay
Government.

2. With reference to its 3rd, 4th, and 5th paragraphs, I am to state that it was the intention of his Excellency the Governor-General in Council to leave entirely to the judgment of the Government of Bombay the question to be decided in each particular case on its own merits, whether the commencement of relief works is or is not necessary. On this point, therefore, it need only now be added that his Excellency in Council leaves the matter to the Government of Bombay, with complete confidence not only that it will be decided rightly, but that a wise economy, consistent with the duty of giving complete protection to the lives of the people, will be practised.

3. The views stated in paragraphs 6 to 9 of your letter are generally approved by the Government of India.

Dhond and
Munmar
Railway
agreed to.

4. With regard to the Dhond and Munmar Railway, referred to in paragraphs 10 to 18 of your letter No. 42 E. of 23rd ultimo, the Governor-General in Council authorises the commencement of the work, if, in the opinion of the Government of Bombay, this course becomes urgently necessary in consequence of more extensive relief works being required than those actually in progress. Work should, however, as far as may be practicable, be commenced only on those portions of the undertaking which, as noted in paragraph 14 of your letter, can be carried out without necessarily committing the Government to the immediate completion of the line when the present difficulties have ceased. The Government of India is not at the present time able to decide finally whether this line can be taken in hand with a view to completing the work.

5. With reference to paragraphs 19 to 23 of your letter regarding the Karwar and Bellary Railway, the questions connected with which are considered by you to be somewhat less urgently pressing, the Government of India will immediately place itself in communication with the Government of Madras and Sir Richard Temple on the subject, and the Bombay Government will be informed of the result with the least practicable delay.

6. With regard to the 25th paragraph of your letter, I am to state that the Bombay Government is right in assuming that the stipulations to which you refer would not apply to works of an Imperial character, such as the Dhond and Munmar line; and the Governor-General in Council fully admits the justice of the remark that, in applying hereafter any rules that may be laid down in regard to the enforcement of provincial responsibility for meeting the charges for extraordinary public works, due regard must be had to the special circumstances under which some of these works may be undertaken in the Bombay Presidency.

No. 54.

Nos. 61, 65. MINUTE by Major-General the Honourable SIR HENRY W. NORMAN, K.C.B., dated 6th February 1877.

Minute by
Sir H. W.
Norman on
the action of
the Bombay
Government.

The minute prepared by Sir Alexander Arbuthnot on the correspondence relating to the famine in Bombay places me under further obligation to him, and I desire, before I say another word, to record, in emphatic terms, my thanks to him and to the Secretary—who acted under his immediate directions, Mr. Hope—for their most anxious and unwearied exertions in connexion with the famine during the period that I was President in Council.

2. Various circumstances combined to throw on the President in Council, during the Viceroy's absence in October last, November, and December, an amount of work unusual during such cases of absence, and nothing but the most anxious attention on the part of Sir A. Arbuthnot and Mr. Hope could have enabled the work connected with the famine in Madras, Bombay, and Mysore to have been at all effectively dealt with. Although I most fully and completely accept all responsibility that may be considered to rightly devolve on me, I must give my honourable colleague and the Secretary credit for all the hard work that was involved.

3. As Sir A. Arbuthnot's minute will go home, I have little to add to it, or to the Despatch No. 8, sent on the 2nd instant. They seem to me to give a complete history

of our proceedings, and I do not see how those proceedings, during the Viceroy's absence, could have been very different from what they were. A policy was decided upon by the Government when his Excellency was with the Government, and it would have been quite improper for us to have changed that policy save on a most clear proof of the necessity for so doing, and after obtaining, if communication was possible, his Excellency's concurrence. It was our duty to keep the Viceroy informed of all that went on, and, as stated in the Despatch No. 8, there was perfect accord between his Lordship and his absent Council. Even the idea that large works should be resorted to, first expressed by Lord Lytton, after arrival at Bombay, had been almost anticipated at Calcutta on the 15th December, when his Excellency had not reached Bombay.

Minute by
Sir H. W.
Norman.

4. Therefore, not only was the Bombay Government wrong from every point of view in trying to force on the public the idea that the Viceroy, on the one hand, and the President in Council, on the other, held and acted on opposite opinions, but it is difficult to understand that they were not aware of this; for the instructions objected to were merely an enlargement of those communicated to them on the 4th and 16th October, when the Viceroy was with the Council, and all allusion to which is ignored in their resolution. They must have been perfectly aware that the Viceroy did not make over the charge at Simla till the 16th October, and therefore that important instructions sent on that day, and still more those sent 12 days previously, were not likely to be of a nature opposed to the Viceroy's views.

5. Further, it is impossible to understand how the Governor of Bombay, in his personal communication with the Viceroy at Bombay, alluded to in paragraph 4 of the Despatch No. 8, can have avoided becoming acquainted with the fact that the Viceroy was being urged to change his views and not to maintain those he had all along held.

6. It is out of place for me to add a word as to the impropriety of the conduct of the Bombay Government, which has been fully dealt with in the Despatch, and I think it has been conclusively shown that they had no grounds whatever for their uncalled for assumptions. All I can now say is that we acted according to the best of our ideas as to what was best. Looking back at the correspondence, perhaps some verbal or trifling changes might have been desirable, but beyond this, I am not aware that we could or should have acted otherwise than we did.

No. 55.

No. 178, dated Bombay Castle, 6th February 1877.

No. 92.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY to the SECRETARY TO THE GOVERNMENT OF MADRAS, Public Works Department.

I am directed to acknowledge the receipt of your letter No. 625, dated 31st January last, and accompaniments, and to forward, for the information of his Grace the Governor of Madras in Council, extracts from the reports of the Agent and General Traffic Manager, Great Indian Peninsula Railway Company, and copy of a letter No. 151, dated 2nd instant, addressed by the Bombay Government to Sir Richard Temple, together with the report of the Consulting Engineer for Railways which accompanied it.

Railway
grain traffic
arrange-
ments.
Nos. 29. 40.

It will be seen from these papers that the Great Indian Peninsula Railway Company represented that it would be impracticable to limit through booking at their receiving stations and those of the East Indian Railway in the manner suggested by his Grace the Governor of Madras, and that they stated that they would be obliged to adopt the plan which they actually have adopted of receiving and forwarding consignments in such a manner as to cause the least demurrage, working up to a block or nearly so, and then temporarily suspending the booking for Madras stations.

In the opinion of the Bombay Government the course adopted by the Great Indian Peninsula Railway Company is on the whole the best. The main object is to pour grain into the distressed districts of the Madras Presidency as rapidly as possible, and this object can best be promoted not by checking imports by the Great Indian Peninsula Railway, but by doing all that can be done to induce greater exertion on the part of the Madras Company to forward it from Raichore. The result has been that the Madras Railway Company have been able to increase the number of waggons forwarded from Raichore considerably over 90, the limit proposed, and count on being in a position to forward 150 by the 14th instant. The Great Indian Peninsula Railway Company, while urging the Madras Railway Company to remove waggons from Raichore more rapidly, have restricted the numbers sent into that station to what the Madras Company using their utmost exertion could take away daily; and the confidence of consignees of grain

to Madras is not likely to be more seriously affected by temporary complete stoppages of through booking than by daily restrictions, which, even if not absolutely impracticable, would be open to the objections mentioned by Mr. Le Mesurier. The inconvenience of a block of waggons on the Great Indian Peninsula Railway is undoubtedly very great, but it is not of much practical consequence whether waggons are delayed at receiving stations or at intermediate points between those stations and Raichore; under any system of booking and forwarding there must be delays and complaints so long as the Madras Railway cannot carry the traffic tendered for despatch from Raichore.

No. 57.

No. 115.

XXXIII.—MEMORANDUM by Mr. BERNARD, Secretary to Sir R. Temple, regarding the MUDANAPALLY SUBDIVISION of the CUDDAPAH DISTRICT.

Bangalore, 6th February 1877.

Mudana-
pally sub-
division
(Cuddapah).

In Sir Richard Temple's Minute, dated 20th January, regarding relief operations in the ceded districts, was expressed (paragraph 19) an opinion that relief expenditure in the taluks belonging to the Mudanapally subdivision of the Cuddapah district was probably excessive. In order to verify the facts, and to ascertain what suggestions could be made for restricting expenditure in that quarter, Sir Richard Temple visited Mudanapally on the 1st and 2nd February. He met there Mr. Gribble, the Sub-Collector, who has been for several years in charge of the subdivision; also Captain Whitlock, who for two years has been police officer at Mudanapally; and Mr. Traill, the Range Officer of the Public Works Department.

2. On his way to Mudanapally Sir Richard Temple passed through the North Arcot district, where relief operations had been restricted quite as far as was compatible with safety to the people.

3. The Mudanapally subdivision consists of four taluks, thus—

	Area in square miles.	Population.
Mudanapally	856	135,000
Kadire	918	141,000
Roychotee	1,031	128,000
Voilpád	769	146,000
Total	3,574	550,000

The chief characteristics of this tract were described in the memorandum on Cuddapah dated the 20th January. So far as the failure of harvest is concerned nothing need now be added to that memorandum, but it appears that the earliest autumn crop in these plateau taluks will not come into market until September [see paragraph 4 of previous memorandum]. Since that memorandum was written the total number of persons on

* NOTE.—Regarding the apparent friction of systems (not of local officers) in the Revenue and Public Works Departments, see paragraph 3 of the further memorandum on North Arcot, dated 2nd February 1877.

relief wages has fallen from the highest total 108,000 down to 90,000. Mr. Gribble, the Sub-Collector, attributes this decrease partly to the prevalence of cholera which dispersed certain relief gangs, and partly to the measures which he (Mr. Gribble) had been able, now that his *staff had been increased, to take towards eliminating from the relief gangs persons who were not in absolute need.

4. Sir Richard Temple visited certain completed relief works, namely roads, which appeared to have been fairly well executed. The cost, however, which had been only Rs. 1,000 per mile when the number of labourers was comparatively manageable, had risen to Rs. 1,800 per mile now that the number of relief labourers had increased so enor-

mously as to be unmanageable. Some expenditure had been incurred in consolidating the stone metal on these roads. This outlay no doubt improves and completes the work; but it costs a good deal, inasmuch as water is scarce and has on occasions to be carried on carts from a distance. It would be more economical to postpone such work till the rainy season, when water will be everywhere at hand, and then the completion of these works would be defrayed by the ordinary district funds, instead of being charged against "relief."

Mudana-
pally sub-
division.

5. Sir Richard Temple inspected several gangs of relief labourers in and about Mudanapally—in all some 3,000 or 4,000 persons. He found that the labourers looked to be in good condition; and it appeared that some proportion of them must have been quite able to support themselves, for a time at least, without Government aid. Hardly any of them appeared to be in a physically reduced condition. Some of them bore on their persons evidence in the shape of good clothes or ornaments that they had not yet been reduced to extremity. The Sub-Collector was of opinion that some of these people could with safety be dismissed from the works, and he anticipated that when the Madras Government orders should be received, he would be able to reduce and in future to keep down the number of relief labourers. The labourers received daily wages and no task-work was practically exacted; yet the number of head-coolies (gangmen) seemed too great.

6. It appeared to Sir Richard Temple that too many of the relief gangs were employed on roads and too few on tanks and petty irrigation works. The Mudanapally country, like Mysore, is studded with tanks; Mr. Gribble says there are 4,000 in his four taluks. Many of these have been breached in former years; many require repair and improvement. Some are gradually silting up, and the work is of a kind that in the adjoining districts of Mysore is done sometimes by the ryots themselves, and sometimes by the subordinate revenue officers. Yet in Mudanapally there seemed to be an opinion that no tank could be safely touched without a professional opinion; that it might do more harm than good to deepen a tank, and that any improvement of a tank would involve strengthening the dam (bund), enlarging the escape weir (calingula), and might jeopardise the safety of all the tanks in the chain to which the particular tank under repair might belong.

* NOTE.—Subsequent inquiry in the Mysore province showed that in the distressed tracts there tanks were the relief works selected by the local civil officers.

Sir Richard Temple did not accept these views as altogether correct.* At any rate he considered that full use should be made of all available engineering skill to employ the relief gangs on tanks, which are the very life of the country, and which directly repay judicious

expenditure by immediate increase in land revenue; whereas new roads (of which 174 miles have already been made in the Mudanapally subdivision) will involve a heavy future expenditure for up-keep.

7. Wages on relief work throughout the subdivision are paid in Government grain. Some Government grain had been expended, and about 20,000 bags (about 1,500 tons) are in store at or *en route* to depôts in the subdivision. Under recent orders it seems probable that Mudanapally will not receive further large allotments of Government grain; and Sir Richard Temple suggests that cash payments be at once resumed, and that the Government grain be kept in reserve and be not expended until either absolute necessity arises, or until favourable rain shall have induced the ryots to open their stocks.

8. The question of the grain stocks and grain supply was so important, that Sir Richard Temple had a long discussion with the local traders on the subject in the Sub-Collector's presence. The general account given by all was that foreign grain imported by railway, and foreign grain only, was sold in the bazaars. No complete statistics were available of the quantity of grain coming daily into the subdivision from the two railways on the north and south. But so far as the figures went, they seemed to show that a very large proportion of the population must still be living upon the whole grain stocks of the country. The Mudanapally and Voilpád taluks appear to get all they want from railway stations in the North Arcot district; the Roychotee taluk is comparatively near to the north-western line, but the Kadire taluk is somewhat inaccessible; its supplies have to come round by Roychotee. The traders declared that sufficient supplies for the weekly markets at outlying villages were carried from the chief towns by village dealers.

9. The price of grain has fallen considerably during the last five weeks. The traders attribute this comparative cheapness to the large private importations into Madras and the famine country generally. They stated their belief that private importations into Mudanapally had declined somewhat since Government grain began to come into the subdivision.

Mudana-
pally sub-
division.

10. The traders, all save one dissident only, stated that if Government ceased to bring in grain, they would try (and they thought they would be successful) to bring in enough foreign grain to supply the relief labourers as well as the ordinary demand. They asked assistance in two respects only : *first*, that the roads (or their consignments) should be so guarded as to prevent their carts being plundered ; and *secondly*, that supply bills on Madras should be granted them at par for cash paid into the Mudanapally treasury. The Sub-Collector stated that the guards could be arranged, and that it would be a direct convenience to Government that the traders should pay cash into his treasury in exchange for bills on Madras. If relief wages are paid in cash, a good deal of silver will be wanted at Mudanapally.

11. At the charitable relief houses in Mudanapally and at the taluk head-quarters cooked food is being distributed to people who are supposed to be in great need and unable to work. Some of the recipients seen by Sir Richard Temple at the Mudanapally relief house were not yet in extreme destitution. It appears that orders have been given to village officers that they are to relieve at the Government expense casual cases of severe distress, either among their own villagers or among temporary sojourners within their borders. But no special steps have been taken to enforce these orders and to see that they are obeyed. Sir Richard Temple considered that some special steps were required to secure that village officials, revenue inspectors, and tahsildars felt their responsibility in this matter. When the gangs of labourers come to be reduced and admission to the gangs is less a matter of course, the risk that disaster may overtake poor creatures in the villages becomes somewhat enhanced. It is cheaper and in every way better to glean up and relieve such cases by village inspection than to pay relief wages to tens of thousands who could support themselves without State aid. Even in districts where multitudes are admitted to relief works without check, occasional deaths from the consequences of hunger or exhaustion are said to occur ; and house-to-house inspection in very distressed tracts will obviate the risk of such disasters.

12. Mr. Gribble pointed out certain doubts he had as to the safety of a recurrence to cash payments. And Sir Richard Temple explained (1) that if risk were apprehended, the change should be made gradually first—at Mudanapally itself and other places near the railway where trade was active, and where competent officers would be on the spot to act in case of emergency ; the change could then be extended speedily to other relief gangs ; (2) Sir Richard Temple replied that prices might, especially in remote places, become somewhat dearer at first when grain payments ceased. But the very rise would work its own remedy, for supplies would be attracted to such places. Meanwhile the reserve of Government grain provides against disaster, and the sliding scale of wages (proportioned to the price of food) guards the labourer from the possibility of his ration being dangerously reduced.

13. Sir Richard Temple's general impressions were—

- (1.) That the numbers on relief works—about 19 per cent. of the whole population—were still too large, and that insufficient work was got out of the labourers :
- (2.) That persistent efforts should be made, with the help of all the engineering staff available in the subdivision, to employ more of the gangs on tanks and irrigation works and fewer on roads :
- (3.) That much care and activity should be immediately exercised to enforce on petty relief officers and village officials the necessity for systematic village inspection and relief :
- (4.) That when the numbers on charitable relief become larger, relief camps should be formed and indoor relief given :
- (5.) That relief wages should be paid in cash, the Government grain being kept for the present as a reserve.

From REVENUE ADDITIONAL SECRETARY, Calcutta, to SECRETARY, Bombay

No. 66.

Your telegram of 3rd.* Government of India do not desire to limit the discretion of Local Government in matter of this kind, and will be satisfied if Collectors are again warned against too free remissions and authorised to hold balances in suspense in cases in which it appears likely that the ryot will, without undue pressure, be able to pay up next season.

Land revenue remissions.

*No. 49.

No. 60.

Telegram, dated 7th February 1877.

From SIR R. TEMPLE, Bangalore, to REVENUE ADDITIONAL SECRETARY, Calcutta.

No. 66.

Just starting from Bangalore to outlying distressed parts Bellary. Shall pass across worst tracts of Mysore. As we leave telegraph line for next five days, I send following in case of need for next mail. Over whole Madras Presidency famine is successfully combated, and starvation prevented. Physical condition of peasantry good. Relief works, great or small, everywhere open, charitable relief arrangements being well organised at all centres where people congregate. Organisation for village to village relief already existing and being now utilised. Some deaths partly or indirectly due to want unhappily occurred at outset in districts near Madras, and some few may still occur despite medical treatment. Government of Madras recent orders on my suggestions for economy will prevent excessive outlay. Numbers on relief works not increasing, but rather less than last month; probable increase hereafter, but will be restricted as much as possible. Numbers on charitable relief not yet large, but will increase. There is still some want in unity and concentration of control in relief operations. Private grain trade remarkably active and successful everywhere. Shipping and railways doing great work. Great Indian Peninsula working well and Madras Railway improving. If line to Arcot doubled I think railways can supply all needs. Plenty of country carts and excellent road communication; draught cattle not yet showing any signs of exhausting. Water often scarce, but absolute dearth nowhere. Humanity and zeal of all officials striving against famine praiseworthy. Send future messages, care Station-master, Tadputree, near Gooty.

Condition of the Madras Presidency.

No. 61.

MINUTE by His Excellency the VICEROY, dated 8th February 1877.

No. 65.

I have little to add to the foregoing Minutes* in the way of statement or opinion, but it is due to Sir Henry Norman and Sir Alexander Arbuthnot that I should take this occasion of recording my grateful appreciation of the conscientious, vigilant, and able manner in which during my short absence from the seat of Government they discharged the anxious and difficult task confided to them in reference to the present famine.

Minute by the Viceroy on the action of the Bombay Government.

*Nos. 41. 54.

At the time I left Simla the scarcity, which has since assumed such serious dimensions, was of a very limited character, nor were the Local Governments with whom we had been in correspondence about it any better able than ourselves to predict its probable duration or extent, these being dependent on the timeliness and abundance of the rainfall due at a later period. My presence was then urgently required on various parts of the frontier, both for the personal conclusion of some important negotiations and also for the investigation of various administrative questions which demanded an early decision founded on personal consultation with the local authorities. Such a decision I was adequately qualified to form. But I need hardly say that I neither had formed nor was competent to form any deeply seated opinion on the relative merits of the various principles which have been from time to time propounded or adopted for the management of a great Indian famine in all its phases, such a task never having come within the scope of my previous experience.

In these circumstances I did not feel called upon to postpone my inspection of the frontier, for which elaborate arrangements had been completed, and I consider that the only course properly open to me was the one I adopted, viz., to leave untrammelled to my colleagues in Council, whose experience on such subjects was greater than my own,

Minute by
the Viceroy
on the action
of the Bom-
bay Govern-
ment.

the conduct of all correspondence about relief operations and other matters connected with the scarcity, affording them, in the discharge of their anxious task, that unreserved support on which they were entitled to reckon.

In default of special experience, my own views were naturally and necessarily guided by reference, on the one hand, to the plain axioms of political economy, and on the other, to those obligations which are permanently incumbent on the responsible guardians of the public purse.

It was my opinion that we should not be justified in sanctioning either any premature interference with private trade, or the commencement, for purely relief purposes, of public works which the Imperial Government might find, after adequate consideration, that it could neither complete without an expenditure of money greatly in excess of its resources, nor suspend, if once commenced, without a considerable waste of money. My colleagues concurred in these conclusions, and were furthermore of opinion that at the stage of the scarcity with which we were then dealing, it was expedient to start small relief works near the homes of the people rather than large ones remote from the suffering localities.

The facts and arguments on which this opinion was based appeared to me sound and cogent, and I unreservedly acquiesced in the recommendation which, with my full authority, was addressed in this sense to the Governments of the two Southern Presidencies before I left Simla on the 16th of October.

The question subsequently raised in reference to the relative efficiency of relief works on a large scale, or a small one, at the earliest possible period of a famine already existing, or confidently expected, was not then under consideration. This is, no doubt, a question of great importance; and so far as I am personally concerned, had anything occurred to suggest it to my mind before I left Simla, I think that, whilst certainly sanctioning and fully approving the recommendation then addressed to the Local Governments in favour of minor works, I should probably have endeavoured so to qualify or guard the language of it as to leave the Local Governments no possible ground for at any time supposing themselves to be precluded, in deference to an established principle, from commencing relief operations on a large scale whenever such a course might appear to them called for by the circumstances with which they were dealing.

There was, however, no cause for the anticipatory discussion of such a question, more especially as the recommendation above referred to was unreservedly accepted by the Government of Bombay as well as that of Madras without the slightest reference to any condition by which it should in their opinion be qualified.

Copies of all the subsequent correspondence on famine matters were promptly and regularly forwarded to me by the President in Council, carefully perused and duly acknowledged not only with approval, but also with cordial recognition of the conscientious care with which it had been conducted.

Now, as regards that portion of this correspondence which was addressed to the Bombay Government, I must here observe that, ever since I assumed charge of the Supreme Government, it has been my earnest and constant endeavour to maintain, both personally and officially, the most frank and cordial relations with his Excellency the Governor of Bombay. Finding that the official intercourse between the two Governments was not altogether free from mutual irritation and mistrust, I have been at some pains to read with care, and occasionally to correct with my own hand, letters drafted on current business of a kind too trivial to engage the personal attention of the Viceroy, had it not been for the Viceroy's anxiety to prevent the inadvertent use of any expression which might appear to him likely to offend the susceptibilities of correspondents predisposed to take offence. But it is my sincere belief that the President in Council could not, consistently with that high sense of public duty which has characterised his long and eminent career, have sanctioned off-hand and in absolute ignorance of the extent and duration of the financial liabilities the Government of India would thereby incur, all the applications for the commencement of large relief works first addressed to him by the Government of Bombay in the latter end of October.

The figures accompanying these applications were, in my opinion, inadequate and even misleading, and I think, not only that the President in Council was fully justified in calling for further information respecting them, but also that it was his clear duty to do so. The question is not whether large works were preferable to small ones at the time when the above-mentioned applications from the Government of Bombay were received by the Government of India, but whether the Government of India ought or ought not to have sanctioned the immediate commencement of the works specified by the Government of Bombay without knowing whether the expenditure for which sanc-

tion was asked on behalf of those works represented the total estimated cost of them or only the amount of a provisional allotment for relief purposes. Again, when it had been ascertained that the proposed expenditure represented only the amount of an allotment for commencing the works in question, was it or was it not the duty of the Government of India to sanction this expenditure before it had ascertained whether it would be absolutely wasted in case the Government of India should find itself unable to prosecute without interruption the completion of the works thus commenced?

Minute by
the Viceroy
on the action
of the Bom-
bay Govern-
ment.

As illustrating the importance of the question thus stated, I may here mention that when application was first received for permission to commence the Dhond and Munmar Railroad, the preliminary survey of that line (a great Imperial work) was barely completed, and had not been subjected to any examination by the Public Works Department of the Imperial Government. I have now sanctioned the commencement of relief work on this projected line, not at all because I am satisfied that the Bombay Government is right in asserting that the earthworks on which it proposes to employ such labour will not be deteriorated if the completion of the work is suspended (as it probably will be suspended) for some years, but because I believe that the difficulties with which the Local Government is at present dealing are so great as to justify us in incurring such a risk rather than reject its urgent and renewed request.

The correspondence which ensued between the two Governments in consequence of the demand made and maintained by the President in Council, for further information respecting the large relief works he was urged to sanction last November, has doubtless occasioned some delay in the commencement of those works. I cannot judge whether the Bombay Government was unable or only unwilling to furnish the information asked for, nor whether, had that information been promptly furnished, the President in Council would still on principle have objected to the commencement of the works recommended. Nothing in the correspondence of which copies were forwarded to me led me to suppose that sanction of these works had been provisionally withheld on any other ground than the need of fuller information on certain financial points.

But, immediately after my arrival at Bombay, I became aware that this correspondence was regarded by the Government of that Presidency as irreconcilable with the discretion left to it by our telegram of the 16th of October, and acknowledged with satisfaction in its own telegram of the 24th of the same month, with regard to expenditure on relief works. I had also the advantage of meeting at Bombay Sir John Strachey, whose personal experience of previous famines in India had led him to form a very strong opinion adverse to the continuation of small local relief works, and in favour of commencing large ones at the earliest possible stage of any serious scarcity. The arguments in support of this opinion, which I need not recapitulate, appeared to me forcibly illustrated by all I learned of what was actually taking place in the affected districts at the time I visited Bombay. I therefore came to the conclusion that relief works upon a large scale were urgently needed; and that, whatever the cause to which it might be attributable, the delay in commencing them could not be safely prolonged.

I am of opinion that, when it became evident that the correspondence between the two Governments on this subject was not conducive to a prompt and satisfactory settlement of the points in dispute, it would have been well to close that correspondence, so far as it concerned matters of detail, by deputing some competent and conciliatory officer to proceed to Bombay for the purpose of settling all such matters in personal communication with the local Government. But I must at once acknowledge that this is an opinion formed after the fact; for, to say the truth, it was not until I had reached Bombay, on my way to Delhi, that I became fully conscious, either of the irritation which the correspondence of the preceding month had occasioned to the Government of that Presidency, or of the gravity of all the circumstances which determined my prompt decision that relief works, on a large scale, ought to be immediately opened.

Being also satisfied that the principles on which the Bombay Government was dealing with the difficulties of its situation were sound and judicious, I omitted no opportunity of encouraging its efforts by giving public and cordial expression to my approval of its proceedings and my confidence in its discretion.

Almost simultaneously with, or immediately after, the public utterances made by myself in this sense on behalf of the Government of India, the Government of Bombay received a letter from the President in Council referring to various matters of detail. The terms of this letter were in accordance with the principles previously laid down by the Government of India, and those principles were not (in my opinion at least) incompatible with the famine policy which the Bombay Government was then pursuing. But some portions of this letter were regarded by that Government as impediments to action urgently needed in the then existing condition of local affairs.

Minute by
the Viceroyn
on the action
of the Bom-
bay Govern-
ment.

Believing that the letter was not intended to have this effect, and being also satisfied by the information furnished me on the spot, that delayed action might have injurious results, I at once addressed a private letter to the President in Council, urgently requesting the immediate revocation of this letter; but my letter did not reach Delhi previous to my own arrival there. I then ascertained that a copy of the letter had been already forwarded to the Secretary of State; but, within a few days afterwards, my colleagues in Council agreed to recall that letter, and substitute for it one from which the paragraphs complained of by the local Government should be omitted. It was not possible to draft the substituted letter thus agreed upon, previous to the return of Sir Philip Wodehouse to Bombay; but on the eve of his Excellency's departure from Delhi, I informed him that the original letter was withdrawn, and that he would speedily receive another letter on the same subject, which was to be substituted for it, and from which the passages to which he had called my attention in the first document would be omitted. I took this occasion of expressing to his Excellency my hope that the arrangement thus explained would terminate a correspondence which could not be continued without detriment to the interests of the Empire, under circumstances of serious difficulty, imperatively demanding the loyal and energetic co-operation of all its administrators.

His Excellency gave me to understand that the arrangement in question was satisfactory to himself and his Government, and that the controversy it was intended to close would be considered by him as set at rest.

My surprise has, therefore, been great on reading, for the first time, in the local newspapers, the Resolution of the Bombay Government to which this and the foregoing minutes have reference.

Village re-
lief.

By direction of Sir Richard Temple, I have the honour to forward copy of a minute* recorded by him concerning the need for fully employing and efficiently supervising the existing organisation for village relief in the interior of districts in the Madras Presidency. Sir Richard Temple believes that, with some trifling changes of detail, his suggestions will be found applicable to the more distressed parts of the Bombay districts affected by the recent failure of harvests.

*No. 20.

2. Sir Richard Temple would take this opportunity of suggesting that the instructions conveyed in paragraph 4 of the Bombay Government orders* might perhaps be construed by subordinate local officers to mean that persons capable of performing some labour who fail to come upon the relief works should be left without any State relief at all, however deplorable their condition. Practically the question, "Will you come on the works or not?" cannot be put to each individual sufferer. And absence from the relief works would be generally considered tantamount to a refusal to work. The orders in which the passage under notice occurs were forwarded to Sir Richard Temple by the courtesy of the Bombay Government, and therefore he trusts to be excused for offering a suggestion upon the matter.

3. Circumstanced as Indian villagers are, fenced about with caste customs and family habits, there will occasionally be cases of women and even of men who might be physically able to do some quantity of work, but who, from one cause or another, sometimes perhaps from what Europeans would term prejudice, will hold back from the kind of relief work Government offers until they are too weak to go to the works at all. When there is a competent existing village organisation, it will not be very costly to search out and relieve such cases. Often it will be found that men and women who from

the habits of a lifetime are really unable to do hard work on roads or tanks, are yet quite ready to weave, or to spin, to make baskets, or to do other labour, within their powers, if only it can be provided for them. Village relief
organisa-
tion.

4. If it should be held to be unjust to the public taxpayer to give State relief to persons who, though physically able, are unwilling to work upon the roads or to submit to any labour test at all, then it might be practicable to debit the cost of relieving such persons to the private subscriptions which have been and are being freely given.

5. With reference to the suggestions regarding village relief in the enclosed minute, it may perhaps be well to mention that the existence of an efficient village relief system enables relief officers to shut off from the works all persons who probably or presumably can support themselves. For even when mistake is made and the disappointed applicants for relief wages are really poor, there need be no risk of their dying of want at home. For the village officials will search out such cases, relieve them temporarily, and then send them before the relief officer. If there be no such system, then an officer in charge of relief works will very often from humane motives decide all doubtful cases in favour of applicants for relief, and the public treasury will thereby suffer.

No. 64.

XXIX.—MINUTE by SIR RICHARD TEMPLE, dated Nundydroog, 8th February 1877. Nos. 72. 115.

As the season advances in which distress gradually deepens in certain classes of the native community, there is one point which I would specially commend to the consideration of the Government of Madras, which is this. However searching, comprehensive, and far-reaching the relief measures may be, it may happen, probably it will happen, that individuals or particular families may yet be suffering in silence, may escape observation, and may compose themselves quietly for death without applying for relief or complaining to any one. When once a complete system of relief has been established, as happily it has been or is being established, throughout the Madras Presidency, it will be in some such way as that above described that deaths from starvation occur, if they occur at all. Such is clearly the result of our experience in 1874 in Behar, where certainly some few cases of this sad nature did occur. And in the districts of the Madras Presidency every now and then incidents come to light which make us fear that, despite all the praiseworthy precautions of the district authorities, some such cases may be occasionally occurring, as is well known some cases did occur at the outset of the distress.

2. For this there is but one remedy, which is as perfectly practicable as it is completely efficacious; and that is constant supervision of every highway and every village throughout the distressed districts, with a view to observing, picking up, and relieving every person who may be found to be threatened with starvation. It is to be assumed that such cases cannot possibly exist in any large numbers anywhere, by reason of the large and liberal measures of relief which have been adopted, and that they will be only scattered instances of misery, where persons, from social prejudices, or from infirmity, or from peculiar circumstances, or from fatalism, or other inexplicable reason, do not apply for relief. In Behar the necessary organisation for such supervision had to be summarily constructed for the occasion. But fortunately in the Madras Presidency it already exists. There is in every village at least one headman, generally there are two headmen and a village accountant,—the local names differ in various parts of the country, but the offices are the same. Every circle of villages or every section of the country is formed into a “taluka” or “taluk” under an official styled tahsildar, who has a deputy immediately under him; and in every “taluk” there are two or more “revenue inspectors,” whose ordinary duties cause them to be specially acquainted with the people in the villages within their respective circles. In most districts over every two or three “taluks” there is a superior officer, such as an Assistant Collector or a Deputy Collector. It is impossible to have an organisation more naturally fitted for the purpose than this. And the staff would be easily strengthened in any locality where additional strength might seem necessary by temporarily allowing a second deputy to the tahsildar or by augmenting the number of revenue inspectors. Nothing could be easier than to specially divide each taluk into two or more circles of relief, and probably this will have to be done in most districts; indeed in some districts it is being done already. Very shortly after entering the Madras Presidency I presented the Collector of Kurnool at his request with a sketch of this system as apparently applicable to his district, which memorandum was immediately laid before the Government of Madras. The same principle was also embodied in my proposals for the systematisation of relief submitted to the Government

Village relief
organisa-
tion.

of Madras on the 19th January. In every district which I have visited the result of our Behar experience in this respect has been explained by me to the district authorities, so that no person be permitted to die from preventible hunger; and I believe that they fully understand the need of that degree of vigilance in this matter, which does indeed form an essential part of the humane policy adopted by the Government of Madras.

3. According to this it has become or will become the duty of every village headman to watch for every instance of distress threatening danger to life, and to arrange for relief or to give food for a day or two until the order of the nearest relief official can be obtained, on the understanding that any slight expense thus incurred would be reimbursed. In some cases the district officer might place some small funds at the disposal of trustworthy village headmen for this purpose. The headmen will not find any difficulty in bringing these cases before a relief official, inasmuch as such official will always be close at hand under the organisation above described, and as relief camps are being established in all suitable localities, thus no financial abuse can arise. Nor is it possible that any cases can escape the care and watchfulness of the village headmen and the taluk officials, if they do their duty, as they doubtless will, under the supervision of the district authorities. If the plan be perfectly carried out, as it doubtless will be throughout the Madras Presidency, then the Government may be sure that, *Deo volente*, no person shall die of hunger.

4. Also on the highway the regular police can discharge the same functions; probably they do so already. In those lines of communication where such occurrences are most to be apprehended, the police patrols might be specially strengthened with this view.

5. Though I believe that the matter is now quite understood by the district officers, there can be no harm in recording this minute in case the Madras Government should see fit to issue any formal instructions to the local authorities on a matter which is so intimately bound up with the humane and charitable policy which they have pursued, and which so much concerns what is, in the words of the Government of India, "the paramount duty of saving human life."

No. 10 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce,
to the Most Honourable the MARQUIS OF SALISBURY, Secretary of State for India.

Calcutta, the 9th February 1877.

With our Despatch of the 2nd instant, No. 6, we forwarded to your Lordship various minutes and memoranda received from Sir Richard Temple principally relating to the condition of the districts of Cuddapah, North Arcot, Coimbatore, and Trichinopoly in the Presidency of Madras. We now enclose Sir Richard Temple's reports on the districts of Salem,* Madura,† and Tinnevely,‡ which continue the narrative of his pre-

Forwarding
and review-
ing Sir R.
Temple's
minutes.
*No. 24.

liminary survey of the distressed districts in the two presidencies. The account of the district of Chingleput, which adjoins and bounds the town of Madras on the north, west, and south, has not yet reached us. The Nellore and Kistna districts have still to be visited.

Forwarding
and review-
ing Sir R.
Temple's
minutes.

2. It will be seen from these papers that the state of the districts now reported on, and the same remark applies to the district of Coimbatore, and still more to the district of Trichinopoly, is very much more favourable than that of the ceded districts and Kurnool. Although in all these districts there has been serious drought and very extensive failure of crops, and prices are consequently very high indeed, but little lower than those which obtain in Bellary, Cuddapah, and Kurnool, the number of persons admitted to the relief works was, at the time of Sir Richard Temple's visit, comparatively small. It is probable that in Madura and

Salem	-	-	23,000
Madura	-	-	5,531
Tinnevelly	-	-	2,500

Tinnevelly the numbers in need of relief would have been very much larger, had it not been for the facilities of emigration to the coffee districts of Ceylon, which annually attract a considerable number of the labouring classes of both districts. It is stated that every year tens of thousands of Tinnevelly labourers go to Ceylon to work on the coffee estates and other farms. The day Sir Richard Temple was at Tuticorin, he saw some hundreds of Ceylon coolies returning after their six months' working season. This year, doubtless in consequence of the dearth, the emigration from both districts has been greater than ever. In the Salem district there is no such outlet, and consequently the labourers on the relief works, although the supervision of the relief operations in this district is stated to be exceptionally good, and the population is more than a quarter of a million less than the population of Madura, were more than four times more numerous than those employed on the Madura works, not counting 8,000 people receiving

Salem	-	-	1,966,925
Madura	-	-	2,266,615

gratuitous relief.

3. A very satisfactory feature in all these districts is the great activity of private trade. They all are traversed from end to end by railways, and in all the districts roads are numerous and good, especially in Salem and Madura, and there are plenty of carts for the transport of grain. The Madura dealers are men of capital and enterprise, and they are already importing grain to the small ports on the coast, and bringing it up to Madura.

Activity of
private trade.

4. In regard to the prospects of these districts during the coming months everything depends on the spring rains. If the usual rains fall in April things will go well. If they fail, there will be serious distress and heavy relief expenditure for several months. There will also, in such an event, it is to be feared, be a considerable loss of cattle. As regards the water supply there is no serious cause for apprehension.

5. We stated in our Despatch of last week that the Madras Government had acceded substantially to all Sir Richard Temple's proposals for economy, and that orders would be issued at once.* Sir Richard Temple has since informed us* that the Madras Government have ordered various measures of economy in relief and such restrictions of expense as are compatible with the safety of the people, and that these orders are actually being carried out in the interior of the districts. Though there may yet be important discussions on details, Sir Richard Temple trusts that there is general accord in principle. He cordially acknowledges the support which he has received from the Madras Government and from all its officials, and bears his testimony to the zeal, devotion, and humanity with which the relief operations have been undertaken in that presidency. In his minutes and memoranda on Bellary, Cuddapah, and Kurnool, which have already been laid before your Lordship, and more particularly in his minute of the 19th January, he has discussed very fully the necessity of placing some restrictions on the enormous numbers resorting to the relief works in those districts and the mode in which this should be done. Similar suggestions were made to the Government of Bombay, which, however, had anticipated the most important of them, viz., the reduction in the rate of wages.

*No. 50.

6. With this Despatch we submit a minute, dated the 24th † ultimo, in which Sir Richard Temple has drawn the attention of the Bombay Government to the applicability of certain passages in our letter of instructions to the relief administration in the Bombay districts, including the question of closing many of the smaller relief works. At present

†No. 17.

* Since this was written we have received copies of the orders of the Madras Government dated the 31st January Nos. 329 and 330, enclosed in their Despatch to your Lordship, under date the 2nd instant. These orders are entirely in accordance with the policy laid down in our instructions to Sir Richard Temple, on the subjects to which they relate, viz., the restrictions on expenditure and non-interference with trade, and have our cordial concurrence.

we are not aware whether anything has been done in either presidency in the direction of closing small works; but in connexion with this subject we submit a* correspondence which has passed with the Government of Bombay regarding the commencement of the earthworks of the Dhond and Manmar Railway and of the railway some time ago projected between Bellary and Karwar by way of Gudduck and Hooblee. We have authorised* the Bombay Government to commence the first of these works at once, if, in their opinion, it is urgently necessary in consequence of more extensive relief works being required than those actually in progress; observing, however, that work should, as far as practicable, be confined to those portions of the undertaking which can be carried out without committing the Government to immediate completion of the line when the present difficulties have ceased. Regarding the Karwar and Bellary Railway we have addressed the Madras Government and Sir Richard Temple, who will shortly again visit the Bellary district. We have reason to believe, although the point is not specially adverted to in any of the official papers before us, except in the memorandum regarding the Tinnevely district, that difficulties have been experienced, though of what nature we are not informed, in devising large works suitable for relief purposes in the Madras Presidency. The only relief works of any magnitude at present in operation appear to be the East Coast Canal and the Junction Canal. Sir Richard Temple has inspected the line of the proposed extension of the railway from Conjeveram to Chingleput, but is not in favour of its being taken up as a relief work.† We shall probably receive more detailed information on the general question in Sir Richard Temple's final report after the completion of his tour.

7. The question of improving the grain traffic on the Great Indian Peninsula and Madras Railways has been carefully investigated by Captain Bisset, R.E., under Sir R. Temple's orders. We enclose some correspondence on this subject.‡ The officials of both railways appear to be using every effort to meet the emergency. A suggestion made by Sir Richard Temple, that the line from Madras to Arconum should be doubled, is under consideration in our Public Works Department, and will, we hope, be disposed of in the course of a few days. Arrangements have been made for obtaining weekly returns of the grain traffic to the affected districts by rail as well as by sea.

8. Sir Richard Temple has visited Bangalore, and was about to inspect some of the distressed localities in Mysore. We have reason to apprehend that the distress in that province is severe. Regarding Hyderabad we submit a memorandum of the facts ascertained by Sir R. Temple on the occasion of his visit to Hyderabad, from which it appears that the distress in the Nizam's country is likely to be more limited and less serious than was at first apprehended. Sir Richard Temple considers the arrangements made to meet the distress creditable to the prudence and foresight of the Nizam's Government.

9. Among the enclosures of this Despatch will be found a correspondence on the subject of remissions of land revenue,§ to which reference was made in our Despatch of the 26th ultimo (paragraph 5). Sir Richard Temple had suggested that suspensions only should be allowed pending further consideration, and that remissions should be prohibited. Both the Local Governments having objected to the course suggested, we have intimated to them that the matter will be left to their discretion, but that the subordinate authorities should be warned against too free remissions, and authorised to hold balances in suspense in cases in which it appears likely that the landholders will, without undue pressure, be able to pay the revenue in arrear during the next season.

10. From the returns of persons employed on the relief works and fed gratuitously which reached us yesterday, it appears that in the former case there has been a diminution of 38,994, and in the latter 12,447. The aggregate number of persons employed on the works was 908,410 and of persons receiving gratuitous relief 60,402 against 947,404 and 72,849, the corresponding numbers for the previous week. The Neillore return, however, does not include the coolies employed on the East Coast, regarding whom it is stated that no return had been received.

11. Since our last Despatch was written we have received your Lordship's Despatch of the 12th January, No. 6. Our Despatches and telegrams during the last few weeks, and the weekly Despatches and returns which you now receive from the two Local Governments, will have placed you in possession of tolerably full information on most of the points adverted to in your Despatch. The detailed reports alluded to in the 24th paragraph are gradually coming in and are undergoing a careful scrutiny, but we are not yet in a position to lay before you a full *resumé* of their contents. In the meantime the clear and full memoranda which have been furnished by Sir Richard Temple regarding the districts visited by him will have enabled your Lordship to form a clear view of the leading facts of the situation, of its dangers and difficulties, and of the

measures which are being taken to meet them. The situation is, indeed, very grave. The extent of the distressed area in length is very great, beginning, as it does, from near the south bank of the Taptee river in Khandesh, and stretching down south, uninterruptedly almost to Cape Comorin; and in one part its breadth is considerable, extending from the eastern watershed of the Western Ghaut mountains to the East Coast. Including Bombay, the Nizam's dominions, Mysore and Madras, the population affected can hardly be less than thirty millions, possibly a good deal more. The calamity is aggravated by the prevalence of cholera in many of the distressed districts. If it were not for the railways, which now extend from the base of the Himalayas to the extreme south of the peninsula, and the great improvement which has taken place in the communications generally, the difficulty of transporting food in sufficient quantities over this vast area would have practically rendered it beyond the power of Government, however great their efforts and unrestricted their expenditure, to prevent a very heavy mortality in some, at all events, of the drought-stricken districts. As it is, the railways are carrying the surplus produce of the Punjab, of the North-western and Central Provinces, and of Bengal, where the harvests have been excellent, to the drought-stricken plains of Sholapore, Bellary, and Kurnool; and throughout the distressed districts, owing to the activity of private trade, the markets, as a general rule, are well supplied. There will, we fear, be a heavy loss of cattle in some districts. The apprehensions which were at one time felt as to a water famine are not now generally entertained.

Area of distressed.

Value of railways.

12. We cannot conclude this Despatch without expressing our sense of the invaluable assistance which Sir Richard Temple is rendering both to the Government of India and to the Local Governments in the performance of our anxious task.

We have the honour to be, &c.

From the COLLECTOR OF BEERBHOOM to the DEPUTY CONSULTING ENGINEER, Government of India.

Referring to your demi-official of 29th ultimo, I have the honour to state that there are, exclusive of about 80,000 maunds of rice awaiting despatch at the different railway stations of this district, about 80,000 maunds in depôt ready for export. I do not anticipate any heavy export after the amount on hand has been cleared; the principal block is at the Bulpore railway station, where there are about 50,000 maunds accumulated, and despatch has been suspended for some days owing to want of carriage.

Grain export from Bengal.

2. Prices have been sensibly affected by the export having risen since 1st November last from 27 seers 5 chittacks, to 21 seers 12 chittacks the rupee.

No. 68.

XXXI.—MINUTE by SIR R. TEMPLE, dated 10th February 1877.

No. 115.

Since the instructions of the Government of India, conveyed in the Despatch No. 45, dated 16th January, were made public, the Madras Government has drawn the attention of its officers to the necessity of restricting expenditure on relief, so far as economy may be compatible with the paramount object of saving human life. And the Madras Government orders prescribe certain specific measures by which economy can be in some degree enforced. But there is another point in the Government of India's instructions to which the attention of all relief authorities might, if the Government of Madras saw fit, be usefully drawn.

Review of relief works for the distress in Madras Presidency.

2. Paragraphs 4, 5, and 7 of the Despatch above cited lay down certain general principles, by the light of which the scheme of relief works in this presidency might, perhaps, be re-considered. The following passage may first be quoted from paragraph 5 of the instructions, thus,—“as it is clear that the Government will have to undertake

Relief works
in the Ma-
dras Presi-
dency.

“ serious measures for the relief of scarcity, no time should be lost in giving the people
“ means of employment on large public works.”

3. Then from paragraph 7 the following passage may be quoted,—“when distress
“ becomes extreme, and a state of absolute famine has been reached, large public works
“ may become insufficient to afford relief to the numbers of people in need of it. At
“ such a time the Government may be driven to set up relief works near the homes of the
“ people on a scale inconsistent with careful supervision or certain test.” After passing
through the more distressed districts, it appears to me that petty relief works of this
nature were, at the outset, undertaken in many parts of the three districts of Bellary,
Kurnool, and Cuddapah, though many of them will ere this have been stopped, and the
labourers concentrated upon better devised works. The period has not, according to my
experience, arrived, when such measures ought to be largely adopted. Their introduction
may become necessary during the month of April, perhaps in some places from the middle
of March. Meanwhile, they ought, in my judgment, to be discontinued wherever this
may be possible.

4. Now, in Bellary two works on the largest scale have been proposed, namely, the
railway towards Dharwar and the western coast, and the high-level canal project from
the Tungabhadra river towards Bellary town. The railway project was negatived some
time ago; but the Government of India have now been pleased to ask my opinion on the
proposal to begin the earth-work of this line as a relief work. I hope to be at Bellary
next week, and to submit my opinion after conference with the officers who may be in
possession of the views of the Madras Government. The high-level Tungabhadra Canal
cannot, I fear, be recommended, because there are doubts whether the river can supply
water enough for this work, as well as for the Kurnool Canal and for the Krishna district
irrigation lower down. A proposal has, indeed, been made for constructing a large lake
in the Mysore hills, at a cost of 300,000L., and thereby maintaining the discharge of the
Tungabhadra; but I have not yet been able to satisfy myself that this reservoir scheme
is such as could be recommended to the Government of India. And, if undertaken, it
would involve much expenditure besides that required for relief. Besides these two, I
cannot discover any works of magnitude in the Bellary district. The only works which
can be suggested are certain lines of main roads now in hand; certain large tanks for
irrigation, about 150 in number, on each of which about 500 persons can properly be em-
ployed, and certain small anicuts (dams) on and channels from the Tungabhadra, which
irrigate the villages within half a mile of the river, but which were breached some years
ago and are now in disrepair.

5. In the level portions of the Kurnool district there are very few such irrigation tanks
to be excavated. But in the hilly taluks of the Cumbum Sub-Collectorate, possibly sites
for such tanks may be found. There are some main lines of road to be proceeded with.
The only large work is the Irrigation Company's Canal, upon the further excavation of
which large numbers might, perhaps, have been employed. But I understood in Madras,
after my visit to Kurnool, that the relations between the Kurnool Irrigation Company
and the Government are not such as to enable us to employ relief labour on this canal.

6. In the northern portion of the Cuddapah district there are some irrigation tanks and
some main lines of road on which relief labourers are employed. There are but two
works of magnitude, one the embankment to protect the railway from the Pennair river;
and the other a continuation of the Irrigation Company's canal. The former may, perhaps,
employ 10,000 to 12,000 persons for three months; while the latter must, for the reason
mentioned in the next foregoing paragraph, be held to be undesirable. In the southern
or hilly portion of the Cuddapah district, relief labourers (to the number of about
100,000 a day) have been employed mainly on road works. And already 170 miles of
new road have been constructed, which is, perhaps, the utmost length which the local
funds can hope to maintain. There are, however, very many irrigation tanks (some of
which were breached in the rainy seasons of 1872 and 1874), the construction and repair
of which might be prosecuted with much advantage to the people and to the Government
revenue. Some of these tanks are great works, on which three to five thousand people
could be employed for five or six weeks. In the memorandum written after my recent
visit to Madanapally, the tank question is discussed. Inquiries in the Mysore tank
country have confirmed my opinion that tank works can be usefully undertaken in
Madanapally. And I suggest that the civil and engineering officers be instructed to
take up this important subject in concert, and to arrange a plan for employing large
gangs on one series of tank works after another. A gang of 4,000 persons under a Public
Works Department subordinate could carry out a considerable tank project by piece work
in a few weeks, and could then be moved on to another similar work.

7. In the North Arcot district no great works have been proposed as yet. But a great deal of very useful work has to be done towards repairing tanks recently breached, and towards improving other tanks and their channels. The officers of the Public Works Department have several of these works ready in the Chundragiri and other taluks, if only the civil officers could arrange for transferring relief gangs to the engineering officers for employment on such works.

Relief works
in the Ma-
dras Presi-
dency.

8. In no other district of this presidency save Nellore are the numbers of relief labourers as yet excessive. In that district, which I have yet to visit, a large and important canal is being excavated; and the Madras Government is, I understand, directing to this great work all the labourers that can be brought thither.

9. For the Chingleput district one considerable work, namely, the earth-work of a railway from Chingleput to Conjeveram, was proposed. After inquiring into the facts and inspecting the site of the proposed line, I was unable to recommend its prosecution as a relief work. The Government of Madras has, however, approved a short canal near Madras itself, the excavation of which will furnish employment to large numbers for a considerable time.

10. If hereafter the number of relief labourers should become large in any of the southern or coast districts, I would suggest for general adoption the plan recommended for Madanapally, whereby large gangs of able-bodied relief labourers should be employed at piece-work rates under Public Works Department officers on one considerable irrigation work (tank, or channel, or anicut as it may be) after another, the gang being shifted from work to work.

11. As a complement to the scheme of employment which I have indicated, it will be necessary for civil officers to establish light labour gangs, on minimum daily wages, whereon elderly or infirm persons, or people draughted from relief camps, may be subjected to some kind of labour test. It will only impede the work of Public Works Department officers, disorganise efficient gangs, and make real piece-work rates impossible, if infirm or weak persons, unable to do a good day's work, are draughted into labour gangs which are to do real good work under skilled direction and efficient supervision.

12. It may, perhaps, be well to add that even though a gang may be doing really good work, and at a reasonable price, still vigilance should not be relaxed so as to admit to relief works persons who are not really in need of State charity. Relief wages at a time like this can, under pressing financial exigencies, be given to the absolutely needy only. And it is quite clear that in this part of India very many men and many women, who are not in absolute need, are quite ready, at a period of dear prices, to do hard work at piece-work rates merely to maintain their standard of comfort, or to earn a little money over and above what is required for their mere subsistence.

No. 508, dated Fort St. George, 10th February 1877.

Nos. 91, 221

From the CHIEF SECRETARY TO THE GOVERNMENT OF MADRAS to the CHIEF COMMISSIONER OF MYSORE.

I am directed by his Grace the Governor in Council to bring to your notice the fact that large numbers of people are flocking from the Mysore territory to the famine relief works and feeding houses in the Bellary and Cuddapah districts, and to the Wynad in Malabar, in the hope of securing the means of subsistence in this season of distress.

2. So far as Bellary and Cuddapah are concerned efforts have, the Government believe, been made to eliminate these people from the relief works and feeding houses, but without success, and this Government are opposed to effort in this direction.

3. In Wynad the Government have reason to fear that, so far from the hoped-for refuge from distress being reached, the demand for labour will be less than usual while the slack time is at hand on the estates, and the ordinary unhealthiness of this tract of country is likely to be aggravated by the circumstances of the year.

4. His Grace the Governor in Council cannot but recognise the serious risk involved in sending away to Mysore territory large numbers of distressed folk who have wandered thence in search of relief, and has accordingly telegraphed instructions to the Collectors that all these people shall be admitted on precisely the same terms as the inhabitants of the districts to which they may repair, and that the necessary extension of work and relief must be unhesitatingly provided, but at the same time he considers that the resulting charge should properly be borne by Mysore, and the Collectors have been accordingly instructed to maintain as correct a register of the number of Mysore people relieved as may be possible.

No. 88.

people from
Mysore.

5. I am directed to request that you will depute a special officer to arrange with the Collectors of Bellary, Cuddapah, and Malabar for the return of these people to their own country as soon as may be, and at the same time to request that you will take steps to reimburse this Government for the expenditure incurred on their account so long as they remain in this presidency.

6. As the rates of wages on relief works in Mysore are understood to be the same as in this presidency, the charge to Mysore will be much the same in either case.

No. 70.

No. 115. XXXIV.—MEMORANDUM by MR. BERNARD, Secretary to Sir R. Temple, respecting the PENNEKONDA DIVISION of the BELLARY DISTRICT, with NOTES respecting RELIEF OPERATIONS in ANANTIPUR.

Anantipore, 11th February 1877.

Pennakonda
division
(Bellary).

Having passed from Bangalore through some of the most distressed portions of the Mysore country, Sir Richard Temple reached Pennekonda on the 9th February, passing across the Hindupore taluk. He met there Mr. Ross, the Sub-Collector, and Dr. Williams, recently sent from Bellary to combat the cholera which appeared in this division.

2. The Pennekonda division consists of three taluks, all of which are on the Mysore plateau, and partake more of the physical characteristics of Mysore than of Bellary. The area and population of the three taluks are as follows:—

	Area.		Population.
Pennekonda	654 square miles	-	80,000
Madaksira -	439 „ „	-	80,000
Hindupore -	481 „ „	-	88,000

The failure of rain last season and the loss of crops has been extreme over the whole of Madaksira, over the greater part of Pennekonda, and over a part of Hindupore. The “dry” crop was lost entirely, and the “wet” crop yielded about three annas all round; so that the total yield of the division is less than a two-anna crop. There is some ragi and a small area of cholum (jowari) now in the ground; the latter is grown in the beds of dry tanks. The yield of this standing crop is estimated by the divisional officer, Mr. Ross, to be equal to one month's food-supply for three taluks. The Pennekonda traders estimated that the yield would be equal to two months' supply.

3. The grain markets are now well supplied with foreign grain, ragi, cholum, and rice, which comes by cart from the Bangalore railway station to the chief marts of Hindupore, Pennekonda, and Madaksira. Pennekonda is further from Bangalore than from Gooty on the north-west line—88 miles as against 79. But carts are cheaper and more abundant at Bangalore than at Gooty. Part of Madaksira, however, draws its supplies from Bellary. The village dealers carry from the towns ample supplies for the village weekly markets. The traders, whom Sir Richard Temple met in presence of the divisional officer, were quite confident that trade would fully supply all local needs, both in towns and villages, so long as the Bangalore market was well supplied. The cessation of grain payments to and the requirements of relief labourers, would in no wise exhaust the markets.

4. The price of ragi and cholum ranges at present from $8\frac{1}{4}$ seers in Pennekonda to $9\frac{1}{2}$ in Hindupore. At the beginning of January prices were much dearer, $6\frac{3}{4}$ seers in Pennekonda and $7\frac{1}{2}$ in Hindupore. In the month of November, before the great importation from Madras coast had set in, the supplies in the smaller markets partially failed for two or three weeks together.

5. Mr. Ross has had a good deal of Government grain in his taluks; at present he has in store about 1,400 tons balance of local purchases, of which 500 tons were received from Major Hicks, the Government Grain Agent. He had expected a further monthly consignment of 1,000 tons a month from Major Hicks. Wages had until lately been paid in grain; now cash wages are paid, and the Government grain in store is all kept as a reserve.

6. The Madras Government orders for reducing relief works expenditure, dated 31st January, have not yet (10th February) reached Mr. Ross. He had, however, begun to weed out his labourers, and to turn off persons who could manage for themselves from the time of the publication of the Government of India orders (16th January). Cholera has dispersed some few gangs round Pennekonda; and further, some 30,000 relief labourers in the Hindupore taluk struck work, and have kept off the works for the

last two or three weeks, because they did not like task-work which had then been introduced. From all these causes the number on relief works has fallen from 90,000 to 30,000 persons. Several hundreds of these labourers, who voluntarily kept off the works, presented themselves to Sir Richard Temple, clamouring for a return to daily wages. He was glad to see that the people, men and women, were in good case, notwithstanding their absence from the works during the last two or three weeks.

7. Sir Richard Temple inspected four small gangs of relief labourers in Pennekonda town, and the appearance of the people was fairly good. The large gangs which had been at work near Pennekonda had recently been dispersed by a violent epidemic of cholera, which is now happily abating. On a road near Gootoor, 8 miles from Pennekonda, there had been at work some 1,500 labourers. On this gang the work of weeding out those who could support themselves had been carried out by the relief Inspector, who had reported that the gang dwindled to almost nothing. Mr. Ross was going to inspect the people out of this gang who still offered themselves for employment at task-work rates. And Sir Richard Temple was able to see about 400 of these people. Among these were certainly some cases of men and women who needed either relief wages or gratuitous relief, and these cases are being cared for.

8. Gratuitous relief used to be distributed at some 20 places in the division. But Mr. Ross found so much peculation at outlying relief houses, that he has arranged for closing all relief houses but five for the present. Each of these five will be under the supervision of a responsible relief officer, and will for the present be managed as a relief camp on the indoor system. Poor creatures at the outlying relief houses who still require State assistance are being taken into the central relief camps. Hereafter, when matters become worse, it may be necessary to establish one relief house in every Inspector's circle throughout the most distressed part of the division.

9. With reference to the fact (see paragraph 20 of the Bellary memorandum, dated 19th January) that some 30,000 people were receiving gratuitous relief in the three Pennekonda taluks at the beginning of January, Mr. Ross explains that some thousands of the names on the charitable relief returns were fictitious, and that peculation of this kind has since been checked and punished. A good many of the children belonging to relief labourers were at one time in receipt of charitable relief, and they have now been sent back to their parents. There are now 8,100 persons receiving charitable relief in the three taluks, and they will be gathered into relief camps. Sir Richard Temple saw about 150 persons in the chutrum (serai), which is used as a relief camp at Pennekonda, and he found all the inmates to be suitable recipients of State charity.

10. The great decrease which has recently taken place in relief expenditure in the three taluks of Pennekonda may be thus seen :—

	On first week of January.	During first half of February.
Total number of relief labourers - - -	88,000	30,000
Total number of persons on gratuitous relief lists - -	33,000	8,100

The physical condition of the Hindupore people who left the works three weeks ago warrants a belief that the relief now given is for the most part sufficient to arrest famine. Mr. Ross is of opinion that now, as was the case before the reduction in the number of labourers, occasional cases occur of wayfarers or other people being reduced to severe straits, and of people dying indirectly from hunger. He cited the case of a widow with two children, who came into Pennekonda a few days ago; they were all very much reduced by hunger; the mother and one child were seized with cholera and died; the other child is now in the poor-house.

11. Sir Richard Temple impressed on Mr. Ross the view that systematic village relief ought to be organised through the village officials; and Mr. Ross read the minute on this subject which Sir Richard Temple has recently laid before the Madras Government. Without such systematic relief, deaths must occasionally occur in remote villages among the old and infirm, or among children. And occasional disasters of this kind cannot be adverted by admitting to State charity (whether on works or in relief houses) tens of thousands of men and women who, in reality, could subsist without State aid. Systematic village relief can make starvation deaths almost impossible; and it is much more economical to the public treasury than insufficiently controlled relief works open to all comers.

12. Sir Richard Temple's general impression was—

- (1.) That the distress in the Pennekonda taluks is not yet quite so severe or so general as had been feared.
- (2.) That the food requirements of the tract can and will be met by private trade so long as the railway can deliver full supplies at Bangalore.

Pennakonda
division.
(Bellary).

- (3.) That Mr. Ross has during the last few weeks done much to secure economy.
- (4.) That Mr. Ross should at once organise his village relief system and supervise its working.
- (5.) That he should press forward the completion of his relief camps (in chutrooms or other existing buildings where possible).
- (6.) That he should himself, or through responsible officers, test the work of relief inspectors who may be empowered to weed out from the labour gangs people who ought to support themselves.

Nos. 78. 92.

Telegram, dated 12th February 1877.

From PUBLIC WORKS DEPARTMENT, Bombay, to the ADDITIONAL SECRETARY, Revenue Department, Calcutta.

Mode of
dealing with
refusal to
accept terms
of relief.

Bodies of people, especially in Sholapore, are persistently refusing to accept terms of relief as defined in Resolution 103 of 19th ultimo. Government believe it would be very mischievous to yield to what is evidently the result of combination, although refusal to yield may very probably lead to the deaths of some of the most weakly of those who have joined the movement and are acting under the influence of those who are stronger. Immediate communication of the wishes of the Government of India by telegram is solicited. Answer goes to day to your letter of the 2nd instant which approves of our rule not to relieve persons holding out through obstinacy under belief that they will not die, a belief which is not shared by this Government.

No. 52, dated Nundydroog, 8th February 1877.

From the SECRETARY TO SIR RICHARD TEMPLE to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

Forwarding
Nos. 63. 64.
regarding
village relief.

By direction of Sir Richard Temple, I have the honour to forward copy of a minute recorded by him regarding the need for efficiently organising and supervising village relief in Madras. With this minute is also forwarded copy of a letter under cover of which this minute was communicated to the Government of Bombay, together with certain observations upon the terms of an order recently issued by the Government of Bombay.

Postscript, dated Bellary, 12th February.

The minute and covering letter were written, as the dates show, at Nundydroog in the heart of the Mysore country. Since then Sir Richard Temple has again come upon the railway line, and has received his Despatches, from which he is glad to find that the Government of India share his views on the subject of the present communication to the Government of Bombay.

No. 73.

Nos. 98. 115.

Telegram, dated Bellary, 12th February 1877.

From SIR RICHARD TEMPLE, Madras, to Mr. T. C. HOPE.

The pro-
posed Kar-
war-Bellary
line.

In reference to telegram of the 6th, regarding the commencement of the proposed railway from Bellary to Karwar, I have discussed the question at Bellary with his Grace the governor of Madras, when there were present the Collector of Bellary, Mr. Master, Colonels Mullins and Shaw, Sheward from Madras, and Colonel Hancock from Bombay. I am adverse to undertaking at present the Karwar and Bellary line generally, in consideration of pressing financial exigencies and claims of other lines. But famine relief labour of Bellary, Dharwar, Kaládgi districts may be most usefully employed in forming earthwork between Bellary, Hubli, and Dharwar, which may eventually be useful when circumstances shall permit such railway to be constructed. No large works being available for relief in the neighbourhood, I suggest that Madras and Bombay Governments be authorised to employ the labour in making the earthwork, taking up the necessary land for the purpose, such land being charged to local Governments; and it

being understood that this permission in no way pledges Imperial Government to ultimate construction of railway. I am authorised to say that the Government of Madras will concur in this view, and I think that the Bombay Government will concur also.

No. 74.

MEMORANDUM by MESSRS. HARVEY and SABAPUTHY on the SUBJECT of the EXTENSION of RAILWAY COMMUNICATION from BELLARY; dated Bellary, 12th February 1877. Nos. 75. 115.

They consider that a railway from Bellary to some central point in the Dharwar best agricultural district would prove remunerative to Government and a benefit to the country, but that a through railway to Karwar is unnecessary for the following reasons:—

The extension of railway communication from Bellary.

1st. The Dharwar crop is ginned in the south-west monsoon when shipments can be readily and promptly made from Madras, but are next to impracticable on the Malabar coast; the rains during that season are trifling in Madras and excessive in Karwar.

2nd. Financial and shipping facilities are present in Madras, the growth of a couple of centuries, but entirely absent in Karwar; the extent to which such facilities assist trade was explained personally by Mr. Harvey to Mr. Bernard.

3rd. Steamers from Calcutta to Europe touch at Madras for part cargo and carry it to Europe cheaper than special steamers sent to Karwar ever can do, or at least till Karwar is made a place as important as Madras.

4th. The best proof of the direction of trade is its present course, and Dharwar cotton comes *via* Bellary now in the rainy season, from Hoongoonda, Noolgoond, &c. &c.

5th. The capital expenditure on the Madras Railway would be rendered more productive than at present by reason of the increased traffic from Dharwar, and that railway is capable of carrying to Madras double its present normal traffic.

6th. The towns *en route* Bellary to Gudduck are of more importance than those from Gudduck to Karwar, and the cart trade at present carried on is enormous "throughout the year." From Karwar it is only practicable in the dry monsoon.

7th. The whole deduction Harvey and Sabapathy make from above stated facts is that a railway from Bellary to Gudduck would not only develop the resources of the country, but help to reduce the Government guarantee on the Madras Railway, which is at present the worst paying, they believe, in India.

8th. Shipping charges in Madras are less than in Bombay or Karwar, as per original actual memorandum of those charges incurred by Harvey and Sabapathy, which memorandum was sent to Mr. Bernard.

No. 75.

NOTE by MR. BERNARD and CAPT. BISSET, on the BELLARY COTTON TRADE as affecting the KARWAR RAILWAY PROJECT. Nos. 76. 115.

Messrs. Harvey and Sabapathy, of Bellary, have been good enough to favour us with approximate statistics of the cotton traffic from Bellary and Adoni, and with a memorandum of their views on the direction of the cotton trade from Bellary and from Dharwar, both at present and in the event of the construction of the Karwar Railway. It appears from these statistics that the annual export of cotton from Bellary by rail amounts to from 7,000 to 8,000 tons, and that nearly a similar amount is exported from Adoni. Of the exports from Bellary 2,000 to 3,000 tons are believed to come from the Dharwar cotton fields. Of the total, say 15,000 tons, exported from the two stations of Bellary and Adoni a portion is occasionally sent to Bombay, but seven-eighths of the whole takes shipment at Madras, where it appears that the shipping charges are no higher than at Bombay, and whence freights to Europe are now much lower than before the opening of the Suez Canal.

Karwar Railway project affected by cotton trade.

2. The observations on the present course of the cotton trade in paragraph 4 of Messrs. Harvey's and Sabapathy's memorandum are understood to refer to the rainy season only. The Dharwar cotton crop is believed to be moderately estimated at 30,000 tons per annum, and if the figures above quoted are approximately correct, the bulk of it must evidently still follow one of the western routes to the sea-board.

3. It is impossible to say with any degree of certainty in which direction the cotton produced along the line of railway will be carried, but there can be no doubt of the present extent of the cultivation, and very little doubt that the cotton for export by sea will take the rail in one direction or the other.

4. The rates for cotton on the Madras Railway are low, but even at these low rates a saving of $\frac{1}{4}$ th of a penny per lb. or $1\frac{1}{2}$ per cent. on the value of the cotton in the Liver-

Table of distances.

		Miles.
Dharwar or Hooblee	- To Bombay (<i>via</i> Bellary)	677
	„ Madras (<i>via</i> Bellary)	431
	„ Carwar	110
Bellary	- „ Bombay	550
	„ Madras	305
	„ Carwar	236
Adoni	- „ Bombay	485
	„ Madras	307
	„ Carwar	302

pool market. Looking at the geographical portion as shown in the marginal table of distances, it appears probable that so much of the Dharwar, Bellary, and Adoni cotton crop as can be prepared for market before the burst of the south-west monsoon (20th May) will be attracted to Carwar; and that after the burst of the monsoon on the western coast, the large portion of Dharwar crop which now remains in the country

till the close of the monsoon will take rail to Madras.

5. From an Imperial point of view, any unproved receipts to the Madras Railway would, so long as the guaranteed interest is not earned, be clear gain to the treasury.

6. It may be well to note that arguments such as are advanced by Messrs. Harvey and Sabapathy were anticipated by the Government of Bombay, whose Secretary (on the 5th February 1873) wrote, “extending the line to Bellary will meet the objections urged against the Karwar Railway on the ground of the uncertainty of communication by that route during the monsoon, will to a certain extent satisfy all parties concerned in the trade of the Southern Mahratta Country, or will ensure a regular traffic to the line throughout the year.”

No. 76.

No. 115.

MEMORANDUM by MR. BERNARD and CAPT. W. S. S. BISSET, R.E., regarding the BELLARY KARWAR and RAILWAY SCHEME as a RELIEF WORK.

The line is 236 miles long and is in the following main sections :—

		Miles.	
Madras, Bellary District	{ Bellary to Tungabhadra	42	{ Not yet actually located; could be done in a month.
	- { River	-	-
Nizam's country	-	27	Located.
Bombay	- { From border to Gudduk	22	Located.
Dharwar	- { Gudduk to Hubli	35	Located.
	- { Hubli to Kinvatee	29	Located.
Karwar	- { Kinvatee to Karwar	81	Located; ghât section requires some preparatory work in jungle.
Total	-	236	

2. The line will pass through the cotton-growing tracts of the following districts :—
Bellary, with a population of 151 to a square mile.

Dharwar „ „ 216 „
North Canara „ „ „

It will also serve a great part of the Belgaum district and some of the southern talooks of Kaladgi. Its cost will vary on the different sections, the ghât section being more expensive. The average cost will be about 7,000*l.* a mile, or Rs. 16,10,000 for the whole line. This includes 10,000*l.* on account of a pier and other loading and landing appliances in Karwar harbour.

3. The portion of the total cost which could be spent on relief labour will depend upon whether it is found possible to move large gangs from the famine districts of Dharwar and Bellary to the heavy works on the ghâts and in other parts of the Canara district. The work which might be done by unskilled labour is then—

		Rs.
From the Canara border to Karwar,	{ earthwork, costing at ordinary rates	8,20,000
81 miles	- { ballast collection	81,000
From the Karwar border to Bellary,	{ earthwork	5,50,000
155 miles	- { ballast collection	1,55,000
Total	-	16,06,000

But a proportion of the relief labourers in Bellary and in Dharwar are of the Wuddah tribe, whose ordinary profession is working in stone; and considerable gangs of stone-workers could be formed in the ceded districts and in Dharwar. There is a large

quantity of stone-work to be done at the Tungabhadra Bridge (42nd mile), which Colonel Hancock would build from the excellent stone found on the spot; also there are heavy cuttings in rock, laterite, and gravel (moorum), thus:—

Bellary and
Karwar
Railway
scheme.

		Costing at Ordinary Rates.
		Rs.
Tungabhadra Bridge, 42nd mile	} preparation of material	- 42,000
from Bellary - - -		
Ghât section from the 168th to 193rd mile - - -	} rock and laterite cutting	- 2,37,000
Other cuttings on length from the 193rd to 236th mile - -		
	} rock cutting - - -	- 83,000
Total - - -		- 3,62,000

4. Now it will not be possible to do in a single season of (say) three months all the earthwork and stonework shown in the foregoing paragraph. On lengths where the work is heaviest, a certain number of men only can work at the same time, and so we could hardly reckon on more than five lakhs of the earthwork on the Canara length being done by relief labour this season, even if it were possible to organise and transport relief gangs from the famine country to the ghâts. On the other lengths where there is only a moderate amount of earthwork, the whole of that work could certainly be done by relief labour in three months. Similarly with the heavy stone cuttings on the ghât length; probably not more than one-fifth of the rock-cutting in this section could be done this season. Thus the cost of the work which might, under the most favourable arrangements, be done by relief labour this season at ordinary rates, may be stated at—

	Section from Bellary to the Canara frontier.	Section from Canara frontier to Karwar.	Total.
	Rs.	Rs.	Rs.
Earthwork - - - - -	5,50,000	5,00,000	10,50,000
Ballast collection - - - - -	1,55,000	81,000	2,36,000
Stone-working and rock-cutting - - - - -	50,000	1,30,000	1,80,000
Total - - - - -	7,55,000	7,11,000	14,66,000

This sum (146,000L.) is the cost of the work at the estimated rates in ordinary years. But the rate taken in the railway estimates, 4 and 5 annas per cubic yard, is considerably higher than the ordinary rates of the ceded districts. And so, although relief labour is generally expensive labour, still, in view of the high rates taken in the estimates, it may be sufficient to reckon that the 146,000L. of ordinary work, if done by relief labourers, will cost 190,000L. And this is the maximum sum which the sanctioning of this railway could be expected to divest from comparatively unremunerative undertaking to an important Imperial work.

5. It is, however, very doubtful whether, at this season of the year, it would be possible to organise in the famine country of Bellary and Eastern Dharwar sufficiently large relief gangs and to transport them to Canara in time to make any very serious impression on the heavy cuttings of the ghât section.

6. It remains to consider shortly the question whether the proposed railway is one that should, on financial considerations, be sanctioned at all. The Committee who inquired very carefully into the financial prospects of the line in the year 1873 reported that the existing traffic of the country would enable the proposed line from Gadak to Karwar (*i.e.*, from the 91st to the 236th mile of the line now under consideration) to pay nearly 4 per cent. on the cost of the line. And this estimate was accepted by the Governments of India and Bombay.

7. Regarding the traffic on the Bellary length no detailed estimate has yet been offered. But Colonel Hancock, in paragraph 5 of his note dated 23rd January 1877, estimates the gross traffic earnings of the whole section above the ghât at Rs. 6,000 per mile per annum. Perhaps it will be safer to take Rs. 5,500

* NOTE.—See annexure regarding the estimated existing cotton traffic. as an average return which, with an assured traffic * in cotton either westwards or eastwards, seems to be a moderate estimate. If these estimated earnings on the Bellary to Gudduk section be added to the estimated earnings on the Gudduk to Carwar length, as already accepted

Bellary and
Karwar
Railway
scheme.

by the Government of India, then the total earnings of the whole line (236 miles) will amount to 15 lakhs of rupees (150,000*l.*).

* NOTE.—See paragraph 3 of the Secretary of State's Despatch of the 6th November 1873. It will not be safe to put the working expenses at less than 55* per cent.; and this would leave 675,000*l.* as the net earnings, equal to 4 per cent. on a capital of 1,687,000*l.*, which is somewhat above the estimated cost of the whole line.

8. Her Majesty's Secretary of State in his Despatch of the 6th November 1873, declined to sanction the line, on the ground that he doubted the financial success of the undertaking. The Despatch remarks that two-fifths of the whole expected traffic is cotton; that there is much doubt whether Indian cotton can hold its own in European markets, now that the American yield is steadily increasing; and that, therefore, there is considerable risk that the railway may not secure the heavy cotton traffic expected; and that it would consequently fail to pay the interest on the capital invested in it. On this point the Committee of 1873 expressed an opinion that the out-turn of cotton from the districts served by the Dharwar and Canara sections of the railway might be safely taken at 30,000 tons, of which two-thirds would take rail to the Karwar port. It may be unnecessary now to discuss the figures of acreage and out-turn on which the Committee based their estimate, though it might be shown that these figures are moderate. But from a review of the general figures of cotton export from Bombay since the American war, we find that the total export to Europe has, on the whole, risen, thus:—

Cotton Exports from Bombay Port in Season.		Cwts.
For these figures we are indebted to the courtesy of Mr. Hamilton Maxwell, of the firm of Nicol and Company, Bombay, who was kind enough to communicate them by telegraph.	1872	3,356,000
	1873	3,454,000
	1874	4,462,000
	1875	4,536,000
	1876, a year of short yield	3,675,000

And Sir William Muir in his financial statement of March 1876 said, "Bombay shows an advance in raw cotton of 1,951,000*l.*, and Madras a similar increase of 331,000*l.*, while Bengal fell off by 253,000." In the absence of further data, which are not available here (Bellary) at the time of writing, it would seem that the cotton export of India is being maintained.

9. There is one other feature in the traffic prospects of this line which may be noted. As yet the oil seed export of Karwar is not large, yet the black soil of Dharwar and Bellary is very well suited for oil seeds. And if there were a railway through these tracts there is every probability that the area under oil seeds in, and the traffic in seeds from, these districts would increase as rapidly as the acreage of and trade in this important staple have risen during the last two years throughout Berar, Khandesh, Nagpore, and the Nerbudda country.

10. There is one consideration on the other side that is against the financial success of the scheme to be noted, and that is that the railway and its traffic may hereafter involve the Government in heavy charges for improving Karwar port. The Committee write (paragraph 44): "We wish it, however, to be clearly understood that should Karwar ever become the port or base of a system of railways, and its trade receive great development, it will undoubtedly be essential that harbour works of some magnitude be undertaken, which would add to the limited sheltered accommodation at present available for shipping." What the final cost of these suggested works might be it might not be safe to estimate, but it was alluded to in Major-General Kennedy's letter of February 1873 as 10 lakhs of rupees.

11. It will be seen from the annexed papers on the cotton traffic of the Bellary country that some of the best informed traders consider that the Madras port will attract more cotton from the ceded districts than Karwar is likely to do. And they even say that the proposed line, if made, will probably bring Dharwar cotton *via* Bellary to Madras instead of carrying Bellary cotton *via* Dharwar to Karwar. About the magnitude of the cotton trade there seems no doubt whatever, and if the anticipations of the Bellary cotton dealers prove correct, then the section from Hooblee to Bellary will be the best paying part of the line, and it will bring a heavy traffic on to the 305 miles of guaranteed railway between Madras and Bellary. And this length from Bellary to Hooblee is the cheapest portion of the line, costing 6,000*l.* a mile as against 9,000*l.* per mile on the length from Hooblee to Karwar.

12. Since the foregoing paragraphs were written, information has been received that the Government of India have admitted the Karwar State Railway into the list of projects which are to be taken up within the next six years. The local authorities estimate

that about Rs. 50,00,000 will have to be spent on relief wages in the Bellary district during the next five months, and they consider that the suitable works in the district will be exhausted before that total has been spent. It therefore seems decidedly advisable to spend as much as practicable of the relief wage fund on the work of the Karwar Railway, which is (it is believed) to be undertaken during the next six years. And the part of the line on which relief labour can be most promptly and conveniently employed in the section from Bellary to Hooblee.

Bellary and Karwar Railway scheme.

Local. No. 91 E.—325 of 1877.

Nos. 77. 133.

From the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department, to the SECRETARY TO THE GOVERNMENT OF INDIA.

V.—Establishments.

Department of Revenue, Agriculture, and Commerce,
February 12, 1877.

I have the honour to acknowledge your letter No. 116, dated 2nd instant,* which was received in Bombay on the 7th idem; a copy of this letter, published in the Gazette of India of the 3rd instant, had reached this Government in that form on the day previous to the receipt of the original.

Interpretation of the instructions of the Government of India in regard to preservation of life.

*No. 42.

2. From this communication his Excellency in Council learns that, when he issued the orders contained in Government Resolution No. 30 E.—158, dated 25th January 1877, he had “seriously misunderstood” the views of the Government of India, as expressed in their instructions to Sir Richard Temple, and his Excellency in Council is so fully sensible of the responsibility cast upon this Government for correctly interpreting all orders of the Government of India in the present crisis, that he feels compelled first to call attention to certain prominent passages in the instructions to Sir Richard Temple.

3. In the 2nd paragraph of those instructions you observe,—

“Even for an object of such paramount importance as the preservation of life, it is obvious that there are limits which are imposed upon us by the facts with which we have to deal. If the estimate of the Local Governments are to be accepted, the relief of the existing scarcity in the Madras and Bombay Presidencies, including loss of revenue, will not cost less than six and a half millions sterling. Considering that the revenues are barely sufficient to meet the ordinary expenditure of the Empire, and that heavy additional taxation is both financially and politically impracticable, we must plainly admit that the task of saving life, irrespective of the cost, is one which it is beyond our power to undertake. The simple fact is this, that the recurrence of a few famines, such as that from which the country is now suffering, or such as that which occurred three years ago in Behar, would, if measures of relief were carried on upon that principle, go far to render the future Government of India impossible. The embarrassment of debt, and the weight of taxation, consequent on the expenditure thereby involved, would soon become more fatal to the country than famine itself.”

And in the 3rd paragraph you add,—

“If relief works are carried on upon wrong principles; if labour is not strictly exacted from all who are physically able to work; if proper supervision is wanting, and people find that they can obtain, almost for the asking, and in return for next to no work at all, wages in money or in grain, there is hardly any limit to the numbers who even in prosperous times may be attracted to them.”

4. This Government, therefore, came to the conclusion that, in the opinion of the Government of India, there was a limit in respect of cost beyond which, even for the preservation of life, the measures of Government could not go; and, further, that with the object of keeping the expenditure within that limit, and thus enabling the Government to give the largest amount of relief to the population, it was the duty of this Government to exact labour strictly from all who were physically able to work; and they, therefore, ordered that a person refusing to perform work, which he was capable of doing, should not, while persisting in that refusal, be relieved at the public expense.

5. In the 4th paragraph of your letter of the 2nd instant, the idea of limiting the efforts which the Government should make for the preservation of life by any consideration of cost, is, however, entirely discarded, and you announce the determination of the Governor-General in Council, “which he thought had already been made sufficiently

Interpretation of instructions in regard to preservation of life.

“clear,” to be, that “no one shall die of starvation if it be in the power of the Government to prevent it.” The Government of India then rules as follows:—

“We say that human life shall be saved at any cost and at any effort; no man, woman, or child shall die of starvation.”

From these words it is to be understood that there are no limits to the responsibility of the State, either as regards the efforts it may make, or the outlay it may incur, with the object of preventing people from dying of starvation.

6. The test case taken by this Government was that of a man “who wilfully and deliberately refuses to render the reasonable equivalent demanded by the Government for the means of subsistence which it is ready to afford him;” and in modification of the previous orders, which were, that no person was to be permitted “through obstinacy to die of starvation,” it was, in accordance with what was at the time believed to be the intention of the Government of India ordered, that no relief should be given to “an individual refusing to perform work which he is capable of doing.” Your 5th paragraph, however, contains the following instructions:—

“Under almost all circumstances, which, if the Government of India is rightly informed, are likely to hold good in the distressed districts of the Bombay Presidency, where the population is almost wholly agricultural, and accustomed to field and other manual labour, the rule laid down by the Government of Bombay appears quite proper. That rule is, that ‘in the case of an individual refusing to perform work which he is capable of doing on the terms fixed by Government no relief shall be afforded him at the public expense during the continuance of such refusal.’”

7. This sentence, I am to submit, seems practically to confirm, and to accord approval to, the orders issued by this Government, which, earlier in the letter, the Government of India hold to have indicated a “serious misunderstanding” of the intentions of the Government of India; and his Excellency in Council, I am to state, feels himself, therefore, in some difficulty. It is true that your letter goes on to state that “the result of such refusal will, certainly, in the case of agricultural labourers, not be death from starvation;” but the question is, should there be such obstinacy is the individual to be allowed to die?

8. The Governor-General in Council expresses his disbelief “that any one ever died of starvation through obstinacy,” and the Governor in Council would be glad to think that his Excellency is right in this opinion; but there is some reason to apprehend that instances of the nature referred to are not so unlikely to happen as is assumed. Recent reductions in relief wages have been made in this presidency, with a view of giving full effect to the policy first announced by the Government of India, orders regarding the exaction of moderate tasks on relief works have been reiterated, and measures have been taken for transferring able-bodied people from the Civil to the Public Works Department works. The immediate effect has been, that large numbers of people have left the works, declining to submit to the reduction of wages, or to perform the required tasks, or to accept the work tendered. There are other influences at work to sustain them in this movement, and the people are, many of them, voluntarily, suffering great privations.

9. Some of those who are on strike are comparatively strong and robust, and able, for a time, to endure privation, but others are weakly; they appear to be acting in bodies, and in concert, and the fear is, that before the majority, who are comparatively strong, are brought to reason, some of the weakly will be reduced to a condition of great prostration. They wander about, and may die out of reach of assistance. The Government, therefore, is placed in this dilemma: if they give way to the people, they cannot successfully carry out the policy of the Government of India—in which they concur—of strictly limiting expenditure; and if they do not give way, some deaths may occur. Feeling, therefore, that their rule has been approved by the Government of India, under what they cannot but hold to be too sanguine a view of the case, they will, until otherwise instructed, act upon the positive injunction contained in your 4th paragraph, that “no one shall die of starvation if it be in the power of the Government to prevent it.”

10. As regards the cases put in your 5th paragraph of the respectable class of women who cannot appear in public, and of those who have caste prejudices, I am to observe that this Government endeavoured to guard themselves as regards both. It was stated in their Resolution which the Government of India review, that the orders would apply to those only who refused a reasonable equivalent, or who refused to perform work which he is capable of doing, and in the Summary No. XI., for the week ending the 26th January 1877, it was stated as follows:—“It is scarcely necessary to add that Government never require people to do work forbidden by their caste rules.” This Government had no intention to compel women to appear in public whose habit it is not to do so; or to

demand from any individual work or service which his caste prejudices would render it impossible for him to perform.

11. His Excellency in Council, I am to say in conclusion, is fully sensible of the privations to which large masses of the people are now subjected, and from which the utmost efforts of the Government can only partially relieve them. He will persevere in his endeavours to enforce economy without a sacrifice of life, and he is confident that the district officers will continue to afford their assistance with the praiseworthy energy and ability they have up to this time exhibited.

No. 78.

Telegram, No. 181, dated 13th February 1877.

No. 92.

From ADDITIONAL SECRETARY, Revenue Department, Calcutta, to SECRETARY, Public Works Department, Bombay.

Your telegram of yesterday. Government of India entirely shares opinion of Government of Bombay as to mischief of yielding to strike on relief works attributable to combination, and thinks that relief wages should not be raised if Government of Bombay are quite satisfied that the rates are sufficient to keep people alive—a point which must necessarily be left to its judgment. Government of India presumes that if small works are closed for the transference of labour to large ones, you will make arrangements for providing for the sustenance of the labourers during their transit. The Viceroy has received telegrams from Sholapore complaining of reductions of wages, but has taken no notice of them, being fully persuaded that the Bombay Government will act with sound discretion in carrying out a difficult but necessary operation.

Wages of those employed on relief works.

No. 79.

XXX.—MINUTE by SIR RICHARD TEMPLE, regarding the Loss of Revenue that may be caused by the Failure of Harvests during the years 1876–1877 in the Presidencies of Bombay and Madras. Nos. 80. 115.

I have already submitted, in my minutes of the 22nd January* and the 5th February,† the best estimate I can frame of the probable relief expenditure in the Bombay and Madras Presidencies. I now present an estimate of the loss of revenue that will probably be caused in the two presidencies by the present failure of harvests, together with an abstract of the probable cost of the famine in respect both of relief expenditure and of loss of revenue.

Loss of revenue in 1876–77 in Bombay and Madras. *Part II., p. 59. †No. 52.

2. The total relief expenditure was in those minutes taken at—

		Rs.	
For the Bombay Presidency	-	1,26,00,000	
For the Madras Presidency	-	2,92,00,000	
Total	-	4,18,00,000	£4,180,000

The present estimate shows that the loss of revenue due to the scarcity will probably be—

		Rs.	
In the Bombay Presidency	-	54,00,000	
In the Madras Presidency	-	1,57,50,000	
Total	-	2,11,50,000	£2,115,000

Grand total of relief expenditure and loss of revenue - - £6,295,000

But if the Government, instead of remitting the whole of the land revenue due from lands whereon there has been severe failure of harvest, should see fit to suspend the Government demand, and if it should be decided to collect in future years such propor-

Loss of revenue in Bombay and Madras.

tions of the arrears as the people might reasonably be expected to pay, then the total cost of the famine might be very materially reduced: 183 lakhs (1,830,000L.) is estimated as the amount of land revenue which ought not to be collected this season; and it is possible that out of this total arrear about 130 lakhs (1,300,000) could be collected in future years, provided that the rainy seasons of 1877 and 1878 be favourable. If the arrears of land revenue of the present season be suspended and not remitted, and if these arrears be hereafter collected wherever possible, then the total net cost of the famine may perhaps be reduced from $6\frac{1}{4}$ to about 5 millions sterling.

3. With this heavy relief expenditure in prospect, with the certainty of temporary diminution of land revenue, and of partial loss of other heads of revenue, it is very important to minimise the ultimate loss of land revenue as far as possible. So far as I am at present informed, it will not be possible to collect this season a larger proportion of the land revenue than the revenue authorities of the two presidencies themselves propose to collect. But if the arrears, which cannot be now collected, be suspended only instead of being remitted, some chance at least will be afforded of recovering the arrears of this year, in part at least, if bumper harvests should be vouchsafed next season.

4. In my opinion it is quite just for Government, acting in behalf of the public treasury and of the general taxpayer, to recover in future years what fairly and reasonably can be recovered, on account of the arrears of a bad season. In all the districts of Bombay and in many of the Madras districts long term settlements of land revenue have been made at moderate and equitable rates. Even in the districts of the Madras Presidency, which have not yet received a long term settlement, the rates of land revenue assessment have been made lighter and more equitable than they were before. So that our system allows to the people the profits accruing during good years, thereby conceding to them a part of the full share of the produce which would have been demanded under preceding Governments. Some remissions of land revenue will in the end have to be made. But I desire to submit this expression of my opinion that, for the present at least, the land revenue demand, which cannot be collected this season, from the drought-stricken districts should be suspended and not remitted.

No. 80.

No. 115. MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, regarding the estimated Loss of Revenue on account of the Failure of Crops in 1876-77.

Bellary, 13th February 1877.

Loss of revenue through failure of crops in 1876-77.

Estimates have been prepared showing, according to available information, the probable relief expenditure in the Bombay and Madras Presidencies during the season from September 1876 to August 1877. The totals were—

		Rs.	£
Estimated Bombay expenditure	-	1,26,00,000	or 1,260,000
„ Madras expenditure	-	2,92,00,000	or 2,920,000
Total	-	<u>4,18,00,000</u>	<u>4,180,000</u>

If everything turns out well, if the usual spring and summer rain falls seasonably and sufficiently, then the expenditure may come short of this total. But if the expected April showers should not come, if distress should break out in fresh districts, or if it should be impossible to maintain the economical restrictions now being imposed, then the total may be exceeded. Out of the total of about $4\frac{1}{4}$ millions sterling, probably more than $1\frac{1}{2}$ millions have at the present time of writing (10th February) been already spent. Four months have yet to elapse before the pressure can even, at the best, greatly abate; and we can hardly hope that expenditure on a large scale will cease until the next six months are over.

2. There remains the question of the loss of revenue. This will be of two kinds: first, revenue which cannot be collected at the time it is due, and secondly, revenue which probably can never be collected at all. In Sir Richard Temple's Minute of the 12th January, on the Deccan district, it was stated (paragraph 12) that, according to the estimate furnished by the Collectors and accepted by the Commissioner of the southern division, the loss of land revenue would probably be 50 lakhs of rupees.

3. So far as Sir Richard Temple has been able to learn, there will not be directly due to the famine any appreciable loss of revenue in the Bombay Presidency under the head

of stamps, salt, or Customs. Some loss of revenue there will be under the head of abkari, or excise on spirits; but this loss will probably not exceed $3\frac{1}{2}$ or at most 4 lakhs. Regarding these miscellaneous items of revenue there is no certain ground for an estimate, which must therefore be subject to correction. Loss of revenue in 1876-77.

4. The Revenue Board of the Madras Presidency, on the 30th November, estimated (see Madras Government Proceedings of the 3rd January) that the loss of revenue caused by the failure of crops would be—

		£
Land revenue	- - 133 lakhs of rupees or	1,330,000
Abkari or liquor excise	- 12 " "	120,000
Customs	- - $\frac{1}{2}$ " "	5,000
Salt	- - 9 " "	90,000
Stamps	- - 3 " "	30,000
Total	157 $\frac{1}{2}$ " "	1,575,000

5. As the Board of Revenue, at paragraph 17 of their report, state the total estimated loss of revenue at 142 lakhs, it should perhaps be explained how each of the about figures was obtained from the report of the Board; thus—

Land Revenue.—Paragraph 11 of the Board's report shows that the "extraordinary remissions necessary during the current year" are 120 lakhs, while 13 lakhs will be sufficient to cover the additional loss during the following year. It is also stated in the same paragraph that the total loss in the two years, compared with the average collections of the past five years, is estimated at 133 lakhs of rupees.

Abkari (liquor excise).—Paragraph 11 of the Board's letter estimates that Rs. 53,32,500 only will be collected during the current year as against the previously sanctioned estimate of Rs. 63,80,000. This gives a loss of $10\frac{1}{2}$ lakhs. The same paragraph estimates that the following year (1877-78) will yield an abkari revenue of Rs. 61,70,000 as against Rs. 63,39,000 the actual of 1875-76. This gives a loss of $1\frac{1}{2}$ lakhs in round numbers for the coming year, and a loss of 12 lakhs for the two years.

Customs.—Paragraphs 12 and 13 of the Board's letter, and the appended statements, show that the sea Customs receipts, though about four lakhs less than the actuals of 1875-76, will yet be equal to the sanctioned estimate. The loss of four lakhs is probably due to other causes than famine, but the land Customs receipts are now taken by the Board at Rs. 62,000 below the sanctioned estimate, and this loss (of say $\frac{1}{2}$ a lakh) may be due to famine.

Salt.—The statements appended to the Board's report give the following figures:—

	Rs.
Average of five years' actual receipts ending 1875-76	- 1,31,47,000
Sanctioned estimate for 1876-77	- 1,36,50,000
Estimate now fixed by the Board for 1876-77	- 1,30,58,000
Ditto ditto 1877-78	- 1,33,69,300

This gives a loss of 6 lakhs on the current and 3 lakhs on the coming year, as compared with the estimate sanctioned before the scarcity began. Thus 9 lakhs may perhaps be taken as the loss due to famine.

Stamps.—The statement appended to the Board's report gives the following figures:—

	Rs.
Average of five years' actual receipts	- 45,84,000
Sanctioned estimate of 1876-77	- 50,00,000
Estimate now fixed by the Board for 1876-77	- 48,00,000
Ditto ditto ditto 1877-78	- 49,00,000

showing a loss of three lakhs probably due to the famine.

6. When the Board of Revenue submitted their estimate they wrote that the Collectors "appear to have in general approached the question in a more desponding frame of mind than is perhaps justifiable, and the Board think that the actual loss will certainly not exceed the sums now reported. The estimate of loss is therefore a maximum one." Sir Richard Temple, however, ascertained on the 6th February from the Board's secretary that the Board's estimate of loss of revenue was under revision, and that the estimated loss will probably exceed the figures offered by the Board on the 30th November.

Loss of
revenue in
1876-77.

7. According to present information, therefore, the expected loss of revenue due to the famine will be—

	Land Revenue.	Other sources of Revenue.	Total.
Bombay Presidency	- 50 lakhs	4 lakhs	54 lakhs.
Madras Presidency	- 133 „	24½ „	157½ „
Total	- 183 „	28½ „	211½ „
	or £1,830,000	£285,000	£2,115,000

8. Sir Richard Temple has no special information whereby he could check the figures offered by the Board, save only in respect of the “salt” revenue estimate. He ascertained from some of the collectors that the salt revenue was, so far, coming in steadily. And the statement published at page 86 of the “Gazette of India” shows that up to the end of December 1876 the salt revenue of Madras for the nine months ending on the 31st December was only Rs. 2,40,000 behind the receipts for the same period during the previous year 1875-76, and was somewhat above the average receipts of the three previous years. Possibly the loss on the salt revenue may be less than the figure taken in the Board’s estimate.

9. But there is one very important general consideration which vitally affects any estimate of loss of revenue on account of famine, and that is the question whether the land revenue due from ryots whose crops have wholly or partially failed, should be remitted for ever, or whether the unpaid arrear should not for the present be held in suspense, so that a part, at any rate, of the arrears should be collected from ryots who may have good harvests during the next two years. Sir Richard Temple has already laid an expression of his views on this question before the Government of India. He considers that the general taxpayer cannot afford, and the circumstances of the case do not require, that the funds of the public treasury should be consumed at both ends to the full extent that has been proposed. About four and a quarter millions sterling are to be spent on relieving the people of certain districts, and there seems no reason why 1,830,000*l.* of land revenue due from those districts should also be permanently remitted, unless strict justice or unavoidable necessity absolutely dictate such wholesale remission of the public revenue.

10. From a strict justice point of view there is, as Sir Richard Temple understands the matter, no case for wholesale remission. All the affected districts in Bombay, and several of the districts in Madras, enjoy a 30 years’ settlement, under which the land revenue is avowedly assessed at a rate which leaves a liberal margin to cover loss in bad years. Even in those Madras districts where a long term settlement has not yet been made, the land revenue rates are now very much lighter and more equitable than they were in former times. And there is no contract, either express or implied, between Government and the ryot that the land revenue shall be remitted when the crops fail or are short.

11. The only possible exception would be in the case of lands in the Madras Presidency irrigated from tanks or river channels, and assessed at what is locally known as “wet” rates. It appears to be the custom of revenue administration in Madras to remit the “wet” assessment of land for a year, in which by reason of failure of water supply no crop whatever is saved. If the custom as above described has been heretofore always observed, there might perhaps be difficulty in making an alteration this year. But as a matter of principle it would be reasonable to keep as an arrear against these lands so much of the “wet” assessment as would be equal to the land revenue thereon at the ordinary “dry” rate. But in any case care will have to be taken against any extension of the custom to irrigated lands on which the crop may have been short, without having utterly failed. For during a time of very high prices like the present, the money value of even a poor crop will have been very considerable.

12. If the case for remission fails from the point of view of strict justice, then Sir Richard Temple apprehends that there is nothing in the circumstances of the case to

* NOTE.—In Madras, land irrigated from wells pays the “dry” rate of assessment only.

make general remission of land revenue necessary. All the Collectors with whom Sir Richard Temple has discussed the matter, considered the present rates of “dry” assessment are light, and that the ryots could easily pay the arrears of this year, if the country is blessed with favourable seasons in 1877 and 1878. Of course, there may be exceptional cases, and partial remission may have to be granted in parts of Sholápúr and in some tracts of Kurnool, where the recent settlement caused considerable increase of revenue, or where the ryots are exceptionally poor. But much discrimination should be exercised, and no remissions should be granted as a

matter of course. Experience in Northern Behar shows that a body of ryots, whose rents were very much higher than the Bombay and Madras rates, were able to pay up, within two years after the famine was over, almost the whole of the price of the grain lent to them by the Government in the year 1874.

13. Sir Richard Temple fully admits that it would be regarded by the ryots as a gracious concession on the part of Government, if the land revenue, which cannot be collected this year, were to be remitted. If the country had a large surplus income, then much might be said for sparing the sufferers by drought and scarcity from the necessity of paying their arrears of land revenue. But the facts are unhappily otherwise, and if $1\frac{3}{4}$ millions of land revenue are finally remitted, the money will have to be made good in some other way. There will possibly be pressure on some of the ryots until the arrears are paid up, but it seems fairer to the rest of the Empire that such pressure should occur, rather than that the whole of this sum ($1\frac{3}{4}$ millions sterling) of land revenue should be remitted.

14. It may, indeed, happen that a part of the famine country may be afflicted for another year; should this unhappily be the case, the position would have to be reconsidered. For the present, the Government will doubtless make its arrangements in view of existing facts only.

15. If Sir Richard Temple's view on this very important point of land revenue remissions be accepted, then it may probably be the case that from 120 to 140 lakhs of land revenue will hereafter be collected out of the 183 lakhs which are estimated as probable arrears at the end of the famine, and the gross total cost of the famine of 1876-77 in the Bombay and Madras Presidencies will be—

Relief expenditure—					£	£
in Bombay	-	-	-	-	1,260,000	
in Madras	-	-	-	-	2,920,000	
						4,180,000
Loss of revenue—						
in Bombay	-	-	-	-	540,000	
in Madras	-	-	-	-	1,575,000	
						2,115,000
Total	-	-	-	-	-	6,295,000
Deduct probable recoveries of land revenue in future years	-	-	-	-	-	1,295,000
Net	-	-	-	-	-	£5,000,000

If, however, wholesale remissions be given, then the cost of the famine will be $6\frac{1}{4}$ millions sterling.

* East Indian Railway.
Great Indian Peninsula.
Scind, Punjab, and Delhi.
Bombay, Baroda.

South India.
State Railways.

† 2,500 tons a day, for five months, over an average lead of 400 miles, gives, at 9 pie per ton per mile, about 700,000*l.* gross earnings.

16. As a set-off against the famine expenditure may perhaps be reckoned the additional earnings on *all** the guaranteed Indian railways, due wholly to the famine grain traffic. The total extra net earnings on all the lines, due to the famine traffic, will probably be not less than 450,000*l.*,† the greater part of which will be a direct gain to the public treasury.

No. 81.

XXXII.—MINUTE by SIR RICHARD TEMPLE, regarding the Purchase and Transport of Nos. 82. 115. Government grain in the Madras Presidency.

13th February 1877.

I desire to take this opportunity of recording, subject to correction upon matters of fact, what I understand to be the state of the case in respect to the purchase and transport of Government grain in the Presidency of Madras.

2. When I proceeded to the Madras Presidency my information was that the Government of Madras had already purchased 30,000 tons of grain from places beyond the presidency, and intended to purchase large additional quantities, either locally or from distant places, according to circumstances, unless indeed the policy of purchasing grain by Government should be modified, either with reference to instructions from the Government of India, or in consequence of the progress of the private trade in grain. The probability of further purchases being intended was borne out by orders which had

Purchase and transport of grain in Madras Presidency.

Purchase
and trans-
port of grain
in Madras.

been issued by Government for the transport of large quantities of grain in the ceded districts and Kurnool.

3. When at Madras on the 26th January I received from the Government of Madras two statements of the purchases made in Calcutta and in Madras, the first of which showed a total of 30,000 tons of rice, the amount ordered from Calcutta. The second showed an additional amount of 11,000 tons bought in Madras. The total thus amounted to 41,000 tons.

4. Besides this amount there were, as I understood, certain small quantities of grain purchased locally by district officers for payment of relief labourers in kind in preference to cash.

5. I learnt then at Madras that no further purchases by Government were either made or intended; that purchasing by Government in any way had ceased.

6. I have since had the advantage of verifying the above facts by conference with his Grace the Governor at Bellary on the 12th February, and I still understand that they are substantially correct, and that the Government of Madras have not purchased anything beyond the 30,000 tons from beyond the Presidency, and that no further local purchases have been or will be made.

7. When the cessation of purchases by Government was announced to me on the 26th January, it seemed to follow that the relation between the Government of Madras and Messrs. Arbuthnot and Company as Government grain brokers would immediately cease: such, indeed, I presumed to be the case. Up to that time, however, the impression in the interior of the presidency seemed to be that the firm were still up to that date considered as Government brokers. It was assumed that from that time at all events they would cease to be Government brokers. It has since been notified that they had already ceased to act in that capacity since the 5th of January.

8. As regards the transport of Government grain, I understood, when at Madras on the 26th January, that the transport arrangements in the ceded districts and Kurnool would be revised with reference to the cessation of Government purchases; that the grain already purchased by Government would be transported to suitable localities, and no more.

9. I had by a minute dated the 19th January, and transmitted on the same date from Cuddapah to Madras, recommended that the plan of paying the relief labourers in grain be abandoned, and that a part of the Government grain already purchased should be sent to places distant at least 60 miles from the railway, and that the rest should be held in reserve. No definite reply was given to me at the time, nor has any since been received by me to that recommendation. It seems to me, however, since I re-entered the ceded districts on the 10th February, that quantities of this grain are being sent to several places within 60 miles of the railway, and comparatively close at hand, and I gather that the transport arrangements are so made as to include the whole of the Government grain, leaving none in reserve. It appears to me clearly that the expense of carting the grain to these easily accessible places, that is, to places within 60 miles of the railway, might be saved, inasmuch as there is no likelihood of its being wanted in those places. And if such grain be regarded as a reserve, the least expensive arrangement will be to keep it at Madras, avoiding the cost of sending it up the country by railway and then carrying it by country carts further into the interior. I would again ask the consideration of the Government of Madras to the matter.

No. 62, dated Bellary, 13th February 1877.

From the SECRETARY TO SIR RICHARD TEMPLE to the ADDITIONAL SECRETARY TO THE
GOVERNMENT OF MADRAS.

Forwarding
No. 81.

By direction of Sir Richard Temple, I have the honour to forward copy of a minute recorded by him in respect to the purchase and transport of Government grain in the Madras Presidency.

2. Inasmuch as this subject has attracted some attention in the Calcutta market, and as it may receive the notice of the Government of India, Sir Richard Temple would be much obliged if the Government of Madras would favour him with information whether the facts as mentioned in this minute are correct. If the present statement is open to correction, or ought to be supplemented in any particular, Sir Richard Temple would be much obliged if you could, with the permission of the Madras Government, inform him accordingly.

No. 83.

Note by Lieutenant D. A. Scott, R.E., Officiating Deputy Consulting Engineer to the Government of India for guaranteed railways, on the accumulation of grain at stations on the East Indian Railway. Nos. 156. 181.

13th February 1877.

On the 25th January I visited the stations between Howrah and Sahibgunge.

I found the platforms of most of the stations between Burdwan and Sahibgunge covered with bags of rice waiting to be carried to Howrah.

At each of these stations a register is kept, in which the dates of the receipt and despatch of consignments are entered. The consignments are despatched strictly in accordance with the place they occupy on this register.

2. The following statement gives the quantity of grain waiting despatch at the principal stations on the loop line on the dates on which I visited them.

In column two of this statement is given an approximate estimate of the amount of rice stored in the adjacent bazaars for export. This estimate can only be a very rough one; but it will serve to give one an idea of the enormous quantity of rice still remaining to be carried away by the railway from this district alone.

In the third column will be found the number of maunds despatched to Howrah during the week previous to my visit, viz., from the 18th to the 24th January inclusive.

Accumulation of grain at the stations of the East Indian Railway.

APPROXIMATE Quantity of Grain for DESPATCH at the Principal Stations and adjacent Bazaars on the Loop Line.

Names of Stations.	Grain for despatch.		Quantity despatched from 18th to 24th January inclusive.	REMARKS.
	At Stations.	In Bazaars.		
	Mds.	Mds.	Mds.	
Gooshkharah - - -	8,000	19,000	4,159	(a) On the 25th January 1877.
Bhulpore - - -	15,000	90,000	10,588	
Amoodpore - - -	16,000	2,000	3,906	(b) On the 26th January 1877.
Cynthea - - -	20,000	30,000	8,038	
Mullarpore - - -	11,000	1,000	(a) 4,747	A very large quantity for export in the bazaar, merchants despatching goods by boats.
Rampore Haut - - -	7,000	19,000	6,776	
Nalhati - - -	53,000	21,000	10,456	
Mooraroe - - -	50,000	30,000	5,364	
Pakour - - -	12,000	38,000	4,300	
Sahibgunge - - -	11,000	5,000	23,113	
Bhaugulpore - - -	15,000	—	(b) 8,164	
Colgong - - -	15,000	15,000	4,283	
Total - - -	2,33,000	2,55,000	93,894	

3. Approximately there were 5,00,000 maunds of rice at the stations and in the bazaars waiting to be taken away, and the amount removed during the seven days given in the statement is a little short of 1,00,000 maunds. At this rate it would take five weeks to clear off the grain accumulated on this part of the line.

From a letter which I received from Mr. Hime, the Collector of the Beerbhoom district (see Appendix), it appears that no heavy export of rice need be expected after this rush, so that by the end of this month it may fairly be supposed that the Railway Company will have carried off nearly the whole of this large rice traffic.

The country about the stations on this district has been invaded by a number of foreign merchants from different parts of India, who have been attracted to these parts by the unusually good harvest and the high prices obtainable in Calcutta.

4. The most noticeable accumulations of grain were at Bhulpore and Nalhati.

At Bhulpore bags of rice were heaped up on both sides of the road leading to the station for about a quarter of a mile. There had been a fall of rain two or three days previous to my arrival, and some damage had been done to the rice, but the loss sustained by the merchants could not have exceeded one per cent.

At Nalhati, where the State railway joins the East Indian Railway, great discontent prevailed amongst the merchants owing to the right of preference to through goods from the State railway having been abolished. I learnt from Mr. Hoyle, outdoor traffic inspector of the loop line, who accompanied me over his district, that it was customary to give priority of despatch to through goods; but that owing to several merchants of

Accumulation of grain at stations of the East Indian Railway.

Nalhati having booked their consignments to Azimgunge and then re-booked them through to Howrah, in order to reap the advantage of this preference, the Traffic Manager had put a stop to the arrangement. Through goods are now treated as local goods, and are registered accordingly.

Major Luard, who visited Nalhati on duty some few days after I was there, and who had more leisure to inquire into the actual circumstances of the case, has written a note on the subject, so that it is unnecessary for me to say more than this, that I think, before taking any decisive steps in the case, the matter should have been referred to the Agent for his consideration, and also that timely notice of the change should have been given to the Manager of the Nalhati line; for, however fair this action may have been to the majority of the local merchants of Nalhati, it was hardly fair on the State railway, which is responsible for the through-consignments lying at Nalhati station.

At Burdwan, the whole station compound was filled with bags of rice. The actual amount registered on the 25th January was 58,000 maunds, and consignments were still being brought in. The total amount of rice carried away from the 18th to 24th January was 11,000 maunds; but the register was only cleared off as far back as the 4th December 1876.

5. On the 27th January I met Mr. Hudson, District Traffic Superintendent, at Dinapore. He informed me that in his district (which extends from Nawadi to Mogulserai) he was receiving no empty waggons, and he was able to work off the outwards traffic with the waggons which brought in the inwards traffic. There were no noticeable accumulations of grain in this district, but the station-masters at almost all the stations told me that merchants were not sending their goods to the stations because there was so much delay in procuring waggons.

6. Between Mogulserai and Allahabad the stations were pretty free from accumulations of grain. At Mirzapore, on the 29th January, there were 30 waggon loads of seeds, sugar, &c. waiting despatch. The seeds were for Howrah and Bombay for export, and the rice for Howrah. The station-master informed me that in former years the rice traffic had been inwards coming from Bengal, but this year, owing to the extraordinary demand in Howrah, merchants were exporting it. There was a large quantity of seeds for despatch in the bazaar.

7. On the 30th January, at Cawnpore, I found an enormous accumulation of grain. There were on the ground 100,000 bags, or 2,50,000 maunds, of grain for the Great Indian Peninsula Railway alone, but only a small quantity for Howrah. The gates of the station yard had been closed since the 15th of the month, but they were to be opened again on the 31st, when 100,000 bags of wheat and seeds for Howrah were actually registered for admission. No more consignments were being sent to the Great Indian Peninsula line on account of the block of loaded waggons at Jubbulpore; but as soon as this block was removed, through booking would be resumed.

8. From the 1st to the 29th January the total weight of grain sent from Cawnpore to the Great Indian Peninsula Railway was 2,66,750 maunds, and to the main line during the same time 2,73,400 maunds. The average number of loaded waggons despatched per day during these days was 89.

9. Mr. Carter, the Deputy Traffic Manager, informed me that here and at all stations in his district the strictest impartiality was observed in the despatch of consignments, and that preference was not even given to English firms, who brought some lakhs of rupees to the Company yearly.

10. The principal accumulations in the district, which extends from Cawnpore to Delhi, were at Etawah and Delhi.

At Etawah station there were 6,000 maunds of grain, cotton, and ghee for Howrah, and outside the station about 50 waggon-loads of wheat for Howrah, and other grains for the Great Indian Peninsula Railway.

At Delhi there were in all 180 waggon-loads of goods lying inside the station yard, 400 waggon loads outside the station yard, in the serai, and a very large quantity in the bazaar. From this district the number of loaded waggons sent to Howrah and stations below Cawnpore during January was 2,222, and to the Great Indian Peninsula Railway 568.

11. On the Jubbulpore line there were very large quantities of grain accumulated at the four stations next Jubbulpore, namely, at Kutnee, Sleemanabad, Sehora Road, and Deoree.

The following statement gives the quantity of goods registered at these stations, with an approximate estimate of goods stored in the bazaar and outside the station compound for export.

STATEMENT showing Quantity of Outwards Goods on hand at some of the Stations on the Jubbulpore Line, 5th February 1877.

Name of Station.	Quantity of Goods at Station.	Description.	Where for.	Approximate Quantity of Goods in the Bazaar.	Number of Waggon's supplied in December 1876.	Number of Waggon's supplied in January 1877.	Accumulation of grain at stations of the East Indian Railway.
Kutnee -	5,000 mds. -	Rice, wheat, seed, and mowha flower.	Great Indian Peninsula Railway.	40,000 bags, or about 110,000 maunds.	194	135	
Sleemanabad -	7,000 " -	Grain, seeds, and mowha flower.	"	8,000 mds. -	53	45	
Sehora Road -	25,000 " -	Rice, wheat, teel-seed and lin-seed.	"	10,000 " -	66	61	
Deoree -	42,000 " -	Wheat, seeds, rice, &c.	"	12,000 " -	95	67	

12. At Jubbulpore, on the 4th February, there were 26,000 bags or 65,000 maunds of grain, &c. waiting despatch. Goods registered so far back as the end of November last were only then being sent off. I was told that there were about 20,000 bags of grain for export in the bazaar.

On this date (4th February) there were 227 loaded East Indian Railway waggon's waiting to be taken away by the Great Indian Peninsula Railway. A statement is given in the Appendix showing the number of East Indian Railway waggon's on the Great Indian Peninsula Railway during January; also the number of East Indian Railway waggon's detained at Jubbulpore daily, &c. From this statement it will be seen that—

		The daily average number of East Indian Railway waggon's on the Great Indian Peninsula Railway during January was	-	727	
"	"	sent to the Great Indian Peninsula Railway	-	-	93
"	"	returned loaded	-	-	7
"	"	" unloaded	-	-	74
"	"	detained at Jubbulpore	-	-	192

} 81

13. Thus, during this great rush of down traffic, the East Indian Railway has lost the use of a large number of waggon's, for which (I was informed by the Deputy Traffic Manager) they get no return from the Great Indian Peninsula Railway.

Considering that the stock of waggon's on the East Indian Railway is insufficient to meet the present requirements of the traffic, this large withdrawal of waggon's prevents the Company from working off the enormous accumulation of goods at some of their stations, which otherwise they might relieve to a very great extent.

14. The station-master at Jubbulpore informed me that lately the Great Indian Peninsula Railway had cut down their number of outwards trains from 10 to 6, on account of a deficiency of break vans. They had, however, borrowed some from the East Indian Railway.

He also said that in calculating the loads of their trains, the Great Indian Peninsula Railway took two of the East Indian Railway waggon's as equivalent to three of their own; so that 20 waggon's only were carried away by a Great Indian Peninsula train out of the usual East Indian Railway train load of 30 waggon's. The reason of this is, that the carrying capacity of an East Indian Railway waggon is 10 tons, that of the Great Indian Peninsula waggon being only six tons.

15. Altogether it is clear that the inability of the Great Indian Peninsula Railway to work off the rush of traffic brought down upon them has caused great loss and inconvenience to the East Indian Railway.

Another matter was brought to my notice at Jubbulpore which deserves attention.

The waggon mileage rate on both lines is the same, the carrying capacity of the East Indian Railway waggon's being 10 tons, whilst those of the Great Indian Peninsula Railway are most of them 6 tons.

16. On the 26th January I met the Traffic Manager at Jamalpore. He assured me that there had been no undue detention of East Indian Railway waggon's on the Great Indian Peninsula Railway, and that they were all (with perhaps one or two exceptions) returned within the allotted time. This seems to me to be a very liberal allowance, since the average detention of each waggon is about 10 days.

Grain traffic
on East
Indian Rail-
way.

The following figures give an idea of the present enormous down traffic on the E. I. R. :—

Goods carried to Howrah during December 1876.

	Tons.
Rice	30,000
Wheat	16,000
Other grains	13,000
Pulses	500
Total	59,500

To the Great Indian Peninsula Railway during the same month.

	Tons.
Wheat	7,370
Rice	7,120
Pulses	5,700
Other grains	1,470
Total	21,660

The traffic to the Madras line from the E. I. R. is merely nominal. Out of a daily average of nearly 800 tons of grain booked through on to the G. I. P. Railway during December, not more than 30 tons went on to the Madras line.

The average number of miles run per day (including those run on foreign lines) by covered goods waggons, open-sided waggons, and goods break vans during November 1876, as compared with November 1875, is as follows :—

	November 1876.	November 1875.
	Miles.	Miles.
Covered goods waggons	115 $\frac{1}{4}$	96 $\frac{3}{4}$
Open-side waggons	62 $\frac{1}{4}$	41 $\frac{3}{4}$
Goods break vans	118 $\frac{1}{4}$	102 $\frac{1}{2}$
The average for the whole stock is	90 $\frac{1}{4}$	74

17. In conclusion, I may add that this heavy traffic on the E. I. R. is being conducted with regularity, and consignments are despatched with the strictest impartiality.

At each station a register of goods is kept, in which the dates of receipt and despatch of consignments are shown. This register is strictly adhered to. It is hardly necessary for me to say that the goods rolling stock is inadequate to meet this heavy rush of traffic. At all the stations I visited (and I visited all the stations except those on the Chord and some of the branch lines), I do not think that there was a single station at which the station-master did not inform me that he was in want of waggons.

In the Appendix will be found two letters from the Traffic Manager, E. I. R., to the Agent of the Company, concerning the traffic to the G. I. P. Railway. It will be seen from the latter paragraph of his letter dated 22nd January 1877, that he repudiates the notion that more favour has been shown to the down traffic to Howrah than to the traffic to the G. I. P. Railway.

Indeed, it is evident from paragraphs 12 to 15 of this report, that the E. I. R. has not only given the G. I. P. Railway more traffic than it can deal with, but has also given it a large number of waggons, the use of which it could ill afford to lose.

No. 84.

Nos. 85, 115.

MEMORANDUM by MR. BERNARD, Secretary to Sir Richard Temple, regarding the Conditions and Prospects of the Mysore Province.

Bellary, 13th February 1877.

Mysore
Province.

Sir Richard Temple, at the request of the Government of India, visited Bangalore, and conferred with the Chief Commissioner, Mr. Saunders, C.B. By the courtesy of Mr. Saunders, he met all the officers of the Civil and Public Works Departments at the headquarters of the Mysore Administration; he met a deputation of the chief traders of Bangalore, and he travelled through the Bangalore and Kolar districts in company with the Commissioner, Colonel Pearse, and with the Deputy Commissioners, Mr. Ricketts and Mr. B. Krishna Iengar, C.S.I. Near Bangalore, and also in the interior of the

Bangalore and Kolar districts, Sir Richard Temple was able to inspect several gangs of relief labourers, and also some of the charitable relief houses. Mysore Province.

2. The province of Mysore consists of eight districts, with a total population of five millions. The population, the area, the estimated average out-turn of the current season's harvests, the number of persons on relief works and on charitable relief, and the proportion borne by the persons on relief to the whole population is shown for each district in the following statement. The per-centages of the population that are in receipt of relief does not, it will be seen, vary precisely with the extent of failure of crop. In some cases explanation of the variation can be readily given. For instance, the Tûmkûr district sends away annually some 30,000 labourers to the coffee districts. This year the coffee emigration was far larger than usual, and so fewer people were thrown upon the works. A similar explanation applies, in a less degree, to the Chittaldroog district. Many of these labourers are, however, now returning, because the coffee crop too is suffering from the drought, and many of the people will probably come upon the relief works.

Name of District.	Area in Square Miles.	Population.	Proportion of Crops saved.	Number on Relief Works in beginning of January.	Number on Charitable Relief in beginning of January.	Per-centage of the total Population who are thus receiving Relief.	Remarks.
Bangalore - -	2,914	828,000	2 annas	12,983	11,527	3 per cent.	* In the Kolar memorandum the proportion of the crop saved was taken at 2 annas, which was the Deputy Commissioner's estimate. The present figures give the estimate formed by the Commissioner and the Chief Commissioner.
Kolar - - -	2,577	618,000	3* "	8,500	3,763	2 "	
Tûmkûr - -	3,606	632,000	2 "	8,900	2,100	1½ "	
Mysore - - -	4,127	943,000	8 to 11 "	5,560	3,699	1 "	
Hassan - - -	3,291	669,000	8 "	9,746	4,249	2 "	
Shimoga - -	3,797	499,000	9 "	1,236	1,546	1½ "	
Kadur - - -	2,294	334,000	4 "	6,296	1,480	2 "	
Chittaldroog -	4,471	531,000	2 "	6,000	1,780	1½ "	
Total - - -	27,077	5,054,000	—	59,301	30,088	1½ per cent.	

3. In the Hassan and Shimoga districts, which lie close to the Western Ghâts, there was some rainfall, and there was a moderate harvest. In the Mysore district the rainfall to the south and the Cauvery irrigation to the north have brought up the average yield of the district. But over the rest of the province there has been grievous failure of rain; nearly all the rain-fed tanks in the northern districts are dry; and the "dry" crop has, for the most part, failed. The disastrous effect to the country from the failure of the tanks may be judged from the fact that Mysore possesses 16,000 irrigation tanks, and the "wet" or irrigated land is one-sixth of the whole cultivated area of the province. This failure has affected two-thirds of the Mysore province, while tracts inhabited by more than two millions of people must be held to be severely distressed.

4. The difficulties of the present year are aggravated by the facts that the crops of the previous year (1875-76) were poor, equal to about one-third of an ordinary yield all over the province. The crops of 1874-75 were, however, good and full. So bad had the failure of the previous year been in some parts, that in July 1876 water began to fail in parts of Chittaldroog. Large importations of grain into Bangalore by railway began in October; but it was not until the end of November, when the latter rains (north-east monsoon) had absolutely failed, that relief operations were generally begun throughout the province.

5. The grain markets of Bangalore and of the Mysore province are well supplied. Most of the grain exposed for sale is foreign grain that has come into Bangalore by railway from Madras and from the west coast. Private trade began early in the autumn to bring grain into Bangalore, and has been very active ever since. The grain brought into Mysore by railway during the last two months is returned as follows:—

During the Month of	Carried into		
	Bangalore.	Other Mysore Stations.	Total.
	Tons.	Tons.	Tons.
December 1876	10,570	1,344	11,914
January 1877	10,820	2,588	13,408

Mysore
Province.

The grain dealers say that this importation will continue until June (or July) so long as there is grain at Madras or anywhere else to come. They say that their only difficulty is the delay which sometimes occurs in getting consignments off from Madras by train. It seems that the Bangalore dealers despatch daily some hundreds of cart-loads of

* NOTE. — When Sir Richard Temple visited Pennnekonda, the southern division of Bellary, he found that its three taluks (250,000 population) drew the whole of their supplies from Bangalore. But a part of the Chittaldroog district gets supplied from Bellary.

grain into the districts of the interior. This grain goes into the Bangalore, Tûmkûr, and Chittaldroog districts. Parts of the Bellary* and Kolar districts also draw their supplies from Bangalore. The Mysore district lives at present on its home produce, while the districts of Hassan, Shimoga, and Kudoor are subsisting on their own produce

eked out by food imported from the western coast.

These three districts last mentioned have large highland

tracts abutting on the Western Ghâts, wherein the rainfall has been good.

6. The traders say that the local stocks will not come out into the market until the tanks fill in June or July next, and the next crop is thereby assured. Until that time the demand for imported grain will continue. Indeed, in the month of May, when the ports on the west coast are practically closed, new demand on the Bangalore source of supply may arise from districts which are now fed from the west. There are excellent bridged roads all over the country, and there is abundance of carts and draught cattle, so that supplies can be carried to whatever tracts require and can pay for them.

7. So far as the facts can be ascertained tracts containing $2\frac{3}{4}$ millions of people are now drawing grain from the railway between Bangalore and the eastern border of Mysore; probably nearly two-thirds of this population may be consuming old stocks, and thus perhaps 900,000 people may require imported grain. An import of 13,000 tons a month would support this population, and the railway is already doing more than this. But this calculation would show that Mysore will continue to draw grain largely from Madras by railway up to an average of about 430 tons daily. So that the Mysore demand upon the powers of the railway is and will remain even larger than was supposed at the time when the proposal for doubling the Madras Railway to Arconum was considered and was recommended by Sir Richard Temple.

8. The Madras Government desired Sir Richard Temple to ascertain whether Bangalore could not draw some of its supplies from the port of Negapatam *viâ* the Southern Railway; and they stated that freights from Calcutta to Negapatam were the same as to Madras, while the grain rates on the Southern Railway had been purposely lowered, so as to make it as cheap for Bangalore dealers to import by Negapatam as by Madras. The dealers, when questioned, replied that they had not heard of the reduction of the railway freight rates by Negapatam, that they had correspondents at Madras, but not at the southern ports, and that there was no great imported store at Negapatam for them to draw upon as there was at Madras. They admitted, however, that if it were demonstrably cheaper, and as speedy to get grain *viâ* Negapatam, that route would no doubt be taken.

9. Prices of grain are easier than they were; thus at Bangalore the prices have ranged:—

	Number of Seers sold for One Rupee.		
	Common Rice.	Râgi.	Cholum or Jowâri.
Last fortnight of December -	6 $\frac{1}{4}$	7 $\frac{1}{2}$	7
First fortnight of January -	6 $\frac{1}{4}$	8 $\frac{1}{4}$	8 $\frac{3}{4}$
Second fortnight of January -	7	9 $\frac{1}{2}$	10 $\frac{1}{4}$

The prices in the interior of the affected districts, for instance, in Tûmkûr and Chittaldroog, range from 10 to 15 per cent. dearer. In the Kolar district, through which the railway passes, prices are much the same as in Bangalore.

10. The memorandum on Kolar shows that in this district a large number of relief works are ready, and that many of these works are actually open. In the Bangalore district, as also in Tûmkûr and Chittaldroog districts, relief works are open; and the Chief Commissioner has now issued orders that relief works shall not be stopped in tracts where they are really needed by reason of the temporary failure of money allotments. All the work is done at ordinary piece-work rates, and the officers of the Engineering

Department co-operate most fully with the civil officers in carrying out relief works. The relief works in progress are mainly tanks, on which so much work has to be done all over the country before the many chains of irrigation tanks are all brought up to the required standard of completeness. All the work, therefore, that is being done is undoubtedly good and useful work. Mysore Province.

11. Sir Richard Temple inspected the gangs on two great works near Bangalore, namely, the waterworks tank and the Dharmboody tank. One, if not both, of these works would be undertaken and pressed forward in ordinary years. Among the thousands of labourers on these two works Sir Richard Temple did not detect any persons who seemed to be in a reduced physical condition, though he saw considerable numbers of men and women who appeared well able to take care of themselves without State aid. Sir Richard Temple also inspected several gangs on large and small works in the interior of the Bangalore and Kolar districts. On a tank near Doodha Ballapore, in the Bangalore district, he observed several men who were in a very reduced physical condition; and he found a very few cases of the same kind in a gang at Begapilly in the Kolar district. In most of these cases it turned out that the labourer was the only bread-winner for a family of six or eight persons, and so he was unable to earn enough to keep his relations alive and also to maintain himself in a fit condition for hard labour. Such cases seem to show that the village relief organisation should be worked up so as to find out and relieve very destitute families of this kind. Unless such village relief be promptly set to work, there is risk that individuals belonging to such families may perish.

12. No single large relief work, on which several thousands could be employed, has yet been sanctioned in Mysore. So long as good useful work on irrigation tanks is being done at piece-work rates, perhaps it may not be necessary to begin any large work. But if hereafter very large bodies of people should require relief employment, the Mysore Government has ready two excellent schemes, if its means allow of its embarking upon either of them. These schemes are, firstly, the railway from Bangalore to Mysore (84 miles) which has been surveyed, aligned, and for which the project is in every respect ready. The line, however, does not pass through the worst famine tracts; but the railway would be a very great boon to the province. The second scheme, which has also been thoroughly prepared, is the Valase reservoir in the Chittaldroog district, which would cost 15 lakhs of rupees and irrigate 50,000 acres. If, therefore, large works are required, the Mysore Government has them ready for immediate commencement.

13. Outdoor relief in the shape of cooked food (ragi pudding and a little curried vegetable) is being given to about 30,000 persons throughout the province. Sir Richard Temple visited some of these relief houses in Bangalore, and another at Bagapally in Kolar. For the most part the paupers seemed to be quite fit recipients of charitable relief. At the Bangalore relief house were some few cases, principally travellers, in which hunger must have caused severe suffering. When the system of rural and village relief is in working order, such cases will probably not recur. Sir Richard Temple suggested that at large centres like Bangalore, Doodha Ballapore, Kolar, and at the taluk head-quarters indoor relief should be given at relief camps on the Madras system. The many chuttrums (serais) on the roads would probably serve the purpose without building special sheds. Hereafter, when distress becomes keener, it may be necessary to have a relief house in every hooblee (subdivision of a taluk) throughout the worst parts of the severely affected districts.

14. The Chief Commissioner has issued orders that all village officials shall relieve at the Government expense, and bring to the nearest relief officers, any person, whether a resident or a wayfarer, who may be in dangerous distress. With the careful supervision which will, under Mr. Saunders' orders, be given to this matter, the effective organisation of village relief will doubtless be soon accomplished.

15. It does not seem probable that there will be serious dearth of drinking water in the Mysore province, unless such difficulty should occur in Bangalore itself. For the plough and draught cattle also there is not much apprehension, provided the usual rains come in April and May. Some mortality from want of fodder has already occurred, and much more must, it is feared, occur among the poorer sorts of cattle.

16. In consideration of the extreme gravity of the scarcity and of the fact that the present is the second consecutive year of failure of crops, the Chief Commissioner has promised remission of eight annas (one half) of the "wet" assessment, and six annas (three eighths) of the "dry" assessment to those ryots whose crops have wholly failed.

MEMORANDUM respecting the Kolar district of Mysore.

Kolar
District
(Mysore).

When Sir Richard Temple was at Mudanpally, a subdivision of Cuddapah, on the 1st and 2nd February, he learnt that one of the roads thence to Bangalore lay through Kolar. As this is considered one of the most distressed districts of Mysore, save only Tûmkûr and Chittaldroog, he desired that its condition and the character of relief there should be ascertained on the spot. At the same time Sir Richard Temple had engaged to meet certain English officers and native gentlemen of North Arcot on the road to Gudiatum, which passes through British territory only. He therefore sent me, his Secretary, by way of Kolar to confer with the district officers there. I met on the road the Amildar (tahsildar) of Sreenarasapurum. At Kolar, Mr. B. Krishna Iengar, C.S.I., who has been Deputy Commissioner of Kolar for twelve years, showed me over the nearer relief works, and gave me every information in his power. He introduced me also to the Amildar and the medical officer of Kolar.

2. The Kolar district contains an area of 2,500 square miles and a population of 600,000. In physical features, in manner of agriculture, and in condition of its people it resembles very closely the upland (plateau) taluks of Mudanapally (South Cuddapah), and Palmonier or Punganoor (North Arcot). The elevation of the plateau is the same; there are the same granite hills and rocky gorges, and the same plains with a soil of decomposed granite schists. Kolar, however, grows more exclusively ragi than do the two border British districts. Kolar grows ragi as a dry crop, and produces very little cholum (jowari). Kolar abounds in tanks, every one of which is rain-fed, and is consequently dry this year. The Madras Railway traverses the south of the district, which is supplied with abundance of good metalled and bridged roads.

3. The average rainfall of Kolar is about 30 inches. The harvest of 1874 was on the whole good. Last year (1875) the rainfall was short (15 inches only), and the yield was estimated at six annas (more than one third of an ordinary harvest). But this season (1876-77) the rainfall has been only $10\frac{1}{2}$ inches; the tanks are all dry. The total yield of the district for the current year is estimated at only two annas (one-eighth of an ordinary crop); in some tracts, for instance Sreenawasoorum, the yield is perhaps only one anna; but the irrigated parts in the south bring the total average up to two annas. Kolar generally produces much more ragi, which is its * staple grain, than its

* NOTE.—Some cholum (jowari) is produced as an irrigated crop in the black soil taluks to the north-west. The areas under the chief food grains in ordinary years are—
Rice - - - - 46,670 acres.

Ragi and other food grains 391,814 „

population requires, and it exports largely to Bellary and to the British coast districts.

In ordinary years large stocks of ragi are kept in underground granaries ("peos"). But in 1874 the October floods got in to many of these "peos," and the grain began to spoil, consequently many holders of grain sold off all their old ragi for export, and it left the district.

And thus the people of the Kolar district entered on 1875, a year of short harvest, with comparatively small stocks, which were still further depleted by the time the failure of 1876 declared itself. Still the people of the district were still living on their old stocks up to about October last. In ordinary years the ryots of Kolar are well off; few of them are in debt. The country is entirely ryotwari, and zemindars (intermediate holders between the Government and the ryots) are unknown.

4. The grain markets at Kolar and at the chief towns are well supplied. But all the grain now exposed for sale is foreign grain, imported by railway. What stocks the richer ryots may possess are now held, and will be held till rain comes. So far as we could, we tested this by visiting some of the grain shops, and questioning the chief traders of three different castes in the town. They showed us their different kinds of grain, and said it all came by railway, the rice and pulse from Madras, and the ragi from Salem and Coimbatore. They declared that the ryots would not sell their stocks, but they were quite confident that the trade would supply all demands both of Kolar town and of outlying marts. There were plenty of carts to do the business. But they said there was fear lest the railway could not supply them quickly enough, as there was delay about getting off consignments from Madras. I told them that the doubling of the line to Arconum would mend matters in this respect.

5. Mr. B. Krishna had previously given information identical with the account given by the traders whom we questioned at their shops. He explained that each large town (kusbah) procured its own supplies from the railway, and that village dealers carried grain from the kusbahs to the weekly markets in the interior. He had, as yet, not heard that the supply had anywhere fallen short. He believed and had all along thought that private traders would supply the country, so far as the railway could enable them to do

so. At one time there was a talk of organising the country carriage for the traders, but they said such interference would only make carts more expensive, and so the proposal dropped. The price of grain at the present time is—

Kolar
District.
(Mysore).

Common rice	8 seers per rupee.
Ragi, home grown	8½ "
Ragi, foreign	10 "

The Kolar ragi is a "dry" crop, whereas Madras ragi is mostly grown on irrigated lands. The dry ragi is a harder more valuable grain than the irrigated (or "nath") species, and is easily distinguishable therefrom. Prices in the beginning of December ruled at 6 and 6½ seers. The comparative cheapness is due to the large importations from Madras, where grain is now growing much cheaper.

6. Distress first began in September, and for some months it was relieved by private charity only. In the month of November relief works were opened, and at the present time 382 different works, estimated to cost Rs. 1,30,000, are either open or ready to be opened, as soon as relief is really required. Only two out of all the relief works proposed by the Deputy Commissioner are road works. The rest are tanks or irrigation works of some kind. These works are spread over all the ten taluks of the district. On them are now employed 8,437 relief labourers, besides about 3,000 persons who are employed under the executive engineer on the ordinary irrigation and road works of the district. The Deputy Commissioner anticipates that if good rain falls as usual in March and April, then the largest number of relief labourers on his hands at one time will not exceed 12,000 or 15,000 in all. If the spring rains should be withheld, matters will become much more serious.

7. All the relief works, with one exception to be noticed hereafter, are done and paid for on the piece-work system. It almost all consists of earth-work, chiefly on the repair and deepening of tanks. The work is done under the ordinary revenue staff, which consists of—

- (1.) The Amildar and his establishment of clerks and gomashtras for the whole tahsil (or taluk).
- (2.) The Sheikdar, who presides over a hooblee, or subdivision of a tahsil, containing about seven to ten thousand persons. The Sheikdar gets a salary of Rs. 10 to Rs. 20 a month according to his grade.
- (3.) The Patel, who is the head ryot of the village or cluster of small villages, and has to help him the "shanbog" or village accountant.

The responsibility of a patel in regard to a relief work varies according to the size of the work, its distance from paid supervision, and the respectability of the patel. A head cooly on 3 annas a day, who can keep account, is allowed to each patel, while the shanbog is employed on revenue work. There is one head cooly, who can write and read, on 3 to 4 annas, over every fifty labourers. The head cooly measures the work daily, and payment is made according to the work done, either by the patel or by the sheikdar, or by a tahsil officer who goes out for the purpose. The rate of piece-work varies with the hardness of the ground and height of lift. Labourers are required to bring their own tools. Labourers of the Wuddah caste, who do the stone facing for the tank banks (bunds), bring their own little stone carts. The rates for earth-work yield about 2 annas a day to an adult male who works hard. The Wuddahs who work in stone earn a little more. The Deputy Commissioner said that the piece-work system was well known to all the people, who in ordinary years repair their tanks on that system, and the people would at once detect and complain of any attempt of a head cooly to make short payments for the work done.

8. On a certain work in Kolar town the Deputy Commissioner was obliged, by the circumstances of the work, to pay daily labour, and then he reduced the daily wages to 1½ anna a day. There was some complaint at first that the rate was cruelly low. But he adhered to his decision; the people worked on, and when a part of it was done and he was able to measure it up roughly, he found that it had been cheaply done. The relief labourers whom I saw to-day on this particular work appeared to be sufficiently well nourished. But I did not see very many of them, as to-day is a festival.

9. Something had been said at Mudanapally about the undesirability of tank work for the employment of relief labour, and it had been said that the tanks were managed by the engineer department, and that they could not be touched without engineering guidance. The Deputy Commissioner of Kolar, Mr. B. Krishna Iengar, from the first preferred tank work to any other relief work. He said that all over the country there were tanks which wanted repair or which had been breached in former years; he urged that their repairs could be done by task-work and without engineering supervision. If

Kolar
District.
(Mysore).

he heightened the bund (bank) he widened and occasionally heightened the escape-weir (calingula), and in some cases he put in an extra irrigating sluice (tooboo) to carry water off to higher lands from the heightened level of the tank. He urged that by deepening a tank he held more water in it, and so made the supply for the old "ayakat" (irrigable area) more secure. Wherever he deepened a tank, he strengthened the bank (bund); and in some cases he took off and relaid the boulders which rivet the sloped water-face of the bund (bank). If he had water left in the tank, then he used it to puddle the face of the bank; but if not, he was obliged to forego puddling, as it cost* him so much to carry the water to the bank.

*NOTE.—I observe that in his relief works Mr. B. K. Iengar foregoes puddling, and tamping or consolidating metal, as such work would greatly add to the cost of his relief. He looks forward to doing this in the rainy weather from ordinary funds, when water will be everywhere available.

10. I visited a large tank which had been breached many years ago, and had since been unused. This tank, distant 3 or 4 miles from Kolar, was the first big work undertaken near Kolar. Save in Kolar town no other relief work was opened within six miles. Rs. 3,000 have already been spent upon it, and Rs. 1,500 more will have to be spent. It will irrigate about 250 acres of now uncultivated land. The bank is of earth, part of the front is puddled, and it is riveted with carefully packed boulders on a slope of one in one and a half. A new high-level irrigating sluice has been put in, and the old low-level sluice is being repaired. The waste weir (calingula) is being widened, as the tank bank is somewhat higher than before. I could see all the places whence the earth, paid for by measurement, was taken out. Out of the 800 labourers usually on the tank, only about 50 were at work to-day, because it was a festival. And the Deputy Commissioner explained that the workpeople were not obliged to come, but if they did no

*NOTE.—Both at Kolar and in Bangalore the baskets used by the women for carrying earth on relief works seemed about double the size of the baskets used on relief works I have recently seen in British districts.

C. B.

work of course they got no pay. We came back from the tank by a new road 19 miles long, which had been begun in better times by the neighbouring ryots at their own expense, and which is now being finished as a relief work. I saw that the earth-work on this road also was being paid at piece-work* rates. The masonry culverts were charged against the ordinary maintenance grant from local funds.

11. Gratuitous relief is being given at the Government expense at ten places. Cooked food, one meal of (half a seer) ragi, with a spoonful of pulse soup, is given to all but high caste recipients, who are allowed to take away uncooked food. In Kolar town 354 persons are being thus relieved daily. At the nine relief houses in the interior an average of 1,238 persons daily are receiving a meal of cooked food. From such persons no work is at present exacted. They take their meal and go to their homes. I visited the Kolar relief house to-day. About 200 persons were there. All the people were infirm, sickly, or else quite young children. They seemed to be fit recipients for relief. None of them bore on their persons marks of emaciation, except two or three children, who had or were just recovering from small-pox. Up to the month of December the relief in Kolar was paid for by private charity. The Hindu managers never sent any applicants away empty, and so the numbers relieved were much larger than they are now. Now that the gratuitous relief is charged to the Government, applicants are sifted before a ticket for relief is given them.

12. Seeing that so little was spent on relief in this district, compared to the adjoining subdivisions of Pennekonda and Mudanapally, though the population is about the same—600,000 in each case—I made particular inquiries whether the Deputy Commissioner and his officers thought that enough relief was given. The amildar of Sreemwaspoorum, whom I just met, the Deputy Commissioner, and the Kolar amildar seem to be all very

NOTE.—I have since seen in Bangalore Mr. S. Venkut Verada Iengar, who was in charge of Kolar district during December and January, while Mr. B. Krishna Iengar was away. He too expresses full confidence that people did not die of starvation during those months. Colonel Pearse, Commissioner of the division, also endorses the opinions expressed on this matter by his subordinates, the Deputy Commissioners of Kolar.

C. B.

5th February 1877.

revenue collections are slack.

confident that there are no deaths from starvation, and that the people who do not come to the works or to the relief houses are getting along somehow. Every patel (village headman) and shanbog (village accountant) in the district has received clear orders to relieve any person who may be in danger of starving within their jurisdictions, and to send the bill in to the amildar. As yet no patel in the Kolar taluk has sent in any such bill, though each amildar has an allotment of money to meet such bills. No funds have been placed with the patels for the defrayal of charges of this kind, and the patels just at present do not get their full incomes now that the land It seems that there is need for special steps to ensure and

supervise the fulfilment of the orders given to the patels on this subject, or else people may be left unrelieved and may die in remote villages.

13. Occasionally the Deputy Commissioner has heard allegations of deaths caused in part by hunger; for instance, two people who died in the dispensary were said to have been reduced by want. Now that cholera is about in the district sudden deaths occur, and they are put down sometimes to cholera and sometimes to hunger. I called on Miss Anstey, a lady missionary, who speaks the Canarese language very well, and takes the closest interest in the people. She said that stories had reached her of deaths from starvation; but she only returned to Kolar 10 days ago, and no such cases had come under her own notice. She believed, however, that scarcity of food must have accelerated some deaths in a time like this.

14. I am particular about this, because the scale of expenditure in Kolar contrasts strongly with that in the adjoining taluks of Bellary and Cuddapah, and I wished to exhaust possible sources of information as to the sufficiency of Kolar relief measures.

* NOTE.—I heard incidentally from the lady missionary, Miss Anstey, mention of the Deputy Commissioner's private charity, and I then, with difficulty, extracted from him, as bearing on this point, that his cash subscriptions to relief houses amount to Rs. 325 a month, besides the cooked food he distributes to mendicants at his own house every evening. His salary is Rs. 1,300 a month.—C. B.

The Deputy Commissioner has been twelve years in command of this district; he knows the people, they know him, he is their fellow-countryman, and is accessible to them at all times; personally he is kind and charitable.* He says that if there were starvation, he believes he would be the first to hear of it. He has given strict orders and makes constant inquiries on the matter. He is aware that many of his district people (perhaps 3,000 in all) go

over to works in Bellary and Mudanapally. The authorities of those districts have written to him; and he has explained that the people have works open close to their homes; but they not unnaturally prefer a fair daily wage and light work to piece-work pay only. If piece-work were exacted over the border, then he believes that none of the Kolar people would trouble the Bellary or Mudanapally relief works.

15. In respect of gratuitous relief I could see that a good deal of selection is now exercised. Outside the missionary's door this morning I saw some people asking alms; and on inquiry I ascertained that two out of these had been refused admission to the relief kitchen, because they had relatives competent to support them. I saw the same sifting process going on outside the relief kitchen. Possibly a Native Collector of 12 years' experience, acting through subordinates whom he knows and trusts, can check indiscriminate relief better than a European officer could do. And my impression, formed on what I have seen and what I have ascertained by careful questioning, is, that the restrictions on relief exercised in the Kolar district are not excessive or dangerous to the safety of the people; although I fear that here, as elsewhere, one or two occasional deaths, caused indirectly or partly by hunger, may have occurred.

16. The Deputy Commissioner showed me a letter he had received this morning from Major Gompertz, Deputy Inspector-General of Police, who is at present on tour in the north of the Kolar district. The purport of that letter (dated 2nd February) is, that the people there (taluks Gudibunder and Bagapilly) "are better off" than further south towards Bangalore, and "though many are suffering from scarcity, yet there are no signs of absolute famine." He writes further: "I have noticed that only a few appear emaciated, though many I am told are reduced to mixing devdari leaf in their food." This testimony from an officer outside the department is satisfactory. The devdari leaf, the Deputy Commissioner tells me, is eaten as a vegetable by many classes, and Mr. B. Krishna Iengar at times eats it himself.

17. The Deputy Commissioner tells me that the Chief Commissioner has decided to remit one half of the land revenue on "wet" crop lands in cases where the water-supply has failed, and to remit $\frac{2}{3}$ (six annas in the rupee) of land revenue on "dry" crop lands. He explains that never before in the history of Mysore, so far as his knowledge goes, has remission been granted on "dry" lands. But this year is the second bad season the people have had one after another; this time the failure has been grievous beyond all memory or expectation, and so the grant of a partial remission on dry crop land is a fair concession. The abkari (toddy excise) revenue contractors have had no remission granted to them, but the receipts of still head duty on spirit has decreased somewhat.

18. The water-supply in tanks has failed, and many wells also are failing. But in all tanks which are being improved by relief labour the Deputy Commissioner digs a hole down to some spring, so as to keep drinking water for the neighbouring cattle and people. He is also deepening and clearing by relief labour many wells and bowdis (large cistern-shaped wells) near to public road. He does not expect there will be actual dearth of water.

Kolar
District
(Mysore).

Kolar
District.
(Mysore).

19. But about the future of the cattle there is cause for anxiety. Many must have died, and the Deputy Commissioner is aware that ryots have sold away good cattle for merely nominal prices. The Chief Commissioner has opened the reserved forests and the ryots are allowed to take away grass thence free. As yet these forests have not been opened to cattle for grazing. The Deputy Commissioner thinks that there may be some little fodder left, rági straw, cholum straw (kurbi), and jungle grass; for the ryots will not yet take the trouble to prepare prickly pear for their cattle. Yet the Deputy Commissioner, his locum tenens in December last, and his assistant have each of them in different parts of the district demonstrated to the people by experiment on a large scale that the prickly pear, when properly prepared, is eaten by and supports cattle. The Kolar taluk, the Malwagul taluk, and other parts of the district abound with prickly pear; so there is an important resource still available for the cattle.

No. 86.

Nos. 87. 115. XXXV.—MINUTE by SIR RICHARD TEMPLE.

Bellary, 14th February 1877.

Mysore re-
lief

In forwarding two memoranda of facts ascertained on the spot regarding the famine in the Mysore province I desire to acknowledge cordially the courtesy with which the Chief Commissioner of Mysore and his officers afforded me valuable information which had an important bearing on the work of my mission to the Madras Presidency.

2. I think there can be no doubt that the relief operations in Mysore have been much more economically conducted than in the neighbouring districts of Madras. The carefulness exercised in this respect is very creditable to the local authorities in Mysore.

3. At the same time it appears to me most important that there should be a house-to-house visitation throughout the more severely affected tracts, so that cases of severe distress may be found out, and may receive timely succour. The existing organisation of village officials, supervised by salaried servants of Government (the sheikdar in his hobli and the amildar in his taluk) is the best that could be desired for effectively carrying out systematic village relief. The Chief Commissioner, moreover, is ready to strengthen the supervising staff where additional help may be absolutely needed. An active and well-directed system of village relief is especially necessary to prevent occasional cases of disaster in districts where, as in the Mysore province, economy in relief expenditure has been carefully practised from the beginning.

4. I communicated unreservedly to the district and other superior officers my views regarding the situation in the tracts which I visited, and the result of my experience of famine affairs in other parts of India. All the civil and engineering officers of Mysore whom I met evinced a humane zeal to save human life and to mitigate the present calamity, together with a careful regard to the financial interests of the Government under which they are serving.

No. 65, dated Bellary, 14th February 1877.

From the SECRETARY TO SIR RICHARD TEMPLE to the SECRETARY TO THE CHIEF COMMISSIONER OF MYSORE.

Forwarding
Nos. 84-6.

By direction of Sir Richard Temple I have the honour to submit copy of a minute recorded by him, together with two memoranda regarding the scarcity in the province of Mysore. Sir Richard Temple desires to tender his cordial acknowledgments for the courteous reception he received, and for the valuable information he gained, while in the territories of Mysore.

2. A copy of Sir Richard Temple's minute, regarding the effective organisation of village relief, is also forwarded in case the Chief Commissioner should wish to peruse it. The suggestions it contains are believed to be equally applicable to Mysore.

No. 88.

No. 66, dated Bellary, 14th February 1877.

No. 115.

From the SECRETARY TO SIR RICHARD TEMPLE to the ADDITIONAL SECRETARY TO THE
GOVERNMENT OF MADRAS.

His Grace the Governor of Madras was pleased to express to Sir Richard Temple a view that it would be advantageous if the Bangalore grain demand could be supplied, partly at any rate, by Negapatam and the Southern Railway, in order that the pressure on the Madras port and the eastern sections of the Madras Railway might be relieved. Grain supply.

2. Sir Richard Temple inquired into the matter at a conference held with the Bangalore traders in presence of the Chief Commissioner and his principal officers. The results of that inquiry will be found embodied in the enclosed extracts (paragraphs 5 to 8) from a memorandum of the facts ascertained by Sir Richard Temple regarding the scarcity in Mysore. No. 84.

No. 89.

MEMORANDUM by Capt. W. S. S. BISSET, R.E., on special duty, of the Proceedings of a Meeting held at Bombay on the 9th February 1877, between Colonel H. F. HANCOCK, R.E., Consulting Engineer, Mr. HENRY CONDER, Traffic Manager, Great Indian Peninsula Railway, and himself. Nos. 90. 115.

Bellary, 14th February 1877.

Captain Bisset submitted to the meeting extracts from the books at Raichore, showing that, although Mr. Conder had been good enough to order increased attention to the arrangement of trains sent into Raichore, there had been no change for the better up to the 7th February. Railway grain traffic arrangements.

Captain Bisset mentioned further, that in his opinion this appeared to be mainly due to the want of free communication between the two local traffic officers at Raichore; but that at a meeting at Raichore on the 6th February, arrangements for mutual accommodation had been made, as a result of which it was to be hoped that the working of the traffic at Raichore will be much simplified.

Mr. Conder was good enough to confirm the following portions of the arrangements come to at Raichore on the 6th, and to state that he had recently renewed his orders for increased attention to the following points:—

- (1.) To place all Raichore waggons together;
- (2.) To put all waggons for transshipment at Raichore together;
- (3.) To deliver both these classes of waggons at Raichore by a separate train when this is possible.

2. Captain Bisset then submitted a fourth proposal, viz.:—

That the waggons for the Madras Railway should be arranged before delivery at Raichore as much as possible in station order, so that the shunting at Raichore might be reduced as much as possible, and the trains forwarded after simply changing engines, or after a few shunts.

Mr. Conder represented that this involved his Company in work which fell properly on the junction station at Raichore; and on this being allowed as correct, he replied to a request for its performance as a favour, that he doubted the necessity of the work, that he could not undertake to detain trains at roadside stations for such work, but that he would endeavour to obtain attention to the arrangement of waggons in station order as far as was possible without additional shunting.

He further promised to consider the possibility of his doing the work thoroughly at one of the larger Great Indian Peninsula Railway stations on the condition that his Company were paid the cost of the shunting.

3. The Traffic Manager of the Madras Railway proposes to place one of his assistants at Raichore during this pressure, and to await further experience before making any proposals involving payment to the Great Indian Peninsula Railway. But if after experiencing the benefits of the improvements already agreed to, the Madras Railway Company find it impossible to pass the increased traffic through Raichore without this further assistance, it will be necessary for them to ask for this further assistance, and for the agents of the railways to arrange the terms under which the work shall be done.

Mr. LeMesurier was kind enough to assure me that he would consent to any such proposals for facilitating the delivery of grain to the Madras Presidency.

Railway
grain traffic
arrange-
ments.

Loading of cotton waggons with
through grain.

The numbers averaged only

NOTE.—The arrivals of these
waggons on the 8th, 9th, and 10th
February were afterwards found to
be 4, 14, and 16 respectively.

Mr. Conder mentioned having recently repeated his orders to avoid loading cotton waggons for stations beyond Raichore, and he assured the meeting that under these orders the loading of such waggons would be practically stopped.

5. Captain Bisset represented that the Madras Railway should be trusted to work from Raichore up to its full powers with through waggons only, and that if it does this there can be little or no room for grain re-booked at Raichore.

Mr. Conder stated that during the recent cessation of through booking every effort was made to discourage the booking of grain to Raichore, and that it was explained to merchants offering grain for conveyance to Raichore, that the cessation of through booking was only temporary, and that by waiting a few days they could book their grain direct to its final destination.

The grain booked to Raichore has been during the last few days unloaded in the new sidings, which are found very convenient for this purpose.

It is to be hoped that the local booking may not continue heavy, as it causes increased work to the staff at Raichore, besides involving longer detentions of the rolling stock.

6. Captain Bisset pointed out that, after the last suspension of through booking, there had been an interval of two days (27th and 28th January) during which the Madras Railway had not had full work.

Mr. Conder stated that he had never suspended the transmission of through-booked waggons from the East Indian Railway or other railways beyond his own line; that he had constantly in view a continuous supply of waggons to Raichore, and that no fears need be entertained of any short delivery at present.

Mr. Conder further intimated that he had resumed through booking for the Madras Railway on the 8th February; that the demands for carriage were not now so pressing; that the accumulations at the stations were now much reduced, those at Nagpore, Moortizapore, and Akola being the only ones of any magnitude; but that he saw no reason for supposing that the supply would not keep up to 150 waggons a day for some time yet.

7. Captain Bisset submitted a memorandum showing the increased work done by the Madras Railway at Raichore, and expressed an opinion that further discussion on the question of limitation was at present unnecessary, as with the additional engines so

Limitation of despatches of through
waggons for Raichore.

soon to be placed at the service of the Madras Railway, their carrying powers would probably be fully equal to removing all the waggons delivered by the Great Indian Peninsula Railway.

Colonel Hancock, however, made some inquiries for his own satisfaction on this point.

Mr. Conder reminded the meeting that he had not pressed more waggons into Raichore than the Madras Railway Company had asked to be sent there; that in loading up all the waggons he had at his disposal he had acted according to his usual practice; and that, on finding that there were no more waggons to spare, and no accommodation for more at the stations on the road, he had suspended further booking to the Madras Railway.

Mr. Conder assured the meeting that, according to his experience, the delays or irregularities which Captain Bisset seemed to fear from very heavy despatches followed by temporary suspensions of through booking are not more objectionable to the dealers than any attempt to limit the despatches would be.

Captain Bisset mentioned the following reasons for his belief that as regular a despatch should be maintained as possible:—

- (1.) Rolling stock would be economised.
- (2.) The train service would be more regular.

- (3.) Some approach to regularity would be attained in the interval between the consignment of goods and their delivery at their destination.
- (4.) Traders could make all their arrangements for supplies with much more certainty and economy if such regularity could be attained.

Railway
grain traffic
arrange-
ments.

There was no conclusion arrived at on the subject, except that with a smaller amount of rolling stock the present mode of working would hardly be practicable.

Colonel Hancock considered that in their effect upon private trade, the merits of the different modes of dealing with the traffic were almost entirely a matter of opinion, and he remarked that it was evident that the difficulties from detention of waggons and from any irregularity of the train service fell entirely on the Great Indian Peninsula Railway Company, and that it might be assumed that Mr. Conder would not incur these difficulties if he were not thoroughly convinced of the advantages of his present practice.

8. With reference to the question of responsibility for the accumulations caused by this mode of working, Captain Bisset represented that the Madras Railway Company was still very short of engines, and that it was impossible to consider that Company altogether responsible for the failure to keep in constant circulation all the waggons which might by an effort on the part of its more fully-stocked neighbour be poured down upon the junction station, and that in his opinion the best interests of both railways and also of the grain traffic to the Madras districts would be best served by mutual accommodation and by the adaptation of the strength of the one railway to the weakness of the other.

Both Colonel Hancock and Mr. Conder stated that no complaint was made on their part of the present working of the Madras Railway, but that they believed that a stimulus to more vigorous working had certainly been given by the knowledge that so many waggons were lying under load for the Madras Railway.

9. The meeting closed with assurances of the strongest desire on the part of the Bombay railway authorities to do all in their power to forward the further development of the grain traffic, and with regrets that somewhat different views as to the method of doing this had apparently been interpreted as obstacles to the attainment of this end.

10. It has been noted above that the Traffic Manager of the Madras Railway has determined to place one of his assistants at Raichore during the present pressure of work there.

The propriety of this step was urged by the Deputy Consulting Engineer, Madras, after his visit to Raichore on the 6th February. I now mention a slight loss of work on the 11th instant, which appears to me to have arisen solely from the want of that prompt intercommunication which the presence of a superior officer of the traffic department at Raichore is likely to secure.

On the 11th February a Madras Railway train, which was ordered in accordance with a definite expectation of larger arrivals of waggons from the Great Indian Peninsula Railway, had to be cancelled. This occurred within a few days after the local traffic officers had met at Raichore, and arranged in the most cordial manner for working into each other's hands.

I am confident that this occurred from want of early intimation that more waggons were wanted at Raichore, and I have only mentioned the matter in the hope of inviting continued attention to the working of Raichore station, which should, in my opinion, be left altogether to the traffic officer on the spot.

Nos. 99. 115.

From the SECRETARY TO SIR RICHARD TEMPLE to the SECRETARIES TO THE GOVERNMENTS OF BOMBAY AND MADRAS.

By desire of Sir Richard Temple I have the honour to forward copy of a memorandum by Captain Bisset, regarding the decisions taken by the Great Indian Peninsula Traffic Manager, Mr. Conder, on certain points connected with the joint working of grain traffic over the Great Indian Peninsula and Madras Railways.

2. The Bombay railway authorities are manifestly ready and anxious to promote the smooth and rapid working of the traffic. Sir Richard Temple has ascertained from the Madras railway authorities that they are ready to do their part loyally to the best of their power. And he trusts that the harmonious working of this great traffic, which is

Railway
grain traffic
arrange-
ments.

so very important to the very lives of the people in the ceded districts, may be thoroughly maintained.

3. Sir Richard Temple will have much pleasure in bringing to the notice of the Government of India that since the 29th January there has been a regular stream of grain waggons (the average being 110 waggons* daily) of northern grain from the Great Indian Peninsula Railway into the ceded districts. It is confidently believed that the daily delivery will shortly be worked up to 150 waggons. Already the effect has been felt in the Bellary markets, where northern cholam (jowari) is now (14th February) quoted at 10 seers per rupee.

*About 660 tons.

From the OFFICIATING SECRETARY TO THE CHIEF COMMISSIONER OF MYSORE to the CHIEF SECRETARY TO THE GOVERNMENT OF FORT ST. GEORGE.

Influx of the
distressed
from Mysore
into British
territory.

I am desired to acknowledge the receipt of your letter No. 508, of the 10th instant, in which you intimate that large numbers of people are flocking from this territory to the famine relief works and feeding houses in the Bellary and Cuddapah districts as well as to the Wynad, "in the hope of securing the means of subsistence," that efforts have been made, but without success, to eliminate these people from the works and relief houses in Bellary and Cuddapah, and that recognising "the serious risk involved in sending away to Mysore territory large numbers of distressed folk," the Madras Government have given the Collectors of those districts and Malabar instructions to make arrangements for providing relief and work for these people, with the intention of demanding that the expenditure so incurred be defrayed by the Mysore State.

2. The Chief Commissioner cannot disguise the surprise which he has felt on receiving this communication, and trusts that his Grace in Council will, on a further consideration of the circumstances which have led to the migration of a certain portion of the people in the border districts of Mysore into Her Majesty's territory, be induced to withdraw from the intention expressed in your letter.

3. It is undoubtedly true that considerable numbers have left their villages in the three districts of Chitaldroog, Tumkur, and Kolar, and that some portion of these have betaken themselves to the relief works and feeding houses in the adjoining districts, but from the inquiries that have been made the Chief Commissioner is satisfied that, so far as relates to the migration into Her Majesty's districts, the cause is to be found, not in any omission on the part of this administration to provide the people with the means of subsistence, but in the fact, which Mr. Saunders understands admits of no denial, that the system on which works and gratuitous relief have been established in the Bellary and Cuddapah districts, has proved a strong temptation to the Mysore people to seek employment and food on the easiest possible terms.

4. In this province the Chief Commissioner has, from the first, made it a rule that a light task on piece-work should be exacted from, more or less, all persons employed on relief works, while it is a matter of notoriety that in the works carried on over the frontier such persons have received a fixed daily wage, for which hitherto no equivalent labour has been exacted. As regards gratuitous relief also, operations have been, it is understood, conducted in the Madras districts on certainly a most liberal and philanthropic scale, and it is not surprising that the Mysore people should have been largely attracted by the expectations they had formed of obtaining relief on much more favourable terms than they could have obtained it on this side of the frontier.

5. Another cause which has been assigned by the district officers as contributing in some measure to the migration eastwards, has been the desire on the part of the petty ryots to evade the land revenue demand, which, after full consideration, the Chief Commissioner decided to enforce to a certain limited extent. Though the number of the kists was increased from four to seven, the payment of the first four kists has been made imperative on all those who were in a condition to pay, and the Chief Commissioner can only regard it as an unfortunate circumstance that a system of relief operations should have prevailed in the Madras districts which is calculated to defeat the efforts made to collect the revenue, as well as the earnest endeavours made by this Administration to abstain from any measures which would produce a demoralising effect on the people, and weaken their sense of self-reliance.

6. The Chief Commissioner has been unable to obtain any precise statistics on the subject, but he has ample grounds for believing that the migration from the three districts

referred to above has been chiefly in the direction of the western taluks of the province and Coorg, to which, from an early period in this season of scarcity, the people were reported to be proceeding in large numbers, accompanied by their cattle, in quest of labour on public works and on the coffee estates, and also of forage and water for their cattle. As his Grace in Council will be aware, the labour required for the coffee estates in the Wynad and elsewhere, not only during the crop-picking season, but throughout the year's operations, is ordinarily supplied from this province. Under present circumstances it is natural that the influx into the Wynad, as well as into Coorg and Manjara-bad, should have increased to some extent, and perhaps beyond the means of the employers of labour in those districts to meet the demand. In any aspect of the case it would have been inexpedient for this Government to make any attempt to check the movement, the result of which has, it is believed, so far profited the planters that they have been able to obtain labour on cheaper terms than formerly; and had any attempt been made to interfere with the labour market, Mr. Saunders feels convinced that as strong objections would have been raised to the measure as were, it will be remembered, advanced in reference to the supposed interference with the exportation of grain from the Mysore country. The contingency of having to provide for the numbers returning from the plantations was, however, foreseen, and along the whole extent of the western frontier, as well as in Coorg, and in the central parts of Mysore, new road and other works have been opened, and all practicable means taken to afford relief and work, on an extensive scale, for those who need it. From Gundlupet onwards, on the Neilgherry road and on the Manantoddy road, to the northern and eastern frontiers of the Ashtagram division, as well as from Periyapatna on the Coorg road, relief kitchens have been established at convenient distances to meet the requirements of the returning coolies, and separate officers have been already appointed to the special charge of the relief arrangements on these roads. Full information in regard to work provided has been sent to the Secretary to the Planters' Association in Wynad, and to the Commissioner of the Neilgherries, with printed notices in the vernacular, for the information of the returning coolies, of the localities where works are in progress and can be obtained.

Mysore mi-
gration.

Under these arrangements the coolies are now returning with their earnings at the rate of from 300 to 400 per diem to the province.

7. The Chief Commissioner feels assured that the Madras Government, in arriving somewhat suddenly at the conclusion stated in your letter, have acted on an erroneous assumption of facts, and there is further evidence of this in the assertion contained in your last paragraph, where you say that "the rates of wages in Mysore are understood to be the same as in this (the Madras) presidency." On this point I am to remark that though the wages earned on relief works in this province might amount to 2 annas 6 pies per diem, the rates adopted vary from 1 anna to 1 anna 4 pies per cubic yard of excavation, and it is only on works of a character that do not admit of exact test that a daily wage of 2 annas, and in some cases 2 annas 6 pies per diem is paid.

8. Under this explanation of the procedure that has been adopted in this province the Chief Commissioner trusts that his Grace in Council will see that it is impossible for him to assent to the suggestions made in paragraph 5 of your letter, and I am desired to add the advance of Rs. 500 should be made to Mr. Mahomed Ali by the Commissioner of Nundydroog to meet emergent requirements.

The Deputy Commissioners of Kolar, Tûmkûr, and Chitaldroog will instruct the Amildars of the border taluks to comply promptly with the requisitions made upon them for the purpose by the Assistant Commissioner. Those who are able-bodied should be relegated to the special or other relief works in progress, and those who are physically unable to work should be promptly admitted to the feeding kitchens, under arrangements to be made by the Deputy Commissioners and their assistants.

FROM the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce,
TO the SECRETARY OF STATE FOR INDIA.

February 16, 1877.

We submit for your consideration our weekly summary of the principal matters which have engaged our attention in connexion with the famine in Madras and Bombay since the date of our last Despatch.

Forwarding
and review-
ing Sir Ri-
chard Tem-
ple's minutes.

Reviewing
Sir Richard
Temple's
minutes.

Nos. 33. 48.

2. Among the papers which we now enclose will be found minutes and memoranda by Sir Richard Temple regarding the condition of the districts of Chingleput and North Arcot in the Madras Presidency, and the expenditure which will have to be incurred for purposes of relief throughout the distressed districts in Madras.

3. The Chingleput district adjoins the town of Madras, bounding it on the north, west, and south. Its area is 2,753 square miles, and its population slightly under a million. It has had three bad seasons to contend against. The harvest in 1874 was poor. It was bad in 1875, and in the present year there has been a serious failure, the rainfall ranging from 8 to 16 inches against an average of 34 inches. The out-turn of the whole district for the present year is estimated at less than one fourth of an ordinary crop. The district, however, has the great advantage of being traversed by three railways,—the Madras Railway, the Carnatic Company's Railway from Arconum to Conjeveram, and the railway recently constructed by the Great Southern of India Railway Company from Madras to the southern districts. The local markets are consequently well supplied, and generally the prices are much the same as in Madras. At the time of Sir Richard Temple's visit 14,000 persons were employed on the relief works, and 8,000 persons were receiving gratuitous relief in the shape of cooked food. These people, however, were being gathered into relief camps, where they will be housed, fed, and put to such light work as they can do. There are also four relief camps in, and in the immediate neighbourhood of, the town of Madras, containing 10,000 pauper inmates in all, mostly immigrants from Chingleput, North Arcot, Vellore, and Cuddapah, who came to Madras to seek for work and food. It appears that many of the persons taken into these camps had been much reduced before they reached Madras; but as their strength was restored, they were draughted out upon the works. At each of the camps which Sir Richard Temple visited there were a considerable number of women and children in an emaciated and miserable condition, and some hundreds of people were being treated for diarrhoea brought on or aggravated by want of food. The death-rate among these persons was very high. The Collector does not expect to collect more than half the land revenue of the district this year, though much of the arrears due on the dry crop lands may be realised next year if the seasons are favourable. As yet the cattle had been kept alive; but a heavy mortality was expected if showers did not come within the next six weeks. In some localities there was already a difficulty about water; but it was not apprehended that there would be anywhere a complete failure of water either for man or beast. Wells were being deepened by relief labour.

No. 34.

4. While in the Chingleput district, Sir Richard Temple inspected the proposed line of the railway from Conjeveram to Chingleput. As stated in our Despatch of the 9th instant, he does not recommend that it should be taken up as a relief work. From a rough estimate furnished by Captain Bisset, he finds that the cost of the earth-works would not exceed Rs. 44,000 out of a total estimate of 13 lakhs. The amount that would be expended on relief wages is comparatively small. The line would not be of special service for relief operations; for in the part of the district through which it runs the distress is not extreme, and there are other railway lines, a good metalled road, and plenty of good carts by which the local markets are, and will continue to be, well supplied with grain. Sir Richard Temple does not consider the financial prospects of the line, should it be made, to be very good. The line runs parallel to the Palar river, the bed of which in that part of its course is very broad, and he thinks it probable that for a part of the year the traffic would be attracted to the other lines on the north and south of the river.

5. Sir Richard Temple has paid a second visit to the district of North Arcot. His first report on that district is contained in the memorandum submitted with our Despatch of the 2nd instant. He was induced to visit the district a second time, partly in consequence of his having seen in the relief camps at Madras a number of persons from the North Arcot district who had been reduced to a very deplorable condition before they came to the camps, and partly in consequence of his having heard bad accounts of the state of the district from the Inspector-General of Police. The conclusions at which he arrived were less favourable than those which he had formed on the occasion of his first visit, and he has suggested the immediate adoption of various measures of relief. In his report on this district he mentions information given to him regarding certain taluks in the South Arcot district by an American missionary, who stated that in the course of a recent tour he had seen much distress, and in some cases physical emaciation from want of food. This district has not hitherto been classed among the distressed districts. In the same report Sir Richard Temple adverts to a delay in starting certain relief works in North Arcot owing to some departmental difficulty, which, he observes, could be at once removed if a superior officer, invested with full power to direct all relief operations in all

departments, were sent down. Both these statements will doubtless have attracted the attention of the Government of Madras. It is obviously of great importance that the superior control of the expensive operations now in progress in various parts of that presidency should be rendered as effective as possible.

Reviewing
Sir Richard
Temple's
minutes.

6. Sir Richard Temple has recently visited Bangalore, and has conferred with the Chief Commissioner of Mysore on the condition of that province. He has also travelled through one of the most distressed parts of it. His detailed report has not yet reached us, but he has informed us by telegraph that the Mysore relief operations are carefully and economically conducted. He has pressed upon the Mysore authorities the need of visitation from village to village to watch distress and prevent any deaths from starvation occurring. He states that in the ceded districts and Kurnool "the well considered orders of the Madras Government for check of excessive expense are being executed fully in some respects, but slowly and imperfectly in others." He is urging the local authorities, by visiting every village throughout the country, to prevent the possibility of any lives being lost, but at the same time to strictly prevent waste and extravagance. He adds, "Condition of people fair and good, and private trade in grain extraordinarily active. Cholera has appeared in many places, but has now decreased. No sign of drinking water failing yet. Draught cattle still sustained."

Nos. 84-6

7. The orders of the Madras Government to which Sir Richard Temple alludes, are those of the 31st January, of which copies were sent to your Lordship with the Madras Despatch of the 3rd instant, and to which reference was made in the foot note to paragraph 5 of our Despatch of the 9th instant. Of these two orders, the first prescribes a reduced scale of wages similar to that recently adopted in Bombay, and the restriction of State relief to those who without it would be in danger of perishing, while at the same time it impresses upon the district officers the necessity of not relaxing their vigilant exertions to prevent loss of life from starvation. The second directs that grain wages are only to be paid so long as food is not purchasable on the spot, and that then it is to be purchased in the districts or from established local dealers after calling for tenders by public advertisement, or should the local dealers fail, by calling for tenders from a wider area. To meet any sudden emergency, and until supplies can be brought in from other sources, recourse may be temporarily had in the districts of Kurnool, Bellary, and Cuddapah to certain small reserve depôts of Government grain which were being formed in the localities most difficult of access; but resort to these depôts is absolutely forbidden except when food for the labourers or for the paupers in the feeding houses provided for the infirm and aged is unpurchasable from private dealers, and it is to cease immediately on other supplies becoming available. These orders appear to us to be unexceptionable, and we trust that they are being carefully acted on, especially in the matter of non-interference with private trade. The statement made in Sir Richard Temple's telegram, from which we have quoted, and which was despatched only yesterday from the Bellary district, to the effect that the private trade in grain is extraordinarily active, would seem to furnish very conclusive evidence that this is the case. We refer to the subject, as we are aware that there is an impression in some quarters, which we believe to be entirely unfounded, that the arrangement made by the Madras Government some months ago with a local firm for the supply of grain on account of Government has not been practically terminated.

8. In connexion with the question of reducing the rates of wages, we enclose a reference which we have received from the Government of Bombay regarding a combination among the labourers in the Sholapur district to refuse the reduced rates, and our reply. We have informed the Bombay Government that we entirely share their opinion as to the mischief of yielding to a strike on relief works attributable to combination, and that the relief wages should not be raised if the Local Government is satisfied that the rates are sufficient,—a point which must necessarily be left to its judgment. Some days ago a report appeared in one of the Bombay newspapers of numerous deaths from starvation at Sholapur, which, however, appears to have been greatly exaggerated. The Collector stated that in the town of Sholapur only one death attributable to that cause had occurred.

Nos. 62. 71.
78.

9. We also enclose a further correspondence on the subject of the grain traffic on the Great Indian Peninsula and Madras Railways with which we have been furnished by the Government of Bombay. We are glad to learn that the Madras Railway authorities expected to be in a position to forward 150 waggons from Raichore to the Madras stations by the 14th instant. As we said in our last Despatch, every exertion is apparently being made by both the railway companies to overcome the difficulties necessarily resulting from the enormously increased traffic.

Nos. 13. 19.
21. 29. 31.
32. 37. 38.
39. 40. 55.

Reviewing
Sir Richard
Temple's
minutes.

Question of
remitting or
suspending
land revenue.

10. Your Lordship will have received from the Government of Madras a copy of their letter of the 9th instant on the subject of remissions of land revenue. Before this letter reached us, we had intimated to both the Governments that the matter would be left to their discretion. We have now only to observe that we consider that the Madras Government have shown good reasons for the opinion which they strongly hold, that in ryotwari districts it would, as a general rule, be inexpedient to substitute suspensions for remissions of revenue, especially in the case of a season so disastrous as the present. We do not overlook the statement which appears to have been made to Sir Richard Temple by the Collector of Chingleput, and to which we have already alluded, that much of the arrears due on the dry crop lands may be realised next year, if the seasons are favourable. It is possible that there may be local circumstances which justify this expectation as regards the particular district in question; and if so, the Madras Government will doubtless act on our suggestion, that "the balances should be held in suspense" in cases in which it appears likely that the landholders will, without undue pressure, "be able to pay the revenue in arrear during the next season." We feel, however, that the question is one which must be treated with the greatest caution, and which must be left to the judgment of the Local Governments and their officers.

11. The weekly return of persons employed on the relief works in the Madras Presidency is incomplete, the returns from Nellore and Malabar not having been received. Taking for these districts the figures of last week, the Madras returns show a further diminution of 32,204 persons, the aggregate number on the works being 876,206 against 908,410, the number for the previous week. The number of persons receiving gratuitous relief had also diminished by upwards of 7,000. The total is 53,287 against 60,402, the number for last week. In Bombay, also, there was a considerable decrease of the numbers on the relief works, which is said to be mainly due to a stand made by the people of Sholapur against the orders for the reduction of wages. Exclusive of 7,136 hillmen and immigrants employed in Canara and Ratnagiri, the number on relief works was 249,158 against 290,537, the number for last week. The numbers receiving gratuitous relief in the Bombay districts, not including Dharwar, for which there were no returns, was 4,968.

Nos. 51. 52.

12. Sir Richard Temple, in his revised forecast for the Madras Presidency, estimates the State expenditure on the relief of the present famine at Rs. 2,92,00,000 (2,920,000/.) of which Rs. 67,49,000 (674,900/.) have already been spent. His estimate is based on the assumption that the checks on expenditure recently ordered will be strictly enforced, and also that there will not be a failure of the usual spring showers. In our Despatch of the 2nd instant we stated that Sir Richard Temple's revised estimate of the famine expenditure in Bombay amounted to 126 lakhs. The aggregate expenditure for the two presidencies would thus be 418 lakhs (4,180,000/.). In regard to the probable loss of revenue by remissions, we have not at present the means of forming any definite estimate. Some time ago it was estimated at 66 lakhs for Bombay and 117 lakhs for Madras (see our Despatch of the 12th January), or in all 183 lakhs, which, added to the expenditure, would give a total loss from the famine of 601 lakhs.

13. According to the latest returns prices were falling in most of the Madras districts, owing, doubtless, to the large importations. In Bombay there was but little change in this respect. Cholera was more or less prevalent throughout the distressed districts of Madras, though apparently decreasing in some of them. In the southern districts of Bombay, especially in Dharwar, this disease was very prevalent. On the general aspect of the situation we have nothing to add to what was said in our last Despatch.

We have, &c.

No. 115.

XXXVI.—MINUTE by SIR RICHARD TEMPLE, recommending commencement of earthwork of line from Bellary to Hooblee.

The pro-
posed Kar-
war-Bellary
Railway.

Bellary, 16th February 1877.

The Government was pleased to direct me to report, after communication with the Madras Government, upon the proposal to commence the earth-work of the Karwar and

Bellary Railway as a relief work. At Bellary, therefore, on the 12th current, I conferred with his Grace the Governor of Madras upon the subject. Colonel Hancock, as representing the Government of Bombay, was present at the conference, having been deputed thither by his Excellency Sir Philip Wodehouse. Mr. J. H. Master, Collector of Bellary, Colonel Mullins, Chief Engineer to the Government of Madras, and Colonel Shaw-Stewart, Consulting Engineer for Railways, were also present.

The proposed Karwar-Bellary Railway.

2. I caused the salient points of the Bellary and Karwar Railway scheme, as far as they concerned relief work, to be put together in the appended memorandum. And after the conclusion of the conference I despatched to the Government of India a telegram to the effect that, in consideration of financial exigencies and the claims of other proposed lines I was adverse to undertaking at present the Karwar and Bellary Railway. At the same time I recommended that as difficulty existed in finding suitable work for relief labourers in the Bellary (and, perhaps, in the) Dharwar and Kaladgi districts, the Madras and Bombay Governments might be authorised to employ relief labourers in making the earth-work of the line from Bellary as far as Hubli in the Dharwar district. I suggested further that the cost of the land taken up for this railway should be charged to the Local Governments, and that the Imperial Government shall be held in no way pledged to the ultimate construction of the line. I added that the Madras Government concurred in my view, and that the Government of Bombay would probably concur also.

3. I desire now briefly to place on record my reasons for submitting this recommendation, and I would premise that when I had the honour of being a member of the Government of India, it was my duty to consider this and other railway projects, and I have always held that railways in India should be undertaken on political and military grounds quite as much as on purely commercial considerations.

4. I am adverse to undertaking at present the Karwar and Bellary Railway, because—

Firstly.—The finances of the country can afford to take up only a limited number of new State railways at a time. There are already a number of lines to which the Government is more or less committed; such, for instance, as the Nagpore and Chutteesgurrh line, the Western Rajputana Railway, the Lahore and Peshawur line, the Northern Bengal extensions, and the North Behar lines. None of these, in my judgment, ought to be postponed to the Karwar and Bellary line.

Secondly.—If the finances can afford one or more additional railways in the Bombay Presidency, then I think that the line from Dhond to Munmar, a line from Dhond (or some other point on the Great Indian Peninsula Railway) to Sattara and onwards into the Southern Mahratta country, and a line from some point in Guzerat into the Kattywar country, are all politically and generally more important than the Karwar and Bellary line.

Thirdly.—There seems much doubt about the capabilities of, and the need for, future expenditure on the Karwar harbour, and unless the harbour be accessible during the monsoon, it would appear that much of the Dharwar and Bellary cotton may still take ship at Madras or Bombay.

5. Although I am, for these reasons, adverse to undertaking for the present the Karwar Railway, yet there is another consideration, namely, that useful work is wanted for the 350,000 relief labourers in Bellary. They have already made a great length of local roads—quite as many roads, indeed, as can be maintained hereafter. Metal for future years' use is being collected on these roads. But soon there will, for a great many of these labourers, be no useful work left to do. And therefore it seems desirable to employ these superabundant relief labourers on the earth-work of the Borkellary Railway, which earth-work may hereafter be useful if the line is ever made. I propose that relief labour should be employed on the Bellary to Hubli section only, because I do not think it will practically be possible to transport to the Canara ghauts large gangs in time enough to do any appreciable work thereon before the monsoon (rainy season) begins. The length from Bellary to Hubli is the cheaper and easier section of the line. And according to the opinion expressed by Bellary cotton dealers, this section would bring a considerable cotton traffic from Dharwar upon the Madras (or upon the Great Indian Peninsula) guaranteed railway.

No. 94.

No. 115.

No. 195, dated 16th February 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the CHIEF SECRETARY
TO THE GOVERNMENT OF MADRAS, Revenue Department.

Bengal Civil
officers sent
to Madras.

I am directed to acknowledge the receipt of your telegram of the 31st ultimo, requesting that the services of the following Bengal Civil Officers may be placed at the disposal of the Government of Madras for duty in the famine-stricken districts of that Presidency :—

Mr. Howe	from North-western Provinces to Bellary.
„ H. M. Kisch	„ Bengal to Bellary.
„ Kirkwood	„ „ Cuddapah.
„ Hodgkinson	„ „ Nellore.
„ A. W. Mackie	„ „ „
„ W. B. Oldham	„ „ Kurnool.
„ H. C. Fanshawe	„ Punjab „
„ Damant	„ Assam to North Arcot.
„ Kitts	„ Berar to Madura.
„ Williams	„ Central Provinces to Salem.

2. In reply, I am to state that the services of the under-mentioned officers have been placed at the disposal of the Madras Government, and that they have already been ordered to report themselves to the Collectors of the districts wherein they are required for duty, viz. :—

Mr. Howe	to report himself to the Collector of Bellary.
„ H. M. Kisch	„ „ „
„ A. W. Mackie	„ „ Nellore.
„ W. B. Oldham	„ „ Kurnool.
„ Kitts	„ „ Madura.

3. The services of the gentlemen mentioned in the margin not being available, I am

Messrs. Damant, Hodgkinson,
H. C. Fanshawe, Kirkwood, and
Williams.

to state that the following officers have been ordered to
proceed in their stead :—

Mr. G. Sharp	to the Nellore district.
„ A. Weekes	„ Cuddapah.
„ H. Gillan	„ Kurnool.
„ A. C. Tute	„ Salem.

4. Thus it will be observed that, to complete the number required, only one officer is required, who will be appointed shortly.

5. As regards the pay and allowances which the officers deputed will receive, I am to refer to my telegram and letter of the 8th instant, and to state that the Governor-General in Council has been pleased to sanction the same rates of pay and allowances as were granted to officers who had been deputed from other parts of the country for famine duty in Bengal in 1874, namely, their existing pay and allowances, *plus* a monthly allowance of Rs. 300 to officers above five years' standing from the date of their landing in India, and Rs. 200 to those below five years, besides the carriage of horses to the famine districts and back.

No. 95.]

No. 115.

XXXVII.—MINUTE by SIR RICHARD TEMPLE, regarding the receiving of labourers from
Mysore and the Nizam's territories on relief works in the Madras Presidency.

Bellary, 16th February 1877.

Treatment of
Mysore and
Hyderabad
subjects re-
sorting to re-
lief works
in British
territory.

I desire to submit to the Government of Madras certain observations on its general order of the 9th February, which directs that "coolies (relief labourers) from Mysore and Hyderabad are to be treated on relief works exactly as our own people."

2. Already many persons of this description have resorted from Mysore and Hyderabad to the relief works in the Madras Presidency, and, after their necessities have been relieved, have been sent back to their own province, Mysore or Hyderabad, as the case may be, by which authorities they have been duly received. Both in Mysore and Hyderabad relief works are open, and I know that the authorities in both these States are willing and able to take care of their own people and to avoid casting the burden of supporting them on the British Government.

3. In Mysore the relief operations are entirely under the direction of British officers, just as if they had been in British territory. But as relief has been allowed somewhat more liberally in the Madras Presidency than in Mysore, there is no fear of British subjects resorting to Mysore, while there is every fear of Mysore subjects resorting to Madras districts. I was distinctly warned of this by the Mysore authorities themselves, who said that many thousands of their people might be resorting to British districts, who all the time might properly be, indeed, ought to be, maintained by Mysore. The Chief Commissioner would, I am sure, be glad that such people should be sent back to him. And I know that the Chief Commissioner is as anxious as he is resourceful, to provide for all Mysore subjects.

4. If, therefore, in virtue of the Madras Government order cited above, any number of Mysore ryots were to come upon Madras works, an unnecessary expenditure of British money would be incurred, upon that which was really the business of the Mysore State, notwithstanding that the Mysore State is anxious to undertake its own duty with its own money.

5. The same remark, *mutatis mutandis*, applies to the Hyderabad territory.

6. It is true that in 1874 the Bengal Government received on its relief works refugees from Nepaul, but then the adjoining Nepaul districts were not under British supervision, and, so far as we knew, did not contain any relief works. It was therefore deemed necessary to receive the poor people. But the case is quite different with the Mysore State, which is administered by our own officers; and also the case is different with the Hyderabad State, where ample provisions of relief are known to have been made.

7. I would therefore suggest that the officers in the Madras districts be directed to receive persons from Mysore or Hyderabad temporarily if seen to be labouring under immediate necessity, but to give the earliest intimation to the nearest local authority either in Mysore or Hyderabad, as the case may be, in order that these persons may be transferred to their own territory.

No. 96.

XXXIX.—MINUTE by SIR RICHARD TEMPLE, regarding the doubling of the line of Railway from Ambatoor, near Madras, to Arconum.

No. 115.

Humpé, Bellary District, 16th February 1877.

On the 27th January I submitted to the Government of India by telegraph a recommendation that the line from Ambatoor near Madras should be doubled as far as the Arconum Junction. This suggestion was made after consultation with his Grace the Governor of Madras, and after a conference with Mr. Elwin, the Agent of the Madras Railway. The Government of India have been pleased to accede to the proposal; and I deem it right to record briefly my reasons for recommending this undertaking.

2. The whole inward and outward railway traffic of Madras, except the trade towards the coast districts of Chingleput and Cuddalore (South Arcot), has to pass over 42 miles of line from Madras to Arconum Junction. Out of this length, seven miles only consist of double line, while 35 miles from Ambatoor to Arconum have a single line of rails only. From Arconum Junction the line bifurcates,—one branch goes north-westward into the ceded districts and towards Bombay, while the other goes south-westwards through North Arcot, Salem, and Coimbatore towards Beypore. From this south-west line breaks off the branch to Bangalore in the province of Mysore. During the present time of scarcity a part of the food required for the ceded districts, and almost the whole of the foreign grain required by North Arcot, Salem, and the Mysore country, has to pass over the 35 miles of single line between Ambatoor and Arconum Junction.

3. The daily supply of imported food sent into the famine districts is therefore limited by the carrying power of the 35 miles of single line over which the ordinary inward and outward traffic of the country has to pass. There is a very large store of grain on the Madras beach waiting for despatch into the interior; the demands of the famine country are great, and up-country dealers complain that they cannot get their consignments of grain away from Madras. According to the lowest computation, and on the under-

* NOTE.—See the sketch of the amount of imported food required by the famine districts, submitted to the Government of India on the 27th January. Subsequent inquiries into the circumstances and trade of Bangalore have shown that the Mysore

standing that the ceded districts will for the most part consume grain brought by the Great Indian Peninsula Railway from the north, the famine districts now require 1,200 tons* of grain per diem from Madras. If the northern supply should in any way fail, or when the monsoon shall close the west coast parts, the famine districts

Railway from Ambatoor to Arconum to be doubled.

Doubling of
railway from
Ambatoor to
Arconum.

demand may have been under estimated in that sketch. will in all probability require more than 1,200 tons a day from Madrás.

4. With a single line, the Madras Railway has never worked more than 7,200 tons of grain over the Arconum length in one week. It is said that, with great exertions, 9,000 tons a week might be carried. It is evident, however, that the single line can, even if everything works smoothly and well, barely meet the present minimum requirements of the country. If anything goes wrong, or if the demand increases, then the Arconum length of the railway cannot do the work which the country requires of it. This requirement is not merely for ordinary articles of commerce, but for actual food, without which prices must rise greatly, and the food supply of the country must fall short. The two lines which branch off from Arconum could, between them, carry considerably more than 1,200 tons of grain, if only it could be carried to Arconum.

5. Under these circumstances it seems absolutely necessary to double the line to Arconum, so as to enable the Madras Railway to carry as much grain as the country needs, and as the trade seems ready to supply. Though the Madras Railway does not possess spare rails sufficient for the 35 miles, yet rails are to be had in the country, and I was informed by the Madras authorities that the work could be finished in six weeks from its commencement. The cost of the work would probably be from 80,000*l.* to 100,000*l.*, and this amount would be added to the guaranteed capital of the Madras Railway.

No. 97.

No. 181.

LXXVI.—MINUTE by SIR RICHARD TEMPLE, recommending the deputation of European and Native Officers from the Madras Army for employment on relief operations.

Camp Bellary, 16th February 1877.

Employment
of European
and Native
officers of
Madras army
necessary.

The time has now come when the few civil officers and engineers in the interior of the country are unable properly to control and employ all the hundreds of thousands of relief labourers that are upon the hands of Government. Some few civil, military, and engineering officers have been sent from the Bengal Presidency by the Government of India to work under the Collector of the more distressed districts. I would now recommend that a certain number of European officers, Native officers, and selected privates from the Madras army should, if his Excellency the Commander-in-Chief were pleased to spare them, be made available for controlling relief operations.

2. During the Bengal famine, by the kindness of the Commander-in-Chief, Lord Napier of Magdala, some scores of European officers, and some hundreds of Native officers, non-commissioned officers, and men of the Bengal army were deputed to North Behar and North Bengal for relief work. It was found that the Native officers and men were, from their habits of discipline and order, specially fitted to control and to direct the employment of large numbers of relief labourers. Many of these Native officers and men gained for themselves honourable mention, which redounded to the credit of their service. The position of such officers in the army makes them less likely to succumb to temptations, such as are sometimes too strong for the honesty of temporary Native officials on small salary. I trust that selected Native officers and men of the Madras army would prove themselves as able and energetic as their brethren in Bengal. And I would recommend that his Excellency the Commander-in-Chief be asked temporarily to depute, for the assistance of the Civil Government in this time of sore need,—

20 European officers.

60 selected Native officers, commissioned and non-commissioned.

40 selected men.

These officers and men, if his Excellency the Commander-in-Chief were pleased to spare their services, might perhaps be allowed by his Grace the Governor to draw deputation allowances at the rates allowed to their brethren of the Bengal army in the Behar famine of 1874.

Telegram, dated 17th February 1877.

From C. E. BERNARD, Bellary, to T. C. HOPE, Calcutta.

Hubli-Bel-
lary Railway.

Your message of 13th has missed me. Repeated message 16th received to-day. Sir Richard's recommendation is that earth-work be begun on proposed line from Bellary

to Hubli, a great cotton mart of Dharwar district. He does not recommend work west of Hubli at present. Minute, with detailed opinion goes to-day.

No. 99.

No. 76, dated Bellary, 17th February 1877.

No. 115.

From the SECRETARY TO SIR RICHARD TEMPLE to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

I am directed to submit copy of a memorandum by Captain Bisset, regarding his recent meeting with officials of the Great Indian Peninsula Railway, together with a copy of the letter which Sir Richard Temple has caused to be addressed to the Governments of Bombay and Madras on the subject. Nos. 89. 90.

2. There can be no doubt that the grain traffic from the north is now working fairly well into the ceded districts, and there is prospect of further improvement. The proposal for working the Raichore section of the Madras line by the Great Indian Peninsula Railway Company need not now be pressed. Grain traffic.

3. Sir Richard Temple is of opinion that Captain Bisset's services in this matter have been highly creditable to that officer.

No. 100.

XLI.—MEMORANDUM by CAPT. W. S. S. BISSET, R.E., on special duty, on the PROGRESS of the ARRANGEMENTS for IMPROVING the DELIVERY of GRAIN from the NORTH to the MADRAS RAILWAY. Nos. 119. 147.

Bellary, 17th February 1877.

Through booking from the Great Indian Peninsula Railway to the Madras Railway was suspended about the 5th January, resumed on the 23rd January, again suspended on the 4th February, and again resumed on the 29th February. Mr. Conder informs me that, even during the suspensions, goods booked to Madras Railway by the East Indian Railway or by other lines beyond the Great Indian Peninsula Railway's system were duly forwarded. Mr. Conder explains that the Native merchants fully understand and are not discouraged by these alternations; and although I cannot understand this, I cannot suppose that Mr. Conder would accept (as he does) all the difficulties of detention of waggons and shunting of trains at roadside stations without very strong convictions of the superiority of the mode of working which he adheres to; and although I believe that the traders of the ceded districts of Madras would deal more directly with the distant markets if they could reckon more confidently on any regular interval between the despatch and the arrival of their goods, it must be noted that any deficiency of enterprise in the distant markets is made up for by the activity of the trade from Poona, Sholapur, and the Nizam's dominions. Railway grain traffic arrangements.

II. Efforts are made at the Great Indian Peninsula Railway stations to discourage the booking of grain locally to Raichore as an alternative to through booking, the consignors being advised that any suspensions of through booking are temporary, and that the Madras Railway Company's trains from Raichore are occupied with through traffic. But Raichore station can, under present arrangements, receive local grain without inconvenience; and now that this reason can no longer be urged, the argument in favour of getting large quantities of grain as near as possible to the distressed districts cannot but be admitted; and moreover grain has now begun to go from Raichore to Kurnool, and more might be expected to take this route if the road and its arrangements could be improved.

During the first sixteen days of February there have been 1,460 through booked waggons passed through Raichore, against 297 waggons booked locally, and the local booking has not unduly increased and it is now quite manageable.

III. The additional sidings were promptly put in at Raichore station, and they have been found of the greatest assistance, particularly in unloading grain for Raichore.

IV. Crossing stations are being constructed, one near the Tungabhadra river (with special reference to the water-supply) and another between Kosgi and Adoni.

Crossing stations and additional sidings.

Additional sidings and grain sheds are ordered at Adoni, where there is now, and where there is likely to be, a heavy traffic.

The crossing stations south of Adoni are not yet in progress, it being considered that the traffic south of Adoni can be passed without further assistance.

I believe that as soon as it is found possible to draw supplies from the north, the demand from the districts south of Gooty will increase much more than it has already done. But in the meantime I fear a temporary check will occur in the traffic as a result of the great fall in the prices of northern grain which has lately taken place, and if the estimates are not altogether wrong, this check will be followed by a more severe pressure than has yet occurred.

Below the junction for Bellary the number of trains may be practicable, but on the line between Raichore and Goondacal junction, I think no means of facilitating the passage of trains should be neglected.

V. The Traffic Manager of the Great Indian Peninsula Railway has now made arrangements to give all the desired assistance to the traffic through Raichore.

The numbers of waggons handed over to the Madras Railway at Raichore are now regulated by the demands* made by the station-master of the junction station; the times of the Great Indian Peninsula Railway are arranged to suit the requirements* of the Madras Railway Company; the waggons are now arranged in station order as much as possible, with the view of reducing the work at, and avoiding difficulties in, the Raichore station; and the waggons for Raichore itself, and for transshipment at Raichore, are being delivered together and by the trains arriving at the hours most convenient for prompt unloading and transshipment.

VI. The arrangements for mutual accommodation at Raichore junction provide for keeping the Great Indian Peninsula Railway Company informed how many waggons the Madras Railway Company can take and promptly dispose of daily.

VII. It will be noticed from the appended table that the number of waggons moved from Raichore southwards has not been maintained up to the average of the first six days of February.

Since the 6th February two engines have been transferred to Raichore, but the third, promised about the 16th, has not yet arrived. Of the two sent up, one failed on the 11th, and another of those formerly on this section has also failed, so that the power at Raichore is again no greater than before.

But, even with the temporary increase of power from the 6th to the 11th, the average number of waggons worked away during the last 10 days is only 102 against 110 a day during the first week of February. It is said that both men and engines were worked at too high pressure during the former period, and this is perhaps the case.

But, possibly, the Locomotive Superintendent may find it possible to arrange for larger shed staff to undertake the necessary shed work to the engines, and to relieve the drivers and firemen from this work so that they may have all their time at home for rest. I learn that many of the Great Indian Peninsula Railway Company's engines are at present worked longer hours, but with reliefs of drivers and firemen, and I see no reason why, with increased running shed establishment to look properly after the engines, this should not be possible on the Madras Railway.

At present a great many of the hours on the road are spent at stations waiting for other trains or crossing orders, and improved regularity of the train service will do much to increase the effective work of both men and engines.

VIII. Reference has already been made to the system under which the movements of the trains on the Madras Railway are regulated, as one of the main causes of this irregularity. The system works very well with few trains, whose irregularities are easily adjusted; but with the multiplication of trains, telegraphic references to and replies from the directing officer increase proportionally, the telegraphic communication fails in the promptitude necessary to prevent serious delays, and in consequence of these delays (which have always a tendency to become cumulative) the train service gets disorganised.

This disorganisation throws an incessant strain on the directing* officer. But its consequences are perhaps most severely felt by the train staff, whose working hours are extended to the full limit of endurance.

A change (involving some delay and considerable expense) to the block system is now being made between Raichore and Adoni, but it will not be practicable, even if it

* At the present moment one of these officers at Madras has been invalided from incessant work; and at Gooty it has been found necessary to appoint a second officer for this special duty and for work also at Raichore.

is desirable, to introduce this change over the whole line in time to be of present use. I believe that a change to the system in force on most of the other Indian railways might safely be introduced, length by length, with a few days of special attention by the telegraph and traffic officers to each length as the change is made.

Railway grain traffic arrangements.

But even if this is considered impracticable, I believe that even with the present system an increase to the telegraph staff would afford considerable relief, and I am confident that if the necessary signallers are not available in this presidency, they could be obtained from other parts of India.

The importance of economising the time of the working staff cannot in my opinion be over-estimated; for, besides considerations of public safety and of humanity to the staff, it has to be remembered that the supply of trained staff is limited, and that upon the vigilance and endurance of the staff during the next four months the supply of food to the people depends.

IX.—Sufficient watering arrangements are of equal importance with an increase of engines and staff, and there is considerable anxiety about the sufficiency of the supply in the length from Raichore to Cuddapah. Efforts are now being made to supplement the supply, but it will very probably be necessary to provide a supply of portable tanks to convey water for use on the long trips where no water can be got. Fortunately, there are a number of suitable iron tanks available in Madras.

Watering arrangements.

An addition has been made with great success to the area of the station well at Kosgi, and similar additions are being made at one of the other stations.

It can hardly be hoped that all the enlargements of the wells will be equally successful, but to meet the coming emergency every possible source of water should be, and I believe is being, tried.

X.—It will be seen from the above notes that, although there is a slight difference of opinion on the through-booking question, the General Traffic Manager of the Great Indian Peninsula Railway has done all that he has been asked to do, and in some respects more than he is legally bound to do, to facilitate the through traffic at Raichore.

The Madras Railway Company, with equally good intentions, has much greater difficulties to contend with. It is short of engines, and its traffic and locomotive staff is ordinarily kept very low.

It has never before had to deal with a traffic so large as the present, and it has for the first time to encounter the difficulty of adapting its arrangements to working a heavy traffic.

And it is thus not to be wondered at that from one cause or another there is not the same facility of expansion on the Madras Railway as there is on lines which have often before had to meet these emergencies.

But with regard to the through traffic from the Great Indian Peninsula Railway, although the mishaps recorded in paragraph 7 have prevented the Madras Railway from working up to the promises made to the Great Indian Peninsula Railway, the advance made has been considerable.

The average number of waggons worked away from Raichore for the first 16 days of February has been 105 a day, while the daily average of the period from the 4th to the 22nd of January was only 72 waggons. The difference in weight of grain amounts to 200 tons a day, and this increase has been attained without any corresponding sacrifice of the despatches from Madras.

No. 70, dated Bellary, 17th February 1877.

From the SECRETARY TO SIR RICHARD TEMPLE, Bart., K.C.S.I., to the RESIDENT,
Hyderabad.

No. 95.

Hyderabad
subjects re-
sorting to
relief works
in British
territory.

By direction of Sir Richard Temple, I have the honour to forward copy of a minute recorded by him regarding the reception of Mysore and Hyderabad labourers upon relief works in the Madras Presidency.

2. Sir Richard Temple would hope that you may see fit to move his Excellency the Minister to direct the Nizam officers to employ and keep within the Hyderabad districts any persons who may be desiring work. It is understood that his Excellency has already established ample relief works.

No. 102.

XL.—MINUTE by SIR RICHARD TEMPLE, regarding the question of the port of landing for the supply of grain destined for Mysore.

Nos. 116.
133.

Goondacal, 19th February 1877.

Negapatam
as a port of
landing for
sea-borne
trade for
Mysore.

I desire that Captain Bisset will be good enough to inquire from the Mysore traders regarding the question of the sea-borne grain destined for Mysore being sent from the port of Negapatam by the South of India Railway to Bangalore, instead of being sent from the port of Madras by the Madras Railway Company's line.

2. When I visited Bangalore, I understood that the Government of Madras preferred that the grain should be sent from Negapatam rather than from Madras, in order to relieve the unavoidably over-burdened Madras line. I therefore urged this view upon the Chief Commissioner of Mysore, and upon the Native traders assembled at Bangalore. I explained to them the merits of the Negapatam route, and the convenience which would result if they could, consistently with their trading interests, adopt that course. They did not give me a clear answer at the time, though they promised that they would consider the matter. My impression, however, was that they felt considerable doubt, and that they might prove unwilling to change from Madras to Negapatam, partly because the freight to Negapatam might be higher and the conveniences of that port less, partly also because they already had their agencies established at Madras. By this time, however, they will be able to form a more definite answer. I therefore shall be glad if Captain Bisset will proceed to Bangalore and learn, as exactly as may be possible, how the matter stands. He could ascertain whether, in the event of the Negapatam project failing, the grain could be brought from the Western Coast.

3. With a view to prepare himself for the discussion with the Mysore traders, he should first visit Negapatam, in order that he may be able to explain to them what the advantages of that port are.

4. The Chief Commissioner of Mysore (to whom a copy of this minute will be forwarded) will, I am sure, give him every assistance.

From REVENUE ADDITIONAL SECRETARY, Calcutta, to REVENUE SECRETARY, Madras.

Government of India sanction immediate commencement of earth-work of railway between Hubli and Bellary by relief labourers. The land to be taken up and charged to the Local Governments. This in no way pledges the Imperial Government to ultimate construction of the railway. Further instructions will issue from the Public Works Department.

Earth-work
of railway
from Hubli
to Bellary
sanctioned.

No. 105.

Nos. 108.
115.

Telegram, dated 20th February 1877

From REVENUE ADDITIONAL SECRETARY, Calcutta, to SIR RICHARD TEMPLE, Bellary.

Government of India have informed Governments of Madras and Bombay that they sanction immediate commencement of the railway between Bellary and Hubli on the terms you suggest.

STATEMENT A.

Nos. 107.
115.STATISTICS RELATING TO THE DISTRESSED DISTRICTS IN THE
BOMBAY PRESIDENCY.

N.B.—This statement consists of extracts from the information furnished by the Government of Bombay on November 4th, 8th, and 15th, 1876, in accordance with the telegram from the Government of India of the 22nd October, and of summaries submitted by that Government of the reports of each taluka called for by the Government of India on November 30th, 1876.

Statistics relating to distressed districts in Bombay Presidency.

KEY to the alphabetical headings in the following statement :—

- (a.)—A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas on the assumption of an average yield being represented by 12 annas : *kharif* and *rabi* should be shown separately ; if there be any prospect of further sowings, it should be mentioned :
- (b.)—An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted :
- (c.)—Information as to the mortality, past and anticipated, among cattle and agricultural stock ; the measures already adopted by Government and the people, their result, and suggestions for the future :
- (d.)—The nature of the water supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any :
- (e.)—The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages :
- (f.)—The local stocks as far as ascertainable ; the centres, railway stations or otherwise, whence further supplies are being or may be drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation :
- (g.)—The character of the population, whether high or low caste, poor or well to do, purely or only partly agricultural, and if the latter, in what proportions urban or artizan ; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse :
- (h.)—The movements of the people ; how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable :
- (i.)—The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity :
- (j.)—The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c. who are unable to work :
- (k.)—The number of persons whom the Government has on its hands at date of report for relief (1) by works, (2) by charitable measures, and the number, roughly estimated, which it is likely to have on its hands on March 1st, May 1st, and July 1st.

DHULIA Taluka (1st Assistant Collector Mr. C.)							
The kharif yield is 4 annas, and the rabi, which is cultivated only in irrigated lands, promises well. There are no prospects of further sowings this season.	The total amount of revenue is not given, but the probable remissions are Rs. 45,000.	There has been no unusual mortality amongst the cattle, and none is anticipated, as the ryots have imported abundance of grass.	About three-fourths of the water supply has failed; in 40 villages there will be a total failure of the ordinary supply. To meet this, ziras are being made, and wells deepened and repaired. NIZÁMPUR PETHA, Pimpalner Taluka (1st Assistant Collector Mr. C.)

In about eight villages the kharif crop has failed; in the rest it has been from 10 to 12 annas. The rabi crops have been equal to or above the average. There are no prospects of any further sowings this season.	The total amount of revenue is not given, but the probable remissions are Rs. 1,500.	No unusual mortality has occurred or is likely to occur amongst the cattle.	There will be no distress owing to scarcity of the water supply, though it is less than usual.	Prices—Lbs. per Rupee

<i>f.</i>	<i>g.</i>	<i>h.</i>	<i>i.</i>	<i>j.</i>	<i>k.</i>
Blathwayt's Report, dated 10th January 1877).					
There are about 900,480 lbs. of grain in store, and it is imported from the Central Provinces and Nymore via Chalisgaon.	The bulk of the population consists of Kunbis who are poor. Sowkars will assist the ryots who work under them.	No emigration has taken place, nor is any anticipated.	No works, except Provincial and Local Funds, are in progress, nor will any be needed.	Rs. 200 have been allotted by the Son-gir Municipality for charitable purposes, but no expenditure has been made.	Government is not at present affording relief to any persons either on works or by charity, nor is it probable that help will be required from Government.

Blathwayt's Report, dated 10th January 1877).					
Most of the well-to-do have a year's supply of grain for their own consumption; the amount in store or for sale is not given; but no scarcity is anticipated, though prices are high. If necessary, grain can be imported from Dhulia and Malegaon.	The population is almost purely agricultural; and there are no landholders likely to aid their tenants should they require help.	No emigration has taken place, nor is any probable.	No relief works are in progress, nor will any be needed.	No charitable relief is given, and none is sought by any one.	It is improbable that Government will have any people to support either on works or by charity.

Inspector Mr. C. G. Blathwayt's Report, dated 10th January 1877).					
Most of the ryots have not sufficient corn for their own consumption. There are no large grain markets.	The people, except between 50 and 75 sowkars and shopkeepers, are agricultural Kunbis, and are poor. There are no large landholders.	There has been no emigration, and none is anticipated.	There are no relief works in progress, nor are any necessary.	The aged and infirm are in no worse condition than in ordinary years.	It is not likely that Government will be called upon to afford relief either on works or by charity.

C. G. Blathwayt's Report, dated 10th January 1877).					
There are 1,344,000 lbs. of grain in store, and this is sufficient for local consumption.	The population consists of Bheels, Guzars, and Kunbis. The Guzars and Kunbis, and some of the Bheels, are employed in agriculture. The rest of the Bheels in labour. There are no large landholders.	No emigration has taken place, nor is any probable.	No relief works are in progress, nor are any required.	No special arrangements are necessary for relief either on works or by charity.	

Statistics relating to distressed districts in Bombay Presidency.

AMALNER Taluka (Acting Extra 2nd Assistant Collector)				
The kharif yield is 5, and the rabi 3 annas. There are no prospects of further sowings this season.	The probable remissions will be Rs. 30,000. The total amount of revenue is not given.	There has as yet been no unusual mortality amongst the cattle, but the Collector thinks many will die. Government have opened forest reserves, and sanctioned advances to Wanjaries.	According to the Assistant Collector, the water supply is not a matter of anxiety. Old wells are being repaired, and new ones dug. The Collector, however, anticipates a serious failure.	Prices—Lbs. per Rupee.

PAROLA PETHA AMALNER Taluka (Acting Extra 2nd Assistant Collector)				
The kharif yield is 5 annas. There is no rabi. There are no prospects of further sowings this season.	The probable remissions are Rs. 4,000. The total revenue is not given.	Some slight mortality amongst the old and worn out cattle is expected, but no Government aid is necessary.	The water supply generally has not failed, but the town of Parola itself is badly off. Large wells are being dug there, and failing them a pumping arrangement from a well on the Bori River would be a success, so far as supplying the town is concerned, but enormously expensive.	Prices—Lbs. per Rupee.

<i>f.</i>	<i>g.</i>	<i>h.</i>	<i>i.</i>	<i>j.</i>	<i>k.</i>
C. G. Blathwayt's Report, dated 10th January 1877).					
is sufficient grain for local use.	Half the population consists of Bheels and the other half of Kunbis; the former are labourers and the latter agriculturists. Their condition will be nearly the same as in ordinary years.	There has been no emigration, and none is probable.	No relief works are in progress, nor are they necessary.	No special charitable aid is required.	No relief on works or by charity will be required.

G. C. Blathwayt's Report, dated 10th January 1877).

supply of grain will be sufficient for the year.	About two thirds of the population are Bheels, and mostly very poor, and the rest are Kunbis and Guzars. The bulk of the people consists of cultivators, but some are labourers. There are no large landholders able materially to aid their tenants.	There has been, and will be, no emigration.	No relief works are in progress nor are any required.	No special arrangements are necessary for relief either on works or by charity.
--	---	---	---	---

Mr. H. T. Ommaney's Report, dated 6th January 1877).

There are no large stocks of grain in store; it is imported as required from Holkar's territories and Jalgaon and Mhaswad Railway Stations. No fall in prices is anticipated, but private enterprise will supply the market.	About one half of the population consists of cultivators, one fourth of artizans and traders, and the rest of labourers, mendicants, &c. There are no landholders likely to aid their tenants, but the sowkars may do so.	No emigration has taken place, and none is anticipated.	One road work, the Amalner-Parola road, is in progress, and is at present sufficient. Should it be necessary, the Amalner-Jalgaon road can be commenced.	A fund of Rs. 350, Rs. 100 being Government money, has been raised for feeding the incapable poor.	600 are at present on works, and none supported by charity. The probable numbers requiring relief will be on— <table><tr><th></th><th><i>On Works.</i></th><th><i>By Charity.</i></th></tr><tr><td>1st March</td><td>- 1,500</td><td>100</td></tr><tr><td>1st May</td><td>- 2,000</td><td>150</td></tr><tr><td>1st July</td><td>- 2,000</td><td>150</td></tr></table>		<i>On Works.</i>	<i>By Charity.</i>	1st March	- 1,500	100	1st May	- 2,000	150	1st July	- 2,000	150

1st March	- 1,500	100															
1st May	- 2,000	150															
1st July	- 2,000	150															

Collector Mr. H. T. Ommaney's Report, dated 6th January 1877).

There are 1,680,000 lbs. of grain in store; it is imported from the western talukas, from Holkar's territories, and the G.I.P. Railway. Private enterprise will supply the market, but prices are unlikely to fall.	The population amounts to 28,000, of whom 10,000 are cultivators and a large number are weavers living in the town of Párola. Half the cultivators are well-to-do, and the other half poor. There are no large landholders, but the cultivators have good credit with the sowkars.	There has been some emigration chiefly from Párola itself on account of the scarcity of water there, but it is not likely to become general.	The Mhasawad tank and the Amalner-Párola road are in progress. The Bho-kar tank and Amalner-Jalgaon road may have to be commenced, and will probably prove sufficient.	No charitable relief has yet been given, but a fund of Rs. 350 (Rs. 100 being Government money) has been collected, and will be used, if necessary, in feeding the infirm poor.	<table><tr><td>There are now about 600 persons on the works. There will be on—</td><td><i>On Works.</i></td><td><i>By Charity.</i></td></tr><tr><td></td><td>—</td><td>—</td></tr><tr><td>1st March</td><td>- 1,500</td><td>200</td></tr><tr><td>1st May</td><td>- 2,000</td><td>200</td></tr><tr><td>1st July</td><td>- 2,000</td><td>300</td></tr></table>	There are now about 600 persons on the works. CHALISGAON Taluka (Acting Extra 2nd Assistant Collector)								
The kharif yield may be taken at 9, and the rabi at 7 annas. There are no prospects of further sowings this season.	The amount of land revenue is not given; but the remissions are estimated at Rs. 6,000.	There has been no unusual mortality amongst the cattle, nor is there any reason to anticipate any, as Government have thrown open the forests of the taluka.	There is no danger of a serious failure in the water supply. The rivers Girna and Titur and several large nullahs will hold sufficient for the year. In about 15 villages it may be necessary to undertake repairs to wells.	Date.	Prices—Lbs. per Rupee.

PACHORA Taluka (Acting Extra 2nd Assistant Collector)								
The kharif yield may be taken at 7, and the rabi at 2 annas. There are no prospects of further sowings this season.	The total amount of land revenue is not given; but the remissions will probably amount to Rs. 15,000.	No unusual mortality amongst the cattle has occurred, and none is anticipated, except in the case of old and worn-out animals.	This taluka is well watered by the Girna and its tributary streams from the Satmalas. There need be no apprehension of a failure in the water supply.	Date.	Prices—Lbs. per Rupee.

BHADGAON PETHA, PACHORA Taluka (Acting Extra 2nd								
The kharif yield, which takes up more than three-fourths of the area of the Petha, may be taken at 7 annas and the rabi at 3 annas. Fodder, but no grain, may be sown.	The total amount of the revenue is not given, but the remissions will probably be Rs. 10,000.	No. unusual mortality amongst the cattle has occurred, and none is anticipated, except in the case of the old and worn-out animals.	Many villages to the north of the taluka will suffer from scarcity of water; the only remedial measure is to repair such old wells as are promising. The Janda Canal will, however, greatly alleviate the inconvenience.	Prices—Lbs. per Rupee.

H. T. Ommaney's Report, dated 6th January 1877).																	
200,000 lbs. of grain are estimated to be in store; imported chiefly from Jalgaon and Mhasawad railway stations. Prices have fallen, but are not likely to decline further, private enterprise will supply the market.	About one-half the population consists of cultivators, one-fourth of artisans and traders, and the rest of labourers, mendicants, &c. A fair proportion of the first two classes is well off. There are no large landholders, but the sowkars will aid the people.	There has been no noticeable emigration, and none is expected.	The Enandol-Meheji and Jalgaon-Girna River roads are in progress. If a further grant is made for the former, and the latter is extended to Dhara-gaon or Amalner, they will prove ample.	The infirm poor receive gratuitous support from Government funds, aided by private contributions.	At present there are 125 people supported on works, and 40 by charity. The number requiring support will be on— <table><tr><th></th><th>On Works.</th><th>By Charity.</th></tr><tr><td>1st March</td><td>- 1,000</td><td>100</td></tr><tr><td>1st May</td><td>- 1,500</td><td>150</td></tr><tr><td>1st July</td><td>- 2,000</td><td>150</td></tr></table>		On Works. H. T. Ommaney's Report, dated 7th January 1877).

There is at present a six months' supply of grain in store. It is imported from the Chalisgaon railway station and the Nizam's dominions. Private enterprise will supply the market, but prices are not likely to fall further.	Out of a population of 45,000, 33,750 are high, and 11,250 low caste. About one-half may be put down as fairly well off. There are 9,000 cultivators, a small proportion of whom combine other occupations with agriculture. There are no large landholders.	There has been no noticeable emigration, and none is anticipated.	There are no relief works in progress at present; it will, however, be necessary to start one shortly, and improving the Utrán Ghát road to the foot of the ghát is proposed. Should another work be necessary, the Chalisgaon-Lohara road can be improved between Ozur and Waghi.	Demands for charitable aid are met by voluntary subscriptions.	At present Government have no people to support. Relief on works may be sought by— On 1st March - 500 " 1st May - 1,000 " 1st July - 1,000 The spontaneous liberality of the richer people will obviate all necessity for Government charity.
---	--	---	--	--	---

H. T. Ommaney's Report, dated 7th January 1877).

ere are at present about 344,000 lbs. of grain in store; it is imported by rail and from the Nizam's territories. Private enterprise will supply the market, but prices are unlikely to fall.	One-half the population is well off, and the other half poor. Of the latter, three-fourths are cultivators and one-fourth labourers. One or two large landholders will probably aid their tenants.	No emigration has taken place, and none is expected.	The road from Páchora to the Titur River is in progress. On its completion, portions of the Chálisgaon-Lo-hara road will be undertaken.	No expenditure on charity has been incurred.	At present there are 124 persons, chiefly immigrants, on the Páchora road. There will probably be on— <table><tr><th></th><th>On Works.</th><th>By Charity.</th></tr><tr><td>1st March</td><td>- 300</td><td>50</td></tr><tr><td>1st May</td><td>- 500</td><td>50</td></tr><tr><td>1st July</td><td>- 500</td><td>50</td></tr></table>		On Works. KHANDEIS

a.	b.	c.	d.	e.
VIRDEL Taluka (District Deputy Collector)				
The kharif yield is estimated at from 8 pies to 8 annas, and the rabi from 1 to 6 annas. There are no prospects of further sowings this season.	The total amount of land revenue is not given, but the Collector estimates the remissions at Rs. 25,000.	There has been no mortality amongst the cattle, and none is anticipated, as Government have thrown open the forest-grazing.	The water-supply is chiefly derived from rivers and good wells, and is on the whole sufficient to last till the next monsoons. There will, however, be scarcity in about eight villages, in which wells must be cleared and deepened.	Prices—Lbs. per R.

SHIRPUR Taluka (District Deputy Collector)				
The kharif crop is from 2 to 10, and the rabi from 1 to 6 annas. There will be no further sowings this season.	About Rs. 55,000 will probably have to be remitted. The total revenue is not stated.	There has been no unusual mortality among cattle, and none is anticipated. Fodder is plentiful.	There is no fear of the water-supply failing at present. But in 24 villages wells will have to be cleared out and deepened before the hot season.	Prices—Lbs. per R.

NUSSEERABAD Taluka (2nd Assistant Collector)				
The yield of the kharif crop is 4½, and that of the rabi 3 annas. There will be no further sowings this year.	Rs. 65,000 will have to be remitted out of a revenue demand of Rs. 2,11,532.	Mortality among the cattle and agricultural stock has as yet been little more than nominal; but it is expected that many will die from want of fodder and water before the end of the hot weather. The cultivators are taking every precaution for the preservation of their cattle, and have secured large stocks of hay, and all the cattle not in immediate use have been sent to the hills and forest reserves to graze. The Second Assistant can suggest no further remedies than those already adopted by Government.	The only sources of water-supply are rivers and wells; many of the latter will soon run dry. Deepening them and digging pits in beds of rivers are the only remedial measures possible.	Weekly Prices—per Rupee.

CHOPRA Taluka (2nd Assistant Collector Mr. J. P.)				
The kharif crop is estimated at 6, and the rabi at 2½ annas.	Out of a revenue demand of Rs. 1,60,482, about Rs. 50,000 will probably have to be remitted.	No unusual mortality has occurred among cattle and agricultural stock, but it is anticipated that before the end of the hot weather many will die from want of fodder and water. All the cattle not in immediate use have been sent into the hills and forest reserves to graze. The Second Assistant is not prepared to suggest any further action in the matter.	The only sources of water-supply are rivers and wells. Many of these wells will run dry before the end of hot season. The only remedial measures possible to improve the water-supply are deepening the wells and digging pits in the beds of streams.	Weekly Prices—per Rupee.

Shriniwas Balaji's Report, dated 8th January 1877).																	
Lies of grain can be own from the railway cons. of Mhasawad Chálisgaon; and pri- enterprise will sup- the market.	The population, which is about 20,800, are for the most part high caste, Kunbis and Rájputs, and purely agricultural. About 1,300 are urban or artisan. About 10 large landholders may aid their ten- ants.	No emigration has taken place, and none is likely.	The present relief works, consisting of the Songir-Nándur- bar road and a tank, will prove sufficient.	No demands have yet been made for cha- ritable assistance, but the sum of Rs. 3,768 has been raised for the purpose by private subscriptions.	At present 1,219 persons are supported on the works, and none by charity. There will probably be, on— <table><tr><th></th><th><i>On Works.</i></th><th><i>By Charity.</i></th></tr><tr><td>1st March</td><td>- 4,000</td><td>200</td></tr><tr><td>1st May</td><td>- 8,000</td><td>400</td></tr><tr><td>1st July</td><td>- 3,000</td><td>600</td></tr></table>		<i>On Works.</i>	<i>By Charity.</i>	1st March	- 4,000	200	1st May	- 8,000	400	1st July	- 3,000	600

1st July	- 3,000	600															

Shriniwas Balaji's Report, dated 9th January 1877).

local stocks are estimated at 1,050 tons. Supplies are drawn from the province of Nimad, lying on the taluka, the large imports have lowered prices. Private enterprise will meet all demands.	The population consists chiefly of Bheels and Kolis, and is almost purely agricultural. The proportion of the urban or artisan to the whole agricultural class is about 2 per cent. There are few well-to-do people. There are 8 or 10 large landholders able to aid their tenants.	No emigration has taken place, and none is anticipated.	The only relief work in progress is the repairing of the Agra road. The Shirpur-Chopra road which has been sanctioned as a relief work will soon be started. If this proves insufficient the District Deputy suggests the repairing of the Shirpur - Sháhada and Amalner road.	The public have subscribed Rs. 1,537 for charitable relief, but none of this sum has yet been expended.	There are 286 persons on the hands of Government for relief on works, and 25 for gratuitous relief according to the Mámlatdár's report, but the District Deputy doubts the latter statement. The Mámlatdár estimates the number to be relieved by works at, on the— 1st March - - 300 1st May - - 700 1st July - - 600 The District Deputy, however, disputes the correctness of this estimate, and is of opinion that the numbers will be more than double; and that the numbers to be gratuitously relieved will be, on the— 1st March - - 100 1st May - - 300 1st July - - 400
--	---	---	--	---	--

J. Pollen's Report, dated 30th December 1876).

trustworthy information is obtainable as to amount of the local stocks of grain, but they supposed to be small, importations will be necessary. Supplies to all local wants can readily procured from large markets of Jalna and Bhusawal.	The population is chiefly agricultural, and the vast majority of the cultivators are very much in debt; not more than 10 per cent. can commence agricultural operations without the aid of sowkars. The sowkars are the capitalists of the taluka, and many of them are large landholders, both able and willing to aid their constituents.	There has been no unusual emigration.	No large relief works have been started in this taluka.	About Rs. 50 have been spent in relieving travellers and the infirm poor; besides which, Rs. 1,000 have been granted for expenditure on light labour relief gangs, employed in improving the cleaned tracts in the taluka.	The number of persons relieved by works at date of report was 261 and by charity 25. The numbers expected to be on the works hereafter are— On 1st March - 3,000 " 1st May - 5,000 " 1st July - 2,000
--	---	---------------------------------------	---	--	--

Report, dated 30th December 1876).

trustworthy information can be obtained as to the extent of the local stocks of grain, but they are believed to be small. It can, however, be stored in any quantity which may be required in the large markets of Gaon and Bhusawal.	The population is chiefly agricultural, and the vast majority of the cultivators are said to be hopelessly in debt; not more than 10 per cent. can commence agricultural operations without the aid of sowskars. They are the capitalists of the taluka. Many of them are large landholders, and are both able and willing to aid their constituents.	No unusual emigration has taken place.	No large relief works have been opened in this taluka.	About Rs. 50 have been spent in charitable relief to travellers and infirm poor in the larger towns. In addition to this, Rs. 1,000 have been granted for expenditure on light labour relief gangs. These gangs are employed in improving the cleaned tracts of the taluka.	The number of persons, whom Government had on their hands at date of report, was on works 378, on charity 39. The numbers on works will hereafter be— On 1st March - 700 „ 1st May - 1,200 „ 1st July - 1,000 The numbers, who may have to be relieved by charity, are not given.

BHUSÁWAL Taluka (Assistant Collector)

The kharif and rabi yields will each be 8 annas. There are no prospects of further sowings this season.	The fixed land revenue is Rs. 2,50,000, and the probable remissions are Rs. 70,000.	No mortality has occurred amongst the cattle, nor is any anticipated.	In about 30 villages, where the wells and nullahs are dry, the people will have to go some distance to fetch water. It is proposed to excavate new wells and deepen old ones, and to attach cattle-troughs to them.	Date.	Prices—Lbs. per Rupee.

GENERAL

Of the 15 talukas and three pethas, the crops in 10 seem fair and in eight indifferent. The proposed remissions amount to Rs. 4,66,000. The condition of the cattle, except in four talukas, appears satisfactory. The recent heavy rain in Khandesh has probably dissipated all fears regarding the water supply. No apprehensions are entertained regarding the grain supply. The majority of the population of this as of all other collectorates is either agricultural, or very intimately connected with agriculture. There has been scarcely any migration from the district. The chief relief works are the Dhulia-Pimpalner and Songir-Nandurbár roads. The expenditure upon charity has been very trifling.

Assistant Collector Mr. J. Pollen's Report, dated 30th December 1876).					
No reliable information is procurable as to the extent of the local stocks of grain, but they are supposed to be small. Grain, however, can be imported in any quantities required from Jalgaon and Bhusaval.	The population is chiefly agricultural, and the great majority of the cultivators are said to be deeply in debt; not more than 10 per cent. can commence agricultural operations without the aid of sowkars. These are the capitalists of the taluka, and many of them are large landholders, and both able and willing to aid their constituents.	There has been no unusual emigration.	Only small relief works are in progress.	Rs. 50 have been expended in relieving needy travellers and the infirm poor; besides which, Rs. 1,000 have been granted for expenditure on light labour relief gangs, who are employed in improving the cleaned tracts throughout the taluka.	The number employed on works at date of report was 325, and that relieved gratuitously 32. The numbers will hereafter be— On 1st March - 2,600 " 1st May - 3,700 " 1st July - 1,700

Mr. H. Woodward's Report, dated 11th January 1877).

the local stocks of grain are sufficient for the year; it can, if necessary, be imported from the Central Provinces, Berar, and Indore. Prices have fallen, and private enterprise will supply the market.	The population is mainly agricultural and very poor. There are no large landholders likely to aid their tenants.	A partial emigration has taken place in the direction of the Central Provinces, Indore, and Berar. Further emigration is expected.	The relief works now in progress, consisting of a tank and two roads, are sufficient. On their completion the only works which can advantageously be undertaken are deepening and excavating wells.	A sum of about Rs. 600 is available for charitable relief, but few demands have been made.	350 persons are being relieved on works, and 40 by charity. The estimate for the future is— <table><tr><td></td><td><i>On Works.</i></td><td><i>By Charity</i></td></tr><tr><td>1st March -</td><td>1,050</td><td>120</td></tr><tr><td>1st May -</td><td>2,100</td><td>240</td></tr><tr><td>1st July -</td><td>350</td><td>40</td></tr></table>		<i>On Works.</i>	<i>By Charity</i>	1st March -	1,050	120	1st May -	2,100	240	1st July -	350	40
	<i>On Works.</i>	<i>By Charity</i>

1st May -	2,100	240															
1st July -	350	40															

OBSERVATIONS.

The number of labourers anticipated to be upon the hands of Government is—

On March 1st -	-	-	-	-	-	16,950
On May 1st -	-	-	-	-	-	28,200
On July 1st -	-	-	-	-	-	16,650

No return of the Jámner Taluka has been received; it is reported to be unaffected by scarcity.

This Government must guard themselves against the supposition of being held to accept as accurate or reliable all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

(Signed) C. G. M. MACPHERSON,
Under-Secretary to Government.

CHANDOR Taluka (Second Assistant Collector Mr. F. L. Charles' Rep

				Date.	Prices—Lbs. per Rupee		
					Rice.	Bajri.	Wheat.
The kharif yield will be 9 annas, and the rabi 4 annas; vegetables and pepper will be sown hereafter in garden lands.	The land revenue is Rs. 31,045, of which about Rs. 25,000 will be remitted.	There has been no unusual mortality amongst the cattle. They are being sent to graze in Dindori and the hills near Chandor, where there is plenty of fodder. Government aid is unnecessary.	The water supply is failing. There are no large rivers, but a number of small nullahs, the flow of which has already stopped, though there are pools at intervals. In the hot weather water to the north of these nullahs will be scarce, and some villages will have to be abandoned on this account; but to the south water will be plentiful. Some wells will have water throughout the year, but others must be deepened.	1st to 15th Oct. 1876	21	30½	27½

NIPHÁD Taluka (Collector Mr. H. N. B. Erskin

				For the week ending	Prices—Lbs. per Rupee		
					Wheat.	Bajri.	Jowári.
The kharif yield will be 6 annas, and the rabi 5 annas. Indian corn, jowari for fodder, methi, carrots, ratala, onions, and vegetables will be sown in garden lands.	The remissions may perhaps be Rs. 80,000, but the Collector considers this high.	No cattle have died from starvation. The people have sown Indian corn and methi for the support of their cattle, and will afterwards sow "khonde." Some have brought grass from the Dindori and Chandor Talukas, whither cattle to the number of 3,000 have been sent to graze, as also to Baglan and Pimpalner. Government aid seems unnecessary.	There will be a scarcity of water from March to June in about 40 villages, to relieve which zirars should be dug in the beds of rivers at a cost of Rs. 500. Most of the villages have a good water supply from the Godavery and other smaller rivers, and as yet want is not felt.	7th October 1876	33	36	44

-----------	-----------	-----------	-----------	-----------	-----------

thout date, forwarded with the Collector's Remarks, dated 6th January 1877).

o large stocks are kept. What is required for consumption is brought in by grain. Probably large exportations have taken place to the Deccan. Private enterprise will keep up the supply; if the grain is largely imported the prices will fall. No Government interference is deemed necessary.	The population is purely agricultural, being mainly Kunbis. In the southern villages the people are well off; in the north and east they are poor. The Chief of Vinchur is the only large landholder, and he may assist his tenants; no aid from other landholders is expected.	No emigration has taken or is likely to take place, except in the case of people in charge of cattle.	One roadwork and one tank have been undertaken. These will suffice for the month. On their completion the Assistant Collector proposes the road from Chandor to Munmad station. The Collector, however, is of opinion that no further works will be necessary.	Rs. 150 have been received to relieve the aged and infirm poor, but nothing has yet been spent. A committee will be appointed at Chandor to administer to travellers' wants.	The number of persons at date of report on the hands of Government for relief by works was 1,742; by charity none. There will be on— 1st March - - 3,000 1st May - - 3,500 1st July - 1,000 to 1,500 None are being supported by charity, and it is impossible to say if any such demands will be made.
--	---	---	--	--	--

Report, dated 6th January 1877).

here is a stock of about 9,910 tons; 3,303 tons will probably be imported. Merchants will probably do all that is required to supply the taluka without Government interference. The Collector observes that a large stock of grain is unnecessary, as the G. I. P. Railway runs through the taluka.	The population is almost purely agricultural, and consists mainly of Kunbis. The Chief of Vinchur is the only large landholder likely to aid his tenants.	There has been no emigration; the people are moving towards the relief works.	Three small road-works are in progress, and two more are required.	Rs. 200 have been granted by Government to aid the helpless and Rs. 70 have been spent.	On works, 8,926; by charity, 80. 1st March, May, and July about 13,000.

IGATPURI Taluka (Assistant Collector Mr. J. A. Baines' Rep)				
The kharif and rabi yield may each be taken as 8 annas. There is no prospect of further sowings this season.	The remissions will be about Rs. 8,000.	There has been no unusual mortality amongst the cattle, and none is anticipated; precautions are, therefore, unnecessary.	There will be about six weeks scarcity of water, to relieve which it is proposed to deepen wells and to construct a dam across the Kadwa.	Prices—Lbs. per Rupee

YEOLA Taluka (Second Assistant Collector Mr. F. L. Charles' Rep)

The kharif yield will be 4 to 5 annas, and the rabi 2 to 3 annas. No further sowings are expected, except a few plots of pepper and vegetables, and methi for fodder.	The revenue is Rs. 64,316-10-1, and the probable remissions will be Rs. 45,000.	No unusual mortality has occurred, but large numbers of cattle have been sent to the hills on the borders of Khandesh. Beyond this no measures have been taken, nor are any deemed necessary.	The water supply will probably fail in the hot weather, in which case the best remedial measure would be for the people to emigrate, as they have done in former years, to the banks of the Godavery. The Collector thinks that the water supply of the town of Yeola will prove sufficient.	Prices—Lbs. per Rupee

SINNAR Taluka (Supernumerary Assistant Collector Mr. J. A. Baines' Rep)

The yield of kharif and rabi is estimated at between 4 and 5 annas; the yield of each is not stated. There will be no further sowings this season.	The remissions will probably range between Rs. 80,000 and Rs. 1,00,000. The amount of the ordinary revenue is not given.	There has been no unusual mortality amongst the cattle, many of which have been sent away by the ryots to Khandesh and the hills to graze. Government interference will not be necessary.	There will be great scarcity of water in many villages, to alleviate which "Scindis" will have to be dug, and wells sunk, cleared, and deepened.	Prices—Lbs. per Rupee

DINDORI Taluka (Acting Second Assistant Collector Mr. F. L. Charles' Rep)

The kharif yield may be taken at 6 to 7 annas, the rabi at 5 $\frac{1}{2}$ to 6 $\frac{1}{2}$, and the bagayat from 8 to 10. There are no prospects of further sowings this season, with the exception of a few isolated patches of vegetables.	The revenue is Rs. 1,15,578, and the remissions will probably amount to Rs. 40,000.	There has been no unusual mortality amongst the cattle, and none is anticipated.	Scarcity of water will be severely felt in those villages, 20 or 30 in number, which are dependent on wells alone for their supply. In such villages it will be necessary to deepen and clear the wells, and failing obtaining water by this means, the villagers must move to the nearest river.	Prices—Lbs. per Rupee

districts in
Bombay
Presidency.

<i>f.</i>	<i>g.</i>	<i>h.</i>	<i>i.</i>	<i>j.</i>	<i>k.</i>
without date, forwarded with Collector's remarks, dated 8th January 1877).					
There are no large stores of grain, but the Assistant Collector hopes to make arrangements with dealers for grain and fodder till the first rain falls.	The majority of the population are agriculturists, and about 3,000 are employed on railway works. Few only of the landholders are able to assist the labouring classes.	No emigration has taken place; but it is expected that after "Shinga" (27th and 28th February) many will go in search of a livelihood.	There are no relief works in progress, but the Sinner and Gori road will soon reach the taluka; it is, however, a small work, and the dam at Walvihir may have to be undertaken.	A few isolated instances of private charity have occurred.	As no relief works have been started, no correct estimate of the probable number requiring relief from Government can be framed.

without date, forwarded with Collector's Remarks, dated 4th January 1877).

There are no large stocks of grain in the taluka itself, but it can always be had in times of real scarcity from the Lasulgaon Railway Station, where piles of grain bags are stacked, and from the north via Manmad. Prices have fallen, and private enterprise will be able to supply the market.	The population of Yeola is almost wholly agricultural, the bulk of the people being Kunbis and Mhars. The town of Yeola itself contains 17,461 inhabitants, who are principally manufacturers. There are a few landholders, notably the Vinchurkur, who will aid their tenants.	Out of a population of 59,313, some 3,000 to 5,000, many of them weavers, have left for the neighbouring talukas and for Benares. Further emigrations are probable, unless relief works are started within the taluka.	There are at present no relief works in progress, but two roads will shortly be commenced.	No charitable relief has yet been deemed necessary.	None are employed on works, and none relieved by charity. The number Government will have to provide for will be on— <table><tr><th></th><th><i>On Works.</i></th><th><i>By Charity.</i></th></tr><tr><td>1st March</td><td>5,000</td><td>100</td></tr><tr><td>1st May 7,000 to 8,000</td><td></td><td>150</td></tr><tr><td>1st July 2,000 to 3,000</td><td></td><td>200</td></tr></table>		<i>On Works.</i>	<i>By Charity.</i>	1st March	5,000	100	1st May 7,000 to 8,000		150	1st July 2,000 to 3,000		200
	<i>On Works.</i>	<i>By Charity.</i>															
1st March	5,000	100															
1st May 7,000 to 8,000		150															
1st July 2,000 to 3,000		200															

Report, without date, forwarded with Collector's Remarks, dated 8th January 1877).

The present store of grain is estimated by the Mamundar at about 74,000 lbs. The Assistant and Collector make no remarks in this estimate. The market will be supplied by private enterprise without any aid from Government.	No reliable information is procurable as to the number of high and low caste people. There are no landholders capable of aiding their tenants.	A few people have emigrated to Bombay and elsewhere in hopes of employment. Others will follow if relief works are started.	The relief work at Ghorwad is sufficient for the present, but two roads will shortly have to be commenced.	Out of Rs. 200 granted for charitable purposes, 97 persons have been relieved, each adult receiving 1 lb. of bajri, 4 ozs. of pulse, and 6 pies cash, and each child 8 ozs. bajri, and 1 oz. pulse, and 3 pies cash.	At present 6,000 people are being supported on the works, and 16 by charity. On 1st March 10,000 persons will require relief on works, on 1st May 14,000 to 15,000, and considerably less on 1st July. The firm requiring support on 1st March and 1st May will be about 150, and on 1st July 300.
---	--	---	--	--	--

Report, forwarded with Collector's Remarks, dated 8th January 1877).

There is no deficiency of grain, but no estimate can be made of the stocks. Large importations are made from Niphad and the Point State. Prices have fallen, and private enterprise will supply the market.	The total population amounts to 68,626, and is almost purely agricultural. The people are chiefly Kolis, and are very poor, and much in debt. There are no landholders who will aid their tenants.	No unusual emigration has taken place, and none is expected.	No relief works are in progress at present; but it may be necessary to start three road works, and make approaches to the Kadwa River.	No charitable relief has yet been given.	No people at present on relief works. There will be probably on— 1st March 3,000 to 4,000; 1st May 4,500 to 5,000; and very few on 1st July.

MALIGAON Taluka (Acting First Assistant Collector)

The kharif yield will be 6, and the rabi 2 annas. There are no prospects of further sowings this season.	The probable remissions are Rs. 40,000. The total revenue is not given.	There has been no unusual mortality among the cattle, and none is anticipated.	About Rs. 5,000 may be required for deepening wells.	Price — Lbs. per Rupee

NANDGAON Taluka (Acting First Assistant Collector)

The kharif yield will be 10, and the rabi 4 annas. There are no prospects of further sowings this season.	The probable remissions are Rs. 2,500. The total revenue is not given.	There has been no unusual mortality among the cattle, and none is anticipated. About 2,000 animals have been sent for grazing to the Chalisgaon Taluka, Khandesh.	It may be necessary to expend about Rs. 4,000 in improving the wells of 15 villages.	Prices—Lbs. per Rupee

forwarded with Collector's Remarks, dated 6th January 1877).					
There is plenty of grain in the taluka, and the railway is at hand to bring whatever may be required. The rates will probably rise after the grain has begun to move from Bombay and other centres. Private enterprise will be equal to the demand.	There is no reliable information on this point. There are no large landholders capable of assisting their tenants.	No emigrations have yet taken place from the villages. The people earn a few pice from the sale of wood and grass, and refuse to labour on distant relief works. Those on the Ghâts may possibly emigrate, but at present they have no such intention.	No relief works are in progress, but the work of metalling the Násik and Trimback road and digging a large tank may shortly have to be undertaken.	No charitable aid has yet been given, and none will probably be necessary.	No persons are maintained by Government either by charity or on relief works. No estimate for the future can be framed.

Mr. W. Woodward's Report, dated 8th January 1877).

he local stocks of grain are estimated at 740,000 lbs. Supplies are imported by railway from Nandgaon. Prices may fall, and private enterprise will supply the market.	The people are chiefly agricultural, with a sprinkling of well-to-do high caste people. There are no large landholders likely to assist their tenants.	No unusual emigration has taken place and none is anticipated.	No relief works are in progress at present, but it may be necessary before long to commence the Malegaon-Nandgaon road and some tanks.	A grant of Rs. 200 for charitable expenditure in the taluka has been made. But none of it has yet been spent.	At present no persons are on the hands of Government for relief either by works or charity. It is possible that later on in the year there may be 5,000 people on relief works.
--	--	--	--	---	---

Mr. W. Woodward's Report, dated 8th January 1877).

The grain supply is ample; the railway station at Nandgaon is the centre for imports. Prices have fallen since October, but are likely to rise three or four months before the harvest. Private enterprise will supply the market.	The population is chiefly agricultural. There are no large landholders able to help their tenants if required.	There has been no emigration, and none is anticipated.	No relief works are at present in progress; but in March it may be necessary to commence the Malegaon-Nandgaon road, and the Rájpur Ghát between Nandgaon and Yeola.	No charitable relief has been necessary. A grant of Rs. 150 is available when required.	At present there are no persons on the hands of Government for relief either on works or by charity. The numbers on relief works may be on— 1st March - - 500 " May - - 1,100 " July - - 1,300
--	--	--	--	---	---

Mr. W. Woodward's Report, dated 29th December 1876).

Each village has its own stock, and the amount in the taluka will probably prove sufficient.	The population is chiefly agricultural. There are no large landholders able to aid their tenants, if required.	No emigration has taken place, and none is anticipated.	No relief works are in progress; but the road from Bhawarbari to Satara will soon be commenced.	No charitable expenditure has been incurred.	There are at present no persons on relief works, and at the worst period there are not likely to be more than 2,000 people on them.

GENE

Of the 11 talukas the crops in eight seem fair, and in three indifferent.
The proposed remissions amount to Rs. 3,69,500.
The condition of the cattle throughout the Collectorate appears satisfactory.
In five talukas the prospects of the water-supply seems satisfactory, and in six indifferent. No calamity due to fa
of water is anticipated by Government.
No apprehensions are entertained regarding the grain supply.
The majority of the population of this, as of all other Collectorates, is either purely agricultural, or very intima
connected with agriculture.
There has been very little emigration.
The chief relief works are the Bawarbari-Vinchur, Kapralla Ghát, Vinchur-Niphar, and Niphar-Deopur roads.

The 3rd February 1877.

-----------	-----------	-----------	-----------	-----------	-----------

Report forwarded with Collector's Remarks, dated 16th January 1877).

There is enough grain in the taluka for its wants.	The population is almost entirely agricultural. There are no large landholders who could help their tenants, were it required.	No emigration has taken place, and none is anticipated.	In September and October a few small works were undertaken for the relief of the Bheels. The pressure lasted only till the kharif harvest commenced. In March it may be necessary to commence the Diwathari Kalwan road.	No expenditure has been incurred on charitable relief.	No persons are at present on the hands of Government, and it is doubtful whether there will be any. At the outside there may be 500 on relief works where the pressure is the greatest.
--	--	---	--	--	---

OBSERVATIONS.

The expenditure upon charity has been very trifling.

The number of labourers anticipated to be upon the hands of Government is about—

On March 1st	-	-	-	-	-	-	43,000
On May 1st	-	-	-	-	-	-	53,100
On July 1st	-	-	-	-	-	-	36,300

This Government must guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

(Signed) C. G. W. MACPHERSON,
Under-Secretary to Government.

KOPARGAON Taluka (2nd Assistant Collect

5 to 6 annas will be the yield of the kharif, and 2 annas that of the rabi crop. No prospect of further sowings this season.	The Assistant Collector estimates the remissions at Rs. 78,000, which estimate the Revenue Commissioner considers too high.	No cattle are known to have died from starvation. At the commencement of the scarcity many were sent into the Konkan. The cultivators who have irrigated land are sowing kadwal. Rs. 650 have been given as tagai advances to assist in the purchase of fodder and the improvement of existing wells.	One-third of the villages are situated on or near the Godáviri, and will be well supplied unless the river runs dry. The greater number of the other villages have wells which, with a little outlay, will last for the season. Some few villages are situated on nalas which have already dried. Zirars are being dug; and if this source should fail, the villages will probably be abandoned for the season.	For the Week ending	Prices—Lbs. per Rupee

<i>f.</i>	<i>g.</i>	<i>h.</i>	<i>i.</i>	<i>j.</i>	<i>k.</i>
-----------	-----------	-----------	-----------	-----------	-----------

Mr. F. S. Hamilton's Report, dated 21st December 1876).

the 12 largest villages of more than about 350 houses are stored. Mammád, on the G. I. P. Railway, is 30 miles from Kopar-gaon, and grain is brought thence in large quantities into the taluka. Prices will probably fall before long, and there is little fear of any subsequent considerable rise.	Out of 72,000 people, about 50,000 are high caste, about 11,000 are purely agricultural, and about 5,000 combine agriculture with other occupations. There are only three considerable landholders, and there is no chance of their assisting their tenants.	About 18,000 people have left the taluka. None have returned, nor is it known whether they have bettered themselves. 1,000 more may yet migrate.	Three large road works are in progress, and three more may be undertaken on their completion. Tanks and prickly-pear may also be cleared, but sufficient work for more than two months cannot be found, unless the Dhond and Mammád Railway or some large irrigation work on the Godáveri be commenced.	So far no large sums have been given in charity, what has been given has been raised from private subscriptions. Government have made a grant which will be availed of later in the season as the distress increases.	On works 3,500. By charity 20. If only men belonging to the taluka be employed, the number will be about 5,000 on 1st March, 6,000 on 1st May, and probably none on 1st July, if rain falls seasonably. The plan of transferring labourers from one taluka to another will interfere with the calculation of each taluka.
---	--	--	---	---	---

Mr. F. S. Hamilton's Report, dated 23rd December 1876).

There are very small stocks in the taluka, but grain comes from the Central Provinces via Deolali on the G. I. P. Railway. Competition is active, and there is no fear of prices being fictitiously forced up.	The whole population 81,000 (except that of the chief town) is agricultural. About 1,000 combine trade with agriculture. There are no large landholders likely to aid their tenants.	Out of a population of 81,000, about 7,000 have left in search of work. Perhaps 3,000 or 4,000 more will go.	Four main roads are in progress. The Dhond and Mammád Railway would afford relief to the whole of the taluka. The Pokhvi tank would also be a useful work to undertake.	About Rs. 138 have been spent on charity. A travellers' grain depôt has been opened at Ambi Ghargaon on the Poona and Násik road. Private subscriptions have been raised. Government aid will be required in the hot weather.	On works 5,620. By charity 111. On 1st March 8,000. On 1st May 10,000, and probably none in July.

PARNER Taluka (2nd Assistant Collect																																																							
2½ annas of kharif crop, 2 annas of rabi. No prospect of further sowings this season.	About Rs. 90,000	No cattle have died from starvation. Many have been sent to graze on the Ghâts. The cultivators who have water enough are sowing kadwal to support their bullocks in the hot season. Rs. 2,785 have been granted as tagai for the purchase of fodder and the deepening of wells.	Unless rain falls about Christmas the scarcity of water will prove fatal to cattle, and possibly to human beings. There is no large river, and the small streams are drying up. The villages to the western edges of the central plateau will be uninhabitable during the hot weather; those at the foot of the ravine will be best off. It is proposed to excavate a tank at Parner. Rs. 958 were given in various villages for improving their water-supply; large bandaras for irrigation purposes might be made at Reewooli and Apdhup Dhond. The Collector opposes the earthen dam advocated by his Assistant, unless competent professional aid is available.	<table><tr><th rowspan="2">For the Week ending</th><th colspan="3">Prices—Lbs. per Rupee</th></tr><tr><th>Bajri.</th><th>Jowari.</th><th>Wheat.</th></tr><tr><td>1st week in October 1876</td><td>28½</td><td>30</td><td>24</td></tr><tr><td>2nd " " "</td><td>28½</td><td>30</td><td>24</td></tr><tr><td>3rd " " "</td><td>27</td><td>30</td><td>24</td></tr><tr><td>4th " " "</td><td>27</td><td>30</td><td>21</td></tr><tr><td>1st week in Nov. 1876</td><td>25½</td><td>30</td><td>21</td></tr><tr><td>2nd " " "</td><td>24</td><td>27</td><td>21</td></tr><tr><td>3rd " " "</td><td>22½</td><td>27</td><td>19½</td></tr><tr><td>4th " " "</td><td>21</td><td>24</td><td>19½</td></tr><tr><td>1st week in Dec. 1876</td><td>24</td><td>27</td><td>21</td></tr><tr><td>2nd " " "</td><td>24</td><td>28½</td><td>21</td></tr><tr><td>Average of six years</td><td>45</td><td>59½</td><td>31½</td></tr></table>	For the Week ending	Prices—Lbs. per Rupee			Bajri. KARJAT Taluka (Supernumerary Assistant Collector)

				For each Week in October, November, and December.	Prices—Lbs. per Rupee			
					Jowari.	Bajri.	Wheat.	Rice.
In garden lands the kharif yielded 4 annas and the rabi 4 annas. There was no jirayat crop whatever, either kharif or rabi. There will be no further sowings this season.	The land revenue is Rs. 64,326, of which Rs. 52,543 will have to be remitted.	Of the 24,012 plough bullocks, half have been taken to the valley of the Godavari and places north, where some have died, and others have been sold. Of the remainder, about 6,000 have already died, and 1,000 more may yet succumb. Nearly all the remaining cattle have been sent away. A large number have no doubt died, or been sold for trifling sums. Rs. 1,350 tagai have been given to help to purchase forage.	The water-supply is reduced by a half and will be very scarce in the hot weather. Wells are being cleared and deepened, and ziras in the beds of streams opened.	1st week in October	31	30	26	18

SHRIGONDA Taluka (Supernumerary Assistant Collector)

				Date.	Prices—Lbs. per Rupee		
					Wheat.	Jowari.	Bajri.
The kharif yield was 9 pies and the rabi 9 pies. No prospect of any further sowings except "kadwal" in garden land for forage.	The land revenue is Rs. 1,08,000, of which Rs. 90,000 will have to be remitted.	It is impossible to give a correct estimate of mortality amongst the cattle. As soon as the forage failed, all the cattle, except those used for gardens, were taken to the Gungathori, or to the Nizam's territory, where many died or were sold for trifling sums. Some are returning in a worn-out state and will probably die. The bullocks used for drawing water will probably be saved. Advances from tagai have been made to about 30 people. Some well-to-do persons have imported grass from the Konkan. The people have been shown how to prepare prickly-pear, but the process is too expensive to be adopted.	The water-supply for drinking purposes has not yet failed, but will be scarce before the next rains. All the small streams are dry, but there is water in the Bhima, Hanja, and Gornadi rivers. Wells can be deepened and ziras excavated to provide water in the hot weather.	15th Oct. 1876	22½	27	24½

JĀMKHED Taluka (Supernumerary Assistant Collector)

				Date.	Prices—Lbs. per Rupee		
					Bajri.	Jowari.	Wheat.
The kharif yield is 6 annas. The rabi 2 annas. There is no prospect of further sowings this season.	The revenue is Rs. 82,000. Remissions to the extent of Rs. 37,400 will have to be made.	The number of cattle is about 60,000; 29,000 have been taken to the Nizam's territory, where many have died or been sold. Not more than 10,000 or 12,000 will return. Of those remaining in the taluka, 10,000 have died or will die. As there is no fodder in the taluka, the only measure that the ryots can take is to grow it in their gardens. Grants of tagai have been made for the purchase of fodder.	The water-supply is only from ½ to ¾ of what is usual, and it will be scarce in the hot weather. Rs. 2,000 are now being expended in deepening wells and excavating ziras in the beds of streams.	7th Oct. 1876	33	33	33

f.	g.	h.	i.	j.	k.
r. F. S. Hamilton's Report, dated 23rd December 1876).					
rain is imported by road from Nagar. There is no railway in the vicinity. It is thought that prices will continue to fall. There is no large store of grain in any village of the taluka.	Of the total population of 82,000 about half are Kunbis. Of these one half combine agriculture with trade. There are a few large landholders, who may, the Assistant Collector thinks, be induced to help their tenants. The Collector, however, considers it improbable that the landholders will help their tenants either by making advances or by any other means.	15,000 people have left the taluka. Many went to Bombay, whence they are returning, having been unsuccessful in obtaining employment.	Fifteen small roads are in progress, and four more and some tank clearances are proposed. When these are completed, unless some large work like the Dhond-Manmád Railway is commenced, it will be necessary to go on improving the existing roads, as no money will be available to keep any more new ones in repair.	About 250 poor people are daily fed at Farnar. The expenditure has been about Rs. 600.	On relief works 6,000. By charity 250; these will increase largely before long. The number of workpeople on 1st March will be 10,000 to 12,000, 1st May 20,000, 1st July 1,500 to 2,000.

r. A. F. Woodburn's Report, dated 20th December 1876).

There is five months' supply in the taluka. There is a large store of grain at Mirajgaon and smaller stores at three or four other places, from which grain is being exported; it is being imported from Deksal, Pomalwari, and Jamkhed. Prices have fallen slightly. Private enterprise will keep up the supply.	The majority of the population belongs to the Kunbi and other inferior castes. The population is 52,983, of whom 3,447 are wealthy and 49,536 poor. Only 7,579 are reported purely agricultural, but the Assistant Collector believes the majority of the poor must belong to the agricultural class. There are no large landholders, except a few jaghirdars, from whom no aid can be expected.	22,956 people have migrated to the Godavari and the country north, and probably to the Berars. Some having failed to obtain employment have returned and report that the others are badly off. The people who remain, knowing this, will not be likely to emigrate.	Three road works which have been sufficient so far have been undertaken, but the sanctioned amount will be finished shortly. Six road works, to cost Rs. 14,100, and two tanks to cost Rs. 4,000, have been provisionally sanctioned, but will not suffice to give employment to the people. The Assistant Collector recommends clearing and repairing five large tanks.	Rs. 300 from Government and Rs. 50 from the Nagar Relief Fund have been given for feeding the aged and infirm; 1½ lbs. of jowári is given daily to adults, and 12 ounces to children. Provision for assisting travellers is considered unnecessary. The amount actually spent is not stated.	On works 7,210. By charity 173. Labourers likely to be on the works— 1st March - - 9,000 1st May - - 7,000 1st July - - 2,000
---	--	---	--	--	--

r. A. F. Woodburn's Report, dated 20th December 1876.)

The local stocks are sufficient to last for three months. Further supplies are being brought from Nagar, Mirajgaon, Karjat, and Dhond Station (G. I. P. Railway). Prices have fallen during the last month. Supplies will probably be kept up by private enterprise.	The population amounts to 64,936, of whom 10,234 are purely agricultural, and 5,058 are artisans. The remainder must, the Assistant Collector thinks, be connected with agriculture. The people on the whole are poor. There are no large landholders.	The population is 60,000. About 20,000 have left principally for the valley of the Godavari and further north. There is no accurate information of what they are doing. A few have returned and many will probably follow. No further emigrations are expected.	Four large road works, three of which have been completed. Tank clearances and cutting prickly-pear are the works which have been undertaken. Seven more roads and a tank have been sanctioned. The works have hitherto been sufficient, but those remaining will not nearly suffice. If the earth-works of the Dhond and Manmád Railways are undesirable, a substitute must be found in some large irrigation work not yet discovered.	The aged and infirm received doles of grain daily, adults 1½ lbs. and children 12 ozs. of jowári. Government granted Rs. 500 for this purpose, the Ahmednagar Relief Fund Rs. 250 in grain and cash, and Rs. 56-8 have been raised locally. Travellers receive a day's food and enough to take them on to Nagar. The amount spent in charity is not given.	On works 3,846. By charity 200. The number of labourers will be as follows:— 1st March - - 8,000 1st May - - 8,000 1st July - - 4,000
--	--	---	---	--	--

r. A. F. Woodburn's Report, dated 20th December 1876).

The taluka has sufficient grain for itself. Prices have fallen owing to the large supplies of grain brought to Poona, Nagar, and other places. The Assistant Collector is of opinion that the Banias will import grain if it is required.	The population is 62,351, of which 1,200 are rich, 22,351 poor and partly connected with agriculture; 5,400 purely agricultural and 33,400 partly agricultural. The majority belong to the Kunbis and other inferior castes. No help can be expected from any landholders to their tenants.	12,565 have emigrated to the Nizam's territory northwards. Some have returned, as they could not find employment. More are expected to emigrate after the rabi is reaped.	There are five road works in progress, and nine small works for improving the water-supply. The money sanctioned for these will shortly be expended. The Collector has been asked to obtain sanction for 13 roads and two tanks. The works so far have been sufficient.	The aged and infirm are supplied with grain daily, adults receiving 1½ lbs. and children 12 ounces of jowári. Rs. 300 have been given for this purpose. A travellers' depot has been opened at Kudch, for which Rs. 100 have been sanctioned, where travellers and the aged and infirm of the locality are helped.	On works 2,365. By charity 280. Labourers likely to be on relief works:— 1st March - - 6,000 1st May - - 5,000 1st July - - 2,000

NEWASA Taluka (1st Assistant Collector)

a.	b.	c.	d.	e.
NEWASA Taluka (1st Assistant Collector)				
The kharif and rabi yield will each be 6 annas. No further sowings are expected this season.	The revenue is Rs. 1,30,000. The 1st Assistant Collector estimates the remissions at Rs. 30,000 or Rs. 40,000; but the Revenue Commissioner sees no reason for remissions, except in some few cases.	Some cattle have died, though probably not from starvation, and a good many have been taken to places where fodder is more plentiful. No unusual mortality is anticipated. No advances have been made by Government.	The water-supply will be sufficient.	Prices—Lbs. per Rupee

NAGAR Taluka (1st Assistant Collector)

a.	b.	c.	d.	e.
NAGAR Taluka (1st Assistant Collector)				
The kharif yield will be 4 annas, and the rabi 10 annas in bagayat lands, from 1 to 4 in jirayat lands of most villages, and 4 to 8 in the others. The area of each is not given, but the rabi cultivation considerably preponderates over the kharif. No further sowings of grain crops are expected.	The revenue is Rs. 1,17,597, and the probable remissions Rs. 50,000.	600 cattle are reported to have perished, and 25,000 more are expected by the Mamlatdar to die. This estimate the Assistant Collector and the Revenue Commissioner consider high. A grant of Rs. 2,200 tagai has been made for the purchase of fodder, and two sums of Rs. 2,000 each have been allotted for improving the water-supply and growing kadwal. There are grazing places at Pimpri in the Sangamner Taluka on the bank of the Prawari at Kopargaon, Kokomton, and Sannatebar, in the Kopargaon Taluka on the bank of the Godavari, and on the Ghats, where cattle can be accommodated. Some cultivators have purchased and sown fodder for the subsistence of their cattle. Others again are deporting them. The Mamlatdar proposes establishing six pounds for the admission of cattle, on the understanding that the owners relinquish all claims to them after they are put in; that Government should support them till the next monsoon, and then sell them, but the Assistant Collector and the Revenue Commissioner are both opposed to entering the market. The Collector supports his Assistant's suggestion to establish temporary Panjrapoles.	Of the total number of villages, 59 are on the banks of rivers, and 59 are dependent on wells for their water-supply. There is no fear of a total failure, provided wells are deepened, ziras dug, tagai liberally advanced, and use made of Norton's screw where practicable.	Prices—Lbs. per Rupee.

f.	g.	h.	i.	j.	k.
Reports, dated 30th December 1876 and 6th January 1877).					
The local stocks of grain are not large. Importations are made by private persons from the Nizam's territory.	The Mamlatdār reports a total population of 87,974, out of which the Assistant Collector thinks 60,000 are partly agriculture, and belong to the Kunbi caste. Sir Dinkar Rao is the only large landholder, and he will doubtless afford relief to his tenants if necessary.	No emigrations are reported, but considerable immigrations have taken place.	No relief works are considered necessary at present.	Rs. 300 have been assigned for charitable relief. Adults receive 1½ lbs. of grain or flour, and children 12 ozs. daily.	About 50 persons are supported by charity. The number of immigrants who may require support on relief works later on in the season is estimated at 7,003.

Mr. A. H. Spry's Report, dated 27th December 1876).

Grain is plentiful and is imported from the Nizam's dominions; it is also exported from this taluka to less favoured localities. Prices have fallen. Private enterprise will supply the market.	The population is 75,000, consisting chiefly of kunbis and agriculturists. There are about 5,000 high-caste people and 4,500 artizans. There are a few jahagidars, who may eventually give relief to their tenants.	There is more fear of immigration than of emigration, though some instances of the latter are reported.	No relief works are required for the present. Later on, however, a demand will be made which can well be met by constructing the earthworks of the Dhond and Munuād Railway. There is no other large works which can be undertaken with advantage.	About 50 infirm people are being charitably supported. Their numbers are likely to increase.	On works 50, by charity 50; this number will probably swell to 1,000 by 1st May. The numbers requiring relief on 1st March will probably be about 8,000, 1st May 20,000, 1st July 8,000. The Revenue Commissioner thinks that at the worst the numbers will never exceed 8,000 people.
---	---	---	--	--	--

Mr. A. H. Spry's Report, dated 28th December 1876).

There is a stock of 3,303 tons of grain in store; this, with the Dhond and Mamnār stations at a distance of 47 and 100 miles respectively, whence supplies are drawn, will suffice. The prices have fallen, and private enterprise will supply the market.	Out of a total population of 67,312, the majority of whom are agriculturists, 65,966 are poor, and 1,346 well-to-do. The proportion of artizans to the total number is about 6 per cent. In the city there are a few landholders likely to assist their tenants, but none in the taluka.	33,032 souls have emigrated, and this number will probably swell as the season advances; their condition cannot be ascertained, but none have yet returned.	There are six road-works and some minor works in progress, which are insufficient, and must be supplemented by further road-works, tank-clearances, and cutting prickly pear, unless the Dhond and Mamnār Railway intersecting the taluka is commenced.	6,575 travellers have already been relieved, each receiving 1½ lbs. of jowāri flour, 6 ozs. of gram flour, together with chillies, a little salt, and five cow-dung cakes a day. The aged, infirm, &c., to the number of 15,641, have also been relieved, each receiving 1½ lbs. of grain, with a little salt.	The number on relief works is 1,462, by charity 781. The probable number requiring support will be as follows:— 1st March - 22,000 1st May - 39,000 1st July - 19,000
--	--	---	---	--	--

Mr. H. P. Spry's Report, dated 26th December 1876).

Grain is plentiful, and is imported from Jubbulpore via Dhond and Mamnād stations. Prices have fallen and private enterprise will meet all demands.	The total population is about 59,000, consisting chiefly of Kunbis and other agriculturists. There are about 4,000 or 5,000 artizans. No aid can be expected from landholders.	No general emigration has taken or is likely to take place.	The only relief works started are road repairs and clearances, which have hitherto sufficed. But the demand for labour will shortly increase, and much more money spent on petty works will simply be wasted; the Dhond and Mamnād Railway would afford ample relief.	Rs. 300 have been allotted for charitable support to the needy, but more will be required.	On works 7,000; by charity 300. By works on 1st March 15,000, on 1st May 25,000, on 1st July 10,000, according to the 1st Assistant; but the Collector and Revenue Commissioner hope the number will not be quite so large.

AKOLA Taluka (2nd Assistant Collecto							
The kharif yield may be taken at 9 annas, and the rabi at 2. There is no prospect of further sowings.	The remissions will probably amount to Rs. 36,000.	No unusual mortality among the cattle has taken place, and none is anticipated, as there is plenty of grazing on the Western Ghats.	The water-supply seems likely to fail altogether; the Praora and Mula rivers still contain water, but a large outlay will have to be incurred on deepening wells.	For the Months of		Prices—Lbs. per Rupee.

Average of six years		-	25½	61½			

GENERAL

Of the 11 talukas, the crops in two seem to have been fair, in five bad, and in four very bad.
The proposed remissions amount to Rs. 5,77,943.
In six talukas the condition of the cattle seems satisfactory, in two indifferent, and in three bad.
In four talukas the prospects of the water-supply seem satisfactory, but it is reported that in five considerable, and in two large expenditure on this account will have to be incurred; no calamity due to failure of water-supply is, however, anticipated by the Government.
No apprehensions are entertained regarding the grain-supply.
The majority of the population of this as of all other Collectorates is either agricultural or very intimately connected with agriculture.
128,553 people, out of a population of 773,958, appear to have emigrated, but some have returned.
A further migration of upwards of 5,000 people is anticipated. The migration appears to this Government to be due mainly, if not entirely, to the cattle movements, and to the movement of the people towards relief works.

24th January 1877.

-continued.

Bombay
Presidency.

f.	g.	h.	i.	j.	k.
----	----	----	----	----	----

[r. F. S. Hamilton's Report, dated 27th December 1876).

There is no large stock of grain in the taluka; it is brought from Sangamner, and the prices will depend on the market rates ruling there.	Except about 500 artisans, the whole population is agricultural, and there are no large landholders among them.	About 1,800 people have emigrated, 300 of whom have gone to the Sinnar relief works adjoining Akola, and the rest probably to the Konkan.	Five road works are in progress; and as this is the only taluka in the zila where there are no roads, six more are proposed, as well as one or two tank-clearances.	About 50 persons are now being gratuitously supported at 1½ lbs. of flour for an adult and 12 ozs. for a child.	There are 650 people now on relief works. This number will rise to 900 in March, 1,200 in May, and fall to 500 in July. The aged and infirm will have to be supported to the extent of 150 in March, 300 in May, and 500 in July.
--	---	---	---	---	---

OBSERVATIONS.

A considerable number of relief works is in progress, but the local officers are unable to suggest sufficient to meet the future demand for labour, unless the Dhond and Manmar Railway earthworks are undertaken.

The expenditure on charity has not been large.

The number of labourers anticipated to be on the hands of Government is—

On March 1st	-	-	-	-	-	98,900
„ May 1st	-	-	-	-	-	1,48,200
„ July 1st	-	-	-	-	-	47,500

This Government must guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

(Signed) C. W. MACPHERSON,
Under Secretary to Government.

BHIMTHARI Taluka (1st Assistant Collector)

The kharif crop is estimated at 1 pie, and the rabi at 1½ pie. In the irrigated lands, where the water lasts, there may be sowings of different kinds of fodder crops. There will be no further sowings in dry-crop lands this season.	The First Assistant estimates the probable amount of remissions at about Rs. 2,15,000 on a revenue demand of Rs. 2,30,025. The Collector considers this estimate under the mark, and doubts whether any revenue can be collected at all.	Out of 71,000 head of cattle, about 47,000 have been taken to the Berars, the Nizam's Dominions, and the Western Ghâts. The past mortality is estimated at 15,000, and the anticipated mortality at 7,000, besides such deaths as may take place among the cattle which have left the taluka. It is only the more worthless animals which have died. No further measures are practicable on the part of Government for cattle preservation than those already adopted.	The villages on the Bhima and Nira Rivers will have plenty of water. The remaining villages are not so well off, and obtain their supply from wells, many of which will require to be deepened and improved; and a large expenditure (Rs. 40,000) will be necessary for this purpose. INDÁPUR Taluka (Report of Assistant Superintendent, Revenue Survey)

						Prices—Lbs. per Rupee.					
						Wheat.	Bajri.	Jowari.	Gram.	Rice.	Tur.
The kharif crop has utterly failed, and the rabi is estimated at about 2 pies.	The total land revenue (Rs. 1,15,254) will probably have to be remitted.	The number of cattle in the taluka was 44,216, of which 32,560 have emigrated, about 2,285 have died, and about 7,319 deaths are anticipated, unless special steps be taken to prevent them. No advantage has as yet been taken of the Government permission to graze cattle in the Konkan and Máwals, owing to a belief that those districts are fatal to cattle from the Deccan. The Assistant suggests that Government should send pressed hay to Diskál Station, and advance it as tagai to the cultivators. This plan the Revenue Commissioner considers too expensive, and thinks that it would be cheaper to let the cattle die, and then, if necessary, advance tagai for the purchase of others.	There is no fear of a water famine. 40 villages lie on the Bhima and Nira Rivers; the remaining 46 depend on wells, some of which will require deepening and improving. ----	----	----	----	----	----

MR. A. KEYSER'S REPORT, dated 27th December 1876).

The Mámálatdar estimates the local stock of grain at about 1,714 tons, but the importations are large and regular by railways, there being three railway stations in the taluka, Khedgaon, Pátas, and Dhond, whence supplies are drawn, and these importations have lowered prices considerably; but the First Assistant Collector does not anticipate any further fall. There is no likelihood of the supply failing.	The population numbers about 116,274 souls, of whom 22,070 are of the agricultural class, 1,300 shepherds and cattle owners, 8,200 artisans, 7,270 traders, shop-keepers, and servants, &c., and the remaining 77,434 are pensioners, women, and children, and people of no particular occupation. The landholders are nearly all of the class of peasant proprietors, and the few who sublet their land are either traders who will do nothing for their tenants or Brahmans who are in debt. The Inámdárs are also quite dependent on their land for their livelihood, and are more likely to require assistance than to give it. The cultivators are of the Kunbi and Mali caste.	The people have emigrated in large numbers (upwards of 39,200) to the Berars, the Sátapura Hills, the Nizam's Dominions, and the Konkan, with their carts, families, and cattle; and are not likely to return before the next harvest. Most of those who have gone are reported to be doing fairly; of others no information has been received. No further emigration is probable.	The chief relief works in progress are the Mutha Canal, employing about 18,000, and the Mutakamal Tank, employing 5,000 persons, besides numerous minor works which will afford employment to 10,000 for two or three months. Works sanctioned and in progress under civil agency are: Clearing the irrigation tank at Wadhani, clearing 7 small tanks for village water supplies, repairing 18 miles of road, making 47 miles of new road, cutting prickly pear, and excavating and deepening wells. As the numbers seeking employment are increasing, the first assistant thinks that, in addition to the above, one large work is necessary, and names the Nira Canal as a work ripe for commencement and capable of relieving very large numbers. He gives also a list of minor works that might be undertaken.	But little money has as yet been expended on charitable relief to travellers. The aged and infirm poor are allowed 1½ lbs. of grain a day, besides some salt and chillies.	The number on relief works was about 21,804 at date of report. It will be on— <table><tr><td>1st March -</td><td>30,000</td></tr><tr><td>1st May, about -</td><td>20,000</td></tr><tr><td>1st July, from -</td><td>5,000</td></tr><tr><td></td><td>to 10,000</td></tr></table>	1st March -	30,000	1st May, about -	20,000	1st July, from -	5,000		to 10,000
1st March -	30,000												
1st May, about -	20,000												
1st July, from -	5,000												
	to 10,000												

MR. W. M. FLETCHER), on special duty, Indápur, dated 29th December 1876).

Of the original local stock of grain, there are about 1,029 tons still unconsumed, and a large quantity sufficient to remove all anxiety has also been imported by rail to Diksal and Populwari. Private enterprise is likely to meet all demands, and prices may yet fall to a slight extent when this season's harvest comes into the market.	Of the total population, numbering 67,164 souls, 3,943 are artisans, 11,712 landholders, and 46,737 persons existing by other means. The mass of the population is agricultural. The higher rank of landholders, such as Patels, Kulkarnis, Deshmukhs, Deshpandes, &c., number about 10,000, including women and children, but few can live without work, and most of them differ in no way from the ordinary Kunbi. There are no wealthy landlords.	Of the total population (67,164), about 34,289 have migrated, but some are returning. Only the first to leave their villages appear to have bettered themselves. No further emigration is probable so long as relief works continue sufficient for the population.	The Assistant Superintendent submits a statement of 22 relief works in progress, chiefly roads, tanks, and wells, and proposes similar works likely to cost Rs. 39,050, suggesting that wells should precede other works. He does not think that these works will be sufficient to provide employment for all who are likely to need it, but is of opinion that if one or two large works were undertaken, such as constructing dams at favourable sites in the villages of Bhalwari, Shelgaon, and Kawtali, they would not only be sufficient to provide employment for all, but the prospective benefit, especially in a drought-stricken district like Indapur, would be very great.	Adults receive a daily allowance of 1 lb. of flour, with salt and chillies, and those under 15 years of age receive $\frac{1}{2}$ lb. flour, with salt and chillies. Travellers in need of food receive the same allowance, but are forwarded at once to the head-quarters of the Mamlatdar, who provides them with work or suitable relief.	The number of persons on the hands of Government for relief by works at date of report was 9,600, and relieved by charity 500. The probable number will be as below:— <table><tr><th></th><th>On Works.</th><th>By Charity.</th></tr><tr><td>On 1st March</td><td>20,000</td><td>500</td></tr><tr><td>" 1st May -</td><td>25,000</td><td>500</td></tr><tr><td>" 1st June -</td><td>25,000</td><td>500</td></tr></table> The number to be relieved by charity will not alter much, unless increased by strangers from other districts. PURANDHAR Taluka (1st Assistant Collector)										
The kharif crop is estimated at about 5 annas, and the rabi at about 4 annas. There will be no further sowings this season, except in irrigated lands.	The probable amount of remissions is estimated at about Rs. 32,000.	No unusual mortality among cattle has occurred or is anticipated. Many cattle were removed from the district early in the season. Fodder is sufficient, and Government interference unnecessary.	There will be no absolute failure of the water supply, but as it has failed in some places, and is scanty in others, wells will have to be sunk, and people aided in securing a sufficient supply, which will entail an expenditure of about Rs. 12,000.	Prices—Lbs. per Rupee.

JUNNAR Taluka (District Deputy Collector Mr. Balaji)									
The kharif crop is 7 and the rabi 2 annas. There will be no further sowings this season.	Out of the total revenue demand of Rs. 1,40,000, about 25 per cent., or Rs. 35,000, will have to be remitted.	There has been no unusual mortality among the cattle and agricultural stock, but it is anticipated that from 10 to 15 per cent. of the total number (77,209) will die from starvation. As the forest reserves have already been thrown open for free grazing, the District Deputy can suggest no further remedy.	Partial failure of the water supply is anticipated later on in the season, and it will be necessary to deepen wells as they run dry.	Prices—Lbs. per Rupee.

MÁWAL Taluka (District Deputy Collector Mr. Balaji)													
The kharif crop is 5 and the rabi 2 annas. There will be no further sowings this season.	The remissions are estimated at about Rs. 10,100 out of a revenue demand of Rs. 59,000.	There has been no unusual mortality among the cattle nor is any anticipated. The measures already adopted by Government for the preservation of cattle are deemed sufficient.	There will be a scarcity of water during the hot weather, and wells must be deepened.	For each Week in October, November, and December 1876.	Prices—Lbs. per Rupee.								
					Wheat.	Bajri.	Jowari.	Rice.	Gram.	Tur.

KHED Taluka (District Deputy Collector Mr. Balaji)										
The kharif crop is 6, the rabi 1, and the bagayet 2 annas. There will be no further sowings this season.	Remissions will probably amount to about Rs. 14,000.	There has been no unusual mortality among cattle or agricultural stock, but about 5,500 deaths are anticipated. The Ghodi subdivision of the taluka is the principal pasture ground for all the cattle of Indapur and Bhimthari, and also for a portion of Sholapur, whence thousands of cattle have poured in, thus seriously affecting the pasturage at the disposal of the cattle of the taluka. The District Deputy thinks that Government has done all that is possible in the matter.	Water has failed to some extent, and further failure is anticipated. To counteract this, wells are being deepened.	Prices—Lbs. per Rupee.

Statistics
relating to
distressed
districts in
Bombay
Presidency.

f.	g.	h.	i.	j.	k.												
r. A. Keyser's Report, dated 28th December 1876).																	
There are no means of ascertaining the local stocks, which are probably not large, but importations are considerable, and no fear of grain proving insufficient is felt. The principal centres whence supplies are drawn are Poona, Saswad, Jejuri, Walhi, and Kikwi.	The population are all of the ordinary Kunbi class, and small peasant proprietors. There are 10 Indian villages among those suffering from distress, but the Inámdars are not in good circumstances, and do not assist their tenants.	Only a few have emigrated with their cattle to the Gháts; the majority of those who have left their villages have gone to the relief works.	The relief works in progress are the Baramatti-Jejuri Road, repairs to a small local road, excavating wells, and cutting prickly pear. Repairs to the main road connecting Jejuri with the railway, 15 miles, and a new road from Saswad to Tásgaon have been sanctioned. A list is submitted by the First Assistant of other projects deemed necessary hereafter to provide employment and afford relief to the people. The First Assistant is of opinion that the Nira Canal and the Jejuri Tank will absorb all the distressed workpeople in the district. The present works are insufficient to provide relief, and some work on a large scale is urgently necessary.	Rs. 150 have been expended in relieving the aged and infirm poor, but travellers have not as yet required such assistance.	There are at present employed on relief works about 5,650 persons, and relieved by charity 71. The numbers will hereafter be on— <table><tr><th></th><th>On Works.</th><th>By Charity.</th></tr><tr><td>1st March</td><td>9,000</td><td>150</td></tr><tr><td>1st May</td><td>6,000</td><td>150</td></tr><tr><td>1st July</td><td>1,000</td><td>50</td></tr></table>		On Works. 1st July	1,000	50															

Mingadhur's Report, dated 27th December 1876).																	
The local stocks of grain are considered sufficient to last for at least three months. The supplies are drawn chiefly from Poona, and to a small extent from Sangamner. Private enterprise will supply all demand. No great fall in prices is anticipated.	The population, numbering 106,876 souls, is of a mixed character: 6,294 are high caste, and 105,582 low caste; 99,876 are poor, and 7,000 well-to-do; 81,033 are purely, and 25,843 partly, agricultural; of artizans the number is 5,500. The landholders are mostly involved in debt, but the few who are well-to-do are likely to aid their tenants.	About 2,000 people have emigrated into the neighbouring districts and Bombay. About half the number annually go to Bombay during the fair season, and return before the monsoon. The increase this year is owing to the present scarcity.	No relief work is in progress, but the Sirur-Narayangaon Road, estimated to cost Rs. 9,000, will shortly be commenced. Some other works have been sanctioned and some proposed, amounting in all to Rs. 1,48,000.	The charitable relief given has been trifling.	There are none on the hands of Government for relief either by works or by charity. The number requiring relief herein-after will be— <table><tr><th></th><th>On Works.</th><th>By Charity.</th></tr><tr><td>1st March</td><td>2,000</td><td>20</td></tr><tr><td>1st May</td><td>10,000</td><td>30</td></tr><tr><td>1st July</td><td>2,000</td><td>50</td></tr></table>		On Works. 1st March	2,000	20															
1st May	10,000	30															
1st July	2,000	50															

Mungadhur's Report, dated 27th December 1876).																	
the local stocks of grain, as far as ascertainable, are sufficient to last till March. Supplies are drawn from Lonauli, Kharkala, and Talegaon Railway Stations, and private enterprise will meet all demands. Prices are falling owing to large importations, and it is not thought likely that they will rise much.	The population is 56,534, and may be divided as follows: High caste 2,505, low caste 54,329, poor 55,034, and well-to-do 1,800, purely agricultural 51,634, and partly agricultural 5,200, artizans 1,000. The ryots are for the most part very poor and much involved. The few who are well-to-do will aid their tenants.	There has been no large emigration. Between 3,000 and 4,000 persons annually proceed to Bombay during the fair season, and return when their presence is required in the fields. It is anticipated that the increase this year will be about 50 per cent.	No relief works have been started yet, but some tanks have been sanctioned and will soon be commenced. Estimates are being prepared for two roads, one from Kharkala to Ambegaon, 11 miles, and the other from Induri to Kusur, 24 miles, which the Collector considers will be of great use in opening out two important valleys.	Charitable relief has been given, both in cash and in food, at the rate of 3 pies and 1 lb. of jowari per head per diem to 7 individuals.	Three persons have been fed on charity and four travellers relieved. Amongst the townsmen of Talegaon a subscription has been raised likely to amount to about Rs. 500 for charitable relief. The numbers of persons likely to be on the hands of Government will be as follows:— <table><tr><th></th><th>On Works.</th><th>By Charity.</th></tr><tr><td>1st March</td><td>500</td><td>25</td></tr><tr><td>1st May</td><td>1,000</td><td>100</td></tr><tr><td>1st July</td><td>800</td><td>150</td></tr></table>		On Works.	By Charity.	1st March	500	25	1st May	1,000	100	1st July	800	150
	On Works.	By Charity.

1st May	1,000	100															
1st July	800	150															

ungadhur's Report, dated 23rd December 1876).														
The local stocks (quantity not stated) are considered sufficient till April. Grain is imported from the Talegaon and Poona Railway Stations, and private enterprise will meet all demands, but prices are not likely to fall to any appreciable extent.	The population, numbering 139,100 souls, is of a mixed character, and may be divided as follows: high caste 6,100, low caste 133,000; of these 123,150 are poor, and 15,950 well-to-day. Purely agricultural number 119,800, and partly so 19,300. The total number of artizans is 10,000. Of landholders there are 13,463, but only 185 of these hold more than 100 acres. These will probably aid their tenants, but many of them are much involved.	Emigration has not taken place to any great extent. About 1,500 people annually go to Bombay during the fair season to seek employment, and return about the time the fields are being prepared for sowing. This year about 15 or 20 per cent. more have emigrated. Further emigration is not probable, especially as the people find employment on relief works.	The only relief work in progress in this taluka is the Khed-Pabal Road. As this is not sufficient, the District Deputy proposes other works, such as road-making and tank and well clearing.	There are four aged and infirm poor people, to whom relief is given in food at the rate of 1 lb. of bajri per head daily.	The number on relief works is 300, that relieved by charity 4. The number to be employed hereafter will be on the— <table><tr><td>1st March</td><td>-</td><td>4,000</td></tr><tr><td>1st May</td><td>-</td><td>5,000</td></tr><tr><td>1st July</td><td>-</td><td>2,000</td></tr></table>	1st March	-	4,000	1st May	-	5,000	1st July	-	2,000

HAVELI Taluka (Acting First Assistant Collector)				
The kharif and the rabi crops are each estimated at about 6 annas. There will be no further sowings this season.	The revenue is Rs. 1,54,289, out of which the 1st Assistant thinks Rs. 25,000 must be remitted.	The mortality among cattle has been very small, from 75 to 100, and the measures adopted of throwing open forest reserves for free grazing are considered sufficient to prevent further loss.	In the east the water supply will prove sufficient to last till near rains, but in the west there is always a scanty supply during the hot weather, and some expenditure will be necessary for clearing out wells, &c.	Prices—Lbs. per Rupee

SIRUR Taluka (Assistant Collector Mr. E. C.)

The kharif crop is estimated at 4, and the rabi at 1½ annas. There will be no further sowings this season.	The remissions will probably amount to about Rs. 1,00,000, out of a revenue demand of Rs. 1,64,574.	Out of a total of 75,234 head of cattle, the village officers report that 2,083 have died from starvation, which the Assistant Collector thinks an exaggerated estimate. About 9,745 are reported to have been sold for nominal prices, but the Assistant Collector estimates the number so sold at about 5,000. About 19,751 have been sent out of the taluka for pasture. The cattle that are still left in the taluka will have to be fed with ordinary fodder or prickly pear. Cattle will eat prepared prickly-pear, but at present the ryots will not go to the cost of preparing it.	The water supply will prove sufficient when the necessary improvements to wells, &c. have been made.	Prices—Lbs. per Rupee

GENERAL

Of the eight talukas, the crops in three seem good, in three indifferent, and in two bad. The proposed remissions amount to Rs. 5,46,354. In five talukas the condition of the cattle appears satisfactory, and in three rather the reverse. Some expenditure of money will render the water-supply throughout the Collectorate satisfactory. No apprehensions are entertained regarding the grain supply. The majority of the population of this as of all other Collectirates is either purely agricultural or very intimately connected with agriculture. 101,989 people seem to have migrated. The movement has now stopped; it appears to be to a great extent caused by the necessity of obtaining pasture for the cattle. The people are expected to return before or during the monsoon. The chief relief works now in progress are the Moota Canal, the Yewut Tank, the Shirshophul Tank, and the Poona Pond Road.

The 30th January 1877.

Statistics relating to distressed districts in Bombay Presidency.

f.	g.	h.	i.	j.	k.												
A. Keyser's Report, dated 30th December 1876).																	
statistics of local ocks are obtainable. Poona is the great entre of the grain ade, and large im- ortations continue be made, which ave lowered prices onsiderably; but a ight rise may be an- ticipated before the ot weather.	Of the total population, numbering 216,885 souls, 45,299 are agriculturists. The landholders in the distressed part of the taluka are small and of the usual Kunbi or cul- tivating caste.	There has been little or no emigration; the Mutha Canal having given employ- ment to those need- ing it directly the distress began to be felt.	The Mutha Canal and the Pimpri Ghât Road are the principal relief works in progress, and employ about 3,000 peo- ple of the taluka. The First Assistant states that these works, in conjunction with cer- tain others he recom- ends, such as clearing wells and constructing tanks at Vagholé, Walthi, and Bosri, will afford sufficient relief to the people of the taluka.	The infirm and the aged poor obtain re- lief at Poona from the Municipality and the relief funds. Funds are also placed at the disposal of Patels to relieve persons of this class in outlying vil- lages, each person being allowed 1 lb. of grain a day and an anna a week for chillies, &c.	The number of persons on relief works is about 3,500, and that relieved by charity 47. The numbers likely to be on hand hereafter will probably be on— <table><tr><th></th><th>On Works.</th><th>By Charity.</th></tr><tr><td>1st March -</td><td>5,000</td><td>60</td></tr><tr><td>1st May -</td><td>3,500</td><td>75</td></tr><tr><td>1st July -</td><td>500</td><td>75</td></tr></table>		On Works. zanne's Report, dated 30th December 1876).

local grain stocks are considerable. The chief supplies are drawn from Ahmednagar, and importations by private enterprise have lowered prices. Private enterprise will continue to supply the demands of the taluka.	Of the population, numbering 76,984 souls, 21,096 are peasant proprietors, 8,547 are artisans, 1,023 traders, and the remainder labourers. The people are much in debt, and are highly improvident. There are no large landholders who will aid their tenants. A few of the peasant proprietors are free from debt, and comparatively wealthy, and can bear a famine without ruin, but cannot help others. The Soukars have, to a large extent, become landholders, and the peasant proprietors, in many instances, their tenants. They can, but will not, aid their tenants, and are merciless landlords. Of the class of Inâmdars, the chief is the Jagirdar of Malthan, a Sirdar of the first class and wealthy. He declined to aid his tenants, and left the taluka for Dhar at the first symptoms of distress. No help can be expected from this class.	About 18,500 persons have left the taluka. Of these about 2,000 are at work in the neighbourhood. About 5,000 have gone to Bombay and to the Ghât districts, and about 3,500 to the Moglai; but they all went with the full intention of returning next rains or earlier. About 300 of those who went to Gangthari have returned with unfavourable accounts of the place. Further emigration is not probable.	There are sufficient useful works in progress in the taluka, such as tanks, roads, and prickly pear cutting to afford employment to the people till March; and for the future the Assistant Collector submits a list of works which require inspection by the Irrigation Department.	A village register of persons requiring charitable relief has been prepared, and relief is given through the agency of the village officers — 1½ lbs. of grain to an adult, and 11 ozs. to a child. One day's supply is given to needy travellers; and clothing for sick and needy persons has been provided from funds allotted by Poona Famine Relief Fund.	The number employed on relief works at date of report was about 6,000, and that relieved by charity about 500. Future numbers are estimated at on— <table><tr><th></th><th>On Works.</th><th>By Charity.</th></tr><tr><td>1st March -</td><td>10,000</td><td>500</td></tr><tr><td>1st May -</td><td>15,000</td><td>800</td></tr><tr><td>1st July -</td><td>4,000</td><td>800</td></tr></table>		On Works. SANGOLA Taluka (Supernumerary Assistant Collector)

The kharif yield will be 7, and the rabi 3 pies. There are no prospects of further sowings this season, except fodder in garden lands.	The total revenue is Rs. 85,120, and the probable remissions will be about Rs. 76,252.	Out of 125,140 cattle, 50,000 have left the taluka, many of which are reported to have died or been sold, 6,820 have already perished, and further mortality to the extent of 14,700 is anticipated. As a remedial measure it is proposed to advance tagai, and shortly before the rains to re-transport agricultural cattle by rail at Government expense.	The taluka is dependent on wells and "hels" for its water-supply, which is now very scanty and precarious; wells and "hels" are being deepened, and new "hels" opened in the beds of rivers and nullahs. In some villages it will be impossible to provide water, and they must be deserted.	For the Week ending	Prices—Lbs. per Rupee

PANDHARPUR Taluka (Supernumerary Assistant Collector)

The kharif and rabi yield are each under one anna. There are no prospects of further sowings this season, except fodder in garden lands.	The revenue amounts to Rs. 1,17,210, and the probable remissions will be Rs. 1,11,226.	Of 72,700 cattle, the Mámlatdár estimates that 63,800 have been taken away, 4,000 have died, and 4,900 still remain in the taluka. The Revenue Commissioner suggests that Government should aid in re-transporting the cattle by rail, and should advance tagai.	This taluka is traversed by the river Bhima and its tributary, the Mann, and the water-supply is not a matter of much anxiety. In some villages, however, where water is very scarce, "hels" are being dug in the beds of nullahs and wells deepened, and where water entirely fails, the people will be removed. -----------	-----------	-----------	-----------	-----------	-----------

Mr. J. Davidson's Report, dated 27th December 1876).

There are upwards of 518,000 lbs. of grain in the market; private stocks cannot be ascertained, but are small. The chief centres from which grain is imported are Sholapur and Pandharpur. No fall in prices can be expected, but private enterprise will supply the market.	The population amounts to 76,850, of these 65,380 are caste people, and 11,470 Mhars and Mhangs; 6,800 are well-to-do, and 68,250 poor; there are about 65,000 agriculturists, and 5,000 weavers, &c. There are no large landholders capable of aiding their tenants.	35,000 persons have emigrated to the Berars, Central Provinces, Indore, and the Konkan, and some have bettered themselves. In a few cases cholera broke out and carried off some of the emigrants; a few of those who went into the Nizam's territory are returning; further emigration to the extent of 3,000 or 4,000 is expected.	The seven road works now in progress are insufficient, and must be supplemented by irrigation works in the taluka if found practicable, or by the Nira Canal and Dhond-Manmar Mamad Railway.	Charity at Government expense is given to the infirm at the rate of 1 anna for an adult and $\frac{1}{2}$ anna for each child. Rs. 595 have been expended from Government resources.	At present there are 15,000 persons employed on the works. There will be on— <table><tr><td></td><td><i>On Works.</i></td><td><i>By Charity.</i></td></tr><tr><td>1st March</td><td>- 22,000</td><td>800</td></tr><tr><td>1st May</td><td>- 25,000</td><td>1,000</td></tr><tr><td>1st July</td><td>- 18,000</td><td>1,200</td></tr></table>		<i>On Works.</i>	<i>By Charity.</i>	1st March	- 22,000	800	1st May	- 25,000	1,000	1st July	- 18,000	1,200

Mr. J. Davidson's Report, dated 27th December 1876).

There are 858,400 lbs. of grain in the market, the actual stores cannot be ascertained. It is imported from Sholapur and Barsi Road station; there will be no considerable fall in prices, but private enterprise will supply the market.	The population amounts to 79,314, of whom 63,740 are caste people, and 15,574 Mhars and Mhangs; 17,722 are well-to-do and 61,592 poor. There are upwards of 60,000 agriculturists and a trifling per-centage of artisans. There are no landholders capable of aiding their tenants.	40,000 people have emigrated; those with cattle, as a rule, went to the Berars, the Central Provinces, or Indore, and a few to the Nizam's Ghats; those in search of employment went to Bombay and the Konkan; 500 have returned, but it is anticipated that there will be some further emigration.	The relief works now in progress, and which will prove insufficient, are tank clearances; seven road works and other minor works. There are no large projects to be undertaken in the taluka itself; but if the works proposed in Sângola and Malsiras are sanctioned, the people can be transferred to them failing the Dhond and Mammar Railway and Nira Canal.	Government have spent Rs. 493 on charitable relief.	There are upwards of 10,824 persons on Government works at present. The Mamlatdar expects there will be on— <table><tr><td></td><td><i>On Works.</i></td><td><i>By Charity.</i></td></tr><tr><td>1st March</td><td>- 20,000</td><td>2,000</td></tr><tr><td>1st May</td><td>- 30,000</td><td>4,000</td></tr><tr><td>1st July</td><td>- 20,000</td><td>3,000</td></tr></table> But the Assistant Collector considers the numbers on works over-estimated.		<i>On Works.</i>	<i>By Charity.</i>	1st March	- 20,000	2,000	1st May	- 30,000	4,000	1st July	- 20,000	3,000

SHOLAPUR--

a.	b.	c.	d.	e.
SHOLAPUR Taluka (Deputy Collector's Report)				
The kharif yield will be 1 pie and the rabi <i>nil</i> . There are no prospects of further sowings this season.	The revenue is Rs. 2,74,000; the Mamlatdar estimates the remissions at Rs. 2,58,000, which the Revenue Commissioner considers too high.	Out of the total number of 71,000 cattle, 20,000 have been sent to Khandalla to graze, 30,000 have been killed by butchers, or have died of starvation, which statement, however, the Revenue Commissioner considers exaggerated, and 20,000 more are expected to perish. The Collector considers advancing tagai to holders of garden land the only practicable remedy.	In 87 villages the water-supply will be precarious, but the difficulty can in a measure be obviated by temporary wells. Some villages, however, must be abandoned in the hot weather.	Prices—Lbs. per Rupee.

KARMALA Taluka (District Deputy Collector's Report)

The kharif and rabi yield may each be taken at 1 anna. There are no prospects of further sowings this season, except fodder in garden lands.	The total revenue is Rs. 1,68,000, nearly the whole of which must be remitted.	There were about 130,000 cattle in the taluka, of which 85,000 have been taken away for grazing, 2,500 have perished, and further mortality to the extent of 5,000 is anticipated.	A failure in the water-supply of some of the villages distant from the rivers is apprehended; wells are being deepened and cleared.	Prices—Lbs. per Rupee.

MALSIRAS Taluka (District Deputy Collector's Report)

The kharif yield may be taken at 3 annas, and the rabi at 7 pies. There are no prospects of further sowings this season.	The total revenue is Rs. 85,900, nearly the whole of which must be remitted.	Out of the total number of 117,420 cattle, 867 have died from starvation, 2,300 more are expected to die, and 85,900 have been taken into other districts. Importing pressed grass is proposed as a remedial measure.	The water-supply will prove sufficient; 20 villages are watered by the Nira, and the rest are dependent on wells, which, when improved, will hold a sufficient supply.	Prices—Lbs. per Rupee.

MADHA Taluka (Second Assistant Collector)

The crops have failed completely, and no further sowings are probable this season.	The total revenue is Rs. 1,51,681, and the probable remissions Rs. 1,51,019.	There were 102,231 cattle in the taluka, out of which 42,000 have left, 5,000 have perished, and it is expected that ⅓ or ⅔ of the remainder will succumb; exportation is the only means of saving them.	The taluka is well watered by rivers, and has numerous wells and tanks, and its water-supply is not a matter of anxiety.	Prices—Lbs. per Rupee.

forwarded with Collector's remarks, dated 15th January 1877).																	
the local stocks are estimated at 740,000 lbs. of jawari. The railway station at Sholapur is the chief centre from which supplies can be drawn. Prices have fallen and the Revenue Commissioner considers that private enterprise will do all that is required, though the local officers think that grain supplies will run short in the more distant villages of the taluka.	The total population is 170,600, of whom 128,700 are high caste, and 41,900 low caste, 166,600 poor and 4,000 well-to-do; 82,000 agricultural, and 88,600 non-agricultural, of whom 28,000 are artisans. There are no landholders likely to aid their tenants.	About 20,000 people have emigrated into the Nizam's territory, but failing to better themselves are returning. No further emigration is probable.	The present relief works are not sufficient; it is proposed to undertake tank clearances and two irrigation tanks if they prove practicable.	2,800 infirm people are being charitably supported.	At present 17,991 persons are supported on works, 2,800 by charity. There will be on— <table><tr><td></td><td><i>On Works.</i></td><td><i>By Charity.</i></td></tr><tr><td>1st March</td><td>30,000</td><td>3,000</td></tr><tr><td>1st May</td><td>35,000</td><td>4,000</td></tr><tr><td>1st July</td><td>40,000</td><td>5,000</td></tr></table> If rain fall seasonably, the number on works in July will be reduced to about 25,000.		<i>On Works.</i>	<i>By Charity.</i>	1st March	30,000	3,000	1st May	35,000	4,000	1st July	40,000	5,000

1st July	40,000	5,000															

forwarded with Collector's remarks, dated 9th January 1877).

There are upwards of 825 tons of grain in store; it is imported chiefly from Khardi and Jeur. Prices have fallen, and private enterprise will supply the market.	The total population is 101,187, of whom 82,243 are high caste, and 18,944 low caste; 100,687 poor, and 500 well-to-do; 8,300 agricultural and 92,887 non-agricultural, of whom 5,000 are artisans. There are no large landholders able to assist their tenants.	Nearly half of the people have emigrated, some to the Nizam's territory and the Berars, others to the Konkan. They do not appear to have bettered themselves, and 2,000 have already returned, and more are returning. No further emigration is anticipated.	The relief works in progress are not sufficient; many others will be required.	Charitable relief to the extent of Rs. 295 has been given by Government in the shape of food.	The number of people on the hands of Government is at present 6,074 labourers, and 518 people receiving charity; and the estimate is, on— <table><tr><td></td><td>On Works.</td><td>By Charity.</td></tr><tr><td>1st March</td><td>12,000</td><td>900</td></tr><tr><td>1st May</td><td>15,000</td><td>1,050</td></tr><tr><td>1st July</td><td>15,000</td><td>1,200</td></tr></table> The Collector, however, thinks the numbers on works will be greater.		On Works.	By Charity.	1st March	12,000	900	1st May	15,000	1,050	1st July	15,000	1,200

forwarded with Collector's remarks, dated 6th January 1877).

There are upwards of 763 tons of grain in store; it is imported from Pomalwari, Deeksal, and Barsi Road Stations. Private enterprise will supply the market, but it may be necessary for Government to keep up a small amount of carriage for the grain transport.	The total population amounts to 63,473, of whom 52,127 are Mahrattas and 11,346 low caste; 60,993 are poor, and 2,480 well-to-do; 48,000 are agriculturists, and 12 per cent. artisans. There are no landholders able to assist their tenants.	35,500 have emigrated to the Nizam's dominions, the Berars, Nagpur, and the Konkan; 1,000 have returned, and many more are following. No further emigration is probable.	16 relief works are now in progress; they will prove insufficient, and four tanks and two roads are proposed.	Destitute people receive flour and a few pice. Rs. 1,687 have been spent in this way up to date.	Government at presentsupport 9,020 on works and 593 by charity. The number to be provided for will be on— <table><tr><td></td><td>On Works.</td><td>By Charity.</td></tr><tr><td>1st March</td><td>- 11,000</td><td>800</td></tr><tr><td>1st May</td><td>- 26,000</td><td>900</td></tr><tr><td>1st July</td><td>- 14,000</td><td>1,100</td></tr></table>		On Works. Mr. H. A. Acworth's Report, dated 1st January 1877).

There are about 117,600 lbs. of grain in the taluka; the chief trade centre is the village of Kurdowadi at Barsi Road Station; it forms a centre of export from Pandharpur and Barsi. In the interior of the taluka Shetphal has acquired importance as a local trade centre. Prices have fallen, and private enterprise will supply the market.	The population is 103,981, of whom 84,379 are high, and 19,608 low, caste; 17,894 are cultivators, 86,087 non-cultivators, and 1,777 artizans; the people are wretchedly poor, and there are no landholders capable of aiding their tenants.	31,800 have emigrated into the Nizam's territory, Dehrur, Bhir, Umrawati, &c., the majority of whom have not bettered themselves; more than 2,000 have returned, and others are following; further emigration is expected.	At present there are 8 roads, 22 tanks, and 20 wells in progress. In addition to these, the Ashti tank will be undertaken, and the Dhond and Mumdad Railway would afford relief.	A comparatively small number of paupers are receiving gratuitous support.	At present Government support 12,500 on works and 1,355 by charity. The numbers requiring relief on works will be on— 1st March - 30,000 or 40,000 1st May - 40,000 1st July - 10,000 or 15,000 if rain falls early. The Revenue Commissioner and Collector think these numbers over-estimated.
--	--	--	--	---	--

Statistics relating to distressed districts in Bombay Presidency.

a.	b.	c.	d.	e.				
BARSII Taluka (Second Assistant Collector)								
The kharif yield may be taken at 1 anna 9 pies, and the rabi at 3 annas. There are no prospects of further sowings this season.	The revenue is Rs. 2,05,180, and the probable remissions will be, according to the Assistant Collector, Rs. 1,51,672; but the Revenue Commissioner considers this amount too great.	The number of cattle, including sheep, is 102,164, about 18,000 of which have left the taluka. The Assistant Collector anticipates a mortality of half the remainder, but the Revenue Commissioner thinks the number exaggerated. The people do not take advantage of the means of transport to the Gháts offered by Government, as they fear finding themselves in a helpless condition far from home.	A considerable sum of money must be spent in the taluka to improve the water-supply, but there is no reason for anxiety, except as regards the town of Barsi.	Prices—Lbs. per Ru

				The average prices for the last six years have been given.				

GENERAL

Of the seven talukas the crops in two seem bad, and in five very bad.
The proposed remissions amount to Rs. 10,01,169.
In one taluka the condition of the cattle appears indifferent, and in six bad.
In two talukas the prospects of the water-supply seems satisfactory, in three indifferent, and in two bad. No calam due to failure of water is anticipated by Government.
No apprehensions regarding the grain supply are entertained.
The majority of the population of this, as of all other collectorates, is either purely agricultural or very intimately connected with agriculture. The figures given by Mr. Acworth (and by the District Deputy as respects Karmá regarding the cultivators and non-cultivators are obviously absurd. He apparently classes khatedars alone as cultivators 212,300, out of a population of 718,034, seem to have migrated. More are expected to follow their example, but, the other hand, some have returned. This migration is, to a great extent, a cattle movement.

31st January 1877.

Bombay
Presidency.

f.	g.	h.	i.	j.	k.
c. H. A. Acworth's Report, dated 1st January 1877).					
There are upwards of 3,071 tons of grain in store. Barsi Road Station, the chief centre of supply, is 1 mile from the kasba town. There are five large market towns well situated to supply the interior. Prices have fallen, and private enterprise will supply the market.	The population amounts to 117,664, of whom 98,187 are high caste, and 19,447 low caste; 8,541 are cultivators, 109,123 non-cultivators, and 4,500 are artisans; about 15,000 are well-to-do and the rest poor. There are no landholders who will aid their tenants.	Many have emigrated, but have not bettered themselves thereby, and are returning; about 1,000 have already done so. Further emigration may be expected.	The relief works in progress are chiefly wells and tanks, and this class of works will be continued till the monsoon.	A number of persons are being fed daily in the kasba town, and all Patels have instructions to relieve and forward all travellers to the Mamlatdars.	Government at present supports 810 on works and 2,450 by charity. On 1st March the Assistant Collector thinks there will be about 15,000 on works with an increase on 1st May. But the Revenue Commissioner is of opinion that the Assistant Collector's estimate of 15,000 will never be reached.

OBSERVATIONS.

The chief relief works are the Ashti tank and the Barsi-Yedsi and Pandharpur-Wangi roads.

The expenditure upon charity has been considerable.

The number of labourers anticipated to be upon the hands of Government is about—

On March 1st -	-	-	-	-	-	140,000
„ May 1st -	-	-	-	-	-	186,000
„ July 1st -	-	-	-	-	-	132,000

This Government must guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

(Signed) C. G. W. MACPHERSON,
Under-Secretary to Government.

33½	36½	24½	18½	26½	23½	36½	57½																					

SATARA Taluka (1st Assistant Collector Mr. W. A.)

The kharif and rabi yields (between which no distinction has been made) will be from 7½ to 10½ annas. There is no prospect of further sowings this season.	The probable remissions, according to the Mám-latdár, will be Rs. 23,373, but the Assistant Collector and the Revenue Commissioner consider the amount much over estimated. The amount of revenue is not given.	No unusual mortality amongst the cattle has taken place, nor is any probable.	No failure of water-supply is anticipated, except in the city and camp of Satara, where it will be severely, if not dangerously, felt.	The course of weekly prices from 1st October to 25th December is not given. The average for the last six years is—														
				<table><tr><th>Jowári.</th><th>Wheat.</th><th>Gram.</th><th>Bajri.</th><th>Rice.</th><th>Tur Dall.</th><th>Nachni.</th></tr><tr><td>41½</td><td>26½</td><td>28½</td><td>35½</td><td>21½</td><td>28½</td><td>34½</td></tr></table>	Jowári. KOREGAON Taluka (1st Assistant Collector Mr. W. A.)

The kharif yield in some villages is up to the average; in 18 from 8 to 10, in 12 from 6 to 7, and in 17 from 4 to 5 annas. Beyond the fact that the rabi crop is reported to look well, no mention is made of the probable yield. No further sowings will take place this season.	The probable remissions will amount to Rs. 23,000.	No unusual mortality amongst the cattle has taken place, 2,339 have left for the ghats and Konkan. Some slight mortality may be expected before the rains among the weakly ones retained for field work.	There will be a scarcity of water in the hot weather in villages on the hill slopes. Takavi will be advanced, and grants from local funds made to improve the supply.	The course of weekly prices from 1st October to 25th December has not been given. The average rate for the last six years is—

-----------	-----------	-----------	-----------	-----------	-----------

ast's Report, dated 22nd December 1876).

he present stock of grain will probably last for three months. Prices have fallen, and private enterprise will supply the market.	The bulk of the population of 88,000 belong to the Mahratta caste; there is a small per-centage of Brahmins, Mussulmans, Mhars, Mangs, &c.; 25,000 are wholly, and 53,000 partly agricultural; the rest are artizans, &c. There are a few wealthy Inamdars who will probably aid their tenants.	About 2,000 people have emigrated to Bombay and elsewhere, and have probably found employment.	No relief works are in progress. Failing the commencement of the Nira Canal, which will absorb all available labour, estimates for seven road-works are under preparation in case of necessity.	No gratuitous relief has yet been afforded except to one man.	As yet only one man is dependent on Government for charity, but about 3,000 labourers will have to be employed through the hot weather.
---	---	--	---	---	---

ast's Report, dated 22nd December 1876).

rain is plentiful, and is imported from the coast and Poona. Prices have fallen, and private enterprise will supply the market.	The population is 33,000, consisting chiefly of Mahrattas; 5 per cent. are Brahmins, 10 per cent. outcastes, and 1 per cent. Mussulmans. About 25 per cent. are fairly off, and the remainder poor, 50,800 are purely, and 14,523 are partly agriculturists. There are about 40 Inamdars likely to assist their tenants.	The usual number. About 300 have left for Bombay in hopes of employment.	No relief works are in progress. None are deemed necessary.	No charitable relief is given by Government.	It is unlikely that Government will have any persons on their hands for relief either by charity or by employment.
---	--	--	---	--	--

ast's Report, dated 22nd December 1876).

The supply of grain has not failed, and it can easily be obtained from the Konkan and Satara.	The population of this Taluka is 58,565, of whom 1,500 are fairly off. Excluding Mahableshtar, only 2,000 are non-agricultural. The bulk of the people are Mahrattas, 2 per cent. are Brahmins, 4 per cent. outcastes, and 1½ Mussulmans. There are about 12 wealthy Inamdars.	About 500 people have left, as usual, for Bombay in search of employment.	No relief works are in progress, and none are likely to be required for the Taluka. Should it be deemed necessary to undertake any, the Kas water-supply scheme and five road-works would be suitable.	No charitable relief is required.	If relief works are undertaken, about 2,000 people will be on them on 1st March, 3,000 on 1st May, and 4,000 on 1st July, if rain does not fall seasonably.
---	--	---	--	-----------------------------------	---

ast's Report, dated 22nd December 1876).

Grain is plentiful, and private enterprise will supply the market.	The bulk of the people is Mahratta, 6 per cent. are Brahmins, 6 per cent. outcastes, and 1 per cent. Mussulmans. One-third of the population are fairly off, and the remainder poor. The proportion of the agricultural to the partly agricultural and the artizans is as 4 to 2 and 4 to 1, respectively. There are 22 Inamdars able to assist their tenants.	2,370 people have left for Bombay, Poona, and elsewhere, and others are likely to follow.	Two road-works have been undertaken for relief, and three others can be undertaken if the necessity for them arises.	No charitable relief seems necessary.	618 people are now on the works. No estimate of the future is given.

WALWA Taluka (Extra 2nd Assistant Collector Mr. A. Shewa)											
The kharif yield will be 10 annas, and the rabi 8 annas. There are no prospects of further sowings this season, except in irrigated lands.	The probable remissions will be Rs.1,05,000 which the Revenue Commissioner considers high. The total amount of revenue is not given.	There has been no unusual mortality amongst the cattle, and none is anticipated.	There will be a general scarcity of water. Tagai must be advanced for deepening and digging wells.	Prices—Lbs. per Rupee.

TASGAON Taluka (Extra 2nd Assistant Collector Mr. A. Shewa)

The kharif yield will be 8 annas, and the rabi nothing. There are no prospects of further sowings this season.	The probable remissions will be Rs. 50,000. The total amount of revenue is not given.	Out of 51,674 cattle, 3,952 have died from starvation, and about 10,742 have been sent to the Konkan to graze. Further mortality is anticipated, unless the experiment of feeding cattle on prickly pear proves a success.	There will be a general scarcity of water. Tagai advances must be made for digging and deepening wells.	Prices—Lbs. per Rupee.

KHATAU Taluka (District Deputy Collector's Report)

The kharif yield is 3 annas, and the rabi 6 annas. No further sowings are probable this season.	The revenue is Rs. 1,01,851, and the probable remissions Rs. 50,925.	Five cattle have died from starvation, and 180 more are likely to succumb. The live stock, other than agricultural, has been removed to the west.	There will be no great distress for want of water. Arrangements have been made to deepen existing, and excavate new, wells in villages where distress is felt.	Price—Lbs. per Rupee

PATAN Taluka (2nd Assistant Collector Mr. C. I.)

The yield of the kharif and rabi crops will each be at least 7 annas. There are no prospects of further sowings this season.	The probable remissions according to the Collector and his Assistant will be Rs.50,170, but the Revenue Commissioner considers this amount capable of reduction. The total revenue is not given.	There has been no unusual mortality amongst the cattle, and none is anticipated.	The greater part of this Taluka will not suffer from want of water; in a few villages in the highland and to the north, it will be necessary to dig new wells and deepen old ones.	For the Week ending	Prices—Lbs. per Rupee.

Statistics
relating to
distressed
districts in
Bombay
Presidency.

Report forwarded with Collector's Letter, dated 27th December 1876).

26 tons of grain are estimated to be in store, independent of the current year's harvest; the Collector considers this amount under-estimated, and the Revenue Commissioner considers it quite impossible to form an approximate estimate on this subject. Grain is imported from Bombay <i>via</i> Chiplun and Poona. Private enterprise will supply the market; the Collector anticipates a rise in prices about two months hence.	The Collector's estimate of the population is 133,122; whereas the Mamlatdar fixes the number at 158,641, of whom 115,728 are high caste, and 42,913, low caste; 37,000 are purely, and 12,700 partly agricultural. The majority of the people are Mahrattas, among whom there are no large landholders willing to aid their tenants.	No emigration has yet taken place, but it may be expected about the end of February.	The present relief works are sufficient for the present. As regards the future, the Revenue Commissioner is of opinion that irrigation works should be selected in preference to all others.	About 60 persons are being supported by a Relief Committee at Ashta.	The number at present on relief works is 1,235. Government will have to afford gratuitous relief on 1st March to 200, on 1st May and 1st July to 500; the number likely to be employed on works will be 3,000 in March, 5,000 in May, and 2,000 in July, provided rain falls freely; if it does not, about 10,000
--	---	--	--	--	---

Report forwarded with Collector's Letter, dated 27th December 1876).

There are upwards of 2,866 tons of grain in the Taluka; imports are chiefly from Chiplun and Poona <i>via</i> Satara. The Collector anticipates a rise in prices two months hence; private enterprise will supply the market.	The Collector estimates the population at 115,491, the majority of whom are Mahrattas, poor and agricultural; whereas the Mamlatdar gives the following estimate:—3,797 high caste, 84,178 low caste, total 87,975, of whom 67,357 are purely, and 9,622 partly, agricultural. There are a few wealthy landholders from whom, however, no aid can be expected.	14,505 people have emigrated, some to the Konkan, and others to the Berars and Hyderabad. Those who left for the Konkan are returning, the others have remained, having presumably bettered themselves. The Collector anticipates further emigration in a month or two, though the Revenue Commissioner cannot well see where the people can go, as there is distress all around.	The present nine works consisting of tank clearances, road repairs, and cutting prickly pear, are sufficient for the present.	About 323 infirm people are being supported daily from private subscriptions.	Government have at present 2,748 labourers on their hands and none requiring charitable relief. The number of the former will swell to about 16,000 on 1st March, 24,500 on 1st May, but probably none will remain in July. The number requiring charitable relief on each of the above dates will be 700, 1,000, and 1,200 respectively.
---	--	---	---	---	---

Report forwarded with Collector's Memorandum, dated 6th January 1877).

The present supply of grain is sufficient, and is imported from Poona, Satara, Chiplun, and Patan. Prices have fallen, and private enterprise will supply the market.	There is a population of 83,427, divided as follows: 66,859 high caste, of whom 55,199 are poor, and 11,660 well-to-do; and 16,568 low caste, of whom 15,904 are poor, and 664 well-to-do. Of these, 60,552 are purely, and 22,875 partly, agricultural. There are no large landholders likely to assist their tenants.	About 4,000 people have emigrated to Bombay, Berar, and the Nizam's territory, and have bettered themselves.	The Nehr and Pingli tanks and road repairs are in progress, and are sufficient for the present. By-and-bye the Warug-Pusegaon Road, and planting roadside trees should be undertaken.	At present 118 incarpables are being supported from private sources.	At present there are 7,681 labourers on relief works; in addition to this number, employment must be found for 10,000 on 1st March, 12,000 on 1st May, and 6,000 on 1st July.
---	---	--	---	--	---

Jopp's Report, dated 24th December 1876).

There are stores of about 256,000 lbs. of grain in the taluka, besides which almost each family has sufficient for its own consumption for a month or two. Grain is imported chiefly from Bombay and Chiplun. Prices have fallen, and private enterprise will supply the market.	The population is 110,000; of this 107,844 are low caste, 1,000 being well-to-do, and 106,844 poor, and 2,000 are high caste, 500 being well-to-do, and 1,500 poor; 40,350 are purely, and 69,494 partly, agricultural. A few landholders of alienated villages will grant remissions to their tenants.	About 115 people have emigrated to Bombay and to the relief works at Karad. Further emigration is expected in the hot weather.	There are at present no relief works in progress, but when absolutely necessary six works can be undertaken.	No gratuitous support has been given.	No persons are at present dependent on Government either by charity or on works. The number likely to require relief on works on 1st March is 500, 1st May 1,500, and 1st July 2,000, and by charity on each of the above dates 50, 100, and 300.

KARAD Taluka (2nd Assistant Collector Mr. C. I)				
The kharif yield may be taken at 11 annas, and the rabi at 10 annas. There are no prospects of further sowings this season.	The Assistant Collector estimates the remissions at Rs. 65,078, but the Collector sees no reason for any remissions save in exceptional cases. The total revenue is not given.	There has been no unusual mortality amongst the cattle, and none is anticipated.	There is no reason to dread a scarcity of water in any but a few hill villages, where wells will be deepened.	Prices—Lbs. per Rupee.

KHANAPUR Taluka (2nd Assistant Collector Mr. C. H)

The kharif yield is 4 and the rabi 2 annas. There are no prospects of further sowings this season.	The probable remissions will amount to Rs. 72,858. The total revenue is not given.	The total number of cattle amounts to 90,000. About 3,042 have left the taluka for the ghats, and 251 have died from starvation, but these were chiefly useless animals, and 500 more of them are expected to perish within three months. Towards the end of March there will be a great scarcity both of fodder and water, and most of the cattle will have to be driven to the ghats, where, should the grazing prove insufficient, as is probable, about 20,000 more may perish. People have been told to try the prickly pear, but as yet have not taken to it.	Villages on the Yerla have a plentiful supply of water, in other villages it is obtained from wells and holes dug in the beds of nullahs. Where the water supply entirely fails, the villages must be moved, and where it has partially failed wells must be constructed or deepened.	Prices—Lbs. per Rupee.

MÁN Taluka (District Deputy Collector's Report forwarded)

The kharif yield is about 3 annas and the rabi nil. There are no prospects of further sowings this season.	Out of the total revenue of Rs. 70,655, the probable remissions will amount to Rs. 52,991.	The total numbers of horned cattle is 42,063, of which 523 have died, and 9,844 more will probably succumb, in fact, the Deputy Collector thinks one third of the live stock will be lost. No mortality has occurred amongst the 96,217 sheep. Leaves of trees and sugarcane are being used as fodder. Preparing prickly-pear is found too expensive for the ryots to undertake.	Many villages will be short of water; wells are being deepened and excavated.	Prices—Lbs. per Rupee.

GENERAL

Of the 11 talukas the crops in seven seem to be fair, in two indifferent, and in two bad.

The proposed remissions amount, on what appears to be an outside estimate, to Rs. 507,621.

In eight talukas the condition of the cattle seems satisfactory, in one indifferent, and in two bad.

In six talukas the prospects of the water supply appear satisfactory, and in five indifferent. No calamity due to failure of water supply is anticipated by Government.

No apprehensions are entertained regarding the grain supply.

The majority of the population of this as of all other Collectorates is either agricultural or very intimately connected with agriculture. 45,163 people out of a population of 1,064,002 seem to have emigrated, some have returned, but further emigration is expected. It appears to be partly a cattle movement, and partly the annual movement in search of labour intensified by the present scarcity.

The chief relief works are the Nehr and Pingli irrigation tanks.

inued.

Statistics
relation to
distressed
districts in
Bombay
Presidency.

f.	g.	h.	i.	j.	k.
pp's Report, dated 24th December 1876).					
Local stocks are estimated at 1,296,000 pounds. Grain is imported from Chiplun and Poona in two quantities, and prices have fallen; whether any further fall will take place is doubtful. Private enterprise will supply the market.	There are 13,337 high caste people, 11,670 being well-to-do, and 1,667 poor; 117,573 low caste, 29,394 being well-to-do, and 88,179 poor; 35,733 are purely, and 17,866 partly, agricultural; the rest are manufacturers, tradesmen, &c. There are no landholders who will assist their tenants.	The usual number, viz., about 1,000, have left for Bombay for employment, and more will follow.	The present relief work, the Karad-Tasgaon Road, is found sufficient. Later in the season four other road-works will be undertaken.	No charitable aid has been given.	At present there are 500 on Government works; these will increase on 1st March to 1,000, 1st May to 2,500, and 1st July 2,500; no infirm people are being supported at present, but on each of the above dates the numbers will be about 50, 150, 150.

pp's Report, dated 23rd December 1876).

Local stocks of grain are estimated to amount to 3,360,000 lbs.; and weekly importations are made from Chiplun, Satara, and Poona. Prices have fallen, but the Collector anticipates a rise shortly. Private enterprise will supply the market.	The total population is 84,415, of whom 71,499 are high caste, 64,209 of them being poor, and 7,140 well-to-do; 13,008 low caste, 12,746 being poor, and 260 well-to-do. Of these again 33,000 are purely, and 35,000 partly, agricultural; one fourth are money lenders, and the rest manufacturers and artisans. A few landholders may grant remissions to their tenants.	4,098 people have emigrated, some to Bombay, others to the Nehr, Pingli, and Islampur works, and have not suffered in consequence. There will be further emigration to the Nehr Tank, and large numbers will accompany their cattle to the ghâts.	At present there are three road works, one tank, and digging pits for road-side trees in progress, but they should be supplemented by three more tanks.	No charitable expenditure has as yet been incurred.	At present there are 11,254 people on relief works. The number of people requiring relief on works will be 6,000 on 1st March, 7,000 on 1st May, and 2,000 on 1st July; and by charity on each of the above dates there will be 200, 400, and 500.
---	---	---	---	---	--

with Collector's remarks, dated 6th January 1877).

The present stock of grain is estimated at 380,856 lbs. It is imported from Satara, Pandharpur, and Diksal via Phaltan and the Mogoolo ghât. Prices have fallen, and private enterprise will supply the market.	The population is 70,572, of whom 51,930 are high caste, 39,606 being poor, and 12,324 well-to-do; and 18,042 low caste, 17,286 being poor, and 1,856 well-to-do; of these, 31,530 are purely, and 29,206 partly, agricultural, and 9,816 urban. There are no landholders able to assist their tenants.	16,275 people have emigrated, 7,000 to relief works in the taluka, and the rest to Bombay, towards Berar and the Nizam's territory, and have bettered themselves. None have returned, and 5,000 are likely to follow.	The relief works in progress at present consist of two road works, three wells, and a tank, and miscellaneous projects for improving the water supply, but they are not sufficient and must be supplemented by five more road works and two tanks.	Persons are at present being charitably relieved.	At present there are 7,266 labourers on the works. Their numbers will increase on 1st March to 22,000, 1st May 27,000 and 1st July 17,000.
---	---	---	--	---	--

OBSERVATIONS.

The expenditure upon charity has been trifling.
The number of labourers anticipated to be upon the hands of Government is about—

On March 1st	-	-	-	-	70,500
On May 1st	-	-	-	-	92,500
On July 1st	-	-	-	-	45,500

This Government must guard themselves against the supposition of being held to accept as accurate or reliable all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

(Signed) C. G. W. MACPHERSON,
Under Secretary to Government.

----	----	----	----	----

BAGALKOT (Acting First Assistant Collector)

The kharif harvest will yield a half anna crop, and the rabi the same. There is now no prospect of further sowings this season.

The Assistant Collector estimates the probable amount of remissions at about one fifth (30,598) and the Collector at one fourth (38,223) of the total revenue (Rs. 1,52,892), but no correct estimate can be given before the jamābundi.

No mortality as yet among agricultural cattle. Among other cattle about 1,000 have died. This taluka is better off for fodder than other parts of the Kaladgi district; there is enough to last till the end of February. The experiment of prickly-pear as fodder has been tried, but not with much success as yet. All valuable animals have been taken to the Kanara jungles to graze. It is anticipated that about one-sixteenth (3,701) of the whole number in the taluka (59,215) may die hereafter. They will be the worst of the cattle, useless for agricultural purposes.

The water-supply is chiefly from the rivers and from shafts sunk in the larger nullahs; but as the water in the rivers is unusually low this year, it is feared that there will be a failure to a certain extent. Steps are being taken to clear out and deepen existing wells.

HUNGUND (Acting First Assistant Collector)

The kharif harvest has yielded a 2-pie, and the rabi a 1-pie crop. The crops have been almost a complete failure. There is no prospect of further sowings this year.

The Assistant Collector considers that about Rs. 30,000 will have to be remitted, but the Collector thinks it probable that the amount will be greater; but the exact sum can be ascertained only at the jamābundi.

About 1,500 deaths have occurred among cattle; how many of these are among agricultural stock is not stated, and about 2,500 more have been sold to butchers at prices varying from 4 annas to Rs. 2. The Assistant Collector thinks it possible that some 25,000 may die before the rains, but this will include a large number of worthless animals. Most of the really valuable cattle were driven out of the district at the commencement of the scarcity. Feeding on prickly-pear is being tried, but without much success.

This taluka is—excepting the villages on the Krishna and the Malprabha, badly off for water, and great scarcity is apprehended in the hot weather. The only remedy will be to clear out and deepen the wells in the hope of thereby reaching more copious springs.

------------	------------	------------	------------	------------	------------

Mr. J. F. Fleet's Report, dated 21st December 1876).

The local stock is estimated at from 5,357 to 7,143 tons. Grain is imported in large quantities from Sholapur and Belgaum, and prices have in consequence declined to some extent and are likely to continue falling should importation be kept up; but some importers have lost by being undersold, and the local dealers have a great command over the market.

The people are generally poor; about 35 per cent. are of the labouring class, including a large number of ryots, with very small holdings, who eke out their means by working in the fields of others. The remaining proportion (about 65 per cent.) are ryots, traders, and artisans of fair means, and persons in Government employ. The landholders are rich and able to help their tenants and followers, and will, in the opinion of the Assistant Collector, do so by loans; but the Collector does not think the landholders, with the exception of a very few of the very wealthy ones, are likely to do much for their tenants.

According to the Assistant Collector's report, about 4,000 people have left the taluka and have bettered themselves by so doing; but the Collector thinks the number to be underestimated, and that at least 10,000 people must have left; some with their cattle, and others in search of employment. The commencement of the relief works has, however, stopped further emigration. It is not probable that many will now leave; on the contrary, some who left are already returning.

The Sholapur-Hubli road is in progress, as also the Turchigiri and the Gangershivani tanks and several other relief works. The Belgaum-Hungund road will be commenced as soon as sanctioned. This work and those already started will, the Collector thinks, suffice for the present.

The Mamlatdar Bilge has 450 and the Bilge Mahalkari Rs. 200 available for charitable relief to travellers and to the aged, infirm, &c.; but little has been spent on this account, as no such relief has been called for. A fund of Rs. 8,593 has also been raised by private subscription for this purpose.

The number of persons now employed on relief works is not stated, but the Assistant Collector reports that according to the Mamlatdar's estimate, the maximum, prior to 31st May next, will be about 41,000 persons on relief works, and about 6,000 to be supported by charity.

Mr. J. F. Fleet's Report, dated 27th December 1876).

It is difficult to obtain accurate information regarding local stocks; the Assistant Collector estimates them at 813 and the Collector at 1,161 tons, which will not last longer than the end of March. There is very little probability of private importations to any large extent, as there are no merchants of wealth and enterprise in this taluka. Supplies come *via* Belgaum and Solapur, the former 128 and the latter 150 miles from Hungund.

The proportions of high and low castes are about three fourths and one fourth respectively. The agricultural class numbers about 50,000, artisans, traders, Government servants, &c. about 40,000, and the remainder about 10,000, are agricultural and other labourers. The only wealthy landholders are the Amraoti and Hulginhal Desais, both of whom are likely to help their tenants and followers.

Emigration has been checked by relief works being opened and by the return of people who left the district early in the season for the Nizam's dominions and the Ghats, but failed to better themselves, and brought back reports of cholera.

The chief special relief work in progress is the Sholapur-Bellary road, which passes through Hungund. The Hungund, Amingad, and Yerankeri tanks are also in hand, as well as ordinary local projects, such as roads and tank clearances. It is proposed to take up similar works as occasion may require.

The amount spent in gratuitous relief is small. Subscription funds had been formed at some of the principal towns, but the subscriptions have not been liberal.

In the Assistant Collector's opinion, 38,320 will be the maximum number that the Government will have on their hands during the season, of which 34,597 can be employed on works, and 3,723 will have to be supported by charity. He puts down about 20,000 people on 1st March, 30,000 on 1st April, and the full number on the 1st May. The Collector considers these estimates somewhat high, and that about 25 per cent. of the population may require relief.

SINDGI (Supernumerary Assistant)				
The kharif harvest has yielded a crop of 3, or at the utmost 4, annas. Rabi crop there is none. There is now no prospect of further sowings this season.	The Mamlatdār estimates that four fifths (Rs. 1,60,000) of the whole revenue (Rs. 2,00,000) will have to be remitted, and the Assistant Collector thinks this a fair estimate, but the Collector considers it a high one; but no correct estimate can be given before the jamabundi.	About 20,000 cattle have died or been sold to butchers; and an equal number have been conveyed to the Nizam's Dominions and the Ghâts in search of fodder. There is among the wealthy ryots sufficient fodder in this taluka for about 10,000 cattle for 3 or 4 months. The poorer classes are feeding their cattle on the leaves of trees. An attempt has been made to utilise prickly pear as fodder, but as yet with little success. The Assistant Collector offers two suggestions for preserving the cattle: First, that the best cattle be selected by Government Officers and conveyed to the Ghâts; and, secondly, that if prickly-pear can be used as food, Government undertake its preparation and feeding cattle thereon; the Collector thinks it would not be worth while to attempt conveying the cattle to the Ghâts, as many may not survive the journey.	The water-supply is very fair, the taluka being intersected in all directions by nullas, and water can always be had by digging holes in their beds. No scarcity of water is apprehended. BADAMI (Acting 1st Assistant Collector)

The Assistant Collector estimates the yield of the kharif harvest at 4 annas, and that of the rabi at 5 annas 4 pies, but the Collector considers these estimates incorrect, as only half of the kharif and one quarter of the rabi crop have been sown. The Assistant's estimates may represent, he thinks, the yield of the land actually sown. No prospect of further sowings this season.	The Assistant Collector estimates the remissions to be about Rs. 25,000, which the Collector believes to be under the mark. The exact amount can be determined only at the jamabundi.	5,000 deaths are stated to have occurred among agricultural stock, and 3,500 among other cattle; of these, about 1,000 deaths are attributed to want of fodder. It is estimated that the total numbers that may die this year will be, of agricultural stock about 11,000, and of other cattle about 7,000. Fodder is scarce, and numbers of cattle have been and are being sent off to the Ghâts and Kanara. The experiment of utilising prickly-pear as fodder may possibly be successful, but at present the owners do not care to undertake the trouble and expense of preparing the leaves on their own account.	The Assistant Collector does not apprehend the supply of water running short before the monsoon, as a year's supply was provided by the rains which fell late in the season. The Collector, however, anticipates a scarcity of water next hot season.	Prices—Lbs. per Rupee

BÁGEWÁRI Taluka (District Deputy Collector)

The kharif harvest will yield a crop of one pie, and the rabi $\frac{1}{2}$ of a pie. No further sowings this season.	The amount that will have to be remitted is estimated by the District Deputy Collector at three quarters (Rs. 155,440) of the whole assessment, Rs. 2,07,253. The Collector, however, considers this estimate too high.	Of cattle and agricultural stock numbering 53,875, exclusive of sheep, 8,400 are reported to have died from all causes, and 16,100 to have been taken to Kanara, the Nizam's dominions, &c. in search of fodder. The Mamlatdār anticipates the future mortality at about 14,700. The permission accorded for free grazing of cattle in Government forests have not been taken advantage of, owing to the length of the journey. A few who can afford it have imported and laid in a stock of kirby, but those who cannot afford to do this feed their cattle on leaves of trees. Experiments to utilise the prickly-pear as fodder have as yet succeeded only to a very slight extent.	The chief source of water-supply is the river Krishna, which, however, is immediately available only to the eleven villages situate on it. The remaining villages depend for their water-supply on wells and pools in beds of nullahs. These sources are likely to fail earlier this year than in ordinary seasons. The remedial measures proposed are the clearance of wells and the sinking of new ones.	Prices—Lbs. per Rupee

distressed
districts in
Bombay
Presidency.

Director Mr. H. Silcock's Report, dated 22nd December 1876).

f.	g.	h.	i.	j.	k.
It is difficult to ascertain exactly what the local stocks are, but they are of large; and the importations from Sholapur are barely sufficient to keep down prices to a fair level. There are not many wealthy merchants in the taluka, and there is a want of enterprise, the condition of the food supply will be a cause of anxiety throughout the season.	The population is of a mixed character. Agriculture is their chief occupation, and the ryots are in general fairly comfortable. The Inamdars are not wealthy, being mostly in debt, and will be unable to help their tenants.	Emigration to the Nizam's dominions has taken place to a considerable extent, the number being between 25,000 and 30,000. As a rule, the people have bettered themselves; it still continues towards the Konkan but at a decreasing rate. Some who left are returning to obtain employment on the relief works.	The relief works already started appear sufficient for the present. The Assistant Collector specifies others which can be taken up as occasion requires. He also recommends the construction, when the works in progress are concluded, of a tank at Hippargi.	No relief has yet been given to travellers, as they have not been found to require it. Private charity has done much to assist the aged and the infirm, &c. The Mamlatdar has been advanced Rs. 450 for charitable relief, which sum seems sufficient for present wants.	The number of persons now employed on relief works is about 4,000; that relieved by charitable measures only 14, which is likely to increase as private charity ceases. The number on relief works on the 1st March will probably amount to 15,000 or 20,000, and that receiving charitable reliefs to about 500, which number is likely to remain the same up to 1st May. By 1st July, if rain should fall, the number will probably have decreased to 8,000, but the number requiring charitable relief will remain the same.

Mr. J. F. Fleet's Report, dated 2nd December 1876).

The Assistant Collector estimates the local stocks of grain to be small (about 107 tons). The Collector thinks his Assistant is mistaken, and that the stocks amount to 1,714 tons. Small quantities have been coming in from Sholapur and from the Hubli and Coomta directions, and prices have in consequence gone down. There are not many traders of wealth and position likely to enter into extensive importations.	Three-fourths of the people (taking the total population at 125,000) are high-caste, the rest low-caste. About 75,000 are purely agricultural, the rest are traders, artisans, Government servants, &c., and ryots who trade as well as cultivate. The only large landholders are Ghorepade of Gajendragad and the Kerur Dessai. The former is much involved and unable to help his tenants; the latter, though well-to-do, is niggardly, and not likely to do anything in the way of help.	About 15,000 people have already emigrated; whether they have bettered themselves by so doing is not known. The Collector does not think that further emigration is probable, but that, on the contrary, many of those who have left their homes will return.	The great special relief work now in hand is the Sholapur-Hubli road, besides which several petty local projects are in progress. Estimates for several tanks are in course of preparation.	The Mamlatdar has Rs. 450 available for charitable relief, but does not state how much of this sum has been spent. Private subscription funds are being formed in the large towns, and the German missionaries have been asked to co-operate in administering the fund at Gulegad.	The number of persons Government has on their hands for relief at date of report is not stated. The Assistant Collector estimates that by March there will be 15,000 persons seeking employment, and that 3,000 will require charitable aid. The number is expected to diminish in April, if rain falls, or may increase if the drought continues. The Collector expects that he will have 25 per cent. of the people on his hands before the close of the hot weather.
---	---	---	---	--	---

Mr. Balkrishna Devrao's Report, dated 28th December 1876).

There are no means of ascertaining with accuracy the local stocks, but the District Deputy Collector estimates the quantity as sufficient for about five months. Sholapur is the central railway station from which supplies are drawn. Private enterprise has imported grain largely, which has had the effect of slightly lowering prices, and of inducing private holders of stores to bring theirs to market. Private importation, if continued, will be sufficient to meet all wants, and another fall in prices may be expected; but it is apprehended that when the supply of fodder, which is not expected to last beyond a couple of months, is exhausted, the importations of grain will cease.	The population consists of all castes, but chiefly of Lingayets. The low castes also form a considerable portion. The population is purely agricultural. The general condition of the people is good. There are no wealthy persons in the taluka; but there are a few large landholders who assist their tenants.	About 6,400 people have emigrated to Kanara and the Nizam's dominions; but not faring well there some have returned and others are expected to return. There is no likelihood of further emigration.	Certain tank works are in progress, besides some minor works, such as clearing out wells, repairing roads, and cutting prickly-pears, giving employment to about 1,900 people. The Hubli and Sholapur road is also being metalled by the Public Works Department, and employs about 1,200 men. Certain new works (excavation of tanks in different localities) have been proposed by the District Deputy Collector as relief works, entailing an expenditure of Rs. 38,500. Also the completion of the tanks now in progress at Mulwar-Satibaland Bagewari, at an outlay of Rs. 6,000. These works are considered sufficient to give employment to the able-bodied.	A fund of about Rs. 2,200 has been raised by private subscription. The number of travellers and aged and infirm people fed daily from this fund is 175 at Bagewari, and about 40 at Manogoli. The discretionary allowance made by Government will afford relief to some, and private charity will relieve others.	The number of persons on hand at date of report for relief by works is about 3,200, including those employed by Public Works Department. None are receiving charitable relief from Government, but some may soon be expected. The number which Government is likely to have on its hands hereafter is roughly estimated by the Deputy Collector as follows:— On 1st March. For relief on works 4,500 " by charity 500 " On 1st May. For relief on works 6,000 " by charity 700 " On 1st July. For relief on works 4,000 " by charity 700 The Collector estimates the maximum number of labourers on hand in April and May at about 25 per cent. (22,922) of the entire population (91,688 souls), and the number in July will depend entirely on the time the monsoon sets in.

BIJÁPUR Taluka (Supernumerary Assistant Collector)										
The yield of the kharif and the rabi crops, where sown, is only 1 anna each.	The Assistant Collector estimates the probable amount of remissions at about Rs. 1,01,500, or about three-fourths of the revenue, Rs. 1,34,000, which estimate the Collector thinks rather high, but no reliable information can be obtained till the jamábundi.	About 12,000 head of cattle, mostly old and useless, have died, out of a total of 60,000. About 30,000 have been driven out of the district for grazing purposes, and 30,000 or 40,000 remain, for which forage is not obtainable. The Assistant has no other suggestions to offer regarding measures to be taken for their preservation than those proposed by him with reference to the Sindgi Taluka, viz., that the best cattle be selected by Government officers, and conveyed to the gháts; and secondly, that Government undertake the preparation of, and feeding cattle on, prickly-pear or other suitable food. The prickly-pear experiment has already been tried in this district, and cattle will eat the leaves when prepared, but the owners do not care to undertake the trouble and incur the expense of preparing them on their own account.	The water-supply is fair, the source being wells and nullahs; and there is no apprehension of a scarcity.	Prices—Lbs. per Rupee.

MUDEBIHÁL Taluka (District Deputy Collector)

The kharif and rabi yield will each be less than one pie. There is no prospect of any further sowings this season.	Last year's revenue amounted to Rs. 1,57,875, and the probable remissions will be Rs. 39,468.	Out of 77,615 cattle, 7,000 have perished, and 13,000 have left the taluka; the rest are emaciated and weak, and only about 20 per cent. will be saved. Government have permitted free grazing in Kanara and other forest districts; but the distances from this taluka are great, and only the more valuable animals are sent.	The taluka is on the whole well off for water, but wells will be dug where required.	Prices—Lbs. per Rupee.

INDI Taluka (Supernumerary Assistant Collector)

The kharif yield will be nil, and the rabi 3 annas. There are no prospects of further sowings this season	The revenue is Rs. 1,95,742, out of which it is estimated that Rs. 1,45,742 must be remitted.	The total number of cattle is 89,000, out of which 15,847 have already died, and it is probable that 25,000 more will die. 40,000 have been taken to the Ghât districts. Prickly-pear fodder is not a success, but if Government would carry grass to Sholapur, it is thought that some of the Kaladgi ryots would buy it.	There is not much reason to dread a failure in the water supply.	Date.	Prices—Lbs. per Rupee

GENERAL

Of the eight talukas the crops in three seem to have been bad, and in five very bad.

The proposed remissions amount to Rs. 6,95,373. In one taluka the condition of the cattle appears tolerably satisfactory, and in seven bad.

In five talukas the prospects of the water-supply seem satisfactory, and in three indifferent. No calamity, due to failure of water, is anticipated by Government.

The local officers appear slightly apprehensive regarding the grain supply of five talukas.

The majority of the population of this, as of all other collectorates, is either agricultural, or very intimately connected with agriculture.

123,900, out of a population of 816,037 appear to have migrated. This movement seems now to have nearly stopped. It is to a great extent due to the necessity of obtaining pasture for the cattle.

The chief relief works are the Sholapur-Hubli and the Sholapur-Bellary roads.

continued.

f.	g.	h.	i.	j.	k.
Mr. H. Silcock's Report, dated 28th December 1876).					
The Assistant estimates the local stock of grain at about 1,683 tons, which, with the large importations from Sholapur by private enterprise, will probably suffice to meet the requirements of the taluka till next harvest. Owing to the large importations, prices have recently fallen.	The inhabitants of this taluka are of the ordinary class, there being but a few high caste, chiefly Brahmins, priests, &c. not well-to-do. The Lingayets are rather numerous and well-to-do. Of these, a few are merchants, the rest are ryots, who have been supplying grain to the poorer cultivators of their own villages. The majority of the inhabitants are ordinary ryots, who in general live very comfortably in their villages, but are obliged to labour this year. There are very few tradesmen and artisans. There are a few wealthy inamdars, but, being in debt, they will be unable to help their tenants.	According to the Mamlatdar's report, about 20,000, out of a population of 85,000, have already emigrated to the Nizam's dominions and the ghats, and appeared to have bettered themselves. A number of agricultural labourers have also left in search of work, but are now returning, preferring to work near their own villages. Further emigration to any great extent is not thought probable.	The works in progress are repairs to the Hubli-Sholapur and Bijapur-Bage-wari roads; filling in the moat round the Arkilla in Bijapur, and repairing the tanks at Torsal, Dasgal, and Kunmooenal. Work can be found in the moat for four or five months more if an increase is made to the estimate. The above works are sufficient to give employment for four or five months to the inhabitants of the taluka, but as numbers from other districts are flocking in, and are employed, the works will be finished sooner. The Assistant Collector proposes, as one of the most useful future relief works, the Bijapur Scheme, and station roads. Also repairing the Begum Talao, some hundred acres in extent, and once the principal source of the water supply of the city. He also proposes repairs to the large irrigation tanks at Mandepur, Koomatgi, and repairs to the Nagathan road.	A monthly subscription has been opened for the relief of the aged, infirm, and those unable to work. The amount not being large, will have to be supplemented by Government. Rs. 145 per mensem has been promised. There is a daily distribution of food to the poor. Travellers are very few, and no separate provision has been made for them.	The number of people on relief works is at present 7,000 men, supported by charity by Government; but grain is given for two or three days to those coming from a distance for employment, and without means of support. The probable number of relief works in future will be on 1st March - - 2,500; 1st May - - 2,500; 1st July - - 5,000.

Mr. Balkrishna Devrao's Report, dated 7th January 1877).

The present supply of grain is ample, and is drawn chiefly from Sholapur. Prices have fallen, and private enterprise will supply the market.	The population, amounting to 81,836, is purely agricultural, consisting of Hindoos, Muslims, Wadars, and Lowans, or wandering tribes. A few landholders have assisted their tenants.	7,500 people have emigrated to Kanara and the Nizam's territory, but are returning; there will probably be no further emigration, as those who have returned give unfavourable reports.	Six road works and two tanks are in progress, but as these will shortly be completed, they will have to be supplemented by four more tank works.	Private subscriptions relieve about 220 infirm people a day.	On works 1,825, and none by charity. It is impossible to say how many will be dependent on Government hereafter.
--	--	---	--	--	--

Mr. H. Silcock's Report, dated 12th January 1877).

There are upwards of 135 tons of grain in store, and it is being imported from Sholapur. Private enterprise will supply the market, provided Government will supply fodder along the Sholapur-Hubli and Sholapur-Bellary roads, so far as they pass through this district.	The majority of the population of 105,000 are agriculturists, and fairly off. There are 200 or 300 artisans and a fair sprinkling of Brahmins and Mussalmans. There are a few Jagirdars from whom no aid can be expected.	Forty thousand have emigrated, some of whom have bettered themselves, while others are returning. No further emigration is expected.	The two road-works at present in progress are sufficient. On their completion, four road-works and four tanks will be undertaken, when the necessity arises.	Rs. 500 have been given for charitable aid. Travellers receive a day's food and the infirm one pound of grain a day.	13,058 persons are at present on relief works, and about 70 are receiving gratuitous support. The numbers of the former will swell to 15,000 or 20,000 on 1st March and 1st May, and fall to 8,000 on 1st July, if it rains seasonably. The number requiring charitable relief on the above dates, including children unable to work, will be 1,000 to 1,500.
--	---	--	--	--	---

OBSERVATIONS.

The expenditure upon charity has been trifling.
The number of labourers anticipated to be upon the hands of Government is about—

On March 1st -	-	-	-	-	-	82,000
On May 1st -	-	-	-	-	-	1,19,500
On July 1st -	-	-	-	-	-	63,320

This Government must guard themselves against the supposition of being held to accept as accurate or reliable all the information contained in these reports; the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

(Signed) C. G. W. MACPHERSON,
Under Secretary to Government.

BELGAUM Taluka (First Assistant Collector Mr.

The kharif yield will be 6 annas, and the rabi <i>nil</i> . There are no prospects of further sowings this season.	The Mámlatdár estimates the remissions at Rs. 7,000, and proposes to defer the collection of a like sum till another year. The Assistant Collector and the Revenue Commissioner think the amounts ought to be less.	No unusual mortality has taken place amongst the taluka cattle, but about 300 of those brought from other districts have perished. There will be sufficient fodder for all the cattle worth preserving.	There is a fair supply of drinking water in the taluka, and very slight remedial measures are considered necessary.	Prices—Lbs. per Rupee.

-----------	-----------	-----------	-----------	-----------	-----------

Steward's Report, dated 27th December 1876).

here are 3,700,000 lbs. of grain in the taluka at present, and supplies are imported from Goa and from Bombay <i>via</i> Vingorla and Belgaum; there is no probability of the grain supplies brought by private enterprise failing.	The Shenvee Brahmins preponderate and are well off. These and the Lingayet Soucars at Nandgad form the wealthy portion of the population; the rest are poor. The richer cultivators may possibly aid their tenants.	Immigration, and not emigration, has taken place. Hard times may compel a few to go to Kanara and Goa for employment.	At present there is only one road-work in progress; this is insufficient, and others will have to be undertaken.	A relief-house has just been started at Khánapur, but the amount of charity dispensed is small.	The Mámáldar estimates the following numbers will require relief, but the Assistant Collector considers the numbers requiring relief by charity to be under-estimated. <table><tr><td></td><td><i>On</i></td><td><i>By</i></td></tr><tr><td></td><td><i>Works.</i></td><td><i>Charity.</i></td></tr><tr><td>On 1st Jan.</td><td>- 400</td><td>100</td></tr><tr><td>On 1st Mar.</td><td>- 1,300</td><td>100</td></tr><tr><td>On 1st May</td><td>- 1,300</td><td>100</td></tr><tr><td>On 1st July</td><td>- 800</td><td>100</td></tr></table>		<i>On</i>	<i>By</i>		<i>Works.</i>	<i>Charity.</i>	On 1st Jan.	- 400	100	On 1st Mar.	- 1,300	100	On 1st May	- 1,300	100	On 1st July	- 800	100

On 1st Jan.	- 400	100																					
On 1st Mar.	- 1,300	100																					
On 1st May	- 1,300	100																					
On 1st July	- 800	100																					

Steward's Report, dated 26th December 1876).

The local stocks of grain are estimated at lbs. 10,165,380. There is no probability of the supply failing, as it is being largely imported from Bombay <i>via</i> the Coast. Private enterprise will continue to supply the market.	There is no marked preponderance of one caste over another; the total population is 129,292, one half of whom are engaged in agriculture; the rest are weavers and artisans. There are no landholders likely to assist their tenants.	There has been immigration, but no emigration.	At present labourers are employed on tank repairs and roads; other relief works will be started in January.	There is a relief-house at Belgaum, towards which Rs. 7,000 have been subscribed, and which has relieved 9,380 persons. When able-bodied men appear, they are given one cooked meal, and then sent to work on a neighbouring tank.	At present there are 1,000 people on the works; on 1st March there will be 3,000, on 1st May 5,000, and 1st July 5,000. The Assistant Collector considers the numbers over-estimated.

CHICKORI Taluka (Acting First Assistant Collector				Prices—Lbs. per Rupee.							
The Mamlatdar estimates the kharif crop at 1 anna, and the rabi at nearly 2½ annas; but the First Assistant considers this estimate unreliable, and calculates that the average throughout the Collectorate is about 5 annas, the crop being almost entirely kharif, and consisting largely of rice. There will be no further sowings this season.	The First Assistant estimates the remissions at Rs. 40,000, and suggests that the collection of the revenue to the extent of Rs. 30,000 more may be deferred till next year.	Of the cattle and agricultural stock, numbering 187,734, about 20,000 have been driven to the Ghâts to graze, and about 4,000 worthless animals have already perished, and 1,000 more are likely to die from hunger. There are considerable stocks of kurbi in the taluka, and the ghâts are near, so there should be little difficulty in feeding all animals worth preserving. The ryots will not go to the trouble and expense of preparing prickly-pear for fodder.	Chickori is a well-watered taluka; 90 of its villages being upon the banks of rivers, and no serious inconvenience is likely to be experienced as regards the rest.	Dates.

PARASGAD Taluka (Superintendery Assistant Collector)												
The kharif yield will be $\frac{1}{2}$ and the rabi $\frac{1}{2}$ of an anna. There are no prospects of further sowings this season.	The total revenue is about Rs. 1,95,000; the remissions will amount to Rs. 65,000, and the outstanding collections to a like sum.	There is a large balance of fodder, and up to the present there has been no mortality amongst the cattle; but the people refuse to send their valuable cattle; to the distant Government grazing grounds, and will not use the prickly-pear. Probably, as the pressure increases, many animals will be sent to the ghâts.	The water-supply in many villages is indifferent, but the Assistant Collector does not anticipate such a failure as to cause serious inconvenience.	Prices—Lbs. per Rupee.

GOKAK Taluka (District Deputy Collector											
The kharif yield will be 9 and the rabi 4 pias. There are no prospects of further sowings this season.	The probable remissions will amount to Rs. 72,273. The total revenue is not given.	Out of the total number of cattle, amounting to 86,466, 1,955 have died, 8,272 have been sold, and 3,474 sent to the ghâts. Of the rest 15,000 may perish. Attempts are being made to introduce prickly-pea as fodder.	Although this part of the district is watered by the River Ghatprabha, which will supply a number of villages, there will be a certain amount of inconvenience as regards water-supply in many villages distant from the Ghatprabha, as nullahs and wells are fast drying up. Wells and tanks are being deepened and cleared out on a large scale.	Dates.	Prices—Lbs. per Rupee.

G. McCorkell's Report, dated 29th December 1876).													
There is a vast quantity of grain in store, and large importations continue from Vingorla and Belam; but the Assistant Collector thinks prices will not fall. Private enterprise will supply the market.	The population is almost purely agricultural; by far the larger number are Lingayets by caste. There are no landholders willing to aid their tenants.	Not more than 1,300 have emigrated, but many more will follow unless relief works are started at once.	No relief works, except one road, are in progress at present, but three road works can be commenced when necessary.	A relief-house has been opened, but up to the present no large demands for charity have been made.	At present there are no people on relief works, but the Assistant Collector expects that support will have to be provided for about— <table><tr><th><i>On Works.</i></th><th><i>By Charity.</i></th></tr><tr><td>On 1st Mar. - 9,000</td><td>3,000</td></tr><tr><td>On 1st May - 9,750</td><td>3,250</td></tr><tr><td>On 1st July - 6,000</td><td>2,000</td></tr></table>	<i>On Works.</i>	<i>By Charity.</i>	On 1st Mar. - 9,000	3,000	On 1st May - 9,750	3,250	On 1st July - 6,000	2,000

A. Steward's Report, dated 4th January 1877).

present supply of grain, added to the vast quantities imported from Vingorla, Chiplun, and other places, is sufficient to last till the monsoon. Prices have fallen, and private enterprise will supply the market.	There is no marked preponderance of any one caste over another. Weaving is the only trade carried on; the cultivators are exceedingly well-to-do, and the population is almost entirely agricultural, though the coolie class is a large one.	About 2,000 people have emigrated towards the Kanara jungles and relief works, and are supposed to have bettered themselves.	At present the eight road works in progress are sufficient; hereafter some large irrigational project in Hukeri Mahál may require to be undertaken.	Relief houses, under Government supervision, are established at four villages, where the wants of travellers and incapables are administered to.	There are at present 5,000 people on the works and 250 in the poor-houses; the numbers of the former will rise to about 14,000 or 15,000 throughout the dry season, and the latter to about 1,000.
---	---	--	---	--	--

G. McCorkell's Report, dated 30th December 1876).

There are upwards of 3,202 tons of grain in store; importations are large, and there is no probability of the supply failing. Prices have fallen since the large importations, but will rise as soon as the rains close in Southern Mahratta ports. Private enterprise will supply the market.	The prevailing caste is that of the Lingayets; the majority of the population is agricultural, and in poor circumstances. There are no landholders capable of assisting their tenants.	About 5,000 people migrated with their cattle, but are returning. No further migration has taken place. There are a large number of immigrants from Dharwar, Kaladgi, and the neighbouring Jaghir States.	The greater number of the 13 relief works undertaken are completed. In addition to these the Assistant Collector proposes 14 tank-works and two roads.	A relief house has been established where the wants of incapables are attended to.	At present there are 8,200 on the works; it is expected that there will be :— <table><tr><th></th><th><i>On Works.</i></th><th><i>By Charity.</i></th></tr><tr><td>On 1st March</td><td>22,350</td><td>1,500</td></tr><tr><td>" 1st May</td><td>- 16,670</td><td>1,750</td></tr><tr><td>" 1st July</td><td>- 12,000</td><td>2,000</td></tr></table>		<i>On Works.</i>	<i>By Charity.</i>	On 1st March	22,350	1,500	" 1st May	- 16,670	1,750	" 1st July	- 12,000	2,000

Jr. J. A. Guerin's Report, dated 10th January 1877).

There are upwards of 571 tons of grain in stores. Further supplies are being drawn from Vingorla, Chickori, Bidi, and Sampgaon talukas. So long as importations from Vingorla continue, private enterprise will supply the market.	The population amounts to 109,697, and is almost entirely of Hindus, 40,063 being high caste and 60,060 low caste. There is a small per-centage of Jains and Musalmans; about 27,424 purely and 3,428 partly agricultural; and the rest are urban, artizan, &c. The people, as a rule, are poor, and there are no landholders able to assist their tenants.	About 4,600 people have emigrated towards Mysore and the western gháts; some have returned, and others have found employment. No further emigration is expected.	Eleven tank works, one well, and one road are at present in progress, but will not meet the demand for labour; and it is proposed to commence the Gokak Canal.	A relief house has been established at Gokak, and the infirm and children are fed daily; the sick are supplied with medicines; and able-bodied travellers are assisted to relief works, partly by Government and partly by private charity.	7,759 persons are now on the works, and 57 are being supported by charity; the number will probably increase to :— <table><tr><td></td><td><i>On Works.</i></td><td><i>By Charity.</i></td></tr><tr><td>On 1st March</td><td>20,000</td><td>400</td></tr><tr><td>" 1st May -</td><td>27,000</td><td>700</td></tr><tr><td>" 1st July -</td><td>22,000</td><td>900</td></tr></table>		<i>On Works.</i>	<i>By Charity.</i>	On 1st March	20,000	400	" 1st May -	27,000	700	" 1st July -	22,000	900

ATHNI Taluka (District Deputy Collector)				
The kharif yield may be taken at 4 pies and the rabi 1½ pies. No further sowings are expected this season.	The probable remissions will amount to Rs. 60,499; the total revenue is not given.	4,300 cattle are reported to have died and 5,000 to have been sold. A further mortality of 16,000 is anticipated.	27 villages of this district derive their water-supply from the Kistna river, which contains sufficient for the season; the other 77 villages, being dependent on wells and nalas, most of which are already dry, will suffer from scarcity. Wells are being deepened and cleared.	Prices-Lbs.perRun

GENERAL

Of the seven talukas, the crop in four seem fair, and in three bad.
The proposed remissions amount to Rs. 2,50,772.
In five talukas the condition of the cattle appears satisfactory, and in two bad.
In five talukas the prospects of the water supply seem satisfactory, and in two indifferent. No calamity due to failure of water is anticipated by Government.
No apprehensions are entertained regarding the grain supply.
The majority of the population of this as of all other collectorates is either purely agricultural or very intimately connected with agriculture; 22,900, out of a population of 938,750, appear to have migrated. This movement appears now to have nearly stopped. It is, to a great extent, due to the necessity of obtaining pasture for the cattle.
The chief relief works are roads.

-----------	-----------	-----------	-----------	-----------	-----------

J. A. Guerin's Report, dated 10th January 1877).

are upwards of 77 tons of grain in re. Supplies are obtained from Sholapur, Jun, and in small quantities from Nipani and Belgaum. Prices have fallen, and private enterprise will supply the market.	The total population of Athni is 114,677, of whom 74,374 are high caste Hindus, and 16,487 low caste, 12,705 Jains, and 11,109 Musalmans. About 21,502 are purely agricultural and 78,840 combine agriculture with other trades; the remaining 14,335 are non-agricultural. The people, as a rule, are poor, and there are no large landholders capable of aiding their tenants.	About 10,000 people emigrated to the Nizam's territory and the Konkan, and a few to Amraoti, but many have returned.	Nine tank works and three roads are in progress at present, but are found insufficient. In the absence of Government sanction to the Gokak Canal, several smaller works must be undertaken.	A relief house has been established at Athni, and the infirm and children are fed daily with cooked food; the sick are supplied with medicines; and able-bodied travellers are assisted to relief works by Government and private charity.	At present there are 6,981 on works and 140 are supported by charity. The numbers will be:— <table><tr><th></th><th><i>On Works.</i></th><th><i>By Charity.</i></th></tr><tr><td>On 1st March</td><td>18,000</td><td>300</td></tr><tr><td>" 1st May</td><td>25,000</td><td>604</td></tr><tr><td>" 1st July</td><td>20,000</td><td>800</td></tr></table>		<i>On Works.</i>	<i>By Charity.</i>	On 1st March	18,000	300	" 1st May	25,000	604	" 1st July	20,000	800

On 1st March	18,000	300															
" 1st May	25,000	604															
" 1st July	20,000	800															

OBSERVATIONS.

The expenditure upon charity has been trifling.

The number of labourers anticipated to be upon the hands of Government is about—

On March 1st	-	-	-	-	-	-	87,650
On May 1st	-	-	-	-	-	-	98,720
On July 1st	-	-	-	-	-	-	79,800

This Government must guard themselves against the supposition of being held to accept as accurate or reliable all the information contained in these reports, the time allowed for their preparation having been so short, considering the delicacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

(Signed) C. G. W. MACPHERSON,
Under Secretary to Government.

HUBLI Taluka (1st Assistant Collector Mr.

The yield of the kharif and the rabi crop where sown is about 4 annas each, but nearly half the culturable area has been unsown. There will be no further sowings this season.	The total land revenue of the taluka is Rs. 2,25,000, and the remission to be given is estimated by the Māmlatdār at Rs. 25,000, which the First Assistant considers somewhat high, as the people are well-to-do.	No unusual mortality has occurred among the cattle, nor is any anticipated. Fodder plentiful. No special measures are required on this account.	The water supply is fair, the chief source being wells. No scarcity of water is apprehended.	For each Week of October, November, and December 1876.	Prices—Lbs. per Bup.

GADAG Taluka (1st Assistant Collector Mr.

The yield of the kharif crop is estimated at 3 annas, and that of the rabi at 1 anna, but only a third of the culturable area has been sown. There will be no further sowings this season.	The Mamlatdar estimates the remissions at about Rs. 36,000, out of the total assessment of Rs. 2,46,522. The First Assistant Collector, however, thinks this estimate too low, and puts the amount at about Rs. 60,000.	No cattle have died from starvation, but some have been sent for grazing to the jungles. There are considerable stocks of fodder, and the people will be able to keep alive the best of their cattle, but difficulty, in procuring fodder will be felt by the owners of carts coming into the taluka with grain supplies, &c.	In some villages there is already a great scarcity of water, and in seven others there is no supply at all, the villagers having to go two or three miles for it; these are black soil villages, and depend for their supply upon tanks, which are filled up by the rain. The only remedial measure that appears feasible to the First Assistant is the sinking of wells to a great depth (100 feet) where good water may be found, that found at a moderate depth being brackish.	For each Week of October, November, and December 1876.	Prices—Lbs. per Rupee

DHARWAR.

f.	g.	h.	i.	j.	k.
----	----	----	----	----	----

Vaddington's Report, dated 30th December 1876).

The Mámlatdár estimates the local stock of grain at about 694 tons, which the First Assistant considers absurdly low. He believes there are large stocks in the taluka. There are many rich traders in the town of Hubli, who are importing largely, as also are Messrs. Nicol and Co., of the Karwar Company (Limited), and the effect of this importation is a considerable fall in prices. If it continue, there is no need of apprehension for the taluka.	Of the total population (101,238) of the taluka, 17,170 persons are purely agricultural, 24,410 are artisans, and 59,658 of no special employment. Out of the whole number, about 500 persons are computed to be of independent means, but of these those of the land-holding class are heavily involved, and there is no probability of their assisting their tenants.	No emigration has taken place from this taluka, but about 2,500 have immigrated from Kaladgi and elsewhere, who now find employment on the road under construction between Hubli and Konur.	The only relief work now in progress here is the road from Hubli and Konur, upon which about 3,000 persons are employed. There are also minor local fund works sanctioned, which will afford relief. A list is appended of works which can, if necessary, be sanctioned for relief.	No charitable relief has been given as yet, and it is doubted if any such will be required in the town of Hubli itself, where many of the wealthy merchants already distribute food daily to large numbers, and will continue to do so during the scarcity. In the villages also little will be required, as Hubli is the grand centre to which all needing employment or charity naturally gravitate.	The number of persons employed on relief works is at present about 3,000, most of whom are immigrants. The Mámlatdár estimates the probable numbers in future as follows:— On 1st March - 5,000 " 1st May - 5,000 " 1st July - 5,000 supposing no rain to have fallen. The First Assistant considers this estimate to be a fair one.
---	--	--	--	---	---

Vaddington's Report, dated 30th December 1876).

The Mámlatdár estimates the local stock of grain at about 826 tons, which the First Assistant considers unreliable, but states he is himself unable to supply a more reliable estimate. Grain is largely imported from Bellary, Coompta, and Karwar, and the stock is sufficient for the wants of the usual inhabitants of the taluka, though, in the absence of importation, prices would be high. Importation, too, is requisite, not only to keep down prices, but to provide grain for the people employed on relief works, the majority of whom are immigrants from other districts. Later in the season difficulty will be experienced in procuring fodder for cart bullocks bringing grain into the district. The Revenue Commissioner, therefore, suggests the desirableness of storing, as a precautionary measure, a certain amount of fodder for sale to the public on the main lines of communication.	Of the total population, numbering 120,655 souls, 24,141 are purely agricultural, 1,026 artisans, and 95,488 of no special employment. The people are on the whole well-to-do. There are no large or wealthy landholders who are in a position to assist their tenants.	According to the Mámlatdár's report about 10,000 people emigrated to the forests, but in consequence of suffering from fever and want of employment, many are returning to their homes. The First Assistant Collector observes that annually considerable numbers of the poorer classes emigrate to the western talukas for employment in reaping the rice crops, and return after harvest, and thinks that these persons form a considerable portion of the number in the Mámlatdár's estimate. Further emigration is not considered probable, if employment on relief works can be found in the taluka.	The relief works in progress are improving the tank at Dambul and making a road between Hurtee and Mulagund, 1,250 persons being employed on the former and 1,500 on the latter work. A list of other relief works which can be undertaken is also submitted.	The amount of charitable relief has as yet been very small, nor is there any likelihood of its rising to anything very considerable.	At present only about 4,000 persons are employed on relief works. It is difficult to make a forecast of the numbers likely to be so employed in future, as it must entirely depend upon the seasonableness or otherwise of the rainfall. The Mámlatdár estimates the number that will require charitable relief at— On 1st March - 60 per diem. " 1st May - 80 " " 1st July - 100 "

KALGHATGI Taluka (First Assistant Collector)				
The taluka is entirely kharif, and the crop is 5 annas.	About Rs. 500 - -	No unusual mortality among cattle, and fodder is abundant. A considerable number of cattle, belonging to immigrants from Kaldgi and elsewhere, have died on their way through this taluka to the forests. Many of them were poor, worthless creatures; their deaths are partly attributable to the scarcity of food and over-driving, and partly to the coarse fodder of this taluka not suiting them.	The water supply is fair, the source being nullahs and holes sunk in the beds of nullahs. Where the want of water is likely to be most felt will be along the road, by cartmen travelling with grain carts from Sangatikop to Hubli. Suggests the sinking of temporary wells at each of the halting places along the line.	Prices—Lbs. per Rupee.

HANGAL Taluka (Acting Second Assistant Collector)				
The kharif crop is as follows: ragi, 5 annas; rice, 4 annas; jowari, 3½ annas; and tur pulse, 1 anna. There has been no rabi crop at all. There will be no further sowings this season.	Rs. 1,000 will probably have to be remitted.	No unusual mortality has occurred or is anticipated. Fodder sufficient.	From February and March the water supply will fail in some villages, but no special distress from scarcity of water will be felt, as the ryots will, as usual, sink temporary wells in nullahs, tanks, &c.	Prices—Lbs. per Rupee.

RANIBENNUR Taluka (Acting Second Assistant Collector)				
The Assistant Collector estimates the kharif crop at 1½, and the rabi at 6¼ annas. The Collector thinks the Assistant's estimate of the kharif crop is slightly too low. There will be no further sowings this season.	About Rs. 10,000 will probably have to be remitted out of a revenue demand of Rs. 1,33,734.	3,000 cattle have died, of which one half were valuable agricultural stock. About 33,500 valuable animals have been sent to Mysore and Kanara to graze; of these about 4,200 have died. It is anticipated that about 1,000 more will die, of which only 300 will be valuable animals. The Second Assistant has no other suggestions to offer for the preservation of cattle than those made with reference to Sindgi Taluka.	The tanks of 10 villages are dry, and those of 15 villages will also be dry in a fortnight, when, with the exception of three villages, the inhabitants of which will have to go three miles, all villagers will have to go from one to two miles for water.	Prices—Lbs. per Rupee.

KARAJGI Taluka (Supernumerary Assistant Collector Mr. E.)				
The kharif crop is about 1 anna, and the rabi ½ an anna.	Remissions will probably amount to nearly Rs. 30,000 out of a revenue of Rs. 1,50,504, but no accurate estimate can be formed till the jamabandi.	No unusual mortality as yet among the cattle in the taluka, but it is anticipated. Of the cattle that have been sent to Malad to graze, about 1,000 have died from the effects of the climate, and some are returning thence. The Collector thinks the effect of the Malad climate exaggerated, and that the animals were weak when they arrived there. He considers that Government cannot do more for the cattle than is being done.	The rivers Warad and Tungabhadra run through the taluka, the former almost through the centre, and the latter bounds the greater part of the eastern side. But in villages where water is deficient measures are being taken to improve the supply.	Prices—Lbs. per Rupee.

f.	g.	h.	i.	j.	k.
Mr. G. Waddington's Report, dated 30th December 1876).					
The local stock of grain is estimated at 3,117 tons, but the First Assistant does not consider this estimate very reliable. Large imports are being made from Karwar, and Messrs. Nicol and Co. have set up a grain store at Kalghatgi. Private enterprise is likely to provide the requisite supply, and prices, which have already fallen, are not likely to rise excessively.	About 10,000 persons, out of a total population of 52,720, are purely agricultural, the remainder are composed of labourers, traders, and artisans and manufacturers. There are no very wealthy persons or large landholders in the taluka, the few that may be considered as such being involved in debt, and there is no probability of their assisting their tenants, though a few are taking advantage of the cheap labour obtainable to improve their lands.	No emigration has taken, or is likely to take place, in this taluka; but about 5,000 persons have immigrated into it from Kaladgi and elsewhere, and the number is daily increasing.	No relief work has yet been started, nor is any at present needed, as there has been no demand for employment, except to a very limited extent. A list of works that may hereafter be necessary is submitted.	No expenditure has as yet been incurred on charitable relief, but hereafter it may be found necessary to grant such relief to immigrants returning home in April or May, after the first showers.	The number of persons now employed on relief works is only 260. The Mamlat-dar estimates on the— 1st March - 2,000 1st May - 1,000 1st July - 1,000 This must depend entirely on the rainfall being early and plentiful or otherwise.

Mr. C. Wiltshire's Report, dated 23rd December 1876).

The Second Assistant Collector estimates the local stocks of grain at 11,826 tons, but the Collector does not consider much weight is to be attached to this estimate. As Hāngal is favourably situated as regards the ports of Karwar and Coompta, private enterprise is likely to meet all requirements.	Of the population numbering 67,300 souls, 23,422 are of high, and 35,083 of low caste; 332 men are rich, and of the remainder half are well-to-do and half are poor. There are 36,974 agriculturists, 5,551 artisans, and 500 professional mendicants. Of the balance, one half are petty shop-keepers, and the other labourers or private servants. There are six wealthy landholders, who are able and willing to aid their tenants. Of these, two at their own expense employ each from 400 to 500 immigrant labourers on works.	There has been and will be no emigration, but 1,000 beggars and 3,000 coolies have immigrated, who are now gradually returning to their homes.	The local fund works are very small. The sum of Rs. 4,331 for small works has been raised by local subscriptions, and will be expended in deepening 3 kalwas and 12 tanks. The Collector does not anticipate much demand for relief employment from the population of Hāngal itself, but there is a prospect of considerable immigration. At present there is sufficient work for the immigrants. Should the necessity for extensive relief arise, tank digging is, in the opinion of the Collector, the proper object for expenditure.	No charitable relief has been given. The Second Assistant has on hand a reserve of Rs. 1,000 to be so spent.	The Second Assistant cannot give accurate information as to the number of persons on relief works. The number is likely to be on the— 1st March - 4,000 1st May - 5,000 1st July - 3,000 On each of these dates 50 persons unable to work will have to be supported by charity.
--	---	--	---	--	---

Mr. C. Wiltshire's Report, dated 29th December 1876).

The local stocks of grain, as far as ascertainable, are not less than 595 tons. A large quantity is also imported from Coompta and Mysore. In the opinion of both the Second Assistant and the Collector, private enterprise is likely to be sufficient to meet all demands, but the importations will not be sufficiently large to lower prices to any great extent.	Of the population 67,730 are high and 15,673 are low caste; 1,077 are rich, 21,312 are well-to-do, and the remainder poor. Of the population, 29,200 are agriculturists, 38,720 artisans, 1,903 merchants, 8,800 dealers in cattle, 600 carriers of goods, 3,300 are Government and other servants, 880 are priests, and 3,700 compose the moneyed gentry. There are no large wealthy landholders able to aid their tenants.	There has been no emigration except an exodus of 300 persons, who have taken their cattle to Mysore and Kanara, and who are not likely to return till the scarcity is over. No further emigration is anticipated.	The metalling of the Poonah-Hurryhur Road is in progress; also the Medleri Tank, the former employing 334, and the latter 150 labourers. The ryots have subscribed Rs. 6,440 for famine works. With this sum a well, hound, and dharmasala will be built, and several hounds, tanks, and wells will be repaired. A list is submitted of other works, chiefly roads, which are suitable relief works.	No charitable relief has as yet been given.	Government have on their hands about 484 labourers. The number likely to require relief hereafter is, on the 1st March 4,000 on works and 100 by charity; 1st May, 4,000 on works and 200 by charity; and on 1st July, 3,000 on works and 200 by charity.
---	--	---	--	---	---

McCallum's Report, dated 30th December 1876).

The Assistant Collector estimates the local stock at about 8,759 tons, but the Collector cannot place any reliance on the estimate. The centres from which further supplies can be drawn are Bellary, distant 14 miles; Coompta, distant 100; and Karwar, distant 112 miles. A good deal of grain is being imported by private enterprise; there has already been a fall in prices and a further decline is probable. No dearth of food is anticipated.	Of the population about 25,000 are well-to-do, the remainder 64,262 are poor. The cultivators number about 23,574, and the artisans 20,384. There are no large landholders likely to help their tenants.	About 3,000 people have emigrated and have bettered themselves by so doing, but owing to sickness some have returned. Further emigration is not anticipated.	Relief works, such as clearing tanks and cutting prickly-pear are being carried on out of voluntary subscription at seven different places. Relief works are also in progress under the Public Works Department, such as clearing out the Gutal hound and metalling the Harrihar Road, and making a new line of road near Tahihulli. A road from Gutal to Ranibenur is also in progress. Other relief work recommended is enlarging a tank between the villages of Timapur, Hattimatur, and Neigalur.	Infirm people, unable to work, are at present supported by voluntary subscriptions, 2 lbs. of jowāri per day being given to them. In Haveri and Devihosur there are one or two sowcars who give relief gratuitously.	The number of people whom Government had on their hands on the 23rd December for relief by works was 2,000, and by charity 500. Government will probably have on their hands for relief on the— 1st March - 5,000 1st May - 3,000 1st July - 1,500 The Collector supposes that the average number between 1st of March and 1st of June will be 5,000; and that if rain be seasonable an deopious, little or no relief will be required in July.

RON Taluka (District Deputy Collector Mr. J. C. Anding)																																																																																																												
The kharif crop was $\frac{1}{2}$ anna; rabi crop nil. There will be no further sowings this season.	The District Deputy estimates the amount of remissions at about one third (Rs. 54,000) of the total assessment, Rs. 1,62,679. The Collector thinks it may be brought below this.	About 7,000 cattle and agricultural stock have died from want of fodder, and about as many more deaths are anticipated. Permission to graze cattle in the forests has eagerly been taken advantage of. Some who could afford it have laid in a stock of fodder sufficient to last for two months or more. The attention of the people has been drawn to the advantage of utilising the leaves of the prickly-pear as fodder.	Of the 58 villages, 53 have a supply of water sufficient till next rains, the remaining five have tanks, which are now dry; but temporary wells have been sunk in the beds of nalas, one or two miles distant, to supply their need; these wells will have to be made deeper as the dry season advances.	<table><tr><th rowspan="2">For the Week ending</th><th colspan="6">Prices—Lbs. per Rupee.</th></tr><tr><th>Jowári.</th><th>Túr pulse.</th><th>Rice.</th><th>Wheat.</th><th>Gram.</th><th>Bajri.</th></tr><tr><td>5th October -</td><td>36</td><td>20</td><td>22</td><td>28</td><td>20</td><td>36</td></tr><tr><td>12th " -</td><td>22</td><td>18</td><td>18</td><td>20</td><td>20</td><td>—</td></tr><tr><td>19th " -</td><td>20</td><td>18</td><td>16</td><td>20</td><td>16</td><td>20</td></tr><tr><td>26th " -</td><td>20</td><td>18</td><td>16</td><td>20</td><td>—</td><td>20</td></tr><tr><td>2nd November</td><td>14</td><td>13</td><td>12</td><td>12</td><td>13</td><td>14</td></tr><tr><td>9th " -</td><td>17</td><td>14</td><td>13</td><td>12</td><td>14</td><td>16</td></tr><tr><td>16th " -</td><td>14</td><td>13</td><td>13</td><td>16</td><td>14</td><td>14</td></tr><tr><td>23rd " -</td><td>16</td><td>14</td><td>14</td><td>14</td><td>14</td><td>14</td></tr><tr><td>30th " -</td><td>16</td><td>14</td><td>14</td><td>14</td><td>18</td><td>11</td></tr><tr><td>7th December</td><td>16</td><td>14</td><td>14</td><td>14</td><td>18</td><td>16</td></tr><tr><td>14th " -</td><td>18</td><td>14</td><td>16</td><td>14</td><td>18</td><td>16</td></tr><tr><td>21st " -</td><td>22</td><td>16</td><td>16</td><td>16</td><td>20</td><td>—</td></tr><tr><td>Average of six years -</td><td>76</td><td>22</td><td>27</td><td>28</td><td>22½</td><td>61</td></tr></table>	For the Week ending	Prices—Lbs. per Rupee. DHARWAR Taluka (District Deputy Collector)											
The kharif crop will yield as follows:—jowári 6 annas, bájri 1 anna, rice 2 annas, túr 2 annas, rági, &c. 3 annas; areas of each not stated. There will be no rabi crop. There is no prospect of further sowings this season.	The District Deputy estimates the remissions at about Rs. 36,268, or one-fourth of the total assessment (Rs. 1,45,072), which both the Collector and the Revenue Commissioner consider excessive, and they are of opinion that the remissions should not exceed Rs. 2,000.	No unusual mortality among cattle, and none is anticipated.	The water-supply is sufficient to last till the commencement of the hot weather in March, after which temporary wells in beds of nalas and in rice lands will have to be sunk and resorted to, as is usually done. The District Deputy recommends the sum of Rs. 400 to be placed in the Mamlatdár's hands to enable him to assist the people in the digging of temporary wells.	For the Week ending	Prices—Lbs. per Rupee.

BANKÁPUR Taluka (First Assistant Collector)										
The kharif and jowári is 6, the rice 5, and the cotton crop 4 annas; relative areas not given. There is no rabi crop in this taluka. There will be no further sowings this season.	Rs. 1,500 will, probably have to be remitted, out of a revenue demand of Rs. 1,77,836.	There has been no unusual mortality among the cattle in the taluka, nor is any anticipated. Fodder is tolerably abundant. The Mamlatdar reports that of the cattle that were sent to the jungles to graze, about 1,000 have died.	The water-supply of this taluka is fair, except in two or three black-soil villages in the north-east extremity.	Prices—Lbs. per Rupee.

f.	g.	h.	i.	j.	k.
Report, dated 5th January 1877).					
The local stock of grain is estimated at about 231 tons, besides which there have been large importations from the coast <i>via</i> Hubli, which is the centre depôt for grain, and from which other markets are supplied. The effect of these importations has been to lower prices, but there is no likelihood of any further considerable fall. Private enterprise is considered sufficient to meet all requirements.	Of the total population, numbering 75,606 souls, 9,200 are high caste and well-to-do, the remaining 64,406 are low caste and poor. Of the whole 55,200 are cultivators, 6,900 artisans, and 11,506 urban. The landholders are not very wealthy, and are not known to have aided their tenants.	About 8,000 persons are estimated to have migrated towards Kanara to assist in harvest operations. Of these some have returned owing to the breaking out of cholera and the prevalence of fever. It is expected that in February about 5,000 or 6,000 people will move into North Kanara to gather the seed of the bamboo, which is in full blossom now.	The only relief work in progress is the new Ron-Nawalgun Road, on which about 5,000 persons are employed. On its completion the District Deputy suggests the following works: The collecting of moorum for the Palla-Badami Road, and improving the tanks at Naregal, Howjerry, Belvanki, Yavgal, and Halakeri. The Collector and the Revenue Commissioner are of opinion that, where possible, relief works should take the form of tanks, instead of new roads, which over a black soil country are useless, unless metalled, and which must in future years be a permanent charge on the local fund of the district.	About Rs. 451 have been spent in minor relief works, such as improving tanks, and Rs. 71 in giving purely charitable relief to travellers, and to the aged and infirm poor.	The number employed on relief works is about 5,064, and that receiving charity about 51. The number in future is estimated by the District Deputy as follow: On the 1st March, 6,000 on works and 100 by charitable measures; 1st May, 8,000 on works and 200 by charitable measures; and on 1st July, 6,000 on works and 300 by charitable measures. The Collector assumes that the number seeking employment between 1st February and 1st May will average 7,000, after which date, if rain fall seasonably and copiously, the number will rapidly diminish.

Mr. J. C. Anding's Report, dated 3rd January 1877).

The District Deputy estimates the local stock of grain at about 925 tons, besides which there have been large importations from the coast <i>via</i> Hubli, the effect of which has been to lower prices considerably. The Collector has no confidence in the above estimate, but agrees with the District Deputy that there is little danger of a failure of food, as private importations will suffice to meet all requirements. He thinks, however, that there is no prospect of a material fall in prices; the imported grain is considered inferior to the local grain and is selling cheaper.	The population is mixed, but the high caste greatly predominates over the low caste. Of the total number 15,532 are cultivators, 23,771 artisans, and 83,427 urban. There are not any very large landholders, and though some are to a certain extent wealthy, they are not likely to assist their tenants.	About 5,000 people have emigrated towards Kanara to assist in harvesting operations. Of these some have returned, owing to cholera breaking out there. It is expected that in February about 10,000 will emigrate thither to gather the seed of the bamboo, which is now in blossom.	The Collector states that at present there is no urgent demand for employment in this taluka; the only work in progress is the improvement of the Mavunkope tank, on the Dharwar and Hüllial road. There are other tank projects which will be taken up as relief works as occasion may require.	The expenditure on account of charitable relief has as yet been trifling, amounting to Rs. 5.	At date of report on relief on works 200. The District Deputy estimates the number likely to be on Government hands hereafter for relief as follows: <table><tr><th>On Works.</th><th>By Charity.</th></tr><tr><td>On 1st Mar. 10,000</td><td>100</td></tr><tr><td>" 1st May 5,000</td><td>100</td></tr><tr><td>" 1st July 1,000</td><td>100</td></tr></table> The Collector thinks the District Deputy wrong in estimating the larger demand in March, but is of opinion that there may be an average of from 5,000 to 10,000 persons, more or less, during February, March, and April, and until rain falls.	On Works.	By Charity.	On 1st Mar. 10,000	100	" 1st May 5,000	100	" 1st July 1,000	100
On Works.	By Charity.

" 1st May 5,000	100												
" 1st July 1,000	100												

C. Wiltshire's Report, dated 1st January 1877).

The local stocks are estimated at from 10,906 to 15,000 tons. Importations are still going on from Karwar and Coompta.	Of the population, 40,000 are high and 38,425 of low caste; 200 men are rich; 40,000 are well-to-do, and the remainder are poor; 41,141 are agriculturists, 50 dealers in cattle, 18,642 are artisans, 500 carriers of goods, 2,000 traders, 1,450 Government servants and their families, 2,000 compose the monied gentry, 50 are private schoolmasters, and the residue private servants. There is no fear of distress among the people. There are no wealthy landholders to aid their tenants.	There has been no emigration, and none is anticipated; about 200 beggars and 1,300 labourers have emigrated.	The Hirekerur tank, on which immigrants are chiefly employed, is being repaired by the Irrigational Department. The ryots have subscribed Rs. 3,785 for famine works, with which amount seven roads, two tanks or honds, and one well will be repaired, and three tanks deepened. The Second Assistant submits a list of roads as relief works on which people might hereafter be employed, but the Collector shows that the capabilities of the taluka for irrigational reproductive works are very great, and is strongly of opinion that future relief works should be of this nature rather than roads.	No charitable relief has been given, but the Second Assistant has a reserve of Rs. 1,000 to be so spent.	The Government are likely to have on their hands on the— <table><tr><th></th><th>On Works.</th><th>By charitable Measures.</th></tr><tr><td>1st March</td><td>2,000</td><td>100</td></tr><tr><td>1st May</td><td>1,500</td><td>75</td></tr><tr><td>1st July</td><td>1,000</td><td>50</td></tr></table>		On Works. 1st March	2,000	100															
1st May	1,500	75															
1st July	1,000	50															

Mr. G. Waddington's Report, dated 6th January 1877).

The local stock of grain is estimated at about 7,143 tons. Large imports are being made from Karwar and elsewhere, and there is no likelihood of supplies for this taluka failing. Prices have considerably fallen, and the Mámálatdár anticipates a further considerable fall, but the First Assistant thinks it probable that prices will remain much as they are for some months to come.	The population of the taluka is 83,175, of whom 52,000 are of the agricultural class and 5,000 are artisans; the remainder 26,175 are traders, including 550 men of some means. There are several landed proprietors of the class of district hereditary officers, who, being involved in debt, are not likely to assist their tenants.	No unusual emigration has taken or is likely to take place. Some labourers who had gone to the jungles to seek employment in the rice harvest have returned.	There has as yet been no great demand for employment. Certain minor works are in progress, such as metal-collecting for the Poona-Harihar road and improving the irrigational tank at Yalwagi. The First Assistant submits a list of projects which, if necessary, can be carried out hereafter as relief works.	There has been no demand as yet for charitable relief, and it is anticipated that in future it will be inconsiderable.	Only about 1,500 persons are at present employed on relief works, but this number will probably increase considerably. The Mámálatdár estimates the numbers likely to be employed hereafter as follows:— <table><tr><td>On 1st March - 4,000</td></tr><tr><td>„ 1st May - 2,000</td></tr><tr><td>„ 1st July - 2,000</td></tr></table> if the usual rain should fall in April and May. About 200 may require to be supported by charity.	On 1st March - 4,000	„ 1st May - 2,000	„ 1st July - 2,000
On 1st March - 4,000								
„ 1st May - 2,000								
„ 1st July - 2,000								

$a.$	$\bar{b}.$	$c.$	$d.$	$e.$
------	------------	------	------	------

The yield of the kharif crop is estimated at 1 pie, and that of the rabi at 2 annas.	The remissions are estimated at about Rs.85,000, or nearly one-fourth of the revenue demand, Rs.3,55,816.	About 550 cattle have died from want of fodder, and about 1,180 more deaths are anticipated from the same cause. The people are taking advantage of the permission accorded by Government to graze their cattle free in the forests. The attention of the people has also been drawn by the local officers to the advantage of utilising the prickly-pear leaves as fodder.	The water-supply is very scanty, except in the very few villages situated on the river Malprabha. Temporary wells will have to be sunk in the beds of nalas to meet the difficulty.	Prices—Libs. per Rupee.

districts in
Bombay
Presidency.

Mr. J. C. Anding's Report, dated 11th January 1877).

The local stocks of grain are estimated by the District Deputy at about 5,487 tons. The Collector, however, has not much reliance on these figures, but agrees with the District Deputy in thinking that the large imports which are being made from the coast <i>via</i> Hubli by private enterprise will meet all demands, and there will be no serious rise in prices.	Of the population numbering 101,042 souls, 77,200 are high caste and well-to-do, and 23,842 low caste and poor. There are 53,235 cultivators, 4,889 artisans, and 42,868 urban population. The landholders, though wealthy to a certain extent, are not known to have aided their tenants in any way.	About 10,600 people have emigrated to Kanara, to assist in harvesting operations; but owing to the breaking out of cholera, and the prevalence of fever, some have returned; but in February large numbers are expected to go there to gather the bamboo seed, which is freely eaten by the poor.	The only large relief work in progress in the taluka is the new road from Kunur to Nawalgund (the Hubli - Sholapur road) under the Public Works Department, on which about 10,000 persons are now employed, besides which some minor works are in progress. As these will not last long, the District Deputy recommends for future execution, the Ron-Nawalgund road, and improving the tanks at Tirilapur, Halikeri, Bhigranbathi, Jagapur, Nargund, Arekurbatti, Dattanball, Ballarwar, and Nalwadi.	Rs. 115-0-9 have been expended on charitable minor works, and Rs. 36-8-3 in relieving travellers and the aged and infirm poor unable to work.	The number of persons Government have on their hands at present is 10,213 on relief works and 20 relieved by charity. The number they are likely to have hereafter will be as follows. On the— <table><tr><th></th><th>On</th><th>By charitable</th></tr><tr><th></th><th>Works.</th><th>Measures.</th></tr><tr><td>1st March</td><td>12,000</td><td>100</td></tr><tr><td>1st May</td><td>13,000</td><td>150</td></tr><tr><td>1st July</td><td>16,000</td><td>250</td></tr></table>		On	By charitable		Works. 1st May	13,000	150																		
1st July	16,000	250																		

OBSERVATIONS.

The expenditure on charity has been trifling.

The number of labourers anticipated to be on the hands of the Government is—

On March 1st	-	-	-	-	-	58,000
On May 1st	-	-	-	-	-	51,500
On July 1st	-	-	-	-	-	43,060

This Government must guard themselves against the supposition of being held to accept as accurate or reliable all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters.

(Signed) C. G. W. MACPHERSON,
Under Secretary to Government.

MENT OF BOMBAY TO THE FOREGOING DISTRICT STATEMENTS.

f India in their Letter, No. 459, of 30th November 1876, as regards the Districts of Khandesh, Násik, Kaládgi, Belgaüm, and Dharwar.

<i>g.</i>	<i>h.</i>	<i>i.</i>	<i>j.</i>	<i>k.</i>		
The majority of the population of this, as of all other Collectories, is either agricultural or very intimately connected with agriculture.	There has been hardly any migration from the district.	The chief relief works are the Dhulia - Pimpalner and Songir-Nandurbar roads.	The expenditure upon charity has been very trifling.	The number of labourers anticipated to be on the hands of Government is on—		
				1st March.	1st May.	1st July.
				16,950	28,200	16,650
The majority of the population of this, as of all other Collectories, is either purely agricultural or very intimately connected with agriculture.	There has been very little emigration.	The chief relief works are the Bhawarbari-Vinchur, Kapralla-Ghat, Vinchur-Niphad, and Niphad-Deopur roads.	The expenditure upon charity has been very trifling.	The number of labourers anticipated to be on the hands of Government is about on—		
				1st March.	1st May.	1st July.
				43,000	53,100	36,300
The majority of the population of this, as of all other Collectories, is either agricultural or very intimately connected with agriculture.	123,553 people out of a population of 773,958 appear to have migrated, but some have returned. A further migration of upwards of 5,000 people is anticipated. The migration appears to this Government to be due mainly, if not entirely, to the cattle movements, and to the movement of the people towards relief works.	A considerable number of relief works is in progress, but the local officers are unable to suggest sufficient to meet the future demand for labour, unless the Dhond and Manmar Railway earthworks are undertaken.	The expenditure on charity has not been large.	The number of labourers anticipated to be on the hands of Government is on—		
				1st March.	1st May.	1st July.

STATEMENT

Collectorate.	a.	b.	c.	d.	e and f.
POONA - - -	Of the 8 talukas, the crops in 3 seem good, in 3 indifferent, and in 2 bad.	The proposed remissions amount to Rs. 5,46,354.	In 5 talukas the condition of the cattle appears satisfactory, and in 3 rather the reverse.	Some expenditure of money will render the water-supply throughout the Collectorate satisfactory.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. Jowári - 27½ Báji - 24½
SHOLAPUR - -	Of the 7 talukas, the crops in 3 seem good, in 2 indifferent, and in 2 very bad.	The proposed remissions amount to Rs. 10,01,169.	In 1 taluka the condition of the cattle appears indifferent, and in 6 bad.	In 2 talukas the prospects of the water supply seem satisfactory, in 3 indifferent, and in 2 bad. No calamity due to failure of water is anticipated by Government.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. Jowári - 19½ Báji - 21½
SATARA - - -	Of the 11 talukas, the crops in 7 seem to be fair, in 2 indifferent, and in 2 bad.	The proposed remissions amount on what appears to be an outside estimate to Rs. 5,07,621.	In 8 talukas the condition of the cattle seems satisfactory, in 1 indifferent, and in 2 bad.	In 6 talukas the prospects of the water supply appear satisfactory, and in 5 indifferent. No calamity due to failure of water supply is anticipated by Government.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. Jowári - 26½ Báji - 24½
KALADGI - - -	Of the 8 talukas, the crops in 3 seem to have been bad, and in 5 very bad.	The proposed remissions amount to Rs. 6,95,373.	In 1 taluka the condition of the cattle appears tolerably satisfactory, and in 7 bad.	In 5 talukas the prospects of the water supply seem satisfactory, and in 3 indifferent. No calamity due to failure of water is anticipated by Government.	The local officers appear slightly apprehensive regarding the grain supply of talukas. For October, November, and December 1876. Jowári - 19 Báji - 17½
BELGAUM - - -	Of the 7 talukas, the crops in 4 seem fair, and in 3 bad.	The proposed remissions amount to Rs. 2,50,772.	In 5 talukas the condition of the cattle appears satisfactory, and in 2 bad.	In 5 talukas the prospects of the water supply seems satisfactory, and in 2 indifferent. No calamity due to the failure of water is anticipated by Government.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. Jowári - 17 Báji - 17½
DHARWAR - - -	Of the 11 talukas, the crops in 5 seem to have been tolerable, in 2 bad, and in 4 very bad.	The proposed remissions amount to Rs. 2,70,000.	In 7 talukas the condition of the cattle seems satisfactory, in 3 indifferent, and in 1 bad.	In 8 talukas the prospects of the water supply seems satisfactory; but in 1 considerable, and in 2 large, expenditure seems to be considered necessary. Government do not anticipate any calamity due to the failure of water.	No apprehensions are entertained regarding the grain supply. For October, November, and December 1876. Jowári - 22½ Báji - 19
Total - - -	—	Rs. 46,94,732	—	—	—

(a.) Out of the 89 talukas forming the collectorates of Khandesh, *Násik, Ahmednagar, Poona, Sholapur, Satara, Kaládgi, Belgaum, and Dharwar, the crops of 39 would appear to be fair, of 13 indifferent, and of 37 bad. It must, however, be observed that, as the respective areas of kharif and rabi are not always given, it is occasionally difficult to judge of the position of a taluka from the answer.

(b.) The estimate by the local officers of revenue to be remitted is Rs. 46,84,732. This would seem to be for the year 1876-77; but the question may have been interpreted in various ways.

(c.) The condition of the cattle in 54 talukas appears to be satisfactory, in 14 indifferent, and in 21 bad. The Government are inclined to hope that, except in Sholapur and Kaládgi, the mortality among cattle will be confined almost entirely to the old and worthless animals.

(d.) The water supply of 58 talukas seems satisfactory, while in 31 considerable expense may have to be incurred. Government, however, do not anticipate any calamity due to failure of water supply.

(e & f.) Private enterprise appears quite able to supply the demand for grain, and there are large stocks in the Bombay markets, and on their way from Central India, the North-West Provinces, and elsewhere; but prices seem unlikely to fall materially, as they now appear to be close upon the margin of profit on importation. The average prices throughout the nine districts for October, November, and December are shown to be—

Jowári, 26½ lbs. per rupee.

Báji, 21½ lbs. per rupee.

* No return of the Jámner Taluka, which is reported to be unaffected by scarcity, has been received.

The majority of the population of this, as of all other Collectorates, is either agricultural, or very intimately connected with agriculture.	36,600 people out of a population of 988,037 appear to have migrated, but many have returned owing to outbreaks of sickness; upwards of 15,000 are shortly expected to go into the Kanara jungles to gather bamboo-seeds.	The Poona-Hurrihar, Ron-Nawalgund, and Hubli-Kaladgi Roads, and some irrigation tanks, are the chief relief works in progress.	The expenditure on charity has been trifling.	<table><tr><td colspan="3">The number of labourers anticipated to be on the hands of Government is on—</td></tr><tr><td>1st March.</td><td>1st May.</td><td>1st July.</td></tr><tr><td>58,000</td><td>51,500</td><td>43,000</td></tr><tr><td>677,500</td><td>863,220</td><td>509,370</td></tr></table>	The number of labourers anticipated to be on the hands of Government is on—			1st March.	1st May.	1st July.	58,000	51,500	43,000	677,500	863,220	509,370
The number of labourers anticipated to be on the hands of Government is on—

No. 671,405

No. 671,405

And the average for the previous six years—

Jowári, 56 lbs. per rupee.

Báji, 47 lbs. per rupee.

It must, however, be remembered that the great general rise of prices did not occur early in October. The average is now about 23½ lbs. per rupee.

(g.) This question has been variously understood. In some talukas Brahmins alone would appear to be entered as high caste; in others all, save Mhars, &c., are so entered. The population of the affected area may be said to be almost entirely agricultural.

(h.) The migration is stated to amount to 671,405, and is chiefly from Ahmednagar, Poona, Sholapur, and Kaládgi. It is probable that most of these people have simply moved from one part of British territory to another, either in search of work or pasture, and the majority will, no doubt, return to their villages next monsoon.

(i.) The expenditure of Government money upon charity has not been large.

(k.) The estimate of the number of people upon relief works is as follows:—

1st March.	1st May.	1st July.
677,500	863,220	509,370

The estimate made by this Government in November was an average of 750,000, 800,000, and 300,000 respectively for the above three months.

(Signed) C. G. W. MACPHERSON,
Under Secretary to Government.

A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas, on the assumption of an average yield being represented by 12 annas; *khariif* and *rabi* should be shown separately. If there be any prospect of further sowings, it should be mentioned.

An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.

Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.

The nature of the water-supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.

The course of prices weekly of each of the principal food-grains from October 1st up to the date of report in each case, and six years' averages.

KHANDESH:

After making allowance for the proportions of *khariif* and *rabi* cultivation, the amount of crop saved is approximately as under:—

Full average	in 4 subdivisions.
Three-fourths	3
Two-thirds	2
One-half	4
One-third	6
	19

Of these subdivisions, 16 are talukas, and 3 are pethas, or portions of a taluka separately administered and reported on.

The reduction in the estimate of remissions, resulting from further scrutiny of the effects of the drought, is very remarkable. The original estimate was Rs. 7,56,000. In paragraph 12 of Sir R. Temple's minute of January 12th, however, the amount is put down, on the statement of the local authorities, at 5 lakhs, and we now learn that Rs. 4,66,000 is probably a maximum estimate.

There has been no unusual mortality among the cattle, and none is anticipated, excepting in a group of four talukas bordering on the Taptee, where want of fodder and water are expected to be severely felt. The throwing open of the Government Forest reserves appears to have had an excellent effect.

No anxiety regarding the water-supply, except in one taluka, where the failure has been serious, and in the group of four already mentioned, where it may be considerable. In other parts scarcity will be felt in individual villages or groups of villages only. The deepening, clearing, or repair of existing wells, and in some cases the sinking of new ones, are recommended for several talukas. The recent heavy rain may have improved matters somewhat.

Famine prices do not exist in any part of Khandesh. In the taluka of Erandole where they are higher than in any other part, the number of lbs. of the four principal grains which could be purchased for one rupee was as follows: bájeri, 24 lbs.; wheat, 24 lbs.; jowári, 24 lbs.; and tūr dal, 16 lbs. The average prices during six years were 32, 38, 48 and 22 lbs. respectively.

NÁSÍK:

The crop saved is estimated as—
Three-fourths in 1 taluka.
Two-thirds " 3 talukas.
One-half " 4 "
One-third " 2 "
One-fourth " 1 taluka.
— 11 talukas.

The remissions are put at Rs. 3,69,000, but the Collector informed Sir R. Temple that they would probably not exceed 3 lakhs.

This district possesses the Ghát mountainous country to the westward, besides the Chandore range of hills and other advantages, of which the people have freely availed themselves; so the condition of the cattle is generally satisfactory.

In all except three or four talukas the scarcity of water will be considerable, and in parts of some it will be severe. The habilitation of all existing wells, the digging of holes in beds of tanks and streams, and even temporary desertion of villages will be resorted to.

This district was rather pinched by a rise of prices about the middle of November, but they rapidly recovered, and have since further improved; though perhaps, on the whole, they are not quite so low as in Khandesh.

AHMEDNAGAR:

The crop saved is estimated as—
Two-thirds in 3 talukas.
One-half " 2 "
One-third " 3 "
One-fourth " 1 taluka.
One-sixth " 1 "
Nil " 1 "
— 11 talukas.

The remissions are stated by the local officers to be likely to reach Rs. 5,77,000, but the Revenue Commissioner appears to consider this estimate too high, as the assessment is very light, and people fairly well off ought to pay up.

The condition of the cattle seems satisfactory in six talukas, indifferent in two, and bad in three. One of the latter, which has suffered severely, is expected to lose one-half of its stock of 60,000 head.

There will be a serious deficiency of the water-supply in five out of nine talukas, and considerable expenditure must be incurred in well-deepening and other expedients, especially in two talukas, but the Government do not anticipate any calamity.

Prices appear to be on the whole somewhat easier than in the Násik district.

The local stocks, as far as ascertainable; the centres, railway stations or otherwise, hence further supplies are being or may be drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample exportation.

The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions urban or artisan; also the character of the landholders, whether large, wealthy, able to aid their tenants and likely to do so, or the reverse.

The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.

The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.

The nature and amount of charitable relief given to travellers, and to the aged, infirm, &c. who are unable to work.

The local stocks are considerable in some talukas, and importations by railway and from the Nizam's dominions are equal to all demands.

The population is chiefly agricultural, and in some parts decidedly well-to-do. The western talukas, which contain a large proportion of Bhils, who are poor and of unsettled habits, have fortunately escaped the drought almost entirely. There is no large landholder class, but in three talukas a few individuals will help their tenants, and in six more the money-lenders are said to be likely to make advances freely.

There has been no noticeable emigration, except from one taluka, Bhosawul, and there further emigration is said to be probable.

There is no complete list of works, but it appears from the weekly report that on 31st December 23 had been completed, and 53, nearly all small, except one tank at Mhasawad, were in hand. Of the Pimpalner locality it is said that "no relief works are in progress, nor will any be needed."

Scarcely any charitable relief has been given, though the public have raised subscriptions in seven talukas; portions of these have been applied with questionable prudence and success, though with the most benevolent motives, in purchasing grain for resale to the poor.

The local stocks in nearly all talukas are believed to be small, but the railway being everywhere within easy reach, no apprehensions are entertained, and private enterprise will keep up adequate supplies.

There may be said to be no landholders, except the Chief of Vinchur, who are in a position to aid their tenantry.

Many people of this district are in the habit of going to Bombay and elsewhere every year, during the fair season, in search of a livelihood. This emigration and that of the people in charge of cattle sent away to graze may be rather more extensive than usual, and will tend to relieve local pressure.

Three roads have been completed, and three more, of which two employ from 5,000 to 10,000 persons, are in progress.

No charitable relief has yet been found necessary in eight out of the eleven talukas, and in the others the expenditure has been small.

Considerable stocks exist in some talukas, and importation is going on briskly from both the railway and the Nizam's territory.

There are a few large landholders, but a fair proportion of the population are tolerably well-to-do.

From eight of the talukas there has been a considerable emigration, estimated at one-sixth of the entire population of the district; some few have returned, but others are going and likely to go.

Fifty-one works have been completed, and 42 more are in progress.

Charitable relief is being dispensed in eight talukas, but on a small scale.

Statistics
relating to
distressed
districts in
Bombay
Presidency.

A careful estimate of the amount (if any) of the crop which has been saved, calculated in annas on the assumption of an average yield been represented by 12 annas; <i>kharif</i> and <i>rabi</i> should be shown separately. If there be any prospect of further sowings, it should be mentioned.	An estimate, as close as may at the time be practicable, of the amount of revenue to be remitted.	Information as to the mortality, past and anticipated, among cattle and agricultural stock; the measures already adopted by Government and the people, their result, and suggestions for the future.	The nature of the water supply, extent of its failure, further anticipated failure up to next rains, and remedial measures possible, if any.	The course of prices of each of the principal food-grains from October 1st up to the date of report in each case, and six yearly averages.
POONA: The crop saved is believed to be:— One-half in 3 talukas. One-third " 2 " One-fourth " 1 taluka. <i>Nil</i> " 2 talukas. 8 talukas.	The proposed remissions are Rs. 5,46,000 according to these reports, but 6 lakhs are mentioned by Sir R. Temple. The Revenue Commissioner, however, considers that much of the revenue proposed for remission can be collected either this year or next.	The cattle in Bhimthari and Indapur talukas have suffered considerably, and in three other talukas there has been some mortality. But the bulk of the cattle have been taken off to pastures out of the district.	Considerable expenditure on deepening wells, &c. is contemplated in order to supplement the water-supply, which is failing partially in most talukas.	There are some singular differences of price, different talukas, but the whole the rates scarcely as favourable as the average.
SHOLAPUR: In one taluka one-fourth of the crop has been saved, but in the remaining six nothing whatever.	The proposed remissions amount to 10 lakhs, or nearly the whole realisable revenue of the year, and it would appear that this estimate is not likely to be much improved upon.	Out of 720,646 animals, 344,700 have been sent to other districts for pasture, and 49,000 are believed to have died. Further large mortality is expected in at least four talukas.	The water-supply in three talukas is indifferent, and in two bad. Considerable expense will have to be incurred.	Prices are generally higher than in the Collector's above-mentioned, and especially so in the San taluka.
SATARA: The crop saved is estimated at:— Full average in 2 talukas. Three-fourths " 3 " Two-thirds " 2 " One-half " 1 " One-third " 1 " One-fourth " 1 " One-sixth " 1 " 11	The remissions are estimated by the local officers at Rs. 5,07,621, but this sum, amounting to half the entire land revenue, is higher in proportion than the estimate for other districts which have suffered more severely, and is considered by both the Collector and the Revenue Commissioner to be capable of reduction.	The condition of the cattle is on the whole satisfactory, and the vicinity of the ghâts prevents any serious apprehension, but in three talukas there has been some mortality, and more is anticipated.	Five talukas will be somewhat short of water, and some expenditure will be necessary in deepening and clearing wells, &c.	There was a sudden severe rise of prices chiefly by panic, but recovery was rapid, as was poured in both the port of Chiploom. Poona and prices are fair, though still below Poona and what might be expected to The Collector anticipates a second rise before the rain on exhaustion of existing supplies.
KALÁDGI: The crop saved is estimated at:— One-fourth in 1 taluka. One-sixth " 1 " <i>Nil</i> " 6 " 8	The remissions are put at Rs. 6,95,373, and the local officers do not hold out much prospect of reduction in this amount. Its lowness in proportion to the estimate for Sholapur is probably attributable to the people generally being more thrifty and well-to-do, and less in debt, as also to Kaládgi having had a better harvest in 1875-76.	The loss of cattle has been very severe in two talukas, and serious in the others except one. A certain number have been taken to the Ghâts and the Nizam's dominions to graze, but further heavy loss is expected.	The water-supply is sufficient in five talukas, and indifferent in three, but no calamity is anticipated.	Prices have been and continue still to be to a certain extent, lower than any other district.
BELGAUM: The crop saved is estimated at:— Two thirds in 1 taluka. One half " 2 " One fourth " 1 " One third " 1 " <i>Nil</i> " 3 " 7	Remissions to the extent of Rs. 2,50,772, or about one fifth of the revenue, are proposed, and this amount seems not likely to be exceeded, according to the remarks of the Revenue Commissioner, who has passed some years in the district as Collector.	In two taluks the cattle have suffered a good deal, and further mortality is apprehended. In the rest they are doing fairly.	There will be some difficulty and consequent expense in two talukas only.	Prices are still comparatively high, though much improved, and better than in the adjoining districts of Kaládgi and Dharwar.
DHARWAR: The crop saved is as under: One half in 1 taluka. One third " 3 " One fourth " 2 " One sixth " 2 " <i>Nil</i> " 3 " 11	The proposed remissions are Rs. 2,70,000, but this amount appears, from the remarks of the District Officers, to be an outside estimate. On the other hand, 4 lakhs was the figure given to Sir Richard Temple by the late Collector, Mr. Robertson.	Four talukas have suffered as regards cattle, but not very severely compared with other districts.	The Government of Bombay anticipate considerable expenditure in one taluka, and large outlay in two more, in consequence of the failure of the water-supply.	Prices are somewhat higher than in the adjacent district of Belgaum.

continued.

the local stocks, as far as ascertainable; the centres, railway stations or otherwise, whence further supplies are being or may be drawn, and the probability of private enterprise being sufficient to maintain them, as also of a fall in prices owing to ample importation.	The character of the population, whether high or low caste, poor or well-to-do, purely or only partly agricultural, and if the latter, in what proportions, urban or artisans; also the character of the landholders, whether large, wealthy, able to aid their tenants, and likely to do so, or the reverse.	The movements of the people; how far emigration has taken place, and with what result (have the people bettered themselves, or merely gone elsewhere to starve, or are they returning), and whether further emigration is probable.	The relief works already started, their sufficiency or otherwise, and the further works which are considered practicable, arranged in the order of their necessity.	The nature and amount of charitable relief given to travellers and to the aged, infirm, &c., who are unable to work.
the local stocks of grain in at least half the district are considerable, and the railway will supply all that may be needed.	There are no wealthy landlords in the districts to help their tenantry, and the ryots are for the most part deeply in debt.	The emigration from three taluks has been unusually large, and, in all, the district has been relieved of above one-eighth of its population. The care of cattle has been one chief cause, but others have gone for employment. All who survive are expected to return.	Fifty-six relief works have been completed, and 99 more are in progress, including the Moota canal, two large tanks, and a considerable road work. Many small works are also proposed for execution if required.	The demand for charitable relief has been considerable, chiefly for children under seven years old whose parents are on relief works, and for women taking care of them.
the stocks do not seem to be anywhere large, but the importation by rail will be ample.	The people generally are very poor, and there are no large landholders.	About one-third of the population of the district have emigrated, and on the whole are understood not to have bettered their condition. Some have returned, and all who survive may be expected to return by the cultivating season.	Thirty-four works have been completed, and 192 are in progress. Some others are proposed, especially irrigation works which are considered to be most likely to be beneficial. The Dhond-Manmar Railway will be some help, but it is at a considerable distance from most parts of the district.	Considerable charitable relief has been given both by Government and the Sholapur Relief Committee, who have influential support from Bombay, and have been most conspicuous for their public-spirited exertions.
rain is plentiful, local stocks are believed to be considerable, and importation goes on freely from Poona and the port of Chiploon.	Four or five talukas contain a few wealthy Inamdars who may be expected to aid their tenants.	The emigration is reported to have been 45,163 out of a population of 1,064,002. The emigration during the fair season in search of labour is always considerable in this district, and has been intensified by the scarcity.	The Pingli and Nehr tanks, to cost about 3½ lakhs, were in progress, and the Mhaswar tank, to cost about 18 lakhs, was about to be commenced at the close of the year. Thirty-six other works, mostly small, were also in hand.	No charitable relief has been required, except in four talukas, where it is given to a trifling extent.
the local stocks are believed to be generally small, and the importations labour under some difficulties, so that apprehensions of their cessation and of consequent high prices are entertained regarding five taluks.	There is a certain sprinkling of large landholders, some of whom will help their tenants.	Fully one-sixth of the population have emigrated, drawn especially from the Indi, Sindgi, Bejapur, and Badami taluks, but the movement has stopped.	The chief works are two main roads. Sixty-five works had been completed at the close of the year and 70 more were in hand, of which one employed above 5,000 and the other above 10,000 labourers.	The expenditure by Government on charitable relief has been trifling, but considerable sums have been subscribed in some places by private parties.
prices have been greatly improved by large supplies from the sea-ports of Goa and Vingorla, and no rise is anticipated, at least till the monsoon closes the coast. The local stocks in some parts are considerable.	There is a fair proportion of well-to-do people, but no body of large landholders able to help their tenants.	The emigration has been comparatively trifling, and chiefly connected with the cattle. Three talukas have an influx of persons from other parts.	Sixteen works were completed, and 64 others, mostly small, in progress at the close of the year. The Golkak canal is about to be commenced.	Relief houses have been established, but little relief has actually been given as yet. Private persons have subscribed liberally.
the local stocks of grain are fair in some few talukas, and importation is going on freely from the port of Carwar.	The people generally are well-to-do, and there are some large landholders, but they are not expected generally to aid their tenants.	The emigration has been comparatively small, and it is not likely to extend, with the exception of a body of 15,000 expected to go to Kanara to gather bamboo seeds.	Nineteen relief works had been completed, and 43 were in progress at the end of the year. Others had been proposed. One work employed over 4,000 and another over 10,000 labourers.	The charitable relief has been trifling.

No. 115.

EXTRACT from the PROCEEDINGS of the GOVERNMENT OF INDIA, in the Department of Revenue, Agriculture, and Commerce, dated Calcutta, the 21st February 1877.

Review of statistics regarding the distress in the Bombay Presidency.

As soon as the Government of India became aware, from the official reports of the Government of Bombay, and other sources, that the scarcity showing itself in that presidency was not unlikely to assume formidable proportions, the submission was requested of statements, containing elementary statistical information and a rough estimate of the probable failure of crops, regarding each taluka of the affected districts.

2. This information was supplied by the Government of Bombay with the utmost promptitude, and has since proved extremely valuable. It was, however, necessarily defective and temporary as regards the failure of crops, inasmuch as the careful field inspections which take place annually in the Bombay Presidency had at that date barely commenced, and the period during which local or general rain might have materially altered the aspect of affairs had not altogether passed away. At the same time the particulars which it comprised revealed the very serious nature of the calamity then imminent, and the necessity for full and searching inquiry upon various points not included in the previous returns, with the view of avoiding, on the one hand, expenditure in excess of the requirements of any locality, and on the other, the occurrence of disaster owing to the deficiency of grain supplies, the failure of water, or the need for further relief, whether by works or charitable measures, having been anywhere overlooked. The Government of Bombay were therefore requested to supplement their previous returns by a complete review and forecast of the situation, and, in accordance with the precedents of the famine of 1874, and the West Behar scarcity of 1875, to forward the original opinions of the mass of local officers, to which, when given deliberately, fully, unreservedly, and promptly, considerable value has always been justly attached. Such a review and forecast, it may be added, is of inestimable service, not only to the high authorities by whom it is eventually considered, but to the local officers themselves, by directing the attention of every one of them to all the points which it is advisable to keep in view, and leading them to endeavour to form regarding each an opinion in the case of their individual charge.

3. His Excellency the Governor-General in Council has now to express his warm acknowledgments of the punctuality, care, and ability with which this somewhat onerous requisition has been responded to. The reports of the Assistant and Deputy Collectors in charge of talukas now submitted, contain ample evidence both of acquaintance with and attention to their charges on the part of the several mamlatdars subordinate to them, and of energetic, watchful, and intelligent supervision on the part of the reporting officers themselves, while the remarks and criticisms of the Collectors and Revenue Commissioners show that they have fully grasped the situation and the serious responsibilities which it imposes upon them, and will not fail to afford all necessary relief to the suffering multitudes dependent on their care, while not losing sight of the vigilant economy which the financial necessities of the State render indispensable. The Government of Bombay have very properly expressed a desire to "guard themselves against the supposition of being held to accept, as accurate or reliable, all the information contained in these reports, the time allowed for their preparation having been so short, considering the intricacy and difficulty of the inquiry, especially at a time when the district officers have been so fully engaged in other matters." The Government of India fully acknowledge the difficulties pointed out, and will be careful not to attribute to the Government of Bombay the responsibility thus deprecated. His Excellency the Governor-General in Council would have been glad to have fixed a more distant date for the submission of the reports if such a course would not have made them too late for the practical purposes for which they were intended; but, considering the advantages possessed by the Bombay Presidency in a complete system of village agricultural statistics, in a strong staff of officials in each taluka, and in the custom of Assistant and Deputy Collectors travelling about their charges for a large portion of the year, no less than the general evidences of care and acquaintance with the subject afforded by the reports received, his Excellency in Council believes that the information now laid before the Government of India is as complete and trustworthy as it was possible to obtain in time to be of service. His Excellency in Council has much pleasure in making public his general commendation of these reports, leaving it to the Local Government, if they think fit, to express their own approval of individual complete and thoughtful documents comprised in the collection.

4. The review now submitted comprised 90 talukas and 3 pettas, or separately administered portions of talukas, making a total of 93 subdivisions of nine districts, all

of which are situated above the Ghâts, and extend from the Satpura range of mountains, north of the Taptee River, to the southern extremity of the Bombay Presidency. Some failure of crops has occurred in portions of two districts, Colaba and Ratnagiri, on the sea coast, but their condition is not such as to cause any anxiety, or to call for extensive relief operations. The area and population, both total and affected, of the nine districts, are given by the Bombay Government in their weekly statements at the figures quoted in the margin. These figures of the affected tracts nearly correspond on

Review of statistics regarding the distress in the Bombay Presidency.

	Total.	Affected.
Area in square miles - - -	54,355	33,873
Population - - -	7,963,927	4,981,616

the whole, though not always in the case of individual districts, with the area and population of the talukas in which, according to the present review, the crop saved is estimated at less than one-half. If talukas in which the crop saved amounts to one-half be also considered as famine-stricken, then the affected area and population will be raised to 41,254 and 6,180,209 respectively.

5. The rain-fall during the past season, as reported in the returns of November, since which date no fall of any importance has occurred, is shown in the margin for 86 talukas, for which the information is complete.

Population.	Number of Talukas.

separately in the several taluka reports with such accuracy as was under the circumstances practicable. Reducing these to one figure for the taluka, by the aid of the proportions of *kharif* and *rabi* cultivation in the preceding year 1875–76, as given in the returns of November, the proportions of crop saved were, in round numbers, as shown in the margin. Contrasting these results with those obtained from the November estimates of failure, which were, as already observed, too early in date to be more than a very rough forecast, it is highly satisfactory to find that they show a more favourable condition of affairs. Whereas, by the returns of November, as summarized in the fifth paragraph of the Despatch from the Government of India to the Secretary of State, No. 2, dated 12th January, the crop saved was above half in 11 districts only, it is now found to be above that proportion in 24. The districts in which there has been total, or almost total, failure, remain 21 in both cases, and the intermediate number (comprising from one-half to one-sixth of crop saved) is consequently reduced from 59 to 48, out of which 17 have got a half crop.*

8. The information now received on the important subject of remissions is equally satisfactory. The loss of revenue was reported in the 10th paragraph of the Despatch above quoted as likely to reach 66 lakhs of rupees, of which 46 lakhs were to fall in the current *financial* year and 20 lakhs in 1877–78. Later on, the estimate of the Bombay Government for the two years was about 76½ lakhs, and Sir Richard Temple, somewhat later still, gave 50 lakhs as the amount suggested to him by those local authorities with whom he had had an opportunity of conferring. The estimate under the present returns which seems, like that of Sir Richard Temple, to be for the *revenue* year which ends on July 31st, is Rs. 46,84,732, and there is reason to hope, from the language used by

* The discrepancy of two is owing to the addition of three *pettas* to, and the omission of Mahabaleshwar from, the present returns.

Review of statistics regarding the distress in the Bombay Presidency.

many of the local officers, that this may prove to be an outside estimate. As regards the principles upon which remissions should be granted, the Government of India were in November last in correspondence with the Government of Bombay, and authorised them to abstain from selling the occupancy right of ryots for arrears of land revenue which were attributable to the unfavourableness of the season, and also to extend, by executive order, to the case of any sales of movable property which might be indispensable, the exemptions which had been proposed in section 266 of the Civil Procedure Code Bill. Subsequently, Sir Richard Temple's suggestion for suspending arrears till the following year, instead of remitting them at once, was communicated to the Local Government for guidance; but on their pointing out objections to the measure arising from the Bombay revenue system, the matter has been left entirely to their discretion, with the request that the local authorities may be again warned against too free remissions, and authorised to hold balances in suspense in cases in which it appears probable that the landholder will, without undue pressure, be able to pay up next season—a course, it may be observed, which is recommended by several officers in the reports now under consideration. The amount of loss of revenue which may occur in the financial and revenue years 1877–78, in consequence of less land being cultivated through the impoverishment of the ryots and their loss of agricultural stock, cannot at present be estimated, and none of the local officers have attempted to do so. Taking all the above circumstances into consideration, however, his Excellency the Governor-General in Council sees reason to hope that the entire loss of revenue in the two financial years may not be so great as was at first apprehended.

9. The question of the condition of the cattle and stock, at all times a highly			important one, is especially so in the case of the Bombay affected districts, owing to their wealth in this respect, the proportion of animals to population being, it may be observed, 34 per cent. greater than in the
Horses, ponies, and mules	-	100,997	
Oxen, cows, bulls, and buffaloes	-	4,589,971	
Sheep and goats	-	2,549,027	
		7,239,995	

affected districts of Madras. In some talukas the mortality has been most severe, the districts of Ahmednagar, Sholapur, and Kaladgi having apparently been the greatest sufferers. The cattle have, however, been driven away in masses, in the case of Sholapur to the extent of one half their entire number, to the Ghauts or other accessible pastures, and the early steps taken by the Government of Bombay to throw open the forest reserves, and to facilitate the passage of cattle both by road and rail, have had a highly beneficial result. His Excellency the Governor-General in Council concurs with that Government in the hope that the mortality will, except in certain cases, be found to have been confined to the more old and worthless animals, and trusts that its per-centage will be found not to be high on the total number, and that the grant of takavi advances for the purchase of fresh cattle, when the ploughing season approaches, for which the Government of India have already given free sanction, may prevent any great falling off in cultivation during the coming year.

10. The condition of the water supply is intimately connected with that of the cattle. The Government of Bombay consider it to be satisfactory in 58 talukas, while in 31 others considerable expense may have to be incurred in clearing out or deepening existing wells, in sinking new ones, and in other remedial measures. His Excellency the Governor-General in Council has every confidence that such relief as may be possible will be afforded, and is glad to learn that the Local Government anticipate no calamity from this source.

11. The course of prices during the critical period from the end of October to the close of the year is very clearly shown in the summary of the taluka reports, statement A., column (e), and is remarkable for the sudden rise which in most cases occurred near the middle of November, and the almost equally rapid fall which followed as soon as the scarcity became known, and private enterprise came forward to supply the deficiency. Severe and extensive, however, as the failure of crops has been, the prices have at no time been generally so high as what are ordinarily understood to be famine prices, and they have become now so favourable that according to the latest accounts there are probably only two or at most three districts where they are on an average higher than 10 seers per rupee, which is the rate long since fixed by the Government of India as that on prices rising beyond which grain batta may be allowed to public servants drawing Rs. 16 per mensem and under. The famine is not so much one of food as of money to buy it with, and it must not be overlooked that wherever failure of crops has been only partial, the crop saved will produce an amount far in excess of what it would have been worth in ordinary years. The activity and sufficiency of

private trade in the Bombay Presidency have been so fully established, chiefly in consequence of the policy from the first pursued, that his Excellency the Governor-General in Council has every confidence that, even if, as anticipated by the Bombay Government, no further material fall should take place, no interference on the part of Government will be required, even in the Southern Mahratta Country, where difficulty of access and local combinations occasioned some anxiety before the close of last year.

Review of statistics regarding the distress in the Bombay Presidency.

12. The character of the population, which in some parts of India is a very important feature in the formation of an estimate of the State relief likely to be required in times of scarcity, would appear to be in Bombay tolerably uniform and little likely to affect the issue. The people are mostly agricultural, the number of peasant proprietors is very great, and there are few large and wealthy landholders who are able to assist their tenantry.

13. The emigration has amounted to 671,405, or about 13·5 per cent. on the affected population, and has been to a large extent induced by the necessity for driving the cattle to distant pastures. One body has passed to the north-east into the Nizam's Dominions, Berar, and even the Central Provinces, while another, probably the larger of the two, has resorted to the Western Ghâts along their whole line. From certain talukas, which annually during the fair season send forth bands of labourers to Bombay, Gujerat, and other parts, larger numbers than usual have gone in search of a livelihood. The condition of those who have thus left their homes it is not easy to ascertain, but for the most part they appear to have been fairly successful in their sojourn. Of all who survive, it may be safely predicted that they will return on the approach of the monsoon.

14. Upon the subject of relief works it is sufficient to observe that at the close of the year 270 works, of which 89 were roads and 36 were tanks, had been completed, while 618 were in progress, of which 33 gave employment to 2,000 labourers and upwards.

15. The Government grants for charitable relief have been large, but the demands on them up to the 9th instant have only amounted to Rs. 38,288, of which two thirds have been spent in the Poona and Sholapur districts. The relief is given to the aged and infirm poor, and, in two out of the three divisions, to the young children of labourers employed on the works. As the total number of persons relieved on the above date was 42,300, there would appear some grounds for the belief that the estimates under this head, which are within that number, are likely to be considerably exceeded. Any notice of this subject would be incomplete without a reference to the action of private charity. His Excellency the Governor-General in Council is glad to embrace this opportunity of again recognising with sympathy and appreciation the remarkable public spirit which has been displayed throughout the presidency in raising subscriptions for various humane objects, and especially the conspicuous zeal and self-sacrifice displayed by the Sholapur Relief Committee and their coadjutors of the Deccan Famine Relief Fund in Bombay.

16. The Government of India is now in possession of three independent estimates of the number of persons likely to be on the relief works on the 1st of March, 1st of May, and 1st of July. The first is an estimate submitted by the Bombay Government on the 30th of November last. It is in a monthly form, and, commencing with 200,000 as the average for December, gives 450,000 as the average of February, 750,000 as that of March, one million for April, and only 300,000 for July. These figures included charitable relief at 10 per cent. The second estimate is that of Sir Richard Temple in his minute of January 11th, and allows 540,000 for March 1st, 870,000 for the 1st of May, and 340,000 for the 1st of July. The last is that of the local officers throughout the country, which was made almost simultaneously with Sir Richard Temple's, and amounts to 677,500 for March 1st, 863,220 for May 1st, and 509,370 for July 1st. Sir Richard Temple is thus in accord with the local officers as regards May 1st, but anticipates lower numbers both before and after that date than they do. These startling discrepancies at once show the extreme difficulty of dealing with the subject, and* of being prepared, by a reserve of works to be started when indispensable but not otherwise, for any sudden access of distressed persons whom the exhaustion of private stocks or the failure of employment abroad may throw suddenly upon the hands of Government. His Excellency the Governor-General in Council is, however, glad to note that the number on the works on the latest date (February 9th) was only 249,158, and to augur from it that possibly all the estimates may alike be falsified in a manner equally relieving to public suffering and the public purse.

* sic orig.

17. In conclusion, his Excellency the Governor-General in Council has great satisfaction in recording that the reports now under consideration fully bear out and confirm the

Review of statistics regarding the distress in the Bombay Presidency.

testimony already borne by Sir Richard Temple to "the zeal and ability with which the famine is being combated by the local officers," and in "congratulating the Local Government on the manner in which the substantial safety of some five millions of people is being secured under circumstances of much danger."

Ordered, that copies of this Resolution be communicated to the Secretary of State for India, the Governments of Madras and Bombay, the Chief Commissioner of Mysore, and Sir Richard Temple, and that it be published in the "Gazette of India." In the event of any part of British India being at any future time threatened with scarcity, the Local Government should take measures for obtaining, at the earliest practicable date, information under the several heads comprised in statement A., with the addition of an account of the nature of the two next preceding seasons and harvests.

No. 108.

No. 115.

No. 222, dated 21st February 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA, to the SECRETARY TO THE GOVERNMENT OF BOMBAY, Public Works Department.

With reference to my telegram of yesterday,* and to paragraph 5 of my letter No. 124 of the 5th instant,† I have the honour to state that, after consulting the Government of Madras and Sir Richard Temple, his Excellency the Governor-General in Council has sanctioned the employment of famine relief labour in forming earth-works between Bellary and Hubli on the line of the proposed railway. These earth-works will be useful whenever circumstances may permit the railway to be constructed, but it is to be distinctly understood that the present permission in no way pledges the Imperial Government to the ultimate completion of the line.

2. His Excellency the Governor-General in Council considers that, for various reasons, the commencement of earth-work on the section between Hubli and Kirwuttee is at present undesirable.

3. Regarding the debit of the charge for compensation for land a further communication will be addressed to you hereafter.

4. Any communication which may be necessary in connexion with the carrying into effect of the permission now given should be addressed to the Government of India in the Public Works Department.

(Similar letter to Government of Madras, No. 223, dated 21st February 1877.)

No. 109.

No. 115.

No. 219, dated 21st February 1877.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO THE GOVERNMENT OF MADRAS.

It was not thought necessary at the time when they were issued to address any special communication to the Government of Madras, in regard to the instructions whereby Sir Richard Temple was authorised, on the 16th ultimo, to inquire into the circumstances of the famine in the presidencies of Madras and Bombay, and to confer with the Governments of those two presidencies on the results of his inquiries.

2. The circumstances which induced the Government of India to depute Sir Richard Temple on his present mission were, in fact, well known to his Grace the Governor of Madras, with whom the Governor-General in Council had the great advantage of personally discussing the whole subject at Delhi on the occasion of the Imperial Assemblage. Sir Richard Temple's appointment was made in the hope that it would strengthen the hands of both Governments, that it would serve to clear up some points of importance in regard to which doubts had been felt, and that, by diminishing the necessity of frequent references to the Government of India, and preventing delay in the treatment of matters demanding immediate decision, it would confirm that accord and harmony of feeling

The circumstances of Sir R. Temple's mission to Madras explained.

Sanction given to commencement of earthwork of Bellary-Hubli Railway.

*Nos. 104. 105.

†No. 53.

which it will always be the anxious desire of his Excellency in Council to maintain between the Supreme and the Local Governments.

Sir R. Temple's mission to Madras explained.

3. Although the mission of Sir Richard Temple is still uncompleted, the Governor-General in Council thinks it right to delay no longer in expressing to the Government of Madras the satisfaction felt by his Excellency in the fulfilment of the hopes with which that mission was undertaken.

4. In conducting operations of so much difficulty and on so vast a scale for the relief of famine, differences of opinion will necessarily arise, and methods of action adopted with much consideration may sometimes prove mistaken. The Government of India not only claims for itself no exemption from error, but is conscious that, acting, as it must often do, with imperfect knowledge, it may be more liable to err in its appreciation of local circumstances than the officers who are acting on the spot.

5. The mission of Sir R. Temple, however, has already had this satisfactory result, that if any difference formerly existed between the views of the two Governments, none, so far as his Excellency in Council is aware, now remains. Sir R. Temple, in reporting to the Government of India the results of his observation, has expressed his opinion that throughout the Madras Presidency famine is successfully combated and starvation prevented, that the physical condition of the people is generally good, that relief works are everywhere open, that charitable arrangements are well organised, and that the operations of private traders for the supply of grain to the distressed districts are everywhere active and successful. Measures are at the same time being taken (and his Excellency in Council feels sure they will be persevered in), not only to encourage the efforts by confirming the confidence of private trade, but also to prevent needless expenditure of money, and restrict as closely as possible the grant of relief to those who actually require it.

6. The Governor-General in Council wishes to take this opportunity of gratefully acknowledging the zeal and humanity with which the Government of Madras and its officers are contending against famine, and furthermore of thanking them for the wise and conciliatory spirit in which all the suggestions of the Government of India and of Sir R. Temple have been received by them. The measures approved by the Government of Madras in consultation with Sir R. Temple are being carried into effect with highly satisfactory results; and his Excellency in Council trusts that the officers of the two Governments will always continue thus loyally and efficiently to co-operate with each other in the performance of the great and difficult duty that lies before them.

No. 110.

XLII.—MEMORANDUM by DR. R. HARVEY, on special duty, on the CONDITION and PROSPECTS of the PATTIKONDA TALUK of KURNOOL, as ascertained by SIR RICHARD TEMPLE on 20th February 1877

No. 147.

Adoni, 21st February 1877.

Sir Richard Temple arrived at Pattikonda from Auspri on the morning of 20th February, and was received by Mr. B. Subba Rao, tehsildar of the taluk, in the absence of Captain Browne, who was away in camp.

Pattikonda Taluk (Kurnool).

2. The Pattikonda taluk has an area of 1,071 square miles and a population of 173,118. It is situated in the south-west of the Kurnool district, and the soil is pretty evenly divided between red laterite and black cotton soil. The Hindri river, which rises near Maddikera and falls into the Tungabadra near Kurnool, flows through it and is fed by numerous small watercourses from hilly parts of the district. The population is almost wholly agricultural, but there are a good many weavers in some of the larger villages, the chief of which are Kodomuru (population 6,064), Maddikera (8,586), Piapali (5,076), and Pattikonda (4,383).

3. The chief product of the taluk is cholum (jowar), of which one crop is sown in the red soil in April and reaped in September; the other and later crop sown in the black soil in August is harvested in December and January. On the banks of the Hindri a certain amount of irrigation is effected by raising water from the river bed, but there are no regular irrigation channels from that river. A good many tanks are scattered over the taluk, but are now for the most part dry.

4. Both crops failed almost entirely last year, though some part of the early crop and

Taluk
(Kurnool).

a good deal of fodder was saved, and fair crops were secured here and there from the irrigated land above mentioned and near wells. The tehsildar estimates that the average out-turn did not exceed one-sixteenth of an average crop. The rains of the previous year, 1875, were unseasonable, a good many of the tanks did not properly fill, and the harvest yielded only about five-eighths of an ordinary crop.

5. Stocks of grain are believed to be low in consequence, but it is difficult to estimate their amount. Trade is very active, and all villages are reported to be fairly well supplied with imported grain, chiefly from the north. Considerable stocks are lying at Auspri ten miles distant, and Sir Richard noticed a long string of carts carrying grain to Pattikonda. The tehsildar believes that private trade will amply provide for all needs. Some 15,000 bags of Government grain are in store at Piapali, and it is intended to establish dépôts at Pattikonda and Devnakonda. The average price of cholum, which is the common food of the people, is nine seers of 84 tolaks per rupee. Second sort rice is now seven seers per rupee, but is little eaten.

6. Relief works were started early and all comers were admitted. In the beginning of January the numbers were 36,000, but since the introduction of task work and the process of discharging those who appeared able to support themselves for a time, they have gradually come down to 23,000. Wages are paid in cash at the rate of 2 annas for a man, 1 anna 4 pies for a woman, and 10 pies for a child; and the nominal task exacted is the breaking and stacking of five cubic yards of road metal per day by each gang of 50 persons. The Madras Government orders of 31st January have not yet been received, and the tehsildar is acting on local orders.

The works now in hand are as follows:—

1. A road from Pattikonda to Devnakonda, 12 miles, occupying 7,105 labourers.
2. A road from Yenigamari to Kurmoor, 30 miles, 6,209 labourers.
3. A road from Kurmoor to Venkatagiri, 15 miles, 6,766 labourers.
4. A road from Rampoor to Garladini, 10 miles, 2,612 labourers.
5. Repairs to the Bondimadugula tank, 50 labourers.
6. Repairs to Pendakallu tank, 24 labourers.

The numbers on No. 1 were 8,000 last week, but the tehsildar himself visited the gangs, and discharged nearly a thousand persons whom he considered on inquiry did not at present need Government aid.

All the gangs on this road (about 7,000 persons in all) were paraded for the inspection of Sir Richard, who spent almost the whole day in inquiring into the condition of the labourers, with a view to showing the tehsildar the principle on which the process of eliminating undeserving cases should be conducted. The great majority appeared to be really poor, and therefore deserving recipients of State charity, but there were some exceptions found in every gang. Several hundred cases were picked out and investigated, many persons were proved to be in a position to maintain themselves, many were set aside for further inquiry, and others were found to be really dependent on relief labour for subsistence. Some few cases were flagrant abuses of Government charity, some few were clear fraud, as the case of a ryot paying Rs. 200 of land revenue, who had been put on the lists by his son, who was the gang maistri.

7. There has been a considerable mortality among the cattle; the tehsildar gave it as his opinion that nearly 50 per cent. of the total number in the taluk had perished, but that the deaths have been chiefly confined to old and worn out beasts, who are left to pick up what scanty pasture they can from the burnt-up fields. Stored fodder is too valuable to be given to them, and is reserved for the better class of draught and plough cattle, which are still abundant and in fair condition, although a good many have died in some villages. Much jowar straw was saved from the early harvest, and it is expected that there will be sufficient fodder to supply the draught cattle.

8. Drinking water is still everywhere procurable. Some wells are dry, and the water in others is of bad quality, but wells are generally abundant, a good many new ones have been sunk, and water is near the surface in most parts of the taluk. No apprehensions of future failure are entertained.

9. The public health has on the whole been good since the beginning of the scarcity. There were a good many scattered cases of cholera in January, but no serious epidemic, and the disease has now subsided. Small-pox is prevalent in some villages but is not severe, and no cases were seen among the gangs examined by Sir Richard.

10. Crime has increased. Petty thefts are numerous, and 12 dacoities, chiefly grain robberies, have occurred since the beginning of the year.

11. On the whole, Sir Richard was of opinion—

That the great majority of the people were of the poorer classes and really in need of State aid.

That their physical condition was satisfactory.

But that about 10 per cent. were clearly and palpably in a position to maintain themselves for some time to come, without the assistance of Government; and that if task work could be fully enforced, or the gangs thoroughly examined by persons of sufficient local and personal knowledge of the people, a still further per-centage would be found in a similar position.

Further, that the tehsildar is a competent Native officer who has already done much in the direction of system and economy, and who, if judiciously instructed, may do still more to assist in carrying out the orders of Government.

Pattikonda
Taluk
Kurnool

No. 111.

No. 224, dated 22nd February 1877.

No. 115.

From the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA to the SECRETARY TO
SIR R. TEMPLE.

I have the honour to request that you will be so good as to inform Sir Richard Temple that in accordance with the suggestion contained in his telegram of the 12th instant, as explained in yours of the 17th instant, the Madras and Bombay Governments have been authorised to construct the earth-works of the proposed railway between Hubli and Bellary, on the understanding that the Imperial Government is not thereby in any way pledged to the ultimate construction of the railway itself.

Hubli-
Bellary
Railway.

2. I am, however, to request the favour of further explanation of the exact meaning of the suggestion that the land taken up for the purpose should be charged to the Local Governments.

No. 112.

XLIII.—MEMORANDUM by DR. ROBERT HARVEY, on special duty, on the CONDITION and No. 147.
PROSPECTS of the ADONI TALUK of BELLARY as ascertained by Sir Richard Temple
on the 14th and 21st February 1877.

22nd February 1877.

Sir Richard Temple visited Adoni on the 14th and again on the 21st February. He met there Mr. Glenny, C.S., Sub-Collector of Gooty, Captain Hamilton, 4th Bengal Cavalry, Taluk Relief Officer, Mr. Oldham, Executive Officer in charge of relief works, and Mr. Pampabatti Rao, Tehsildar. On his first visit he found that the numbers had been very rapidly increasing, and that the orders for the new arrangements, confining relief to those actually in need, had just been received and were on the point of being carried out. He therefore contented himself with inspecting about 15,000 relief labourers on the works near Adoni and explaining to the local officers the views of Government, reserving full inspection and report till he could re-visit the taluk after the new system had been organised.

Adoni Taluk
(Bellary).

2. The taluk of Adoni is the most northerly taluk of the Bellary district, and has an area of 805 square miles. The population numbers 179,448, 12 per cent. of whom are Mahomedans. The rural population is chiefly agricultural, but there are a number of comparatively large towns in the taluk, and the urban population is largely made up of weavers, artisans of various classes, leather dresses, and other non-agricultural classes of low castes. The population of Mahomedans is very large in some of the towns (Adoni has 40 per cent.), and they are described as for the most poor and thriftless and badly off even in good years. The chief towns are Adoni (population 22,429), Yemigamir (6,243), Koshgi (5,463), Kavutal (3,650), Nagladini (2,134).

3. The taluk is bounded on the north by the Tungabadra river, from which the Rampur irrigation channel runs through the taluk for 10 miles and waters 965 acres of rice and ragi. This is the only irrigation work with the exception of a few small tanks, all of which failed to fill last year. A few fields near villages are irrigated from wells, and Mr. Glenny is of opinion that wells exist wherever there is room for them, and that cultivation from well irrigation (small though it is) has reached its limit. Black cotton soil prevails almost universally, but there is some red laterite here and there.

Adoni Taluk
(Bellary).

4. Considerable quantities of cotton are grown. It is sown in June and picked in February, but the staple product of the taluk is cholum, of which there is an early crop dependent on south-east and a late crop dependent on the north-west monsoon.

5. Both monsoons failed last year, and, except from the irrigated lands, almost no crop was secured. Many villages had absolutely nothing, and the total out-turn is estimated by Mr. Glenney at less than a one-anna crop. The harvest of 1875 yielded a 10 or 12-anna crop or from five-eighths to three-fourths of a good crop.

6. From personal inquiries, from inspection of the store pits, and the evidence of disinterested persons, Mr. Glenney thinks there are considerable stocks of grain still in the country, probably amounting to several months' supply; but these will not be produced until the holders see that next season's crops are safe and that danger is at an end. Private trade is most active and is expected to be quite adequate to meet all demands. Large quantities of grain are lying at Adoni and carts are going everywhere. The people live on cholum to the almost complete exclusion of rice. Prices were at one time as high as seven per rupee. On Sir Richard's first visit (14th February) cholum was $8\frac{1}{2}$ to $9\frac{1}{2}$, and several sort rice $5\frac{1}{2}$ to 7 seers, per rupee; but a considerable fall has occurred in the last few days, and the rates are now $11\frac{1}{2}$ and 8 or 9 seers, respectively. The Bellary seer weighs 2 lbs. 2 oz., so that $11\frac{1}{2}$ seers is about $23\frac{1}{2}$ lbs. per rupee or $1\frac{1}{2}$ lb. for an anna.

7. Relief works were opened about the middle of October. No applicant was refused, and the numbers gradually swelled to 88,000 or more than half the population of the taluk, which was the number on the lists at Sir Richard's first visit. Great exertions have been made by the local officers since that time; it has been discovered that extensive frauds have been practised by the gang-men; that about 5 per cent. of the numbers were men of straw, while many children had been classed as men. Numerous well-to-do people were discovered and turned off. The gangs have been sent to work some distance from their homes, and task work is being introduced. These measures have resulted in a reduction already estimated at 13,000 persons, some of whom were turned off; the remainder, probably the majority themselves, left the work as soon as task work and discipline were enforced. Very many of the gangs remain to be examined, as the process of inquiry, if conducted with sufficient care to avoid mistakes, is necessarily slow. The scale of task work to be exacted—it has as yet been little more than nominal—is 16 to 20 cubic yards of earth-work, or 12 to 16 of gravel, according to stiffness of soil and height of lift per day, from a gang of 50 persons. Some gangs are employed in metal breaking, and five cubic yards per gang is the tale demanded. No hammers have as yet been provided and stones are used instead. The Madras Government orders of 31st January were received last week, and No. 2 standard has been adopted, wages being now $1\frac{1}{2}$ anna, 1 anna, and 9 pies for men, women, and children, respectively.

8. The principal works in hand are,—

1. Railway feeder road from Nagladini to Adoni, 30 miles, in two divisions, employing 1,3228 and 19,517 labourers (on 10th February). This work is under the taluk officer with the tehsildar of Adoni and the deputy tehsildar of Yemigamir to assist him.
2. Madveram road, 27 miles, 13,776 labourers.
3. Alur road, 7 miles, 20,052 labourers.
4. Gooty road, 5 miles, 17,381 labourers.
5. Sirgapa road, 8 miles, 3,003 labourers.
6. Rampur Channel embankment, 1,766 labourers.

The figures are taken from the last return; but, as stated above, a total reduction, estimated at about 13,000, has since been effected chiefly from the gangs on the Alur and Gooty roads.

9. On the occasion of his first visit (February 14th) Sir Richard carefully inspected an aggregate of nearly 15,000 labourers collected from Adoni and the villages around. Many of them were poor people dependent for subsistence on their earnings at the works, but many belonged to a better class of people, who were presumably able to maintain themselves. A large per-centage were Mussulmans, many were weavers and artizans, and there were few persons of low caste. Their general physical condition was good, and very few showed any signs of being insufficiently nourished. On his second visit he saw about 10,000 persons belonging to gangs from the Yemigamir road. The great majority were of extremely low castes, madigars (chamars) and others, ranking even below pariahs, and regarded as so low and degraded that their better-born countrymen speak of them as persons "who cannot come in our mouths," whose very caste name cannot be mentioned. These are poor people chiefly leather dressers, and live to a considerable extent on the flesh of the cattle whose skins they dress. They

are extremely poor, always inured to hardship, and it is believed that very many of them have hitherto abstained from applying for relief under the mistaken notion that there could be no aid for such as they, and that even if Government would give it them the prejudices of their countrymen would prevent it reaching them. The contrast between these gangs and all those previously seen elsewhere was very great. Very many persons were considerably emaciated, and had evidently been insufficiently nourished all their lives; and a few only among them had the fine physique and blooming condition so frequently found in other gangs among the better castes. Sir Richard considers that they were by many degrees the worst he has yet seen, and he carefully explained to the native officials that no prejudices of race or caste, no amount of contempt, and no fear of contamination could justify them in neglecting any person however degraded; that they were expected to do their duty irrespective of persons, and that no such excuse or neglect of it would be accepted by Government, which would visit with exemplary punishment any person guilty of inhumanity to such people. The headmen of villages were warned that they must be specially careful in watching for and immediately relieving them, as it is among them that cases of starvation are most likely to occur.

10. The cattle have so far suffered comparatively little. A good many old ones have died, because the people will not feed such, but the draught cattle are in good case. There are considerable stores of fodder. Many valuable beasts have been sent away to the Nallamalli hills in the Eastern Ghâts, and there is still some pasture on the banks of the Tungabhadra. The brisk demand for carriage keeps the draught cattle constantly employed, and high prices enable their owners to buy fodder, so that no great loss is apprehended.

11. Water is still fairly abundant everywhere, and will not fail.

12. The public health has been and still is bad; cholera is extensively prevalent though not in a very fatal form, and bowel complaints and fevers are common. A severe epidemic of small-pox is raging in Adoni and some of the large villages; and Sir Richard observed very many cases among the Adoni gangs during his first visit. Arrangements are in train to isolate the cases in special sheds where the children may not be dangerous to their neighbours, and where gratuitous ration will be issued to the mothers who will stay to nurse them.

13. Crime increased remarkably during the earlier weeks of scarcity; dacoities of grain and thefts in standing crops were numerous, but since the few fields which yielded anything have been harvested, and it has become evident to the people that grain will not fail, it has remarkably diminished.

14. Sir Richard's impressions on the condition of the taluk were as follows:—

That the numbers are still abnormally high, but that, while such is the case and many people are being relieved who are not in need of it, there is reason to fear that others who do need are not found out and taken on the work soon enough. This, however, is now being remedied.

That the great majority of the labourers are in good case, but that some low-caste persons are in bad condition.

That special attention must be given to village inspection, with a view of picking up any such persons as have not yet been relieved.

That the various native officials will have to be carefully instructed to look after persons of low caste and not suffer them to drift into danger, and that the various European officers must see that they do this.

That the superior relief officers in the taluk are making most praiseworthy efforts to give effect loyally and fully to the orders of the Madras Government in the direction of system and economy.

That considerable success seems to have already attended their efforts, and that still further improvement is to be looked for.

No. 113.

XLIV.—MEMORANDUM by DR. HARVEY, on special duty, on the CONDITION of RELIEF GANGS at GOONDAKUL in the GOOTY TALUK of BELLARY as ascertained by Sir Richard Temple on 22nd February 1877. No. 147.

22nd February 1877.

Sir Richard Temple left Adoni by the morning train on the 22nd February, accompanied by Mr. Glenny, C.S., Sub-Collector of Gooty, and reached Goondakul at 9 A.M. All the relief labourers employed on the works within easy distance had been

Condition of
relief gangs
in Gooty
Taluk
(Bellary).

collected near the railway station, and he spent the greater part of the day in inspecting them, first going carefully down the lines of persons drawn out for inspection, pointing out those who seemed able to support themselves, and afterwards investigating the circumstances. About 4,500 persons were paraded. They were for the most part ryots and subordinate cultivators, weavers, and working men of the better caste and classes in admirable condition, and bearing no signs of ever having missed a meal. Here and there a few poor-looking specimens, generally of inferior social position, presented themselves, and the contrast between them and the greater majority of the persons present was pointed out to the Native officials, who could not fail to see it. Large numbers of the women belonged to respectable castes, and had come to the works to earn a little money, their husbands being employed at home or otherwise off the works. Some cases of cheating by gangmen were exposed, and many persons were shown to be in a position not to require aid from Government.

2. Sir Richard was astonished by the very marked contrast between these gangs and the gangs of low-caste workmen seen on his second visit to Adoni, and Mr. Glenney remarked that, as regards physical condition, they were the best gangs he had yet seen. There was no sign of suffering among them, and Sir Richard Temple thought that there could be no doubt whatever that very many of them had been admitted to the works much too soon, and would have maintained themselves without difficulty had the works not been open to receive them. He considered that many of them might now be discharged without the smallest danger of their suffering risk of starvation or even of distress.

Nos. 127.
147.

No. 3,540, dated Hyderabad Residency, 22nd February 1877.

From the FIRST ASSISTANT RESIDENT, Hyderabad, to the SECRETARY to SIR R. TEMPLE,
BART., K.C.S.I.

Migration
from Hyder-
abad to
British ter-
ritory and
vice versa.

I am directed to acknowledge your letter, No. 70, dated 17th instant, forwarding copy of a minute recorded by Sir R. Temple, regarding the reception of Mysore and Hyderabad labourers upon relief works in the Madras Presidency, and expressing his hope that the Resident will move the Minister to issue directions for the employment and retention within the Hyderabad districts of Nizam's subjects who may desire work.

2. The question thus brought forward has been the subject of frequent conversation and inquiry between Sir R. Meade and the Minister and officials of his Highness' Government for the last four months, and the Resident has every reason to believe that the orders passed by the Minister before he proceeded to Delhi, and also since his return to Hyderabad, have fairly provided for the employment on relief works of the suffering population of all the Hyderabad districts bordering the Madras Presidency that are affected by the famine.

3. At first, no doubt, many Hyderabad people crossed the frontier and presented themselves at the British relief works; but, so far as Sir R. Meade has been able to ascertain, a large proportion of these persons subsequently returned to the Nizam's limits and obtained employment on the works opened therein.

4. On the other hand, considerable numbers of men and cattle in search of the means of subsistence have from time to time come into Hyderabad from the British districts, and within the last fortnight the Minister has brought to the Resident's notice that there had been recently a large arrival of both in the Raichore district.

Sir R. Meade has been further informed by the officers of the Nizam's Public Works Department employed on relief works, that, latterly, many labourers from the British districts have made their appearance on those works, and been provided for on them.

5. It is, however, admitted that many of the Hyderabad distressed poor, who left their homes when the pressure began to be first seriously felt, have not returned, and it is not known what has become of them.

6. The Nizam's Government has not, that the Resident is aware of, hitherto taken any steps to prevent sufferers from the famine in the British districts entering its territory as already described in search of subsistence.

7. The Nizam's officials were at first disposed to effect the expulsion of any bodies of such persons that might arrive within their limits, on the ground that their presence would add to the existing difficulties, as well as be dangerous to the peace of the country; but Sir R. Meade urged that on no account should the migration of these

people be obstructed or interfered with so long as they committed no offence, and did not assemble in bands dangerous to the public peace, and the Minister entirely concurred in this view and issued orders accordingly.

8. It is well known that the practice under Native rule has always been for the poorer classes to abandon their homes in times of drought and famine, and to migrate to other parts of the country free from such a calamity.

9. Sir R. Meade's personal experience of the great value of this practice as a means of reducing the number of sufferers in a stricken district, and especially in localities to which food could hardly be transported, leads him to think that the door to its continuance along the Hyderabad and Madras frontier should not be closed by the adoption of any strict rule on either side of the frontier for the retention of the suffering poor within their own limits.

10. It has suggested itself to him, in considering the request contained in your letter under reply, that as a large portion of the Hyderabad territory is fairly off both as regards food for man and forage for cattle, it is probable that the migration towards it from the Madras and Bombay famine districts will continue, and that, in the interests of these districts and of the British Government, it should be encouraged as much as possible; and as any request to his Highness' Government to prevent its subjects who are in search of work or the means of subsistence from crossing over to seek the same on the British relief works, would probably be understood to warrant its preventing the migration of sufferers from the British districts into Hyderabad, the Resident proposes to limit his action on your present communication to urging his Highness' Government to increased effort to provide fully, in the matter of relief works, for the employment of the poor in the districts adjoining Kurnool and Bellary, and to instruct its local officials to use their influence to induce the people of those districts in want of work to take it on the relief works so provided for them.

11. The Resident trusts that Sir R. Temple will concur in the course thus proposed to be taken in this matter.

Proposed measure to meet immigration.

No. 115.

No. 12 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce to the SECRETARY OF STATE FOR INDIA.

No. 201.

Calcutta, February 23, 1877.

With this Despatch we enclose various additional minutes and memoranda by Sir Richard Temple, relating to the famine in the presidencies of Madras and Bombay, and in Mysore. The subjects dealt with in these papers are—

- | | |
|--|--------------|
| 1st. The organisation and supervision of measures for village relief. | Nos. 63. 64. |
| 2nd. The concentration of relief labour on large public works in the Madras Presidency. | 72. |
| 3rd. The estimated loss of revenue in the two presidencies. | No. 68. |
| 4th. Certain questions relating to the purchase and transport of grain in Madras. | Nos. 79. 80. |
| 5th. The condition of subdivisions of the Cuddapah and Bellary districts. | Nos. 81. 82. |
| 6th. The commencement of the projected railway from Bellary to Hubli as a relief work. | Nos. 57. 70. |
| 7th. The distress in Mysore. | Nos. 73-6. |
| 8th. The question of receiving labourers from Mysore and the Nizam's territories on relief works in the Madras Presidency. | 98. 104-5. |
| 9th. The arrangements made for facilitating traffic between the Great Indian Peninsula Railway and the Madras Railway. | 108. |
| 10th. The doubling of the line of railway from Ambatoor near Madras to Arconum. | Nos. 84-88. |
| | No. 95. |
| | Nos. 89. 90. |
| | No. 96. |

A few other papers on subjects which have come under our consideration during the past week are also forwarded, including a Resolution* in which we have briefly reviewed the Taluka reports† received from Bombay in reply to the call made in our letter of the 30th October last.

* No. 107.
† No. 106.

2. The necessity of organising a system under which individual cases of destitution, either in villages or on the highways, may be searched out and promptly dealt with, is clearly stated in Sir Richard Temple's minute of the 8th instant. He there points out the facilities which exist under the land revenue system of the Madras Presidency (and his suggestions on this point are equally applicable to Bombay) for the application of such a system of relief. "It may happen," he observes, "probably it will happen,"

Necessity for home relief.

that "however searching, comprehensive, and far-reaching the relief measures may be," "individuals or particular families may yet be suffering in silence, may escape observation, and may compose themselves quietly for death without complaining to any one." Such cases, he states, did occur in the famine in Behar, and some such cases have occurred at the outset of the present distress in Madras. They will only be scattered instances where persons from social prejudices, or from infirmity, or from fatalism or other inexplicable reason, do not apply for relief, and the only remedy is constant supervision of every village and of every highway in the distressed districts. The necessary organisation exists in the village headman, Revenue Inspector and Tahsildar, working under the orders of the Assistant Collector or Deputy Collector in charge of the division, and in the police, to meet the cases of travellers dying from starvation on the roads. In the existence of this organisation, Madras, Bombay, and Mysore have, as Sir Richard Temple observes, a great advantage over Behar, where a special organisation had to be summarily organised for the occasion.

Difficulty
in devising
large works
for relief
purposes in
Madras pre-
sidency.

3. In our Despatch of the 9th instant (paragraph 6) we remarked that we had reason to believe that difficulty had been experienced in devising large works, suitable for relief purposes, in the Madras Presidency. This subject is discussed in Sir Richard Temple's minute of the 10th instant. It will be seen that the only work of any considerable magnitude which he has been able to suggest, in addition to the East Coast Canal and the Junction Canal at Madras, now, it is believed, in course of construction, are a Railway from Bellary towards Dharwar and the western coast, and an embankment in the Cuddapah district to protect the railway from the Pennair River. Since his minute was written, Sir Richard Temple has met the Governor of Madras and the Consulting railway Engineers of the Bombay and Madras Governments at Bellary, and in concurrence with his Grace has recommended that the earth-work of the railway should be commenced as a relief work from Bellary to Hubli in the Dharwar district. The Government of Bombay had previously recommended the commencement of this work as a means of affording employment to the distressed poor in the Southern Mahratta Country. The recommendation now made has been sanctioned on the understanding that the Government of India are not pledged to the ultimate completion of the railway. Sir Richard Temple's minute on this subject of the 17th instant, which explains at length the grounds of the recommendation made in his telegram of the 12th, has only just reached us. We shall notice it more fully in next week's Despatch. The section on which work is to be commenced is, as your Lordship is aware, a portion of the line from Bellary to Karwar, which was projected some years ago. It will also serve to connect a line from the Portuguese port of Goa to Hubli with the Madras Railway at Bellary, which has recently formed the subject of correspondence between the Government of Portugal and Her Majesty's Government, should that line be eventually carried out.

Repair of
irrigation
tanks suit-
able for
relief.

4. In more than one of the Minutes, herewith enclosed, Sir Richard Temple has suggested the repair and improvement of irrigation tanks, as a very suitable and valuable means of providing labour for those in need of relief. His attention appears to have been specially attracted to this description of work on the occasion of his visit to Mysore, where the relief works in progress are mainly tanks. It appears from an interesting Memorandum by Sir Richard Temple's Secretary, Mr. Bernard, on the Mysore district of Kolar, to which we would invite the attention of your Lordship, that out of 382 works proposed for the relief of distress in that district, all except two were tanks or irrigation works of some kind. The province of Mysore is thickly studded with irrigation tanks most of them of moderate size, and many of them in need of repair or improvement. The same may be said of many districts in the Madras Presidency, and especially of the southern portion of the Cuddapah district, which, situated on the level of the Mysore plateau, contains numerous works of this character. We trust that the Madras Government will find themselves in a position to adopt Sir Richard Temple's recommendations on this point, and that the want of concert between the Civil and Public Works Departments, to which allusion is made in one of these minutes as well as in a former minute, but which does not appear to be attributable to the local officers, may be overcome.

5. There would seem to have been some delay in communicating to the subordinate district officers the orders passed by the Madras Government on the 31st January for restricting expenditure on relief works. The Sub-Collector of Cuddapah had not received them on the 6th instant, and on the 11th instant they had not reached the Sub-Collector of Bellary. In the Cuddapah Sub-Collector's division the labourers were still paid grain wages, and the gangs inspected by Sir Richard Temple in that division contained persons who, the Sub-Collector admitted, could safely be dismissed from the works. The number receiving relief wages had, however, fallen from 108,000, the number on the works in the

division at the time of Sir Richard Temple's first visit to the district, to 90,000, partly owing to the elimination from the relief gangs of persons not in absolute need, and partly owing to the prevalence of cholera, which had led to the dispersion of certain gangs. In the division of the Sub-Collector of Bellary, cash payments had been substituted for grain wages and task-work had been introduced. The Sub-Collector on his own responsibility had begun to weed out his labourers and to turn off people who could manage for themselves. Cholera had dispersed some of the gangs, and some 30,000 persons had struck work owing to the introduction of task-work. From all these causes the number on the relief works had fallen from 88,000 to 30,000. The number nominally receiving gratuitous relief had also fallen from 33,000 in the first week of January to 8,000 in the first week of February. In the matter of gratuitous relief there had been a good deal of speculation. It had been discovered that some thousands of the names on the charitable relief returns, were fictitious. These irregularities, however, had been checked and punished, and the persons needing charitable relief were being gathered into relief camps.

6. The latest intelligence which we have received regarding the relief operations in Madras is contained in the following telegram from Sir Richard Temple, which reached us yesterday :—

"During past week I have been examining relief operations, interior of Bellary district, and part of Kurnool. Great improvement effected by local authorities in restricting relief to those who really need it. Numbers on relief works much reduced, and fresh admissions generally checked, but many persons are still being relieved without actual necessity, and fresh admissions not systematically arranged. Some demoralisation results, together with some malpractices and abuses. I am pressing this on local officers. The Government orders for reduction of relief wages have not yet taken effect, consequent financial loss considerable, but I still hope to see effect given to the inspection village to village for discovering cases of special distress, originally ordered in general terms and partly carried out. Still further specific orders from Government are wanting. I am representing the matter to Government of Madras. Import of grain from Madras end of railway has fallen off. I am endeavouring to secure early arrival of borrowed engines. Import from northern end good. Prices cheapening. Other favourable points in my two previous bulletins regarding physical condition of people, activity of trade, and exertions of officers remain unchanged."

7. It will be gathered from this telegram, and from the remarks which we have extracted from Sir Richard Temple's minutes, that in some respects the measures which have been ordered by the Madras Government with a view to the avoidance of all needless expenditure have not as yet been fully carried out; but already there has been a great improvement, and we entertain no doubt whatever of the sincere desire of that Government to co-operate with us in this matter. According to the latest returns the number on the relief works in Madras had fallen from 876,206, the number for the previous week, to 767,281. We enclose a copy of a letter which we caused to be addressed to the Government of Madras on the 21st instant, conveying our acknowledgments of the zeal and humanity with which they and their officers are contending against the famine, and of the wise and conciliatory spirit in which they have accepted Sir Richard Temple's mission, and the various suggestions made by him. We have observed with deep concern the very unsatisfactory, and indeed alarming, condition of the public health in the town of Madras, which has been reported to your Lordship in the Despatch from the Madras Government under date the 10th instant. The state of things described in the report of the Sanitary Commissioner which accompanied that Despatch has added a heavy burthen to the weight of anxiety and responsibility which at the present juncture presses upon the Government of the Duke of Buckingham.

8. Your Lordship will have learnt from our previous Despatches that a considerable portion of the territories of his Highness the Maharaja of Mysore, which are at present and for many years past have been under British management, have suffered very severely from the drought which has afflicted the adjoining British districts. The area of Mysore is 27,097 square miles, and its population a little over 5,000,000. For administrative purposes it is divided into eight districts. In two of these districts, Hassan and Shimoga, which lie close to the Western Ghats, there was some rainfall, and there was a moderate harvest. In the district of Mysore, one of the largest in the province, part of which is irrigated by channels from the Cauvery River, the harvest was an average one; but over the remaining districts there was a grievous failure of rain. In this extensive tract, forming two-thirds of the province, nearly all the rain-fed tanks are dry, and the dry-crop cultivation, which depends entirely upon rain, has for the most part failed. Of the affected tracts, an area inhabited by about 2,000,000 of people must be held, in Sir Richard Temple's opinion, to be severely distressed. The crops of the

Mysore.
Area of
distress.
Commence-
ment and
progress.

The distress
in Mysore.

previous year (1875-76) were poor; but those of 1874-75 were full and good. Sir Richard Temple draws attention to the economy with which the relief operations have been conducted, and which, as he justly observes, is very creditable to the Chief Commissioner and his officers. In the beginning of January the number of persons on the relief works was 59,301, and the number in receipt of charitable relief 30,088. Sir Richard Temple was, on the whole, well satisfied with the character of the relief works in progress, and with the mode in which it is managed. As we have already observed, the relief works in Mysore are almost entirely irrigation tanks, and the work is paid for at task rates. All the work that is being done is good and useful work. On two works which Sir Richard Temple inspected near Bangalore, he "saw considerable numbers of persons" who appeared well able to take care of themselves without State aid, and none in a reduced physical condition; but among gangs in the interior of the Bangalore and Kolar districts he observed persons whose condition was much reduced. The result of his observations was, that so long as good and useful work on irrigation tanks is being done at piece-work rates, it may not be necessary to begin any large work (no single large relief work has yet been begun in Mysore), but that, if hereafter very large bodies of people should require employment, two projects, viz., the long projected railway from Bangalore to Mysore, and a reservoir in the Chitaldroog district, estimated to cost 15 lakhs of rupees (150,000*l.*), and to irrigate 50,000 acres, should be put in hand. Both these works are ready for immediate commencement should the necessity arise. The point, however, which appeared to Sir Richard Temple to demand the most immediate attention from the Mysore authorities, was the organisation of a system of village relief, to which we have referred in the earlier part of this Despatch. Orders have been issued on this subject by the Chief Commissioner.

9. We have already drawn your Lordship's attention to Mr. Bernard's memorandum on the Kolar district, which is administered by a Native Deputy Commissioner, B. Krishna Iyengár. All that is stated in this memorandum appears to us to reflect very great credit on the Deputy Commissioner, whose humane, but careful and discriminating management of the famine in his district is most praiseworthy. Krishna Iyengár is the only Native who has yet risen to the responsible post of Deputy Commissioner. He is evidently an efficient and useful officer, and with reference to the approaching transfer of the province to the direct management of the Mahárájá, we regard the success of this Native official as very satisfactory.

Bombay pre-
sidency.

ment, pro-
gress, esti-
mated cost.

10. The returns submitted by the Government of Bombay in reply to our call of the 30th October last, which are reviewed in our proceedings of the 21st instant, contain a great deal of useful information regarding the condition of the various parts of the distressed districts in that presidency, and furnish ample evidence of the energy and ability with which the famine is being combated by the Bombay Government and its officers. The number of talukas and subdivisions of districts, of which particulars are given in these returns, is 93, covering an area of 54,355 square miles, and containing a population of 7,963,927. The area in which the crop saved is less than one-half of a full crop is 33,873 square miles, and the population 4,981,616. The returns of the crops saved show a more favourable condition of affairs than the estimate which was framed in November last. It was then estimated that more than half the crops would be saved in only 11 talukas. It is now found to be above that proportion in 24 talukas. The estimate of remissions of land revenue is also more favourable than it was in November. The remissions were then estimated at 66 lakhs of rupees, and later on the estimate of the Bombay Government was about 76½ lakhs. The estimate given in the present returns, which appears to be for the revenue year, which ends on July 31st, is Rs. 46,84,732, and this apparently may be regarded to be an outside estimate, judging from the language used by some of the local officers. Sir Richard Temple, however, in his minute of the 13th instant (enclosed in this Despatch) estimates the total loss of revenue at 54 lakhs. In the same minute Sir Richard Temple estimates the relief expenditure to be incurred in Bombay at 126 lakhs. The accuracy of this estimate in a great measure depends upon the number of persons whom it will be necessary to employ upon the relief works. We have now before us three estimates of the number of persons likely to be on the relief works on the 1st March, 1st May, and 1st July. The first is an estimate submitted by the Bombay Government on the 30th November last. It is in a monthly form, and commencing with 200,000 as the average for December gives 450,000 as the average of February, 750,000 as that of March, 1,000,000 for April, and only 300,000 for July. These figures included charitable relief at 10 per cent. The second estimate is that of Sir Richard Temple in his minute of January 11th, and allows 540,000 for March 1st, 870,000 for the 1st of May, and 340,000 for the 1st of July. The last is that of the local officers throughout the country, which was made

almost simultaneously with Sir Richard Temple's, and amounts to 677,500 for March 1st, 863,220 for May 1st, and 509,370 for July 1st. Sir Richard Temple is thus in accord with the local officers as regards May 1st, but anticipates lower numbers both before and after that date than they do. As we have observed in our Resolution, these startling discrepancies at once show the extreme difficulty of dealing with the subject, and the necessity of being prepared, by a reserve of works to be started when indispensable but not otherwise, for any sudden access of distressed persons whom the exhaustion of private stocks or the failure of employment abroad may throw suddenly upon the hands of Government. Adverting to the latest returns however (for the 16th instant), the number on the works was only 238,219, and we therefore see reason to hope that all the estimates will prove to be in excess of the actual numbers.

We have the honour to be, &c.

EXTRACT from the PROCEEDINGS of the GOVERNMENT of BOMBAY, Public Works Department,—No. 131E.-444 (Local), dated 23rd February 1877.

Read—A letter from the Collector and Political Agent, Sholapur, No. 811, dated 12th February 1877, with reference to Government Resolution No. 37A.-153 Local, dated 25th January 1877, forwards copy of a report on the purchase of grain in the Akalkot State, and observes that no harm can result from what has been done, as the State is so small and so near the large market of Sholapur and the railway. Adds that the trade of the country will not be affected, and the inhabitants of the State will probably get their grain a little cheaper.

State purchase of grain in Akalkot.

RESOLUTION.—The Collector and Political Agent should report whether the State cannot now withdraw from the purchase of grain, and leave the supply in the hands of the regular traders.

State should withdraw from transaction.

2. The State's transactions may be on a small scale, but they are entirely wrong in principle, and if it is not now too late, and if the ordinary retail dealers are prepared to take up and continue the business, no more purchases should be made by the State.

3. If the purchases of grain had been made in the adjoining local market of Sholapur, the arrangement would not have been so objectionable; but it appears that they were made in distant markets, such as Akola, in Berar, and no plan could have been adopted so likely to interrupt the regular flow of trade as that which has been pursued.

Assistance rendered by Great Indian Peninsula to Madras Railway.

By direction of Sir Richard Temple I have the honour to submit copy of a memorandum by Captain Bisset upon the improvements in the working of the grain traffic, with copy of a covering letter to the Madras Government.

2. The assistance given by the Great Indian Peninsula Railway Company in smoothing the difficulties and assisting the working of the Madras Railway Company is now most satisfactory.

No. 120.

No. 81, dated Bellary, 24th February 1877.

From the SECRETARY to SIR RICHARD TEMPLE, to the ADDITIONAL SECRETARY to the GOVERNMENT OF MADRAS.

On improvement of grain traffic from Raichore to ceded districts.

By direction of Sir Richard Temple, I have the honour to forward copy of a memorandum by Captain Bisset on the progress of arrangements for improving the grain traffic from Raichore into the ceded districts.

2. With reference to this memorandum, I am to suggest that, if his Grace the Governor in Council be pleased to permit, the Agent of the Madras Railway may be moved—

(a.) To increase the staff in the locomotive sheds, so that the engines of the Madras Railway Company, and also those lent to the Company, may be kept in first rate working order, and so that failures of engine may be either prevented or set right :

(b.) To improve and increase the telegraphic staff and also the station staff, so that telegraphic reports and orders about the movement of trains may be promptly transmitted by day and by night :

(c.) To expedite the completion of the crossing stations, especially that between Nunchirla and Auspri.

3. Sir Richard Temple understands that some of these matters, as well as the completion of arrangements for watering engines, are engaging the attention of the railway officials. At the same time he considers it desirable to lay his recommendation on the matter before the Government of Madras, so that the improvement which has been effected in the grain traffic may continue, and in order that full work may be got out of the additional engines when they arrive.

4. The need for strengthening the telegraphic staff and for improved arrangements for passing trains is very apparent. But Sir Richard Temple will abstain from expressing a confident opinion whether it would be advisable to extend the block system gradually over the whole of the length of the Madras Railway in the ceded districts.

No. 121.

XLIX.—MINUTE by SIR RICHARD TEMPLE, dated Tripetty, 24th February 1877.

Grain transactions of Madras Government.

In continuation of my minute of the 13th February, regarding the Government grain transaction in this presidency, I feel obliged to represent to the Government of Madras that there seems to have been some misapprehension, in the Bellary district at least, respecting the time when the arrangements ceased between Government and the firm of Messrs. Arbuthnot and Company.

2. It will be in the recollection of Government that the notification published on the 8th February set forth that these relations ceased on the 5th January.

3. Nevertheless, at Bellary the following circumstances occurred which showed that there must have been some misunderstanding on the subject. On the 12th January the Collector of Bellary bought on account of Government 10,000 bags of rice at Rs. 9-6 per bag from the firm of Harvey and Sabapathy. On the same day the Bellary agent of Messrs. Arbuthnot and Company called and asked the Collector why the transaction had been concluded without making reference to him as Government broker. And on that same day the Government of Madras telegraphed to the Collector for explanation why this particular transaction had been concluded without reference to the Government brokers.

Again, on the 29th January certain Bellary dealers tendered for the supply of 5,000 bags of rice to the Collector. And their tenders were on that day, with the samples, referred by the Collector to the Bellary agent of Messrs. Arbuthnot and Company for opinion. The agent, acting on behalf of his principals, gave an opinion on the samples. And it was not until the evening of the 29th of January that the Government officers at Bellary became aware that Messrs. Arbuthnot and Company were no longer Government brokers, and that it was no longer necessary to consult them regarding local purchases of grain.

4. It is probable that the importance of these circumstances has passed away, now that the cessation of the relations between the Government and the firm has been notified. But to prevent any possible misapprehension it has seemed to me desirable to state what I have learnt.

No. 122.

No. 147.

L.—MINUTE by SIR RICHARD TEMPLE, dated Tripetty, 24th February 1877.

In a minute dated 13th February I repeated my previous recommendation that a part only of the grain purchased by Government should be transported to places distant at least 60 miles from the railway, the residue being kept at Madras as a reserve. No definite reply has been received to this suggestion, which was laid before the Government of Madras, first on the 19th January, and afterwards on the 13th February.

Distribution of grain purchased by Madras Government.

2. I have now had an opportunity of conferring with Major Hicks, and I learn that about 15,000 tons of Government grain have already been delivered at depôts in the interior of the country; that to employ the contractors' carts, which he still retains, 4,000 bags of grain are required by him daily; that only 1,400 bags daily are now being despatched from Madras; that he is offering the use of his carts to local dealers at reduced rates of hire, but that as yet his arrangements are not sufficiently known in the interior to attract the village dealers.

3. It appears to me that the quantity (15,000 tons) already transported into the interior is quite enough for all the places that are likely to need such support. And the *26,000 tons remaining may safely be kept as reserve in Madras. But as Major Hicks contracted for the transport of at least 30,000 tons, out of which 15,000 tons have been delivered in the interior, it follows that there is spare carriage at his disposal for the residue, namely, 15,000 tons. Looking at all the circumstances of the case, seeing that the contracts have been made, and the carriage has been collected, I think that the carts employed by Major Hicks' agency had better be maintained under Government control, and not dispersed. And I recommend that these carts be let out to private traders if not wanted by Government.

*Note.

	Tons.
Madras Government purchases from Calcutta	- 30,000
Purchases in Madras by the Madras Government and its officers	- 11,000
	41,000
Already transported to depôts by Major Hicks	- 15,000
Residue which may safely be kept as reserve	- 26,000

4. If the Madras Government should accede to my view that the quantity (15,000 tons) of Government grain already delivered at depôts in the interior is quite enough for the wants of the country requiring such support, then it would be necessary for Major Hicks to take prompt steps, through the local revenue officers, to make his terms known to the petty traders of the interior, who do most of the business of carrying goods from the railway to rural markets of the country. As soon as the local traders can employ all his carts, Major Hicks would cease to receive any Government grain by railway and so the waggons now occupied by Government grain would be set free for private traders.

XLV.—MINUTE by Sir RICHARD TEMPLE, regarding person-by-person inspection of relief labourers. Tripetty, February 24, 1877.

Relief labourers inspected by Sir Richard Temple.

I desire to place on record a statement showing the approximate numbers of the relief labourers who have been carefully inspected person by person, either by me or by officers deputed by me for that purpose, with a brief general remark on the physical condition of each gang of labourers.

2. It will appear from the abstract annexed that about 97,350 relief labourers have thus been inspected, always in the presence of a local civil officer; and that of this number the physical condition of 50,700 may be described as having been good, of 29,850 as middling, and of 16,800 as indifferent. And of this total some three bodies of labourers, numbering about 1,700, were found to be on strike, *i.e.*, in a state of refusing to accept the terms of pay offered by Government for such work as they could be made to perform.

Importance of gang inspection.

3. It is my opinion that this inspection of relief labourers is a matter of great importance; by this I do not mean a cursory glance at great masses of persons, but a careful look along the lines of men, women, and children, individual by individual, drawn up and arranged by the orders of the gangmen or relief officer. In this way it is comparatively easy to detect the unfit recipients of relief, and to show the officers, by selecting specimens of the well-to-do and needy respectively, the principles which should guide them on their inspections.

4. This work of inspection of gangs of relief labourers was at first, I fear, altogether overlooked by the local officers, but now they are attending to it with their wonted zeal and efficiency.

No. 147.

XLVII.—MINUTE by SIR RICHARD TEMPLE, regarding the utilisation of the services of the Great Indian Peninsula Railway on the Madras line.

Tritany, 26th February 1877.

From the beginning of the present month (February) the Madras Railway has succeeded in carrying away promptly from Raichore all the grain waggons delivered there by the Great Indian Peninsula Railway. The success of the Madras Railway in these affairs is very satisfactory. The daily average of despatches southwards from Raichore has been 105 waggons (683 tons). Most of this grain has been cholum (jowaree), which is the ordinary food of the poor in the ceded districts. And this grain, which was quoted at 7 seers per rupee in December, is now selling at Adoni and Bellary for $11\frac{1}{2}$ and $10\frac{1}{2}$ seers per rupee. I learn that, though the grain block on the Great Indian Peninsula stations in Central India is being cleared, the trade is expected to increase, and that there are practically inexhaustible quantities of grain ready to be sent down if wanted. I trust, therefore, that the large imports from the north may continue, notwithstanding the fall in price throughout the ceded districts. And I am clear that efforts should not be relaxed in delivering as promptly as possible all the northern grain which may come through Raichore.

2. But at the other end of the railway, namely, at Madras itself, there is much cause for anxiety. At one time the grain despatches from Madras by railway towards the interior averaged 1,000 tons a day; and when I was at Madras, at the end of January, I understood that the Madras Railway could, if working full power, despatch 1,200 tons of grain a day. But during the last fortnight despatches of grain from Madras have hardly averaged 700 tons per diem. Dealers in the ceded districts are in much difficulty, because they cannot get up their grain from Madras and fulfil their engagements in the interior. No appreciable decrease of the great accumulations of grain on the Madras beach is being effected. Shipments of rice from beyond the sea are falling off.

3. I cannot doubt that the drought-stricken districts of Madras and Mysore require that the stream of grain imports into Madras should continue as long as the monsoon permits. And therefore I think that new efforts must be made to relieve the block at Madras, and so prepare the way for further shipments from Bengal and Burma.

4. At one time it was hoped that, by reducing charges on the Southern India Railway, a portion at least of the grain supply from Mysore and Coimbatore might come from the port of Negapatam. But inquiry has shown that the Negapatam route could hardly give any appreciable relief to Madras for the next six weeks, even if facilities for landing, warehousing, and despatching rice existed at Negapatam, which is not at present the case.

Railway grain traffic arrangements.

Anxiety on account of block on Madras Railway.

Engine stock
insufficient.

5. It was also thought that the 18 engines, which the Government of India has arranged to lend to the Madras Railway, would enable that Company to carry out its programme for working full power both at the Madras end and at the Raichore end. But the work of the last few weeks has broken down a number of the Madras Company's engines, and it now appears that the borrowed engines, when they arrive, can hardly do more than supply the place of the engines which have broken down.

6. In neither of these ways can such full relief be given as will enable the Madras Railway to do what the country absolutely requires, that is—(1) to despatch from 1,000 to 1,200 tons a day from Madras, and (2) to bring in from 700 to 1,000 tons from Raichore. This requirement is irrespective of the supply brought by the Beypore line to Coimbatore and Bangalore, which supply is comparatively inconsiderable, and must entirely cease when the monsoon closes the western ports early in May. Unless this requirement can be met, there is danger that the food-supply of the country may fall short.

Suggestion
to work
Raichore
section of
Madras line
through
agency of
Great Indian
Peninsula.

7. I see only one way by which the present difficulty can be met, and regular dispatches of grain into the interior of the Madras Presidency, both from the east (Madras) and from the west (Raichore), can be secured. And that is, by reviving a proposal, which was a one time under the consideration of the Government of Madras, for working the Raichore section of the Madras line by the rolling stock and through the agency of the Great Indian Peninsula Company. By this arrangement the Great Indian Peninsula engines and staff would work the traffic to Adoni, Gooty and Bellary, the principal marts to which northern grain is now being consigned. And the Madras Railway would be able to concentrate its efforts, its engines, and its staff, upon the work of carrying into the interior the great accumulations of rice now awaiting despatch from Madras.

8. I am now writing at a distance from Madras, and it may be that in some detail my understanding of the facts may be open to correction. But if the case is in the main as stated above, and if no other way of meeting the difficulty can be devised, then I earnestly commend to the consideration of the Government of Madras that the services of the Great Indian Peninsula Railway be utilised for the requirements of the ceded districts in the way now suggested. A similar proposal was, I understood, favourably received by his Grace the Governor at the time of the Raichore block at the end of January. The subsequent smooth working of the Raichore section caused the proposal to be for the time dropped. But now the serious block at the other end of the Madras line appears to me to dictate the revival of the proposal.

9. It is quite certain that a large and constant supply of grain is wanted in the famine-stricken districts; it is also certain that there are large quantities of grain ready to be sent into those tracts both from the north and from the east; it is only too probable that there will be serious danger to the country if a constant and full supply cannot be maintained; the Madras Railway (from no fault of its agents and officers, who are doing their very best) first failed to maintain the supply from the north, and have now failed to maintain the supply from the east. There is, in my judgment, now no alternative but that the Madras Railway should accept the aid of the Great Indian Peninsula Railway at the northern source of supply. And I believe that the Great Indian Peninsula Railway is quite ready to give the required aid.

10. If his Grace the Governor in Council should be pleased to accept the views expressed in this minute, then I think no time should be lost in arranging to give effect to his Grace's decision. I anticipate that the Government of India and the Government of Bombay would accept favourably any proposal of the kind that might be made by the Madras Government. And the preliminaries could probably be settled by a meeting of the authorities of the two railway companies at Raichore, in presence of the Consulting Engineers of the Madras and Bombay Governments. If the proposal now revived is to be carried out at all, it will be best for the country and for both the railway companies that it should be carried out at once.

No. 147.

No. 125.

XLVI.—MINUTE by SIR RICHARD TEMPLE, suggesting the issue of further orders to secure that cases of extreme distress may be searched out and relieved in every village of the more distressed districts.

Tripetty, 26th February 1877.

Necessity for
house-to-
house visita-
tion.

In my minute, dated Nundidroog, 8th February, I laid before the Government of Madras my views as to the need for fully utilising the existing organisation in the work of house-to-house visitation, so that all cases of dangerous distress may be searched out

and relieved. Since that date I have seen the Madras Government orders of the — February on the same subject. I have also visited the ceded districts, Cuddapah, North Arcot, and part of Kurnool, with the view of ascertaining how far systematic house-to-house visitation is being carried out, and how far the village headmen discharge the duty of searching out and bringing up every case of dangerous distress.

2. The orders of the Madras Government on this subject have, I believe, reached the village headmen; and Government officers, European and Native, are doing something in this direction. Still the fact remains that, up to the present time, the village headmen have brought forward only a very few cases of persons (in the many taluks I visited there were hardly a score of such cases altogether) who were in extreme need of relief. At the same time, in many of the relief labour gangs I found, side by side with hundreds or thousands of people not as yet in absolute need, a few persons in very poor physical condition, an inquiry into whose cases showed that they were the only bread-winners for whole families of infirm people. There is risk that the weaker members of families in such straits must sooner or later die, unless they are brought upon charitable relief. And there is always the fear that, if cases of this kind come to light, more (possibly worse) cases of the same kind remain undiscovered. And all this may occur side by side and simultaneously with the employment of great gangs of relief labourers whose numbers perhaps exceed the real dimensions of distress.

3. During my visits I have always drawn the attention of the relief officers in charge to the dangerous nature of such cases. And I have explained that the admission of thousands of comparatively well-to-do people to relief gangs without discrimination cannot relieve the few scores of really needy people who may be at home in their villages.

4. I would recommend that the existing orders of the Madras Government (which are doubtless excellent so far as they go) be further explained and enforced, and that a written (or printed) notice of his duties and responsibilities be sent to every village headman in the more distressed districts, that a written acknowledgment be obtained from him, and that a report be demanded of him of his having inspected every household in his village, and of his either having done the needful if he found any person in dangerous straits, or of his having found none such. The intentions of Government will then become really known, and supervising officers of all ranks will be able to enforce the real and careful discharge of their duties by the village officers. It is assumed that they have already been authorised to relieve temporarily any person in this condition at the Government expense. They, therefore, cannot have any motive for concealing the existence of any such case, if it exist. The reports of the village headmen will therefore be evidence of the best kind.

5. With regard to the disposal of necessitous people, when they are brought up to relief officers by the village headmen, I desire to bring to notice that, as yet, no relief camps on the Madras system have been formed in the ceded districts. Instead of the relief camp system, there are a number of relief houses (in one taluk as many as seven), at which out-door relief is given under the supervision of village headmen. It may be necessary hereafter, when the pressure on the people is greater, to have several places in each taluk for the distribution of out-door relief. But at present such relief is not required; it may lead to great peculation and waste, (for instance) such as occurred recently on a large scale at Hindupur in the Bellary district. And I would recommend that, for the present at any rate, the regular relief camp system, such as is enforced at Madras, should be adopted in the ceded districts. It is true that a considerable establishment is required, but if Native officers of the army are employed and existing buildings (such as chuttrums) utilised, the cost will not be excessive. And at any rate the expenditure will be less than under the plan of indiscriminate out door relief under village headmen. Every necessitous person brought up by a village headman would be taken to the nearest relief camp, would be tended and fed there, until he or she was able to do some light work.

I suggest that some further orders on the subject of village visitation and the duties of village headmen be issued and carefully enforced at an early date. Systematic house to house inquiry is the necessary complement of an economical relief-work system. Indeed, it is the necessary complement of any relief-work system. Even if 70 per cent. of the population of a severely distressed taluk were on the relief works, I should still fear that some cases of extreme and dangerous distress must be left at home in the villages, unless a house-to-house visitation were maintained in the villages.

7. It is clearly cheaper for the public treasury and better for the people that all real cases of extreme distress should be searched out and relieved, while admission to the relief works is allowed with discrimination, than that all comers should be admitted

indiscriminately to the relief works while extreme cases of dangerous distress are left unrelieved in the villages or on the highways. In the Madras Presidency discrimination is now generally exercised in admitting people to relief works; and I earnestly recommend that no pains be spared to secure the discovery and relief of extreme distress, such as must occur in outlying villages, with increased frequency as the season advances.

No. 126.

From ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA Department of Revenue, Agriculture, and Commerce, to the SECRETARY TO THE GOVERNMENT OF BOMBAY.

Calcutta, the 27th February 1877.

No. 77.

I am directed to acknowledge the receipt of your letter No. 91E.-325, dated 12th February 1877.

2. The first seven paragraphs do not appear to the Governor-General in Council to require particular notice. He regrets that his instructions to Sir Richard Temple in respect of the necessity of preventing, to the utmost of our power, the loss of life from starvation, should not have been correctly understood by the Government of Bombay; and he would regret it the more if, as the Government of Bombay appears to think, the misunderstanding arose from some obscurity of expression, or inconsistency in the language which was used. It may, however, be observed that the interpretation placed upon the instructions by Sir Richard Temple to whom they were addressed has been from the first in complete accordance with the intentions of the Government of India; and his Excellency in Council fails to perceive the obscurity by which the Government of Bombay thinks that it has been misled. These, however, are matters of little practical importance, and as the Governor-General in Council has never attached any blame to the Government of Bombay for the misapprehension which has arisen, it is needless to continue what would be a merely verbal discussion.

3. The 8th and 9th paragraphs of your letter refer to a more important and practical question. It appears that the Government of Bombay has most wisely determined to take active measures for carrying out the decision that relief shall be given to those persons only who require it; that certain reductions in the amount of relief wages have been made, and orders regarding the exaction of moderate tasks on relief works have been issued. The result has been a strike among the labourers, who, it is presumed, prefer to obtain good wages for doing little or nothing, to obtaining reduced wages and having real work to perform. Large numbers of people have left the works; "they appear to be acting in bodies, and in concert, and the fear is that before the majority, who are comparatively strong, are brought to reason, some of the weakly will be reduced to a condition of great prostration. They wander about and may die out of reach of assistance."

4. The Government of Bombay wishes to know what, in the opinion of this Government, ought to be done under these circumstances, and it is understood that while the determination is being strictly adhered to that the orders which were given shall be enforced, measures are at the same time being taken to carry out the injunction that "no one shall die of starvation if it be in the power of the Government to prevent it."

5. You have already been informed by telegraph that the action of the Government of Bombay is entirely approved by the Governor-General in Council. The Government of Bombay may confidently rely on the support of the Government of India in its refusal to yield to the demands that have been made, and in its determination to introduce a more satisfactory system. At the same time the change must be carried out with care and caution, and his Excellency in Council has no doubt that this is being done. The most efficient measures that are practicable should be taken to guard against the danger pointed out in your letter, and to give relief in each individual case in which it is necessary. When a man is obviously in danger of dying from starvation, it is evident that we cannot refuse to save him because he has been misled into joining a strike, or has neglected to comply with certain orders or conditions. If, however, after all practicable efforts have been made, the case anticipated as possible by the Government of Bombay should occur, and some of the more weakly should "wander about and die out of reach of assistance," the misfortune will be much regretted, but it will throw no discredit on the Government or its officers. In carrying out the humane policy which has been adopted, the Government does not pretend that it can guard against every one of the numerous risks to life which arise in time of famine, or that it can save every one from the consequences of his own ignorance or folly.

The interpretation put upon instructions of Government of India to Sir Richard Temple for the preservation of life.

As to dealing with those who refuse to work on reduced wage.

No. 12,053G.-239, dated Bangalore, 27th February 1877.

ORDER by the CHIEF COMMISSIONER of Mysore.

Order.—The Commissioner of the Nundydroog division reports* that the people of the Hindupur and Madaksira taluks in the Bellary district are entering the Maddagiri taluk of the Tunkur district in large numbers to seek relief on works and at kitchens, alleging that the works on the other side of the frontier have been stopped, and the gratuitous distribution of food curtailed.

* No. 103.
Measures to prevent people leaving Bellary district for Mysore.

2. The Chief Commissioner apprehends that this influx is the immediate effect of the measures recently taken in the Madras districts to diminish the scale of wages and to economise expenditure on gratuitous relief.

3. Mr. Saunders has no reason to believe but that the provision made by the Madras authorities for the subsistence of their poor is fully adequate, and that the immigration is due to the expectation of these people that they will obtain more liberal treatment on this side.

4. To obviate this the Chief Commissioner has directed that the scale of daily-wage rates on special relief works shall be assimilated to that previously prescribed by the Madras Government, and that all able-bodied persons shall be relegated to the works proceeding under the officers of the Public Works Department. It will be necessary that the district officers and others in charge of relief operations, while abstaining from any such measure as rejecting distressed persons from our relief works, should see that the orders above adverted to are strictly carried out.

5. As regards individuals of the class referred to, who are in a starving condition, the needful help must be afforded at the relief kitchens, and efforts should be made to send them back to their homes.

6. The Deputy Commissioners of the border districts should, as a matter of statistics, have the numbers of foreign labourers and recipients of gratuitous relief registered and separately returned in the weekly statements to be hereafter submitted by Amildars.

Ordered.—That a copy of these proceedings be communicated to the Government of Madras.

XLVIII.—MINUTE by SIR RICHARD TEMPLE about drafting off relief labourers from the neighbouring districts to the East Coast Navigation Canal.

Nellore, 28th February 1877.

Having visited the East Coast Canal at Kurotoor, on the seaside opposite Nellore, in company with Mr. Sharp, the Acting Collector, and Mr. O'Shaughnessy, District Engineer, and having inspected 8,000 labourers now employed on the works, I desire to record the following remarks:—

East Coast Navigation Canal.

2. This excellent navigation canal, passing through the whole length of the Nellore district, connects the delta of the Kistna River with Madras, and opens out a large field for inland trade between the presidency and some of the richest agricultural districts of the interior.

3. Before the present scarcity commenced this canal was open from Madras to Kistnapatam, at the mouth of the Kundalairoo River in the Nellore district, a distance of 95 miles: Above Kistnapatam northwards, in the direction of the Kistna district, a distance of 105 miles, some work was in progress. Since the commencement of the scarcity this work has been vigorously prosecuted over the whole of this above length of 105 miles. Some 30,000 persons of both sexes are now employed. Of these, some are professional labourers, regularly employed before the commencement of the scarcity; others have been drafted on to the canal from the district relief works of Nellore; others again have been sent as relief labourers from the ceded districts and Kurnool. Mr. O'Shaughnessy informs me that he can with advantage employ 90,000 able-bodied persons of both sexes; if he shall obtain this full number, he can excavate the canal completely up to its terminus at the Kistna by July next; the work consisting of earth excavation, the very work best suited for relief labour. He has now, as just seen, only 30,000 labourers, leaving 60,000 to be yet made up out of the 90,000 full complement required. He has professional supervision available; he has an established task-work system;

Employs 30,000 persons;

and could employ 60,000 more.

and everything that can be needed in the way of sheds, huts, hospital accommodation, and the like. The situation is remarkably salubrious, being on the very margin of the sea, and there is good fresh water close to the surface.

4. It seems to me that here is the fairest possible opportunity for employing relief labour from the Nellore district, and from the neighbouring districts, in a proper and regular manner. But the month of February is over, and only one-third of the desired complement of labourers has been made up. It seems to me that strenuous efforts ought to be immediately made for making up that complement to its full strength.

5. The Government of Madras have, as I understand, issued repeated injunctions to the district officers to send relief labourers to this canal. This is, I know, an object which the Government have much at heart. Indeed, if the canal be not now excavated as a relief work, while money for this purpose is available, there will be financial difficulty hereafter in finding money for it. This is another reason for not allowing the present opportunity to slip away.

6. In the Nellore district itself, comparatively near to the canal, there are upwards of 50,000 persons working on relief labour on district roads and other petty works. Of these many are unfit for regular task-work on the canal, but many, on the other hand, are quite fit. Surely these latter might be drafted off at once from the district works to the canal. The Collector of Nellore appears to have understood at first that only persons from the ceded districts were to be employed on the canal, so he did not take any particular steps to send people there. He, however, has recently issued orders that all the able-bodied persons on his relief works shall be drafted on to the canal, and about 1,000 have been so sent. The process of drafting and despatching these people seem to be tardy at first. Doubtless the people are unwilling to go; the attractions of relief works close at their own doors prove so great, and the Native officials are apt to be too yielding in such a case. That is all the greater reason why efforts should be made by the European officers to ensure the people being promptly sent; when, on being ordered to go to the canal they attempt to strike, as I see they are attempting in some places, then firmness and patience will be needed.

The Collector informs me that he expects to gather together 20,000 able-bodied persons of both sexes from among his relief gangs, which certainly are able to furnish that number for the canal. He probably will not be able to do more; if he succeed in effecting even as much as this, we may be content to accept that result. At all events he would do well to expedite the matter with all his might, looking to its importance in so many ways. And this he informs me that he is doing. Indeed steps are, as I see, being taken. But on the assumption that he does manage to send 20,000 persons, that number added to the already existing 30,000 would make up only 50,000; leaving 40,000 to be made up out of the required complement of 90,000.

7. It is therefore clear that 40,000 able-bodied persons ought to be sent from the ceded districts and Kurnool as soon as possible, in accordance with the policy already laid down by the Madras Government. As yet the numbers sent from those districts have been very small. The reason, as I understand, is this, that volunteers only have been called for from the relief gangs in those districts, and so long as the men can get easy work at their own doors (as they actually can) they will not volunteer to go to a distant district for harder work. But the proper plan would be for the relief officers to select persons, able-bodied and otherwise fitted, from every relief gang, to be ordered to proceed to the canal with an intimation that they will be turned off relief works in the event of their refusing to go. Having recently inspected so many of those gangs, I can affirm that there are many thousands of persons thus qualified who can go to the canal, and will go, if cautioned by the fear of dismissal in event of refusing, but not otherwise. The public interests seem to demand that a trial should be made in this direction; some 15,000 might thus be called for from the Bellary district, and some 15,000 from Kurnool, the necessary 10,000 (to make up the 40,000) could be called for from Cuddapah and North Arcot.

No. 129.

No. 64, dated Hyderabad, 1st March 1877.

From the FIRST ASSISTANT RESIDENT, Hyderabad, to the ADDITIONAL SECRETARY TO THE GOVERNMENT OF INDIA.

No. 114.

I am directed to forward, for the information of his Excellency the Viceroy and Governor-General in Council, copy of a letter addressed by order of the Resident to the Honourable Sir Richard Temple's Secretary with reference to a minute recorded by his Honour on the subject of the retention of his Highness the Nizam's subjects on relief

works within the Hyderabad territory during the present famine in some of his Highness' frontier districts and those of the Madras Presidency adjoining them.

Relief mea-
sures in
Hyderabad.

2. Sir Richard Meade had hoped ere this to have laid before Government a full report of the state of the Hyderabad districts which are affected by the famine and the arrangements made in them for the relief of the people, but he has found it impossible to get as yet from his Highness' Government the full statistical and other information required for its preparation, though such was promised some weeks ago.

3. The Resident has, however, been in constant communication with the Minister on the general question of the famine in his Highness' territory, and has no reason to doubt that the measures taken by the Government to meet the requirements of the calamity have been judicious and well-considered and suited to the condition of the people and the necessities of the occasion; and this being the case, he has thought it unadvisable to press the Minister for the prompt submission of information that would probably take some time to collect and prepare.

4. At an interview between the Minister and Sir Richard Meade yesterday, however, the former stated that the required information was now nearly complete and should be forwarded immediately.

No. 32, dated Camp Chingleput, 1st March 1877.

From the COLLECTOR OF CHINGLEPUT DISTRICT to the SECRETARY TO SIR RICHARD TEMPLE.

In the evening papers of the 22nd ultimo I observed the following passage in an extract from a report of the Government of India to the India Office, dated the 16th idem:—

Land revenue
remissions.

“We do not overlook the statement which appears to have been made to Sir Richard Temple by the Collector of Chingleput, and to which we have already alluded, that much of the arrears due on the dry crop lands may be realised next year if the seasons are favourable.”

I made no such statement to Sir Richard Temple, and I am unable to conjecture on what words of mine his misapprehension, for such it is, was based. The idea of suspending collections of dry assessment till next year was never entertained by me, and I have already strongly recommended to the Board the absolute *remission* this season of all assessment for dry lands, left waste, or on which the crops have withered.

221.

No. 767, dated Fort St. George, 1st March 1877.

From the CHIEF SECRETARY TO THE GOVERNMENT OF MADRAS to the CHIEF COMMISSIONER OF MYSORE.

I am directed by his Grace the Governor in Council to acknowledge receipt of your reply dated 15th* to my letter of 10th February, No. 508,† and to observe that it seems more essential to consider how the large numbers of Mysore folk now in this presidency shall be kept from starvation than to discuss conjectural causes which may have led to their increase by some few thousands, whether laxity on the part of any particular officer on some portion of an extended frontier, or the desire of the people themselves to evade the pressure of the Mysore revenue officials, or to escape the pangs of hunger in the prevailing scarcity.

Mysore
labourers in
British terri-
tory.

* No. 91.

† No. 69.

The fact remains that there are at the present time in this presidency a very large number of Mysore labourers dependent on others for means of livelihood.

2. Of those in the Wynad a large proportion are doubtless the ordinary plantation labour supply of the year, but the demand for these was less and ceased earlier than usual owing to the season, while a large and extraordinary number of men, women, and children have flocked into the district in the hopes of finding a demand for labour which does not exist, and a similar influx has taken place at various other points on the frontier.

3. That many of those in the Wynad are in distress is testified from personal observation by Colonel Kennedy, the experienced District Engineer, writing on 30th January.

4. That some at least of those who found their way to relief houses in the Bellary district were in sore need is shown by the annexed extracts from reports by the Acting Head Assistant Collector.

5. This Government are determined that, so far as in them lies, loss of life from starvation shall be prevented in the territory under their administration, and have therefore directed that all in destitution shall be relieved alike. But though this will provide

Mysore
Government
should con-
tribute to
their main-
tenance.

for immediate need, the continued maintenance of people from other territory is a different matter. This Government ought not to bear the charge, and the Governor in Council considers that there should be no difficulty in the Mysore Government, administered by British officers directly under the Supreme Government, consenting to contribute towards the maintenance of its famine-stricken subjects, although in British territory. The measure would be advantageous both to the people and to the State, and would be no more than equitable, for though Madras in ordinary times benefits by the supply of labour to the Wynad, Mysore benefits also by the employment of large numbers of her population, and by their savings which they annually take back with them.

6. His Grace the Governor in Council still hopes that this system of contribution may be arranged, for the constant and unregulated movement hither and thither of large masses of people already weakened by insufficient or inferior food, in times of scarcity and of great sickness, is highly undesirable, and cannot but entail much additional suffering as well as increased risk of spreading disease.

7. I am directed to ask your early consideration of this important matter, as well as a reply to the request of this Government in my former letter, that an officer may be deputed from Mysore to supervise the return of the people to their own country.

8. I am, in conclusion, to point out that it is very desirable that important notices such as those alluded to in the letter under reply should be communicated to this Government direct. The notice of relief works established in Mysore seems to have been sent to a private association in the Wynad and to the Commissioner of the Nilgiris, but it was not sent to this Government, nor to the Collectors of Malabar (which includes the Wynad), of Bellary, Cuddapah, or other districts bordering on Mysore.

LX.—NOTE by CAPTAIN W. S. S. BISSET, R.E., on the probabilities of landing GRAIN at NEGAPATAM, and delivering it at ERODE JUNCTION for Conveyance to BANGALORE.

Bangalore, 2nd March 1877.

Negapatam
port.

At Negapatam cargo is unloaded, not on the beach as at Madras, but at a quay on the banks of a river, at the entrance to which there is a bar, which for two hours out of six is impassable to the heavy boats in ordinary use. The quay, or river bank, where goods are ordinarily landed, is within 400 yards of the railway station. From the difficulties at the bar, and from the distance at which the ships lie, the boats which draw three feet of water with their ordinary load of four tons are prevented from making more than one trip a day, but they occasionally accomplish two trips a day from steamers, which lie nearer the shore than ships, and also from grain ships, to which the boatmen appear partial.

2. Although there are 90 boats on the license register, many are at present out of repair, some seriously so; and there are only 53 of them available for work. The Master Attendant has power to withdraw the license from any boat not kept in repair, and he hopes that the knowledge of this power, and the prospect of regular work, may induce the owners to put more boats in working order; but he does not think it likely that many boats from the neighbouring ports will come in to supplement the numbers, even if good prospects of regular work were held out.

3. Allowing for some increase in the number of boats, and for increased delivery from steamers, it appears safe to reckon on landing at Negapatam 300 tons a day of grain and general cargo.

4. During the month of March there are expected to arrive at Negapatam, (1) three ships (already overdue), with a total load of 2,600 tons of stores for the South Indian Railway; (2) forty Native craft with rice from Akyab; and also (3) the weekly steamers of the British India Company, which are now bringing grain from Negapatam. If the delivery by these Native craft is taken, as I am told it may be taken, at 8,000 tons, and by the British India Steam Navigation Company's steamers at 1,000 tons by the four steamers during the month, there will be ample work for all the boats available, and there will be every inducement for more to get ready for work, by the latter part of the month.

5. The following particulars learnt at Negapatam may be interesting:—

A ship with a cargo of 1,700 tons of coal has been 46 days unloading; another ship with 1,300 tons on board has just discharged her cargo in 28 days.

When steamers call with cargo from Negapatam, the boats leave the ships and Native craft, and concentrate all their energies on the steamer's cargo, frequently making two trips a day in place of their ordinary single trip.

6. The boats would be able to do more work but for the detention caused by the bar ; Negapatam
port. whether any temporary improvement in the channel could be effected or not is a point on which, without special experience of works on the Madras coast, I would not venture an opinion. If, however, it is desired to work a large traffic at Negapatam, this way of increasing the landing power of the boats will doubtless be considered along with others.

7. If now it is assumed that the special aid given to the conveyance of grain from Negapatam to Bangalore will change the natural current of trade, which at present flows from Negapatam and the Tanjore district towards Madura and the south, it remains to consider what amount of traffic can be worked over the two portions of the South Indian Railway, viz., the narrow-gauge line from Negapatam to Trichinopoly and the broad-gauge line from Trichinopoly (after transhipment to Erode). It is confidently stated by the Agent and officers of the South Indian Railway that there are sufficient narrow-gauge engines and rolling-stock to work from Negapatam to Trichinopoly all the grain which the broad-gauge railway stock can work away ; and as the whole of the existing traffic is conveyed by day trains, it is evident that many more trains can, if necessary, be worked over the line. Any restrictions imposed by Government on working trains over an unfenced line at night will probably be withdrawn in view of the necessities of the country, and moreover, these restrictions do not affect directly the train service between Negapatam and Trichinopoly, where the line is fenced.

8. Up to Trichinopoly there need be no limit stated, but at this point the break of gauge necessitates transhipment. The Traffic Manager, in whose department this work lies, is of opinion that, with the present transhipment accommodation, he cannot undertake to tranship more than 30 waggons, or about 190 tons, a day, in each direction ; and although I am surprised at the moderate estimate of the work considered practicable with the existing accommodation, it is possible that the less active habits and the smaller physical powers of the loading coolies at Trichinopoly present difficulties which I am not accustomed to consider. The Traffic Manager considers an additional transhipment platform necessary, and with this, which it is possible to provide within a fortnight, he is prepared to work up to the powers of the broad-gauge engines and rolling stock.

9. Next to the landing powers at Negapatam, the capacity of the broad-gauge section of the South Indian Railway fixes the limit to the traffic from Negapatam to Bangalore. There are altogether ten broad-gauge engines, suitable when in good repair for running trains ; but of these five are now undergoing heavy repair. In ten days' time (say the 10th March) one engine of the five now running must go in for repairs, and it will be replaced by a larger one of which the repairs are nearly completed.

After an interval of about three weeks another engine will be turned out after repairs, and another after a similar interval.

The Locomotive Superintendent, with these prospects, considers himself in a position to carry after the 10th March—40 grain waggons a day, or 250 tons, and after 1st April 60 grain waggons a day, or 375 tons, to Erode.

10. The engine-power being sufficient for the probable landing powers at the port of Negapatam, even after allowing for a large increase, it remains to consider the sufficiency of the waggon stock. The stock of about 200 waggons of all sorts, including ballast waggons, would be enough to work about 60 waggons a day between Trichinopoly and Erode ; but the through-booked grain will most advantageously and most expeditiously be carried on to Bangalore in the same waggons, and the waggon stock of the South Indian Railway Company will not suffice for this purpose.

11. To work to the best advantage, a system of waggon interchange not now in force would have to be established at Erode Junction ; *i. e.*, for every loaded waggon sent off from the South Indian Railway, an empty waggon should, if required, be made over by the Madras Railway Company. In this way the stock of both lines may be worked with more effective results than is otherwise possible. And this joint service will not occupy the waggon stock of either railway longer than is proper to the respective distances on each line.

12. But the distance from Erode to Bangalore is so little shorter than that from Madras to Bangalore, that little, if any, advantage of economy of the engine-power and rolling stock of the Madras Railway can be claimed for this route. And although from the recently increased number of engines, and from more regular working, an increased delivery of grain may confidently be expected from Madras, it does not seem likely that the Madras-Arconum line will for some time yet be overworked, or that the engines can be more profitably employed elsewhere.

13. But with regard to the possibilities of working traffic from Negapatam to Bangalore, I am of opinion that, making allowances for all the difficulties in the way of working

Negapatam
port.

a large traffic *viâ* Negapatam, it is possible, by bringing into use the power of the South of India Railway, and by an expenditure of the power of the Madras Railway equal to, or perhaps a little less than is required to work the same traffic from Madras, to carry from Negapatam to Bangalore about 200 tons of grain a day during March, and up to 300 tons a day in April and subsequent months, if more landing power can be provided at Negapatam, and that along with a disturbance of the natural current of trade from Negapatam to Madura and the south there are some incidental advantages in drawing, even at present, a portion of the food supply of Bangalore from Negapatam.

But I consider that until the Madras-Arconum section of the Madras Railway is worked so as to feed to the fullest extent of its powers all the portions of the north-west and south-west lines, which are with the least expenditure of carrying power supplied from Madras, there is no material advantage to be gained by the use of the Negapatam route.

14. But as changes in trade routes cannot be made suddenly, it is worth while noting that, if traders begin now to arrange for consignments *viâ* Negapatam, their consignments may be expected to arrive there about April, or just at the time when the greatest strain on the Madras-Arconum section is likely to occur, and when it is to be hoped that this section will be worked to its full power. And it is further to be considered that, before the end of the month of May, the Bypore traffic will probably be stopped by the monsoon, and that the Negapatam traffic, which will be practicable all through the rainy season, will then become of great importance to the country.

No. 222.

No. 133.

No. 13 of 1877.

From the GOVERNMENT OF INDIA, Department of Revenue, Agriculture, and Commerce,
to the SECRETARY OF STATE FOR INDIA.

Calcutta, the 2nd March 1877.

We proceed to lay before you a summary of the matters which have engaged our attention in connexion with the famine in Southern and Western India during the past week.

The proposed
line, Bellary
to Kárwár.

2. In our last Despatch we informed your Lordship that, on the recommendation of Sir Richard Temple, concurred in by the Government of Madras, we had sanctioned the commencement of the earth-works of a railway from Bellary to Hubli in the Bombay district of Dhárwár, which forms a section of a line projected some years ago to connect the Madras Railway at Bellary with the port of Kárwár in North Kanara. The commencement of this line as a relief work was recommended by the Government of Madras at an early stage of the famine in that presidency; but we declined to sanction it on grounds similar to those which influenced us in refusing our assent to the commencement of the Dhond and Munmar Railway when first proposed by the Government of Bombay, viz., that we did not consider it expedient to sanction large and expensive works, the ultimate cost of which would greatly exceed the expense involved for providing labour for the distressed poor. At the time at which the proposal was made, the 27th October, it was not too late to look for rain from the north-east monsoon, which would have materially altered the aspect of affairs in Madras.

3. More recently the Bombay Government, in their letter of the 23rd January, enclosed in our Despatch of the 9th ultimo, recommended the line as one which would afford a useful relief work to their southern districts as well as to the Madras district of Bellary. The principal questions connected with the line are discussed in Sir Richard Temple's minute* of the 16th ultimo, and in the memorandum* annexed to it. The entire length of the line from Bellary to Kárwár is 236 miles. It would pass through the cotton-growing tracts of Bellary, Dhárwár, and North Kanara. It would also serve a great part of the Belgaum district and the southern talukas of Kaládgi. The average cost of the line is estimated at about 7,000*l.* a mile, or somewhat more than a million and a half for the whole line. The estimated cost of that portion of the work which could be done by unskilled labour is Rs. 16,06,000, but it is stated that a proportion of the labourers on the relief works in Bellary and in Dhárwár are of the Wuddah tribe, whose ordinary employment is working in stone; that considerable gangs of stone-workers could be found in the ceded districts and in Dhárwár; that there is a large quantity of stone-work to be done at the Tungabhadra bridge, and heavy cuttings in rock, laterite, and gravel. The estimated cost of the stone-work at the ordinary rates is Rs. 3,62,000. The estimated cost of the work which could be done by relief labour during the present

* Enclosures in our Despatch of 23rd February 1877. (Nos. 74 and 93 in this Collection.)

season is, at the estimated rates in ordinary years, Rs. 14,60,000, and allowing for the expensiveness of relief labour, Rs. 19,000,000 is the sum which would be diverted to this work from comparatively unremunerative works.

4. It is doubtful, however, whether during the present season it would be possible to organise large relief gangs and transport them into Kanara in time to make any serious impression on the heavy cuttings of the Ghât section of the line. The traffic is estimated to yield about four per cent. on the capital. As your Lordship is aware, the Secretary of State in 1873 declined to sanction the line, entertaining doubts as to whether the export of cotton from India, on which the line would depend for two-fifths of its whole traffic, would be maintained. Sir Richard Temple was not in favour of undertaking the line as a whole, on the ground that other lines were politically and generally more important than the Bellary and Kárwár line, and that there seemed to be much doubt as to the capabilities and the need for future expenditure on the Kárwár harbour; but inasmuch as useful work was wanted for 350,000 labourers in Bellary, and that there would soon be no useful work left for them to do, he recommended that they should be employed in constructing the earth-work on the section from Bellary to Hubli, which is the cheaper and easier section of the line, and which, according to an opinion expressed to him by the Bellary cotton-dealers, would bring a great deal of cotton traffic upon the Madras and Great Indian Peninsula Guaranteed Railways.

5. Sir Richard Temple had already satisfied himself that there was no other work of magnitude in or near the Bellary district which could be organised for the relief of distress. The only other one which had been suggested was a high level canal from the Tungabhadra, projected some years ago, which, if practicable, would unquestionably be a most valuable work, bringing under irrigation a very considerable tract of land in the Bellary district; but the cost of the work would be very considerable, involving the construction of a costly reservoir in Mysore; and he had not been able to satisfy himself that this was a project which ought to be undertaken.

6. In these circumstances we thought it right, as stated in our Despatch of last week, to sanction the earth-work of the Railway from Bellary to Hubli as a relief work, on the understanding that the Government of India are not pledged to the ultimate completion of the line.

7. With your Lordship's permission, sanction has been accorded to doubling the line from Ambatur, near Madras, to Arconum on the Madras Railway. Arconum is the point at which the north-western branch of the Madras Railway leaves the main line, and consequently up to this point the railway, with its single line of rails, has had to carry the traffic, not only of the western districts, which are traversed by the main line, but that of the two branches to Bangalore and to Raichore, where the Madras line and the Great Indian Peninsula join. It is to be hoped that the doubling of the line to Arconum will greatly diminish the difficulties now experienced in carrying into the interior the large stores of grain which have been recently imported into Madras.

8. Another step which has been taken with the same object, is the equalisation of the through rate for grain from the port of Negapatam in Tanjore to Bangalore, and the suspension of port dues at Negapatam in the case of vessels importing grain equal to a quarter of their whole cargo. A telegram from the Madras Government, dated the 23rd ultimo,* notifying these measures, which has been communicated to the Calcutta Chamber of Commerce, and published in the Calcutta newspapers, is enclosed. As the freights from Calcutta to Negapatam are the same as from Calcutta to Madras, it may be expected that these measures will lead to some of the grain from Calcutta, Burma, &c., which in the ordinary course would be sent to Madras, being shipped to Negapatam, whence it will find its way by the Great Southern of India Railway to Bangalore, and also probably to the distressed districts in the south of the Madras Presidency.

9. From a telegram addressed to us by Sir Richard Temple on the 24th ultimo,† we were gratified to learn that he had "received favourable accounts of coming spring crops from wells in most parts of the Cuddapah district which mitigate anxiety." We have since received the following telegram from Mr. Bernard, dated from Madras, yesterday, containing Sir Richard Temple's weekly bulletin:—

Sir Richard Temple is visiting Nellore. He sends following for mail: "favourable points, same as per last bulletin, regarding activity, internal trade, food supply, condition of people, and energy of Government officers. Price of millet cheaper in Bellary, whither large importations continue from north. Railway despatches of rice from Madras are short, and accumulation of stocks there great. Good deal grain coming from Beypore. Further arrangement for strengthening railway at Madras proposed. Doubling line to Arconum progressing. Ten more miles double line will shortly open. Numbers on works reduced in all districts, except Nellore and Salem, which Sir Richard will now visit. Spring crops irrigated from wells and river channels in Cuddapah, North Arcot,

To facilitate grain traffic the line from Ambatur to Arconum to be doubled.

And through rate for grain from Negapatam to Bangalore to be equalised.

and some other places surpassing expectation; will yield food for those neighbourhoods for two months. Tinnevely district doing very well; large saving on estimated expenditure will accrue there."

The intelligence contained in this telegram is on the whole satisfactory.

Correspondence with Governor of Bombay as to preservation of life.

* Nos. 77. 126.

As to dealing with strike among labourers.

10. We enclose for your Lordship's information a further correspondence* which has passed with the Government of Bombay regarding that part of our instructions to Sir Richard Temple in which we endeavoured to define the duty of the Government in times of famine. A strike having recently occurred among the labourers on the relief works at Sholapur, owing to a reduction in the rate of wages, the Government of Bombay inquired what course they were to take in the event of the strike continuing; in which case they apprehended that, before the majority who were comparatively strong were brought to reason, some of the weakly might be reduced to a condition of great prostration and might die out of reach of assistance. We had previously, as stated in our Despatch of the 16th ultimo, paragraph 8, been in correspondence with the Government of Bombay by telegraph regarding the strike, and had expressed our concurrence in their opinion that it would be very mischievous to yield to a strike on relief works attributable to combination, and that relief wages would not be raised if the Government of Bombay were satisfied that the rates were sufficient. In replying to their subsequent representation, we observed that, while we were fully prepared to support the Government of Bombay in its refusal to yield to the demands which had been made, the most efficient measures that were practicable should be taken to guard against the danger which they pointed out, and to give relief in each individual case in which it was necessary. We remarked that when a man was obviously in danger of dying from starvation no efforts should be spared to save him, although he may have been misled into joining a strike; but that if after all such efforts had been made, the case anticipated, as possible, by the Government of Bombay should occur, and persons to whom no relief could be given should die out of reach of assistance, the misfortune will be much regretted, but it will throw no discredit on the Government or its officers. It is obviously impossible for the Government, in carrying out its humane policy, to guard against every one of the numerous risks to life which arise in time of famine, or to save every one from the consequences of his own ignorance or folly. We trust that there will be no further misapprehension as to the precise meaning of our instructions on this point.

Five lakhs of rupees advanced to municipalities.

Sir Richard Temple's suggestions anticipated by Bombay Government.

† Page 77.

11. We have sanctioned a special grant of five lakhs of rupees to enable the Government of Bombay to make advances to municipalities and local fund committees, who being in a position to carry out relief works, consent to pledge their revenues as security for advances made to meet the present emergency.

12. The Government of Bombay have drawn our attention to a passage in our Despatch to your Lordship's address under date the 9th February, which does not sufficiently describe the extent to which Sir Richard Temple's suggestions has been anticipated by the Local Government. We said, in the 5th paragraph† of the Despatch in question, that the Government of Bombay had anticipated the most important of the suggestions made by Sir Richard Temple, viz., the reduction of grain wages. We ought to have framed our remark in terms of more general application; for, as the Government of Bombay observe, the suggestions made by Sir Richard Temple had been anticipated, not only as regards reduction of wages, but also as regards the rejection of persons not really in need of relief, and in reference to a more rigid exaction of task work. In the same letter, a copy of which has been sent to your Lordship by the Local Government, referring to a remark made by us in the same Despatch, that we were not then aware whether anything had been done in either presidency, in the direction of closing small works, the Government of Bombay state that as soon as they had been put in a position to do so, by receiving sanction for the prosecution of large works, they proceeded with all practicable expedition to close as many as possible of the small and more scattered works that had previously been in progress, and over which a proper control could not be effectually maintained. We have noticed, that since the beginning of January, when the restrictions on large works were removed, the Government of Bombay have sanctioned provisionally a very considerable number of small works; but we feel sure that when they accorded these sanctions, the Government of Bombay had satisfied themselves as to their necessity, and we entertain no doubt whatever as to the earnestness of the efforts which that Government is making to prevent all needless expenditure. The last weekly return shows that the number of persons employed on relief labour under Civil Agency, most of whom probably were on small works, had diminished from 136,629 on the 13th January to 63,659 on the 10th February.

v. No. 22.

Numbers employed in Bombay and Madras.
